QUESTIONS
and
ANSWERS
WITH COMPLETE HISTORY
of the ROSICRUCIAN ORDER

By H. SPENCER LEWIS, Ph. D., F. R. C.
*Imperator of the Rosicrucian Order
for North America*

ROSICRUCIAN LIBRARY
VOLUME NO. 1

SAN JOSE, CALIFORNIA
ROSICRUCIAN PRESS
Printing and Publishing Department
AMORC COLLEGE

FIRST EDITION

Copyright 1929

SECOND EDITION

April, 1932

By AMORC

Printed in the U. S.A.

Rosicrucian Press, San Jose, Calif.

Dedication

To the Memory of
BROTHER JULIUS SACHSE, F. R. C.
Historian,

*last descendant of the First American
Rosicrucian Colony, whose History of
their achievements will remain as a
monument to the Faith and Love of their
great leader, Magister Kelpius,*

THIS BOOK IS DEDICATED
that I may place a flower among the
many at the side of
his grave.

The Rosicrucian Library

VOLUME

- I. Rosicrucian Question and Answers with Complete History of the Order.
- II. Rosicrucian Principles for the Home and Business.
- III. Mystical Life of Jesus.
- IV. The Secret Doctrines of Jesus.
(In preparation.)
- V. "Unto Thee I Grant"
(Secret Teachings of Tibet.)
- VI. A Thousand Years of Yesterdays.
(A Revelation of Reincarnation.)
- VII. Self Mastery and Fate with the Cycles of Life.
- VIII. Rosicrucian Manual.
- IX. Mystics at Prayer.
- X. Rosicrucian Healing.
- XI. Mansions of the Soul.
(The Cosmic Conception.)
- XII. Lemuria, The Lost Continent of the Pacific.

*(Other volumes will be added from time to time.
Write for complete Catalogue.)*

International Rosicrucian Order*

Registered in the U. S. Patent Office
Exclusively in the name of AMORC

PREFACE

The mystery which has always surrounded the origin and history of the Great White Brotherhood has probably been one of its fascinating attractions, even with those who had no interest in its teachings or its activities. The mystery is not eliminated by a revelation of the *real* as well as the *traditional* facts associated with its origin; and in its history one will find romance, intrigue, astounding achievements, fascinating exploits, and alluring inducements.

The history of the Brotherhood must be divided into two general classifications. First, that which is traditional, and which has come down to the present time by word of mouth, supported by more or less definite references in ancient writings or symbolical passages in the rituals or teachings; and second, that which is truly historical and supported by the records found in the various branches of the organization throughout the world.

It is realized that the traditional history of the organization is very often cast aside or accepted

HISTORY OF THE ORDER

with considerable doubt by those who hesitate to believe in the antiquity of the organization. Persons of this type prefer to have the history of the organization begin with its first definite, printed records. But they forget that everything of human construction had a beginning, and that there must have been an origin and beginning of the Order which antedates the first definite, printed, or written records.

It was generally believed, several hundred years ago, that the *historical birth* of the Rosicrucians did not antedate the seventeenth century. It was likewise believed that the *traditional birth* of the Order began some time in the Christian Era, and ended at the time of the historical birth. In other words, the attitude was taken that all the stories, reports, and references to the Rosicrucians as existing prior to the seventeenth century belonged to the *traditional history* of the Order. But, the many discoveries of documents, books, manuscripts, and references of an authentic nature in the past century have taken the actual origin and existence of the Order backward step by step,

HISTORY OF THE ORDER

year by year, into the very heart of the so-called traditional period.

The demand on the part of Rosicrucian students throughout the world and the search on the part of thousands of others for more facts regarding both the traditional and actual periods of the Order's existence, have warranted this history. Parts of this history appeared for the first time in the official Rosicrucian magazine called the "American Rosae Crucis," beginning with the January, 1916, issue. That history was at that time considered the most complete outline of the traditional part of the Order's existence ever presented, and has been widely utilized by other writers who found therein the clues which enabled them to verify many of the statements made. Since 1916 a number of other histories have appeared in the French, Dutch, German, and English languages by eminent officers of the organization. In most of these, the facts presented in the articles which appeared in the "American Rosae Crucis" have been utilized and appreciation expressed for the publication of hitherto concealed records.

HISTORY OF THE ORDER

The present history is an extension of the one published in the magazine and considerably augmented by documents, books, and papers sent to the author by other historians or members of foreign branches of the Order, who were able to find the further details because of the clues given in the original articles. Credit must also be given to the researches made by the official historian of the Order in America, *Fra Fidelis*, who, through his editorial association with one of the largest newspapers in North America, and his connections with the Order and with foreign libraries and records in many languages, has been able to make extensive researches covering a number of years, thereby bringing to light many important and intensely interesting facts.

Whether one accepts all of the points of the traditional history or not, one is certain to feel that the origin of the Rosicrucian Order is found in the early mystery schools of the Great White Brotherhood. A study of the schools of philosophy and arcane wisdom in the Oriental lands preceding the Christian Era reveals that there is but one land in which the Rosicrucian organization could

HISTORY OF THE ORDER

have had its birth. That land is Egypt. And even the casual student of Egyptian history is impressed with the probability of the birth of the organization in that land.

If one sets aside the traditional history entirely, and accepts only that which is based upon very definite records in printed or official manuscript form, one must reject the popular and entirely fictitious claim that the Rosicrucian Order had its origin in the seventeenth century in Germany. The very positive references to the Order in printed books dated centuries earlier in other lands conclusively prove that the Order was very old and very well established when it had a form of revival in Germany in the seventeenth century. Likewise, one discovers at once that the romantic or symbolic story regarding *Christian Rosenkreuz* and his foundation of the first Rosicrucian body must be rejected, unless one associates that story with similar stories found in many earlier records.

The author, therefore, presents the following history as the most modern version and perhaps the most complete outline of the history of the Rosicrucian Order, with the hope that the mem-

HISTORY OF THE ORDER

bers of the Order will find between the lines the facts which are carefully concealed; and the inquiring mind, seeking for a mystery story and nothing more, will also find in the printed words a mystical romance prepared to his liking.

INTRODUCTION

It is no violation of secrecy to give the outer, objective details of the various activities of the Great White Brotherhood, but the genuine conservatism of the Eastern Councils until recent years has acted as a barrier against such publicity as we in America believe necessary for the growth of any public or semi-public institution.

After twenty years' study of the doctrines and principles, and a very careful examination of all matters pertaining to the history of the Order, one does not find a single prohibition against the general publication of the history except in such minor details as are closely associated with the working or manifestation of some of the R. C. doctrines. While these exceptions are few, although of vast importance to the higher students, they have undoubtedly caused the subconscious attitude on the part of all R. C. Brothers and Sisters that it is safer, in the face of their individual sacred oaths, to refrain from all mention of either the antiquity or progression of the Order.

HISTORY OF THE ORDER

There is also the element of mysticism which explains the attitude of even the most advanced Brothers and Sisters. Realizing as most of them do that the complete history of the Brotherhood has never been given to the public and has for centuries defied the casual researches of scientists, historians and archivists alike, they feel a certain pride in having been able to mystify the profoundly inquisitive minds. Even the grossly erroneous and biased *raisonne* of the history of the Brotherhood given in various encyclopedias, reference books, and histories only adds to this feeling of pride and victory.

Such secrecy is not only uncalled for, but is positively detrimental to the Order in *America*. We are a people of frankness; Americans are lovers of the true, and have a natural antipathy toward that which may be characterized as "mystically mythical;" and precisely such is the general impression of the origin and existence of the R. C. Order in the minds of many thousands today.

Nor is it necessary to enshroud the history of the Order with a cloak of blackest mystery to make the Order itself appeal to the thinking mind.

HISTORY OF THE ORDER

One will find that the true history of the Order arouses, even commands, such deep respect for its noble birth, grand growth, and wonderful increase of power, that this is a greater attraction to the thinking American than the element of mystery.

Inexactness and indefiniteness are the principal faults to be found with all the published accounts of the origin and present status of the Order. The few instances of wilful and inconsistent deception shown by some writers on the subject may be ignored in any consideration of the matter, for no mind can explain these things nor account for them aside from the writer's own personal bias which we are always led to believe has had no influence upon the honesty of the work.

Still, there are many very definite and exact facts easily within the reach of an analytical mind bent upon historical research, even when such mind is uninitiated into the secrets of the Order.

The claim has been made that the AMORC is the oldest fraternal or secret order known to man. This claim makes the Order antedate Freemasonry and the latter has always claimed great antiquity.

HISTORY OF THE ORDER

Here again the investigator is confronted with a mass of details purporting to be the history of Freemasonry, but gradually classifying itself into two groups which one may label "facts" and "traditions."

On the point of its connection with the Rosicrucians, Freemasonry is more or less silent. It traces its antiquity to Solomon's Temple, and refers to characters whose history, if not actual existence, is cloaked with mystery. Its published history is very esoteric and mystical, although its actual history, as known to all advanced Rosicrucians, is a living testimonial to the truth of the notable principles of Brotherhood which actuate Freemasonry.

So closely are the two Orders allied in some lands that many of the great exponents of the one are active workers in the other. Freemasonry has acknowledged its debt to the ancient White Brotherhood by adding a Rosicrucian Degree to the Ancient and Accepted Scottish Rite.

H. SPENCER LEWIS, F. R. C.

CHAPTER I

THE TRADITIONAL HISTORY OF THE ORDER

THE Rosicrucian Order had its traditional conception and birth in Egypt in the activities of the Great White Lodge. In giving the story of the origin, the writer realizes that to an exceptional degree will exactness be demanded by the reader, and in return pardon must be granted for reiteration.

Space will not be used in describing conditions in Egypt as they existed at the time of the conception of so wonderful an organization as this. The reader is requested to read either a brief or extended history of Egypt, which will prove highly illuminating on this subject.

One will find, however, that the Egyptians had reached a high state of civilization and advanced learning at the beginning of the XVIII dynasty comparable only with the Renaissance of France. Many were the means adopted to preserve the

HISTORY OF THE ORDER

knowledge attained that it might be correctly given to future generations. The hieroglyphic markings on the pyramids, obelisks, and temple walls give us evidence of the first desires to make permanent the knowledge and learning of the Egyptians.

But the more profound secrets of nature, science, and art were not to be entrusted to the masses nor were they susceptible to preservation through writing upon papyri. For this reason classes were formed by the most learned, attended by the select minds, at which the doctrines and principles of science were taught.

These classes or *schools*, as history refers to them, were held in the most isolated grottos at times, and again in the quiet of some of the temples erected to the many Egyptian gods. In some cases classes of a very select nature were held in the private chambers of the reigning Pharaoh.

The members of such assemblies became more and more select, the teachings more profound, and the discussions so dialectic that there arose a most autocratic and secret society of the truly great

HISTORY OF THE ORDER

minds of the day. Thus was laid the foundation of the Great White Brotherhood.

The first Pharaoh who conducted the class in his private chambers was Ahmose I, who reigned from 1580 B. C. to 1557 B. C. Because he was capable of conducting the great school as well as ruling the people with more civilized and advanced principles (due to his training in the school, no doubt), he is referred to as the “deliverer of Egypt” by some historians.

He was succeeded as Pharaoh by Amenhotep I, who became a teacher in the secret school for three years.

On January 12th (approximately), 1538 B.C., Thutmose I was crowned succeeding Amenhotep I. He owed his position to his wife, Ahmose, who was the first woman to become a member of the class on equal terms with the men. The discussion regarding her admittance (preserved in the Rosicrucian Archives) forms an interesting story and reveals the origin of some of the doctrines of the equality of the sexes.

Thutmose I was succeeded by Hatshepsut, his daughter, who ruled as a “king” independently

HISTORY OF THE ORDER

and as co-regent with her half-brother Thutmose II, a son of Thutmose I by his marriage to Isis.

It was Thutmose III who organized the present physical form of the secret Brotherhood and outlined many of its rules and regulations. He became ruler upon the deposition of his father, Thutmose II, in 1500 B. C. He ruled until 1447 B. C., and his reign is unimportant to us except for his establishment of the Brotherhood.

He appears to have been quite original in his application of the doctrines of mysticism, but held to the existing external form of religion, possibly because of political conditions. Egypt was not free from the danger of the "grasping hand" of adjoining nations and the life of this ruler was constantly tormented by outbreaks of war; the co-operation of his military forces depended considerably upon permitting the populace to indulge in all its fanciful beliefs—the idolatrous religions especially. For this reason an immediate change in the fundamentals of their religion—such as was made by Thutmose's descendant, Amenhotep IV in 1355 with such reactionary results—did not seem advisable or even necessary.

HISTORY OF THE ORDER

A gradual development in the existing mystical beliefs could be more easily and permanently accomplished by establishing a secret school of philosophy, the students of which would put into practice the high standards decided upon.

As in all ages there were those who might be called *advanced thinkers*, true philosophers, sages, and scholars. Many of these were students of the mystical doctrines as taught by Thutmose's predecessors, and they evidently had great faith in the final success of the principles; for when Thutmose proposed that the "class" which had been meeting in his chambers become a closed and secret order, "there was no dissenting voice, and articles of limitations were established ere the assembly dispersed in the early hours of dawn."

This grand "Council Meeting," for such it is considered in all official records, occurred during what would be the week of March 28th to April 4th of 1489 B. C., according to our present calendar. It is generally conceded to have been on Thursday, April 1st, but this may be associated with *Maunday Thursday*, a later establishment. However, Thursday has become the usual day for

HISTORY OF THE ORDER

Rosicrucian meetings, and "Maunday" Thursday has become the occasion for special Temple Services in many AMORC Lodges of the world.

Twelve known Brothers and Sisters were present at this first Supreme Council, the Sisters being the wife of Thutmose III, known in the Order as "Mene"; the wife of one of the Brothers; and another who was descendant of one of the rulers of a preceding dynasty. Therefore, there were nine Brothers and three Sisters at this Council, a combination of numbers very significant.

No worldly name was decided upon for the Brotherhood, the records showing that the predominating thought was the maintenance of secrecy. The organization had no publicity, required no propaganda other than personal advice to those whose presence was desired, and as the one word, translated into *Brotherhood* (a secret, fraternal body), was sufficient name for all purposes, we do not find any other term. This accounts for the widespread diversion of the name as adopted later. In so many of the documents issued by the Supreme Magi to the Grand Lodges throughout the world, the name of the Order is

HISTORY OF THE ORDER

seldom mentioned. The writer has noticed this especially in such documents as are given to a newly established Grand Lodge and which are translations of ancient documents. In these the element, the idea, of secrecy is so strong and predominant that the Order is referred to indirectly and sometimes erroneously (or perhaps diplomatically) as it, the *school*, the *brotherhood*, or the *council*. Furthermore many of these documents begin with the announcement: "I, *Brother of the Illuminati*, with power decreed, do declare this Manifesto," or with the Salutation: "I, F. Illuminati of the 12." (I, Frater Illuminati of the 12th degree.) Very often these official manifestos are signed: "With Peace Profound" and sometimes "F, Profundis" or "F, 12."

These words not only show that the twelfth or last degree has been the last circle within the Order, and known as the *Illuminati*, even to this day, but they also explain why some references are made to these documents as "Instructions of the Illuminati," which may easily be misinterpreted as "Instructions to the Illuminati" as one sees them referred to in works published abroad in the 15th,

HISTORY OF THE ORDER

16th, and 17th centuries A. D., where the *Order Rosae Crucis* is designated solely by the term "Illuminati."

Furthermore, if one considers for a moment the prejudice—even the prohibition—against such secret Orders, one will appreciate the very evident attempts at subterfuge. Not only did certain bigoted religious organizations condemn all secret orders as "works of the devil," but those orders or schools which claimed to have *rare knowledge* of the sciences were severely criticised by the various scientific bodies of the day. As soon as learning became very general and competition arose between schools and students, the secret orders were widely condemned even though many of the most unfair critics of some were oath-bound members of others.

Though the Order had no definite name, Thutmose saw that it had very definite principles, rules, and modes of procedure, all of which have come down to us today without material change.

At the close of his reign in 1447 there were thirty-nine Brothers and Sisters in the Council, and the meetings, which had become regular and

HISTORY OF THE ORDER

systematic, were held in one of the halls of the Temple at Karnak, outside of which Thutmose III erected two obelisks bearing a record of his achievements.

Thutmose signed most of the decrees of the Council with his own *cartouche* and it became the Seal of the Order "in testimony of the great work of our teacher (Master) to be forever a mark of honor and loyalty." As was customary with these rulers when any event of national importance occurred, Thutmose issued a *scarab* bearing his *cartouche* on one side, plus a mark which has a special meaning to all mystics. One original scarab, which was used for hundreds of years in Egypt, by various officials to impress the Seal of the mystic fraternity in wax on all official documents, was given to the Grand Lodge of America with other jewels and papers of an official nature, and it is considered one of the rarest antiquities of Egypt now in this country. The Order here is to be congratulated on having in its possession one of the *oldest*, if not the most *sacred*, of all mystic jewels, one which has never been used by others than the Masters in Egypt; for it means virtually the pass-

HISTORY OF THE ORDER

ing of the Master's Spirit from Egypt to America, as was planned by the founders centuries ago.

This Seal appears on the official documents of the Order in America together with the American R. C. Seal, and its illegitimate use constitutes a forgery, according to the By-Laws of the Order throughout the world, punishable by a special decree of the Masters.

In this connection it may be explained that the Obelisk in Central Park, one of the two erected in Egypt by Thutmose III and intended to stand some day in "the country where the Eagle spreads its wings," bears this Cartouche or Seal as well as many other authentic and instructive signs now used by all Rosicrucians of the true order. In Egypt today the Rosicrucian Order, descending from very ancient lodges, uses this Cartouche as its official emblem above all others.

Before his transition, Thutmose III made his son (by Hatshepsut) co-regent. Thus Amenhotep II took up his father's work in the Brotherhood about the end of September, 1448. In the month of March—the seventeenth to be exact—1447 B. C., Thutmose passed to the Great Beyond, having

HISTORY OF THE ORDER

been king for nearly 54 years and being but one week less than 89 years of age. His mummy was found in the Cachette at Deir el Bahri, and history acclaims him "the greatest pharaoh in the New Empire if not in all Egyptian history."

Amenhotep II ruled from 1448 to 1420 B. C. and he in turn was succeeded by his son Thutmose IV, who ruled from 1420 to 1411 B. C. Amenhotep III, son of the preceding, occupied the throne from 1411 to 1375 B. C. and was the last of the truly powerful pharaohs or emperors.

Upon the transition of Amenhotep III the Empire fell to his son Amenhotep IV, with whose history all Rosicrucians are greatly concerned. He was the last Great Master in the family of the founders and the one to whom we owe the really wonderful philosophies and writings used so universally in all Lodge work throughout the world.

Amenhotep IV was born in the Royal Palace at Thebes, November 24th, 1378 B. C. His mother Tiy or Tia was of Aryan birth, but both he and his father paid the most sincere respects to her and were ever proud of designating her "Queen Tia" upon all monuments.

HISTORY OF THE ORDER

He was only eleven years old in 1367 B. C. when he was crowned and immediately began a career unequaled by any pharaoh of Egypt.

His father, having been the Master of the Order for a number of years, built the great Temple of Luxor and dedicated it to the Brotherhood. He also added to the Temple of Karnak and in many ways left "monuments of testimony and praise."

The Brotherhood numbered two hundred and eighty-three Brothers and sixty-two Sisters at this time, and at the time of the crowning of young Amenhotep IV, the Master was one Thehopset who remained in the office until 1365 B. C. Amenhotep's installation as *Master-by-Council-Decree* occurred in the Temple of Luxor, April 9th, 1365, at sunset, in the presence of his bride and her parents.

Amenhotep being the only descendant it was deemed advisable that he marry as early as the customs then permitted in order that an heir to the throne would be assured. But though Amenhotep had a number of children, unfortunately they were daughters, and this proved disastrous to the throne.

HISTORY OF THE ORDER

The life of this great man is too easily found in various histories of Egypt, especially Breasted's, to warrant space in this work, but his accomplishments for the Order must be treated at least briefly.

Born in a country where peoples were given to idolatry, where the chief endeavors were those of building Temples to gods of all kinds, it is easy to appreciate his attitude toward the existing religion (or religions) after he had been thoroughly instructed in the secret philosophy. His mind and understanding were unusually keen, for in his fifteenth year he composed many of the most beautiful prayers, psalms, and chants used in the organization today, as well as contributing to the philosophy and sciences.

To him came the inspiration of overthrowing the worship of idols and substituting the religion and worship of one God, a supreme deity, whose spirit was in Heaven and whose physical manifestation was the Sun—the *Symbol of Life*. This was in accordance with the secret doctrines and it changed the worship of the Sun as a god to the worship of *the God* symbolized by the sun. This

HISTORY OF THE ORDER

was the beginning of ~~Monotheism~~ in Egypt and the origin of the worship of a spiritual deity which “*existed everywhere, in everything, but was nothing of the earth*” i. e., had no physical existence on earth in the form of inanimate or nonspiritual images.

Arthur E. P. Weigall, Chief Inspector of the Department of Antiquities, Upper Egypt, in writing of the religion inspired by Amenhotep IV, says: “Like a flash of blinding light in the night time, the Aton (the sun-symbol of the true God) stands out for a moment amidst the black Egyptian darkness, and disappears once more—the first signal to the world of the future religions of the West. One might believe that Almighty God had for a moment revealed himself to Egypt.”

Truly the religion of Amenhotep did not endure for long. Compared to the years of darkness, it was but a flash, for it ceased as a *public* and *general* religion when Amenhotep passed beyond the veil in 1350 B. C.

He, too, left many monuments to the glory of the Brotherhood. First he removed as far as possible all “pillars to Ammon” and all references to

HISTORY OF THE ORDER

Ammon as a god. So thorough was his work that he did not hesitate to mutilate the work done by his father at Karnak and Luxor of effacing all reference to the god Ammon, put there to appease the heathen priesthood, even to removing the name of his father and mother where they were connected with such idolatry. This naturally provoked the populace, especially since Amenhotep substituted beautiful monuments to the "living God."

In the fifth year of his reign—when he was only sixteen years of age—a sweeping reform was initiated throughout Egypt by his decree, which prohibited any other form of worship except that already mentioned. In one of his decrees he wrote: "This is my oath of Truth which it is my desire to pronounce, and of which I will not say: 'It is false,' eternally forever."

He then changed his own name so that it would not be inconsistent with his reform. Amenhotep meant "Ammon is satisfied"; this he altered to Akhnaton or Ikhenaton meaning "pious to Aton" or "Glory to Aton."

He built a new capital at El Amarna in the plain of Hermopolis on a virgin site at the edge of

HISTORY OF THE ORDER

the desert and abandoned Thebes because it was the *magnificent city of Ammon*. At El Amarna he also built a large Temple for the Brotherhood, in "the form of a cross," and a large number of houses for his Council. Here was the beginning of monastic life, for within the boundaries of El Amarna lived two hundred and ninety-six Brothers of the Order, each having taken an oath never to pass "beyond the shadow of the Temple."

These Brothers wore special costumes which included a "cord at the loins" and a covering for the head, while the priest in the Temple wore a surplice of linen and had his head shaved in a round spot on the top.

It is from this institution that all monastic orders, especially that of St. Francis, derive their methods, even their costumes.

During these years at El Amarna the Brotherhood was being made into a concrete organization, and the Brothers at this community outlined the initiations and forms of service as used today.

Akhnaton (Amenhotep IV) not only built his Temple in the form of a cross, but he added the cross and the rose as symbols and further adopted

HISTORY OF THE ORDER

the Crux Ansata, in a special coloring, as the symbol to be worn by all teachers (Masters). In fact, the last year of his life was spent in evolving a wonderful system of symbols used at this day, to express every phase and meaning of the Rosicrucian sciences, arts, and philosophies, and while some of these have become known to the uninitiated through the researches of Egyptologists, many remain secret and all are understandable only to the initiated.

As a ruler of Egypt our master failed utterly to check the desire for war and by his attacks on the popular religion he left the way open for invasion through lack of cooperation on the part of his subjects. As the crisis approached our Master foresaw the result and sad at his neglect of political matters in his enthusiasm for the spiritual, he weakened his health and he was finally forced to take to his bed in the month of July, 1350 B. C. Instead of using his mighty knowledge to regain his health it appears from his last dictated writings that his constant wish was to be spiritualized, that he might be *raised up to that plane* from which God's symbol shone down upon him. He fasted—

HISTORY OF THE ORDER

practically starving himself—refused the services of the physician in the Order, and prayed constantly. Then, on July 24, late in the afternoon, with his right hand upstretched to God pleading to be taken into the *nous* he was seen by his Brothers and Sisters of the Order watching there, to be actually raised for a moment and then to drop back in “sweet repose with a smile of illumination upon his countenance.”

Thus, passed to the beyond our Great Master, who did so much and left so much for our organization.

He may have neglected Egypt politically, but she will always remember her young Pharaoh whose twenty-eight years left its art and architecture, its sciences and philosophies so greatly changed and improved. His reign was like unto the Renaissance of France, and even the hieroglyphics and arts show a vast improvement based upon the principles of Truth. At the time of his crowning he took the title of “Amenhotep, King, *Living in Truth*” which was the Rosicrucian phrase of fidelity as it is today, and he passed onward to the other life in *truth*.

HISTORY OF THE ORDER

Perhaps the most summary of all testimonies to Amenhotep IV found outside of the Rosicrucian literature, is that paid by James Breasted, Professor of Egyptology, University of Chicago, who says in his *History of Egypt*: "The modern world has yet adequately to value, or even acquaint itself with this man, who in an age so remote and under conditions so adverse, became the world's first individual."

CHAPTER II

THE GROWTH OF THE ORDER IN THE ORIENT

AT the close of the first epoch of the Brotherhood's history, ending with the transition of Amenhotep IV (Akhnaton) in 1350 B. C., there was but one secret assembly, that which met in the Temple at El Amarna; and the Brothers and Sisters numbered four hundred and ten, which number included the Officers of the Lodge and the members of the Supreme High Council.

Plans had been made for years for the establishment of other assemblies or Lodges in various countries; but in those countries where a Lodge could have been established by one of the Egyptians who would have traveled there, war was raging and conditions were against any such institution.

Greeks were coming to Egypt to study its philosophies and become acquainted with its learning.

HISTORY OF THE ORDER

Many of them sought entrance into the Order but it appears from various Council decisions that they were not admitted because of unpreparedness.

Benedictus Figulus, a Brother of the Order, who made a very exhaustive study of the growth of the Order, wrote: "About the year 1680 A. M. the Greeks went to Chaldea and Egypt to learn this philosophy—but after learning a little they became so puffed up and proud, depending more than was meet on their own understanding." This seems to have been the result most feared by the Council there, just as it is today. So many are ready to grasp at the first principles and then, thinking their minds capable of building a philosophical structure upon the foundation, cease to be students and at once become teachers, each having a distinct, incomplete, and erroneous philosophy or "ism." Naturally there will be heretics in every school of thought; but a heretic is one who diverges from the established teachings only because of a *thorough knowledge* of such teachings and to such we may turn for helpful criticism and suggestions at times. But we must be deliv-

HISTORY OF THE ORDER

ered from the bigoted *student* who rises above his fellows and places his *superior* mind and judgment above the experienced understanding of his teachers.

For many years the Order progressed but little. Amenhotep IV left the work in the hands of competent teachers and as the years passed by a few were admitted and initiated while the great teachings were being transcribed into symbolism and a special secret alphabet.

There being no male descendants of Amenhotep IV, he was succeeded by his son-in-law as Pharaoh and at the close of the XVIII dynasty. The religion of Ammon had been established once again, while the dreams and hopes of our Master were confined to the Order and its succession of teachers.

During the XIX dynasty under Seti I and Ramesses II considerable tolerance was granted to the Order in Egypt; but gradually a feeling arose against its "secret power" and the lines of activity had to be drawn closer and closer.

Fortunately, in the Order at the time of the transition of Amenhotep IV, there was a sage

HISTORY OF THE ORDER

named Hermes. So great was his learning and yet so mystical his many writings, purposely veiled so that they might be of value only to the future initiates, that the uninitiated minds of future years arose and acclaimed Hermes a myth, and there are those today who try to establish his identity with that of the Egyptian god "Thoth." However, it is the author's pleasure to state now that which has never appeared in print before and which has perplexed investigators for centuries—the birth date of Hermes—the Thrice Great Man. He was born in Thebes, October 9th, 1399 B. C. He lived to the age of one hundred and forty-two years, dying in the Rosicrucian Monastery at El Amarna, on March 22nd, 1257, B. C., and his mummy lies among others in a cachette in the vicinity of El Amarna.

He was "thrice great" because he lived to attend the installation of Amenhotep IV as an R. C. Master, became Master himself upon the latter's transition, and in 1249 installed one Atonamen as Master of the Order.

It was at this time that Hermes completed his writings, especially the seven books and tablets

HISTORY OF THE ORDER

which were found and brought to light in 400 A. D., and which were upon diverse chemical and physical subjects.

In 1203 several of the Brothers of the Order who were of the *Illuminati* were commissioned to go into other lands and spread the secret doctrines by the establishment of other Lodges. It was quite apparent that Egypt was to be subjected to a devastation and that its great learning might be lost. Confidence seems to have been the keynote, however, for one may read a long argument, reminding one of a speech in Congress, delivered by one of the Brothers at a Council held in El Amarna on June 8, 1202 B. C., in which he reassures all present that the "stars shew naught but trial, and test, by air, fire, and water, which we hold to be the elements of the crucible from which the precious stones will bring forth its own." And again: "who among us will rise and predict defeat for that which our Masters have labored over 29 cycles (two hundred years)? Is not this *Truth*? Are we not assembled in *Truth*? Are we not living *Truth*? And, can *Truth* ever die? Is not transition the gateway of progress? And can the

HISTORY OF THE ORDER

crucible do more than bring about a physical and spiritual transition, a transmutation, of the principles for which we have pledged our lives?"

It was finally decided that "no undue haste should be sanctioned in permitting the Brothers who have gone abroad to establish Lodges, but rather that those who travel here in search of the Light should be tried, and to those found qualified shall be given the commission to return to their people and establish a Lodge in the name of the Brotherhood."

It was this dictum—known as the "*Amra*"—that in later years proved the wisdom of the Councilors at this meeting, for it not only became a hard and fast rule, but made for the success of the plans of propagation.

It was in this wise that the phrase "travel East for learning or Light" first came into use; for those who soon began to travel to Egypt came from the West.

About the year 1000 B. C. there came to Egypt a character whose name is recorded as Saloman but who was identified in later years with Solomon.

HISTORY OF THE ORDER

The records show that he had come from the West, had traveled over many lands and across waters. He was of a nation which was large and important, situated in some very distant land. All this is indicated from the report he made to the representative of the fraternity whom he interviewed at Thebes "whither he had gone immediately upon his arrival in Egypt accompanied by his slaves (!) and his *najah* (a word unknown to the translators)."

He desired instruction in the higher Egyptian sciences and philosophy, and was directed to El Amarna with a letter of introduction from the *intendant* at Thebes. He reached El Amarna on the 4th day of June, 999, under the name of Saloman, the youthful seeker.

Saloman did not complete his studies, for it is reported that he left El Amarna "before the fourth examination." He left with his Brothers and Sisters a definite feeling of love, wisdom, and virtue, and all were grieved at his sudden but announced departure.

The next word of him is as a resident at the royal home in Bubastis in the Delta where Shishak

HISTORY OF THE ORDER

I (or Sheshonk) had established himself. This was in the year 952 B. C., and Saloman is referred to as an instructor to the Pharaoh's son. This is probably a mistake in translation, for in another place he is referred to as advisor in political matters, and this seems more probable in the light of future developments. Whether he had been at this residence all the intervening years from 999 to 952 B. C. is not definitely established, but there is a record of his presence at Thebes in the year 980 when he visited some *games* in company with the *intendant* of Thebes, and a group of scholars with whom he seemed on the most intimate terms.

Saloman seems to have been greatly influenced in Thebes and Bubastis by the religion of Ammon and conceived a form of philosophical religion which was a mixture of the Rosicrucian monotheism and the Egyptian idolatry. To him the *sun* became more than the mere symbol of a God; it was the living vital spirit of God, and while not the God, it was God's ethereal body. This would indicate that Saloman conceived God as being (a) personal, rather than *impersonal* as Rosicrucianism

HISTORY OF THE ORDER

taught, and (b) dual, body and spirit, Father and Holy Ghost.

Shishak I secured Thebes in 951 B. C. and appointed his son priest in the religion of Ammon, and gave his daughter, Aye, to Saloman to wed. This is the first mention of any of Saloman's wives and she may have been his first wife. At the close of 951 or early in 950 Saloman departed for Palestine where he became a mighty power, and with a prearranged plan, permitted Shishak I to rule over his people. The history of Saloman or Solomon in Palestine is too well known to warrant any further comment except on one point.

Five years after Saloman began his rule in Palestine, or about 945 B. C., he completed a Temple there in which to house a "society" or brotherhood such as he had found at El Amarna. An examination of the plans and cross-section views of the so-called Saloman's Temple shows it to be not only typically Egyptian in architecture and decoration, but copied after the mystic Temple at El Amarna, even to the location of the Altar, with the exception that the side structures which made the orig-

HISTORY OF THE ORDER

nal building a *cross* were eliminated in Saloman's plans.

Saloman had the assistance of two who had traveled in Egypt as architects and artists—Hiramabi of Tyre and one Hiram Abif.

The Saloman brotherhood was closely watched by the fraternity in Egypt, which had removed its headquarters to Thebes again because of political changes and the warring invasions in the territory of El Amarna, which eventually reduced the entire community to ruins.

It was found that Saloman restricted his order to males and adapted a great many of the details of the Rosicrucian initiations and services. At first it was believed that he would apply to the Grand Lodge in Thebes for a charter and make his work a branch of the R. C., but it became apparent before the first assembly was held that he was not adhering to the Rosicrucian philosophy, for he used the sun as the exclusive symbol of his order.

Of the growth of the Saloman brotherhood, as it was officially called in all ancient documents, one may read in all literature bearing upon Free Masonry. It has evolved into a semi-mystical, specu-

HISTORY OF THE ORDER

lative, secret, fraternal order of power and great honor, gradually altering the principles laid down by Saloman, it is true, but doing so for the greater benefit of man.

The Greeks were now coming to Thebes to study, and it was at this time that the world-wide spread of the organization began.

Pythagoras is so often mentioned as one of the earliest Messiahs of the order, but in truth there were many who preceded him. Among the first to become worldly famous in the order was Solon, who became the first chaplain who was not an Egyptian. He entered the order in 618 B. C., and remained a true Messiah until his transition in 550 B. C., leaving for our use some of the most beautiful and inspiring prayers ever spoken by a yearning soul. Contemporary with him was Anaximander, who came from Miletus to study at Thebes preceding the coming of Pythagoras.

Pythagoras was born in Samos on November 26th, 582 B. C. He entered the Order at Thebes on the second of April, 531, and having passed through all the initiations and examinations he entered the Illuminati, October 16, 529, and left

HISTORY OF THE ORDER

at once for Crotona (Krotono), Italy, with jewels and documents to found a Grand Lodge there. There were a few so-called secret cults in existence at that time in Italy, and when Pythagoras began to promulgate his plans and admitted that women might not only become members, but could hold office, he attracted the attention of the most advanced thinkers of the day. Theano, the wife of Pythagoras, was one of the principal officers for three years. The Grand Lodge eventually had 300 brothers and sisters and issued many charters for local lodges of the order throughout Italy.

From this time onward toward the Christian period, great minds from many countries journeyed Eastward and Westward and *Crossed the Threshold*, and having completed the work and studies, passed again into the world's darkness to spread the *light* as they interpreted it.

As a historical record and a guide to the student who delights in research and antiquarianism, there will be given the names of those who came to Thebes to study, became Masters of Rosicrucian Lodges in other lands, and during their lifetimes

HISTORY OF THE ORDER

published at least one book, an official work, treating on the Rosicrucian philosophies or sciences.

Many of the books or manuscripts to be listed are still extant in the original, or translated, and quite a few of them are in America. A perusal of any one of them convinces one of the author's real knowledge and experience in Rosicrucianism.

CHAPTER III

THE WORK OF THE DISCIPLES

UTER activities of the Great White Brotherhood, during the pre-Christian Era, were centered in a number of branches controlled by one group of supreme officers who constituted the Rosicrucian Fraternity of Brethren of the Rosy Cross. The Supreme Masters of the Great White Brotherhood withdrew from public activity and with a council of eminent advisors constituted the esoteric body known thereafter as the Great White Lodge.

Notable among the phases of the spread of the work of the Rosicrucians to other lands was the establishment of two branches known as the *Essenes* and the *Therapeuti*. The *Essenes* constituted that branch which went into Palestine and adopted a distinct name in order to veil its preliminary work while the *Therapeuti* was a similar branch established for the same purpose in Greece.

HISTORY OF THE ORDER

In Palestine the Essenes established a community of members and associate members at Galilee where they had many homes in this non-Jewish, Gentile part of the country, and built their principal monastery and temple on the top of Mount Carmel where Elijah, as one of the descendants of the Great White Brotherhood, had previously established a retreat and had taught many of the mysteries of the Brotherhood.

Just before the Christian period, the Great White Brotherhood had also established a new monastery and temple and other structures for a great central point of their activities at Heliopolis, and the temple here was known as the Temple of Helios, or sometimes called "the Temple of the Sun." The intercourse between the temple at Heliopolis and the one on top of Mount Carmel was intimate and frequent, and many of the philosophers who journeyed from European points to Egypt to study spent some of their time at Mount Carmel.

Just about the time of the birth of Jesus the great library and archivist records maintained at Heliopolis were transferred to Mount Carmel, and

HISTORY OF THE ORDER

the Essenes Brotherhood in Palestine together with other branches of the Great White Brotherhood were preparing for the coming of the great Avatar who was to be the reincarnation of Zoroaster, one of the famous Avatars of the Brotherhood in centuries past.

The birth of Jesus in the family of Gentiles living in the Essenes community at Galilee fulfilled the expectations of the Brotherhood, and from this time on the outer and inner activities of the Brotherhood became centered around the ministry of the great Master Jesus. The details of the birth, preparation, ministry, and culminating events of the Master Jesus are all set forth in a separate volume entitled "The Mystical Life of Jesus" wherein are given details from the records of the Essenes and the Great White Brotherhood and which have never been published before. Therefore, I will not take space in the present record to recite these many and important matters.

At the close of the life of Jesus the Christ, the disciples of Jesus and the high officers of the Great White Brotherhood planned to carry on the new cycle of illumination and revelation of doctrines as

HISTORY OF THE ORDER

presented by Him, and an outer congregation or public movement was established known as the Christine Church. This movement gradually evolved into a more or less independent public organization, and while it was sponsored by the Great White Brotherhood, and all of the principal workers like unto the original Apostles were men chosen from the Essenes Gentile community at Galilee, the Great White Brotherhood did not establish the Christine Church as a part of its activities, because it was interested in the work of all religious movements in all lands, and did not become a part of any of them.

Several hundred years after the foundation of the Christine Church, and while it was being actively promulgated by the representative of the Great White Brotherhood in those lands where the doctrines and teachings would do the utmost good, the Supreme Temple and monastery, as well as the library and archivist records, were transferred from Mount Carmel to new structures built in an isolated section of Tibet where the Headquarters of the Great Masters of the organization is still maintained.

HISTORY OF THE ORDER

During the time of the organization of the Christine movement, and throughout all the centuries thereafter, the inner circle of the Great White Brotherhood continued to function as a non-sectarian, non-religious school of mystical, occult, and scientific teachings. All of the outer activities such as the Essenes movement, the Christine movement, and similar bodies in various lands, represented the outer congregation of the Great White Brotherhood while the secret schools and temples with their high priests and instructors and large membership of students represented the inner congregation. All through the ages up to the present time the Great White Brotherhood has continued to function in this dual manner.

It was during the period of contentions and strife that the Christine movement faced, that the Great White Brotherhood found it advisable to establish another organization composed almost exclusively of men, and called the *Militia Crucifera Evangelica*. Its purpose was to protect the cross as a mystical symbol, against its misuse by those who attempted to carry on crusades of persecution against others who would not accept a

HISTORY OF THE ORDER

sectarian interpretation of the symbolism of the ancient emblem. It was in the foundation of this Militia that we find the origin of all the militant organizations which became defenders of the faith in later years, but it is notable that the Militia Crucifera Evangelica never became an active body of prosecutors or crusaders, but merely of silent defenders who were pledged never to unsheathe the sword except in absolute defense. The organization became greatly enlarged in later centuries and continues to exist at the present time, not as a true military organization, but as defenders of the Rosicrucian emblem and the cross with their moral strength rather than with any physical strength.

Throughout the centuries preceding the Christian Era, and thereafter, the Great White Brotherhood and its centers of learning and its libraries and monasteries became the centers for pilgrimages on the part of great minds seeking illumination and the highest advancement in culture and ethics. The records of the Brotherhood are replete with the life stories of many eminent characters known in general history who became students in the mystery

HISTORY OF THE ORDER

temples of the organization in Egypt, at Palestine or elsewhere, and later presented outlines of modified philosophies and principles which the public could understand and apply, and authors of books which have been valuable contributions to the advancement of learning.

Among the very earliest of the philosophers who contributed to the Rosicrucian philosophy were: the fellow-workers of Hermes—Mena, Busriris, Simandius, Sesostris, Miris, Sethon, Amasis, Adfar Alexandrinus, and King Calid.

Then there was “Maria Hebraeae,” a Hebrew woman supposed to have been Miriam, a sister of Moses.

But after the going of Pythagoras to Italy many came from Greece and other lands to be initiated in Egypt and from there returned to their native lands or elsewhere to establish branches of the mystic school and become Masters and Officers therein.

Most of these—whose names are listed below, published during their lifetime one or more papers dealing with various principles of the Rosicrucian philosophy or science.

HISTORY OF THE ORDER

Some of these writings were kept secret—others were written for public reading with the true doctrines carefully veiled. In order that the Rosicrucian students may study such writings as are extant today these philosophers' names are given and sometimes the name or title of their work which is especially recommended.

Solon, 640 to 550 B. C.

Anaximander of Miletus, 610 to 540 B. C.

Pythagoras

Anaximenes of Miletus, 520 B. C.

Heraclitus of Ephesus, 520 B. C.

Parmenides, born 515 B. C.

Empedocles of Agrigentum, 500 B. C.

Democritus of Thrace, 460 B. C.

Socrates of Athens, 470 B. C.

Euclides of Negara, 399 B. C.

Plato of Athens, 428 to 347 B. C.

Aristotle of Thrace, 385 to 322 B. C.

(Read: "De Anima," the "Metaphysica" and the "Quinta Essentia.")

Epicurus of Athens, 341 to 270 B. C.

Metrodorus, Hermarchus, Colotes, Leonteus and his wife Themista, and Leontium, all of whom

HISTORY OF THE ORDER

were pupils of Epicurus in his R. C. Lodge in Athens in 306 to 301 B. C.

Philo, 110 B. C.

Antiochus of Ascalon, 100 B. C.

Cicero, 79 B. C.

Nigidius Figulus, 70 B. C.

Seneca, 70 B. C.

THE CHRISTIAN PERIOD

After these came philosophers from the Christian period beginning a new line of writers.

From this time on the work spread very rapidly throughout many lands and only a brief list of the most prominent can be given. The following not only contributed interesting writings to the future R. C. literature, but were either Masters of various Lodges or assisted in bringing the mystic fraternity into their respective countries.

Geber (or Yber) of Haman in the VIII century A. D.

(Read: "Fragmentum de Triangulis Sphaericis" and "The Sum of Perfection or THE PERFECT MAGISTRY.")

HISTORY OF THE ORDER

Rhasis (or Razi), an Arabian, born in 850 A. D.

(Wrote many treatises on planetary correspondences and alchemy.)

Alfarabi, of Farab, Asia Minor, born about 910 A. D.

(He compiled the first Encyclopaedia of R. C. science and arts.)

Avicenna (or Ebn Sina) of Bacara, Persia, born about 980 A. D.

(Read: "Tractatulus Alchemiae.")

Morien of Rome (who after his Initiation in Egypt remained there as the chief Alchemist for 49 years). Born about 1120 A. D.

(Read: "Liber de Compositione Alchemiae," published under the auspices of the Rosicrucian Order in France.)

Albertus Magnus of Subia, born in 1205 A. D.

(Read: "Secretum Secretorum.")

Thomas Aquinas (St. Thomas) of Italy.

(Read: "Thesaurus Alchemiae.")

Roger Bacon of England, born 1214 A. D.

(Read: "Book of Six Sciences," and others.)

Alain de Lille.

(Read: "Dicta de Lapide Philosophico.")

HISTORY OF THE ORDER

Raymond Lully of Spain, born 1229.

(Read: "Clavicula, or the Little Key." He wrote over 400 R. C. treatises.)

Arnold de Villanova, of Montpellier, France.
Born 1245.

(Read: "Rosarium Philosophorum.")

Jean de Meung of France, born 1250.

(Read: "Roman de la Rose.")

Ferarius, The Italian Monk, born in Italy, 1303.

(Read: "Thesaurus Philosophiae.")

Nicholas Flamel, born at Pontoise, France, 1330.

(Read: "Tresor de Philosophie.")

Peter Bono of Lombardi, born 1330.

(Read: "Margarita Pretioso.")

Johannes de Rupecissa, born 1336.

(Read: "The Book of Light.")

Basil Valentine, of Mayence.

(Read: "Currus Triumphalis Antimonii.")

Isaac, of Holland.

(Read: "Opera Minerali.")

Bernardi Trevisan of Padua, born 1406.

(Read: "La Philosophie Naturelle des Metaux.")

John Fontaine, of France.

HISTORY OF THE ORDER

(Read: "Aux Amoureux de Science," a poem.)

Thomas Norton of Briseto, died in 1477.

(Read: "Ordinall of Alchemy.")

Thomas Dalton of England.

Sir George Ripley, died 1490.

(Read: "Twelve Gates of Alchemy.")

Picus de Mirandola (John Picus, Earl of Mirandola, born February 24, 1463.

(Read: "De Auro.")

Philippus A. T. Bambas Von Hohenheim (known in the Order as "Paracelsus"), born 1493 in Switzerland.

(Read: "Kabbalah of the Spiritual, Astral and Material Worlds.")

Johann Trithemius.

Denis Zachaire of Guienne, born 1510.

(Read: "Opusculum Chemicum.")

Berigard of Pisa (Claude Berigard), 1614.

(Read: "Circulus Pisanus.")

Thomas Charnack, of Isle of Thanet, born 1524.

(Read: "Breviary of Philosophy," and "Enigma of Alchemy.")

HISTORY OF THE ORDER

Giovanni Braaccresco of Brescia, 1580.

(Read: *Legno della Vita.*)

Leonardi Fioravanti of Italy, 1571.

(Read: "Summary of the Arcana of Medicine, Surgery and Alchemy.")

John Dee (or Dr. Dee).

(Read: "Diary of Dr. Dee.")

Sir Edward Kelly (or Talbot) of Worcester, born 1555.

(Read: "Theatrum Chemicum Britannicum.")

Dr. Nicholas Barnaud and Thaddeus de Hozek, Imperial Physician at Prague, 1585.

Henry Khunrath of Saxony, born 1560. Established first Rosicrucian Library in Germany.

(Read: "Amphitheatrum Sapientiae.")

Michael Maier, Grand Master of the R. C. Order in Germany for many years. Born in Holstein, 1567. Died 1622.

(Read: "Revelatam de Fraternitate Rosae Crucis.")

Jacob Bohme of Old Seidenberg, born 1575.

(Read: "True Principles," and *Mysterium Magnum.*) Bohme's books are especially

HISTORY OF THE ORDER

recommended to all Rosicrucians. They contain many R. C. Keys.

J. B. Van Helmont, of Boise le Duc, born 1557.

(Read: "De Vita Eterna.")

Dr. (Ralph) Butler of England, 1557.

Jean d'Espagnet.

(Read: "Arcanum Philosophiae Hermeticae," also known as "Canons of Espagnet.")

Alexander Sethon of Scotland (known as "Sethonius", born in Molier.

Michael Sendevogius of Moravia, born 1566.

(Read: "New Light of Alchemy.")

Gusenhover of Strasburg, 1603.

"Baron Chaos" (Busardier) of Prague, 1648.

Albert Belin (Benedictine), of Besancow, born 1610.

(Read: "Adventures of an Unknown Philosopher.")

Eirenaeus Philalethes of England, born 1623.

(Read: "Fame and Confession of the Fraternity R. C.," also "Euphrates, or the Waters of the East.")

HISTORY OF THE ORDER

Thomas Vaughan of England (a Welshman),
born 1621, died 1665. He translated the early
Rosicrucian papers into English for the English
R. C. Order.

(Read: "Lumen de Lumine.")

Pierre Jean Fabre of Montpellier, Grand Master
in France from 1610 to 1620.

(Read: "Alchimista Christianus.")

Dr. John Frederick Helvetius of Amsterdam.
Grand Master in 1667.

Guiseppi Francesco Borri (Chevalier), born in
Milan 1627.

(Read: "The Key to the Cabinet.")

John Heydon of England. He translated the
famous "Atlantis" into the Rosicrucian story
intended by Francis Bacon, who was also a
Master in the Order.

(Read: "Atlantis," and "Rosae Crucian In-
fallible Axiomata.")

Delisle, of Provence, 1710.

John Herman Obereit of Switzerland, born in
1725.

(Read: "La Connexion Originare des Es-
prits.")

HISTORY OF THE ORDER

“Count Cagliostro” of Sicily, born 1743. He was Initiated in the Temples of Egypt, and became a Continental Master and established many Lodges in Europe. Recent historical researches prove that he was *not* the notorious “Joseph Balsamo” nor guilty of the charges made against him by the enemies of “Light.”

When the Rosicrucian movement reached France, early in the Christian Era, it found there its greatest welcome.

The Pilgrims to the Holy Land had brought back to the Counts and Lords of the South of France reports of the activities of a certain secret society devoted to science and brotherhood. Charlemagne was at the time conducting his great school of learning. History will tell the lay mind considerable regarding this famous school. Charlemagne realized that through education alone could he build his power and hold the reins of government. He gathered around him the brightest scholars of the day, the learned men of many countries, and offered them excellent remuneration if they would devote all their time to the teaching of the pupils in this school. These pupils consisted of

HISTORY OF THE ORDER

himself, his family, his relatives, and a few of the officials he had appointed.

Nor were these learned men limited to teaching. Charlemagne desired to promote learning. He gave his tutors every opportunity to make extensive researches in every field, and provided them with an experimental laboratory. The philosophers—among them was the famous Alcuin—were permitted to travel to other lands and bring back the cream of all knowledge. In this school the great St. Guillem received his education, being a nephew of Charlemagne.

One of these philosophers, Arnaud, was directed to go to Jerusalem in the year 778 A. D. to learn all he could of this wonderful secret society which possessed the key to all science and all art. Arnaud journeyed to Jerusalem and was there directed to Egypt. It is recorded that he made humble application for admission into the Order in Thebes, and then, in accordance with the Law "AMRA," applied for permission to establish a branch Lodge in France.

Arnaud completed his study in Egypt in approximately two years and one month. Because of

HISTORY OF THE ORDER

the difficulty of communication his several letters and reports to Charlemagne failed to reach their destination and in France he was given up as dead—a fate which fell to many who journeyed far in those days. One of his letters to Charlemagne, written on a papyrus in Thebes, was afterward found in a monastery near Milau in France, where it had been deposited in a vault among other rare papers for some unknown reason. In it Arnaud makes a very glowing report of his discoveries, and refers to the body of “silent students clothed in white as pure and spotless as their characters but diligent in their mastery of God’s laws and privileges.” In closing his report he says: “Should it be my privilege, my great honor, to bring to our land the seal and signs of this great school, we shall have in our midst the power which our beloved Master may use in destroying all ignorance, provided, of course, our Master shall deem it wise and beneficial to humble himself, not to those who ask it, but to God, and thereby become as one of the disciples of our Lord Jesus.”

The significance of this closing sentence will be brought to mind when it is recalled that the re-

HISTORY OF THE ORDER

ligious feeling in Charlemagne's school was very intense and sincere. And, bear in mind, Arnaud was trying to diplomatically and respectfully state that it would be necessary for Charlemagne to become a humble suppliant for admission into the Order if he wished to become a Master of the Order in France—a position and honor which Arnaud and his colleagues would certainly have insisted upon.

Arnaud returned to France in 802, however, and was given a very interesting ovation in the chamber of Charlemagne's throne. Charlemagne did not become a Master in the Order, but after two years' delay permitted a Lodge to be established in Toulouse. The original Lodge was founded in a temporary monastery on the outskirts of Tolosa—the ancient city—which is now in ruins some little distance from the present city of Toulouse. Part of the Altar of this first Lodge in France was still preserved by the archivists of the Order in France in 1909, though it was much the worse for very severe handling during the many religious wars in the Provinces.

HISTORY OF THE ORDER

Arnaud became the Master in that first Lodge which held its opening convocation about 804-805. (The difficulty with exact dates is due to the many changes in the calendar and in interpreting the various methods of keeping records in those days.)

The first Grand Master of France was Frees, who reigned from 883 to 899 A. D. Until that time Grand Masters were not appointed. There was to be only one Lodge in any country, according to the original plans, and the Master of that Lodge held no other power or authority than rule over the one Lodge. The granting of charters was still in the hands of the Supreme Council. But it was Frees who brought before the Council the advisability of establishing a Grand Lodge in certain countries and giving to its Masters the right to grant charters to other Lodges within the same national confines. It was only one year before Frees passed to the beyond—898—that he received his authority and instructions to establish other Lodges in France and the second Lodge was immediately established in Lyons.

There were many devout students of the Order in Toulouse who lived in Lyons and they lost no

HISTORY OF THE ORDER

time—after years of waiting—in getting a very flourishing Lodge established there. Many years later—1623—the Masons in Lyons organized a Rose Croix degree in the same city to please the many Rosicrucians who were Masons. The Masonic body was organized at a Council held there July 23rd, 1623.

In the meantime the Order in France had spread very rapidly and had attracted wide attention. Some of the Monks in the various monasteries in the South of France became interested, and without mentioning names at this time—let it be known that some of these Roman Catholic persons, devout and sincere, rendered a great service to the upbuilding of the sanctity of the Order by contributing many beautiful moral and spiritual creeds and dogmas.

Finally in 1001—the year when all the South of France was expecting the end of the world—according to an old Biblical prophecy—the Order in France established a Rosicrucian Monastery—the first in the world—in the old Roman city of Nemausus, now Nimes.

HISTORY OF THE ORDER

This Monastery became the nucleus for the great Rosicrucian College or Ecole R. C. which flourished in France from the twelfth century to the middle of the sixteenth and which was revived again in 1882 in Montpellier.

The history of the Order in France is very interesting. The most minute facts of the early history were recorded by Phonaire, who was the Official Historian of the Order in 1132 to 1134. The later history was compiled by a number of Masters of the R. C., R. F. and preserved in the archives in the Dongeon at Toulouse. This latter city has been the meeting place of the French Supreme Council since 1487. France held second place in strength of number of members, Germany holding first place, and England third. Egypt of course, was the great Supreme Center, but had only a comparatively small number of members.

In France today—at this very hour—the loss of membership through the great war is seen to be enormous. Of the French Supreme Council of twenty-five, there were living in December of 1915 only seven. But the loss in Germany has been even greater. So many of the Brothers of the

HISTORY OF THE ORDER

Order in France were living in the South of France, that although they were called upon to bear arms, they did not reach the front. Then, again, a great many of the French Brothers were older men and men who held high offices in the army, navy, and general government and they did not participate in the actual conflict.

The Order spread into Germany shortly after the Grand Lodge was established in France. Charlemagne himself was the first to introduce the Order in Germany, for by his command one Mause settled somewhere along the Rhine near Coblenz and there began a propaganda for members in a quiet dignified manner. He never lived, however, to see his work bear fruit, for the restrictions placed around membership were severe and too stringent. But in 1100 a Lodge was established in Worms, which became the Grand Lodge.

The work grew rapidly in Germany during the twelfth century, but it remained so secret and so inactive in its outward manifestations during its 108 years of inactivity that little was known of the Order or its members. Toward the beginning

HISTORY OF THE ORDER

of the fifteenth century a spell of quietude—of dormancy—came again to the Order and as its members passed on few were admitted. Religious controversies and other troubles not of interest here threatened the complete destruction of the Order. At the beginning of the fifteenth century there were only about seven hundred Brothers and Sisters of the Order living within the jurisdiction of the German Grand Lodge at Leipzig.

But in the fifteenth century—at almost the last moment—the great revival came again. And whilst this great revival brought new life, new vigor and new hope to the Order in Germany, it has proved to be the most perplexing one that ever came to the Order anywhere throughout the world. It has left a question, a doubt, unanswered and unsettled, in the layman's mind and has caused more misunderstanding of the Order's true history and ancestry than this humble attempt by me will ever be able to make clear.

CHAPTER IV

THE 108-YEAR CYCLE AND "C. R-C."

IT is necessary, just at this point in the history, to refer to one of the very mysterious and puzzling laws of the organization, the origin of which is lost in the traditional history, but the general acceptance of which accounts for many of the peculiar breaks in the activities of the organization.

It appears from many ancient writings that in the first centuries preceding the Christian Era the organization complied with a regulation which may have been established centuries before, or may have been tried at this time as a new regulation. This regulation called for a periodicity of active and inactive cycles, each of 108 years. The number of 108 is significant in itself to all occult students, but just why this new regulation was brought into effect is not known.

HISTORY OF THE ORDER

According to the terms of this regulation, every branch jurisdiction was to select a certain year as the anniversary of its original foundation, and from that year onward operate in accordance with the periodicity of cycles.

A complete cycle of existence from birth to rebirth was to be of 216 years. Of this cycle, the first 108 years was to be a period of outer, general activity, while the second period of 108 years was to be a period of concealed, silent activity, almost resembling complete dormancy. This period of inactivity was to be followed by another 108 years of outer activity, just as though a new Order of the organization was born without any connection with the previous cycles. This regulation seemed to be a close analogy to the cycles of birth and rebirth for the human family, except that the number of years in each cycle was different. Just as man's rebirth on earth was considered a reincarnation of his previous existence, so each new birth of the organization in each jurisdiction was to be considered the birth of a new organization as a reincarnated soul in a *new body*.

HISTORY OF THE ORDER

So we find in the first few centuries preceding the Christian Era the Order seemed suddenly to disappear from all outward existence and all outward activity in some of the older branches in the Orient. So far as the uninitiated were concerned, and so far as the casual historians recorded the events, the older branches forming a part of the foundation of the Rosicrucian Order suddenly ceased to exist without any explanation, or any indication that they would be revived. The members of the branches, and the great leaders, did not cease to carry on their *individual* activities, and we know from the records of the organization that, according to the rules and regulations regarding these periods of silence, during the 108 years of inactivity the members of the organization privately initiated their own descendants in their immediate families, but accepted no new members from the profane world. Thus several generations of Rosicrucians, initiated within the privacy of homes or secret temples, continued to carry the heritage of the Order in some lands, while outwardly and in all of its general activities the Order seemed to have gone out of existence.

HISTORY OF THE ORDER

Then for several years preceding the time of the new birth, many prepared themselves by getting in contact with an active branch of the organization in other lands, and at the proper time announced in their own land the birth of a new cycle of the Order.

In most of the foreign lands the periods of dormancy and the periods of activity were not coincidental. Therefore, we find, for instance, that Germany was in the midst of a period of dormancy so far as the outer activities of the Order were concerned, during a time when the Order was very active in France and Holland. And again we find that the Order was inactive in France just at the time that the Order had its new birth in Germany, and the Order in England was in the very center of its period of activity.

The Mystery of C. R. C.

As the time approached for each jurisdiction or country to have its new birth of the Order, arrangements were made for the usual issuance of a manifesto or pamphlet setting forth the beginning of a new cycle. Just when this custom was

HISTORY OF THE ORDER

adopted it is difficult to say, and of course in the early pre-Christian days, the issuance of pamphlets or printed matter was impossible, and so a decree was promulgated or disseminated by word of mouth and by the display of a certain symbol among the people. This manifesto, decree, or symbol, announced the opening of a "tomb" in which the "body" of a great master, C. R.-C., was found, together with rare jewels and secret writings or engravings on stone or wood which empowered the discoverers of the "tomb" to establish the secret organization once again.

We will find later on in our history that when the time came for the new birth in Germany, the incident of the opening of the "tomb" was given wider circulation than had ever been given to a similar incident in any land before. This was due to the invention of the art of printing, which made possible the distribution of the manifestos and the announcements in the form of pamphlets issued in five different languages, and disseminated through many nations at the same time. Coming at a crucial hour, as we shall see, in the evolution of religion and philosophy, and being so widely dis-

HISTORY OF THE ORDER

tributed, the pamphlets of the seventeenth century attracted such universal attention among persons who had never heard of the organization before that a common impression was created and recorded to the effect that a *new* organization, never known in the world before, had come into existence through the discovery of a tomb, and the body of a person unique in history. This false impression was recorded in so many later histories, that even today we are required to explain the misconception.

It must be apparent to the reader of this history that the discovery of a "body" in the "tomb," or the finding of the "body" of a person known as C. R-C., is allegorical, and is not to be taken in a literal sense. In the first place, the word "body" in the language in which it was first used, was symbolical of something entirely different than the *physical body* of a man. In the second place, the initials C. R-C., did not mean *Christian Rosenkreuz*, except as the words represented by those initials were translated in the *German* language. The initials C. R-C., standing for the *Christus* of the *Rosy Cross*, may be translated into the Latin,

HISTORY OF THE ORDER

French, and other languages without any change; therefore the initials C. R-C., when first used were not the initials of either *German* or *French* words, but of Latin words.

Those writers of mystical and fantastical stories who have tried to present the story of C. R-C., by stating that these initials were those of an individual, are wholly unacquainted with the facts. Even if the spiritual person represented by the "body" of C. R-C., were the same in each cycle, through a series of reincarnations, such a reincarnated person would be a different *earthly individual* in each incarnation. For that reason it must be understood that there was no one earthly person who was *uniquely* and *exclusively* known as C. R-C., in any cycle of the Order's existence. Our records refer to at least twelve discoveries of "tombs" containing the "body" of C. R-C. in different lands preceding the greatly popularized incident in Cassel, Germany, in the seventeenth century. And there have been similar incidents in the history of the Order since the one in the seventeenth century.

HISTORY OF THE ORDER

Therefore, when the student of the history of the organization finds the various breaks in the outer activities of the organization he soon notices that there is a periodicity to the breaks, and almost unconsciously sets down the dates of the cycles of activity and dormancy. We shall note a few of these dates as we proceed with the history in the different lands.

However, everyone who reads in some of the modern mystical books, and even in those that claim to be Rosicrucian, the story of "Christian Rosenkreuz" being the *original founder* of the Rosicrucian Order in Germany (speaking of C. R-C. as though he were an earthly person who invented and established the first lodge of Rosicrucians anywhere in the world) will know at once that the writer of the account is unfamiliar with the facts and has mistaken the allegorical story for an actual event. The other explanation of the Rosicrucian work, by an author of this calibre, may be easily placed in the same category of reliability. And, when the seeker comes in contact with a mystical organization, or a "Rosicrucian" group, that claims that it has its *authority* and

HISTORY OF THE ORDER

power derived from the organization started by "Christian Rosenkreuz" in Germany, or that it is a descendant from the original lodge established by C. R-C in Germany, he will know also that the claim must be fictitious and wilfully misleading; for the facts contained in this history will show that the Order was in existence in many lands before the popular new birth of the Order in Germany in the seventeenth century, and that any Rosicrucian student and most certainly any leader of Rosicrucian activities connected with the genuine organization would have the correct story and the correct facts which are available to all of those who are truly affiliated with the real organization.

CHAPTER V

THE POPULAR REVIVAL IN GERMANY

S intimated in previous paragraphs of this history, the most popular and puzzling incident in the whole history of the Rosicrucian Order is in connection with the third or fourth revival of the organization in Germany. Coming as it did, at a critical time in the awakening of the religious consciousness of the people, and when various reforms were being instituted and attacks were being made upon older institutions, with a promulgation of ideas for newer ones, the announcement of the birth of the Rosicrucian Order for the new cycle in Germany was considered by many as a part of the general reform taking place throughout that country and other lands. The revival would never have become so popular nor attracted so great attention if it had not been that for the first time in the his-

HISTORY OF THE ORDER

tory of the Rosicrucian Order, the art of printing was freely used.

Such a use of printing was almost unique, and it naturally attracted the attention of persons who were easily convinced that great wealth and great power were back of this national and international program, and for this reason other pamphlets and booklets were written criticizing, commenting upon, and attacking the organization, as well as praising it and endorsing it.

The mass of literature resulting from the opening announcements of the German revival constitutes one of the very dependable sources of historical information regarding the Rosicrucians, and at the same time constitutes one of the deplorable problems that confronts every seeker for real information.

Many of the pamphlets and booklets issued by critics or by enemies of the organization, or even in some cases by persons who merely wished to attain prominence or attract attention through writing about the organization, without any real knowledge of the subject, resulted in a mass of misinformation, a great deal of which eventually

HISTORY OF THE ORDER

found its way into encyclopedias and general histories. To this very day, the average newspaper, magazine writer, or seeker for information regarding the organization, who turns to one of the standard encyclopedias or histories of literature, religion, science, or art, is very apt to come in contact with misleading statements based upon the critical essays written about the organization during this period of the German revival.

It is not my intention to take space in this present history to review the facts relating to the revival in Germany, but merely to call attention to the outstanding points connected therewith, because the real history of the revival, as well as the theoretical and misleading history, has been published in many books and can be found in many articles and essays dealing with Rosicrucianism.

The opening salute of that revival was the sudden and mysterious publication of a book briefly called "The Fama." In just what year the original pamphlet entitled "The Fama Fraternitatis" was issued in Germany is really unknown; for there were so many editions in so many languages appearing in a number of different cities at slightly

HISTORY OF THE ORDER

varying dates. Judging from copies which have been collected, one may see that the pamphlet appeared during the years 1610 to 1616, or even later. It is generally conceded that most of these were printed at Cassel, in Germany, although the English edition and the French edition were probably printed in other countries. As is natural with all of the ancient Rosicrucian literature, the authorship was veiled with a symbolic name, and a great deal of the literature of the period of revival in Germany was signed with the name of *Christian Rosenkreuz* when the pamphlet was in German, or with a similar name translated in other languages when published in foreign lands; or else the principal character telling the story in the announcements or proclamations bore this symbolical name. Of course, the name translated into our English means "a Christian of the Rosy Cross."

The pamphlets were addressed to the learned persons of the world, particularly of Europe, and appealed to the educated and cultured, and it is very doubtful if any of the learned persons in Germany or other lands who read those pamphlets believed that the name "Christian Rosenkreuz"

HISTORY OF THE ORDER

was the actual bona-fide name of any person. However, today throughout the world we find thousands of persons, and especially those who have attempted to write misleading articles about the Rosicrucians, or who have attempted to found and organize commercial propositions selling so-called Rosicrucian books, who seem to really believe that the name "Christian Rosenkreuz" was the name of an individual, and that this individual was the real author of the "Fama" and other pieces of Rosicrucian literature, and likewise the *founder of the entire Rosicrucian Order* which had its beginning, according to their belief, in this very establishment during the years 1610 to 1616.

The other general opinion regarding the authorship of these pamphlets is one which was born in the minds of a great many persons who criticized the organization during the seventeenth century. They believed that an individual by the name of Johann Valentine Andrea was the real author of the "Fama," and the later book called the "Confessio Fraternitatis R. C."

In the year 1614, the "Fama" had attained nationwide popularity in its way, and had created

HISTORY OF THE ORDER

a real public sensation, and at that time Andrea was but a young man of twenty-eight years. He was born at Wurtemberg, on August 17, 1586. He was of a family devoted to the Lutheran form of reformation, and although Andrea was raised according to strict orthodox religious principles, he did come under the influence and instruction of a group of theologians and philosophers, two of whom were mystically inclined, and one of whom was one of the high officers of the Rosicrucian Order in Germany. The public knew nothing of his studies under this Rosicrucian teacher, but it knew or heard something of his mystical view points, and this was sufficient to make some start the story that Andrea was the real author of the Rosicrucian pamphlets.

As has been intimated heretofore, the Rosicrucian Order has always been subject to the law established by itself; one hundred and eight years of activity and one hundred and eight years of inactivity. We now have sufficient record, in the form of manuscripts, documents, and official papers not available or known to the German public in the seventeenth century, to show conclusively

HISTORY OF THE ORDER

that the Rosicrucian Order was not born for the first time in the history of the world in Germany, in 1610 or 1614, but had existed in many lands for many centuries previous thereto, and had had cycles of activity and inactivity in Germany for several centuries before the revival to which we are referring. Even the "Fama" itself referred to the fact that the symbolical author of the manuscript or the symbolical characters in the story had been members of the organization centuries previous. All of this has been overlooked by those who still claim, especially in America, that a German whose true family name was "Christian Rosenkreuz," invented, and established the Rosicrucian Order, for the first time in the history of the world, in the years 1610 to 1614, in Germany.

One of the many well established facts regarding the history of the Order, which proves the existence of the Order of the Rose Cross or Rosy Cross throughout Europe before 1610, is the story of the founding of one of the branches of the Rosicrucian activities.

Throughout Rosicrucian literature, reference will be found to peculiar initials and strange names

HISTORY OF THE ORDER

usually connected with the title "Militia Crucifera Evangelica." The "M. C. E." has always been a puzzle to those who have not worked through the complete history of the Order, and at the same time it has continued to be one of the most essential forms of Rosicrucian activities in many lands.

It may be that the following facts regarding the "M. C. E." will interest those of my readers who have never had the privilege of learning the real facts before, and it will probably set at rest the hundreds of questions that have been in the minds of Rosicrucian research workers for many years.

As stated above, the revival of the Rosicrucian work in Germany in 1610 to 1614, which constituted the beginning of one of the new cycles of one hundred and eight years, occurred when most of Europe was being torn by various forms of religious reformation and strife between church and state. Throughout each of the countries of Europe, various secret societies or military organizations had been formed to protest against the established activities of the larger church, or to stamp out the growing freedom of religious thought and practices of the so-called heretics.

HISTORY OF THE ORDER

Thus we find that for many years before the revival of the Rosicrucian Order there had been established, for instance in 1511, as typical of the many secret religious bodies, a "Holy League" composed of those persons who had pledged themselves to support the church against its critics, even to the extent of taking up arms and carrying on warfare in "the name of the cross." The *Holy League* was perhaps the most famous or powerful of these organizations, but there were so many others, and with so many different purposes or ends in view, that historians have been incapable of classifying them or even determining the real part that any of them played in the changes that were made. During all these years of strife and contention, the *cross* either as a Christian symbol or as adopted by the early Crusaders in the eleventh, twelfth, and thirteenth centuries was used as the standard under which the wars and other forms of persecutions were conducted. And to the worshipper of the ancient cross, who had its *real symbolism* in his mind and heart, the use of the cross in the manner in which it was being

HISTORY OF THE ORDER

employed by these contending organizations brought grief and deep sorrow.

Our records show that the Rosicrucians early protested against the cross being carried on staffs or painted on flags that were carried into the battles and into the fields of bloodshed, as well as into the plans and schemes for tortures and persecution. To the Rosicrucians, the use of the cross for such destructive work was not only irreligious and a sacrilege, but a mystical insult and a spiritual crime. It is easy to believe that the Rosicrucians, wherever they could avoid doing so, took no part in any of these religious strifes and contentions, and it is easy to believe that they never permitted themselves to carry any standard that bore the cross in public affairs.

Matters became so bad in connection with the use of the cross in this sorrowful way that finally the Rosicrucians decided to revive an ancient organization to defend the cross against its misuse. The idea of re-establishing this organization was born in the mind of the Grand Master of one of the inactive branches in Germany. His name was Simon Studion, and he was born at Urach in the

HISTORY OF THE ORDER

state of Wurtemberg in 1543, and later attained the high degree of Emperor in Germany. During the year 1586 he planned an international convention for the purpose of organizing a special body of Rosicrucians to defend the cross against its misuse in destructive and sorrowful activities. After communicating with the leading Rosicrucian officers in various lands, and receiving their wholehearted approval, a convention was called in Hanover, where was located the "silent" Grand Lodge of the Rosicrucians for that part of the country. The meeting was officially called "Cruce Signatorum Conventus," and its opening session was held on July 27th, 1586. Studion himself made the opening speech, reading the history of the original *Militia* formed in Palestine soon after the founding of the first Christian churches; and then introduced the high representatives from many lands and the legates from the many thrones which gave support to the movement. The records show that the convention and its plan was sponsored particularly and specifically by Henry IV, king of France and Navarre, who had received the "arms" of the ancient *Militia* through direct authority

HISTORY OF THE ORDER

from the Militia in Palestine, Queen Elizabeth of England, and the king of Denmark, as well as the nobility of other lands. The organization thus formed used the ancient name, "Militia Crucifera Evangelica," and was established as an organization of loyal Rosicrucians who would defend the cross, not especially the Rosy Cross, but the ancient and much loved cross of all times, against its use in religious persecution, religious warfare, or destructive contests of any kind. Each who signed the great scroll at that convention became titled or knighted as a *Chevalier* and a secret worker to *protect* the Rosicrucian organization in its constructive activities, revive the pure mystical teachings of the Pristine Christians and Rosicrucians, and prevent persecution of any kind because of freedom of religious and scientific thinking. A few years later, when the records of activities of this great organization had been gathered from all lands, Studion compiled a great book of nineteen hundred and ninety-five (1995) pages, dedicated to Frederick, the Duke of Wurtemberg, who was a Grand Master of the Rosicrucians. This book was called "Naometria," and it was completed in

HISTORY OF THE ORDER

1604. The book is still in existence, and has been examined by eminent historians and quoted from quite freely. A great part of the book is devoted to a history of the cross and its real spiritual and mystical significance, to the rose and its symbolical meaning, and to the special significance of the rose and the cross when united. The book also contains a complete outline of the Rosicrucian doctrines, reviving the ancient teachings of the Esenes, the first Christians, and the Rosicrucians, giving emphasis to the spiritual and mystical significance of the Rosicrucian ideals. It has never been copied or republished in any form, and constitutes one of the secret publications that has been examined only by eminent historians who have sought positive proof of the existence of such a book or such a Rosicrucian monument before the year 1610.

The "Militia Crucifera Evangelica," as a defensive body within the Rosicrucian Order, still exists, and is the real secret organization within the Rosicrucian Order. Membership in it is limited to those who are well trained in the fundamentals of the Rosicrucian teachings, and to those who have

HISTORY OF THE ORDER

pledged their entire lives in devotion to the Rosicrucian ideals, and especially to the support of the individual Imperator in each country where the Militia exists. It is the existence of such an organization that makes possible the continuous protection of the Rosicrucian Order, and enables the Order itself to carry on its national and international secret activities in a conservative, uniform manner, to the glory of the Order and the preservation of the true, secret doctrines of Jesus. To be admitted and titled as a *Chevalier* of this Militia is to receive one of the highest honors and highest acknowledgements in the Rosicrucian Order. The ranks of the Militia are open to both men and women who have been individually tested and tried for a number of years by the Imperator of the jurisdiction where each member lives.

An interesting point in connection with this is the fact that this organization and this convention of Rosicrucians was brought about by the cooperation of thousands of well-trained, tried, and tested Rosicrucians, and the first convention and meeting of establishment was held on July 27th, 1586, which was several weeks before Johann Val-

HISTORY OF THE ORDER

entine Andrea was born. The statement, therefore, on the part of those unacquainted with Rosicrucian history that Andrea was the author of the books that "established the first and only Rosicrucian Order in the world in Cassel, Germany, in 1610," appears ridiculous.

The real author of the pamphlets that brought about the revival in Germany was none other than Sir Francis Bacon, who was Imperator for the Order in England and various parts of Europe at the time. And his other Rosicrucian writings, and especially his book the "New Atlantis," admittedly his own work, clearly indicate the connection between Bacon and the publications issued in Germany between 1610 and 1616.

CHAPTER VI

THE BIRTH OF SEMI-ROSIKRUCIAN ORGANIZATIONS

 HE spread of Rosicrucian activity throughout many lands and the attraction to its ranks of many notable characters brought the organization before the attention of men of other associations and affiliations. It was but natural that other secret societies or fraternal Orders would investigate the increasing activities of the Rosicrucian Order, and attempt to discover whether there was any invasion of their sacred rites by the Rosicrucians, or anything of value in the Rosicrucian work that might be added to their own rituals and forms of operation.

We will not consider at all the attempts made by various persons at various times to institute "Rosicrucian" lodges or bodies solely for the purpose of attracting the gullible or misleading the un-

HISTORY OF THE ORDER

wary. A number of such organizations came into existence in France, Germany, and England, but in each case their existence was very short and they left no records of importance.

We do find, however, that preceding the year 1870 the development of Freemasonic activity in England, with an increasing desire on the Continent to add more and higher degrees to the existing Masonic degrees, tempted many men of that organization to establish separate secret bodies or societies composed entirely of Masons, and in some cases new Orders or organizations were established with many degrees based upon Masonic symbols and requiring Masonic affiliations as a pre-requisite for affiliation in the new organization. The histories of Freemasonry deal extensively with this unfortunate situation throughout Europe, for these many bodies attaching themselves to Freemasonry or attempting to associate themselves with the Freemasonic ideals caused endless trouble and confusion. A few of the bodies thus formed became recognized eventually and carried on a very excellent work. It must be stated, however, that the average Freemasonic enthusiast of that

HISTORY OF THE ORDER

period was a true seeker for *light* and arcane wisdom, and while he found much in the Freemasonic teachings to gratify his desires or satiate his hunger, many seemed to feel that there was more *light* and wisdom to be found elsewhere and especially in the secret, *mystic* schools which had their origin in the Oriental philosophies. Probably in those days, as today, many of those in the Freemasonic fraternity did not realize the vast amount of wisdom that is contained in their symbology and in their carefully veiled teachings. However that may be, the fact remains that many of the most prominent Freemasons congregated at different times in different places, and formed research bodies or groups devoted to the sole purpose of unearthing such additional teachings or arcane knowledge as might be found in the various *mystic* schools of the day.

It is not surprising, therefore, that a number of these men were attracted to the Rosicrucian Order, especially the English lodge, and were admitted therein and became enthusiastic students and workers. The time came, however, when some of these believed that further research of an inde-

HISTORY OF THE ORDER

pendent nature might be carried on outside of both the Rosicrucian and the Freemasonic circles, and that members of both organizations might come together in a more social and informal manner at stated periods for the purpose of discussing the work and teachings found in both bodies.

Out of this belief was born a new organization in England, the activities of which and the imitation of which has caused considerable confusion in the minds of those persons seeking to trace the origin and development of the Rosicrucian Order.

It appears from definite historical records that some men of learning, and with typical research minds, united to establish what they intended to be a *Masonic* Rosicrucian Society. During their first discussion of the plans of organization it was clearly stated that application for membership in this new body would be limited to Freemasons, in good standing, who had mastered the elementary work of Freemasonry and were desirous of such philosophical knowledge as was available just beyond the limited teachings of their organization. The transactions of this organization, with minutes of its meetings, are to be found in the British

HISTORY OF THE ORDER

Museum in London, but the most definite statements regarding its purposes and activities are found in a small historical treatise prepared by the Supreme Magus of the body, Dr. W. Lynn Wescott. It appears that after much discussion they decided to call their new society the "Societas Rosicruciana in Anglia," which name, translated, would mean the "Rosicrucian Society in England," and the initials of this title were used as a brief form of name in their literature. Hence the initials S. R. I. A. became significant among Freemasons during that period, and have contributed to considerable confusion in Rosicrucian records ever since.

It seems that the prime mover of the formation of this new society was Robert Wentworth Little, who is referred to in the records as a clerk at Freemason's Hall, and subsequently secretary of the Royal Institution for Girls. Freemason's Hall at that time was the national headquarters for the Freemasonic Brotherhood, and it contained a large library and archive of ancient books and manuscripts, to all of which Mr. Little had access. Nowhere in the early literature of this organization

HISTORY OF THE ORDER

or in its early histories as published by them is there any reference to any of the organizers of the S. R. I. A. being initiates or members of any other Rosicrucian body or organization anywhere in the world. This a very important fact, and its significance is emphasized by the statements of this society regarding the methods or means of its foundation.

In its official history, this S. R. I. A. says that the society was "designed" by Robert Wentworth Little, who "rescued" some rituals from the store-rooms of Freemason's Hall. In other places there are statements indicating that Mr. Little found and *borrowed*, or as Mr. Waite, the Masonic historian, states it, abstracted certain papers containing Rosicrucian ritual information preserved in the Grand Lodge library of Freemason's Hall, and that these papers had been discovered before him by William Henry White, who was Grand Secretary of the Freemason's until 1857. According to Dr. Westcott, Mr. White had received some "Rosicrucian" initiation in an English "Rosicrucian" Lodge, but had never made any use of the ritual manuscripts which he had discovered in the Masonic Grand

HISTORY OF THE ORDER

Lodge library. Waite calls attention to the fact that other records intimated that after Mr. White's retirement from the office of Grand Secretary, wherein he had charge of such secret or private manuscripts as were not a part of the Masonic work, Mr. Little *borrowed* the Rosicrucian papers and called to his assistance a year or so later one Kenneth R. H. McKenzie, who claimed that while he was in Germany he had been admitted by some "German adepts" into *some* of the "Rosicrucian" system, and had been licensed to form a group of Masonic students in England "under a Rosicrucian name."

To the sincere and careful student of Rosicrucian history, the claims made by Mr. McKenzie seem peculiar, to say the least. Why some *German adepts* should admit an English person into just a *part* of the Rosicrucian work and then *license him* to establish a group of *Masonic* students in England under a *Rosicrucian* name, while there was a superior Rosicrucian body already active in England, is certainly incomprehensible. It would appear to be the first and only instance in Rosicrucian history where the Rosicrucian Order licensed

HISTORY OF THE ORDER

anyone to establish a Masonic Rosicrucian body. And it is as inconsistent with Rosicrucian principles as would be the *licensing* of a Freemason to go into a foreign land and establish a Masonic body composed of Rosicrucians.

Dr. Wescott states also that the peculiar Rosicrucian papers that were taken from the Masonic archives were used to reconstruct a branch of the *Red Cross of Rome and Constantine*, as well as the foundation of the S. R. I. A.

The important points in this brief sketch of the foundation of the S. R. I. A. are: First, the fact that the Society was started by an individual without any charter or authority from the local Rosicrucian lodge in London, or any other superior Rosicrucian body in Europe; and, secondly, that with some manuscripts of an indefinite nature a society was formed which did not adopt the universal name of the Rosicrucian Order or the universal symbol as used by the rest of the Rosicrucian fraternity throughout the Continent. In no other Rosicrucian records do we find any reference to any German branch that *licensed* Mr. McKenzie, and, therefore, we may believe that Mr. Mc-

HISTORY OF THE ORDER

Kenzie's contact with the Rosicrucians, if real at all, was a contact with some of the temporary, clandestine, or imitation societies that flourished for short intervals in foreign sections.

Mr. Waite, in his English history of the Rosicrucian Order, gives little credence to Mr. McKenzie's Rosicrucian connections, and emphasizes the fact that "in 1866 Mr. McKenzie was a Freemason only under some foreign and apparently unacknowledged obedience." Mr. Waite, who is not only a Rosicrucian historian but an eminent Masonic historian and writer as well, plainly indicates the cloud that seems to cover the origin and foundation of the S. R. I. A., and shows that while it became a very worthy, learned, and highly respected organization of gentlemen seeking for arcane wisdom, enjoying a banquet and social evening once a month, it was not in any sense a part of the Rosicrucian organization throughout the world.

However, the S. R. I. A. in England continued to grow and called its first branch the *Metropolitan College*. We find that its principal officers were well-known Freemasons, and included a num-

HISTORY OF THE ORDER

ber whose names we shall mention later. Mr. McKenzie visited Paris some years later and there met one who was deeply interested in the Rosicrucian work and teachings, as a member of the regular Rosicrucian organization, known as Eliphaz Levi, but whose name was Alphonse Louis Constant. Levi was invited to become a part of the S. R. I. A. in England, and did so with the belief that the founders were really sincere in their desire to delve deeply into Rosicrucian lore, and become neophytes of the Rosicrucian organization. A few years after his acceptance into the S. R. I. A., Levi evidently felt that his connections therewith were not proper in the face of his affiliation with the regular Rosicrucian Order, or else he discovered reasons for withdrawing. It is indicated that he had many arguments with the founders of the new English society, and disagreed with their viewpoints in many ways, and finally withdrew his membership. The records of the S. R. I. A. state that Levi incurred their displeasure by the publication of his several books on magic and ritual, but since these books have proved to be excellent and highly endorsed by mystics of many periods, such

HISTORY OF THE ORDER

explanation does not seem to be justifiable. Levi passed through transition in 1875, and in the last years of his life was not connected with the S. R. I. A. in any way.

Other branches of the S. R. I. A. were established at Bristol, Manchester, Liverpool, and Yorkshire, and finally a branch was established in Canada. All of these branches were strictly limited to Freemasons. In fact, the ritual adopted by the S. R. I. A. for its initiations and ceremonies was quite distinct from the Rosicrucian ritual of the regular Order, and the fantastic names of the various grades were designed to appeal to Freemasons. The highest of these grades were limited to Freemasons who were in the higher grades of their own organization.

Prior to the establishment of a branch of the S. R. I. A. in Canada, which was intended to be under the British or English jurisdiction of the organization, a branch was authorized in 1880 to be known as the "Societas Rosicruciana in U. S. A." According to some records, a few Freemasons living in Pennsylvania were granted permission to establish this American branch, but

HISTORY OF THE ORDER

there is no record of its having existed very long in Pennsylvania, and in the meantime the Canadian branch carried on very successfully among the Freemasons in that part of North America.

We have seen the official copies of the charters issued by the Canadian branch which was known as the "*Societas Rosicruciana in Canadensis*." These charters were preserved in the House of the Temple of the Southern jurisdiction of the Scottish Rite of Freemasonry in Washington, D. C. They were issued by the Canadian branch of the S. R. I. A. to Brother Albert Pike and several others of the American Freemasonic organization, particularly because Albert Pike, the honored and respected writer of American Freemasonry, was a very thorough Rosicrucian student. The charter grants to Brother Albert Pike and others the privilege of establishing a Southern College of the S. R. I. A. in the United States, and is worded as though the Canadian branch was unaware that a similar warrant for an American branch had been issued previously to the Freemasons in Pennsylvania. However, a controversy arose over the establishment of a second North American branch,

HISTORY OF THE ORDER

and thereby hangs a very interesting story. It must be borne in mind that these S. R. I. A. branches were not operating as a part of the ancient Rosicrucian Order, and by their own admission did not have the Rosicrucian rituals and teachings nor any warrant, charter, patent, or authority from the Rosicrucian Order of Europe and other lands. American Rosicrucian students were well aware of the fact that the Rosicrucian Order of Europe had previously authorized the establishment of true Rosicrucianism in America in the years 1692 and 1693, and there were many living descendants of those first official Rosicrucians who objected to the establishment of Rosicrucianism in America in connection with any other organization and without warrant or proper rituals. But nothing was done to prevent the S. R. I. A. of England in maintaining a branch of its English work in America, especially in connection with Freemasonry, since it was recognized that the Masonic Rosicrucian society thus being established in America would cooperate with the desires of many of the Masons in giving them that additional light or knowledge along certain arcane lines which they

HISTORY OF THE ORDER

desired, and which was highly praiseworthy. This did not in any way infringe the rights of the Rosicrucian Order. In fact, there was no conflict or discussion in that one regard, because the S. R. I. A. did not claim to have the genuine Rosicrucian teachings or ritual, and was, therefore, entitled to establish a branch of its English body in America. But the controversy referred to started between the various officials and members of the S. R. I. A. and gradually involved the interest of all Rosicrucians; because the argument in regard to two establishments of S. R. I. A. under two different warrants was bringing the subject of Rosicrucianism and the Rosicrucian activities into unfavorable light among those who did not understand the situation. It appears that the gentlemen who were granted the privilege by the Canadian branch to operate in the United States finally withheld any action on their part, while the Brother who held the charter direct from England for the State of Pennsylvania, proceeded to organize a branch, and some spasmodic meetings of this branch were held without attempting to practice the Rosicrucian rituals or introduce the true Rosi-

HISTORY OF THE ORDER

crucian teachings. This was the situation existing in the United States when a third effort was made to establish the S. R. I. A. in America, and the third effort proved more successful, as we shall see from the following facts:

A number of Freemasons in America were admitted into the S. R. I. A. of England in its branch known as the *York College*. They petitioned the English headquarters for permission to continue the work in America under the charter that had been granted for Pennsylvania. They established a branch at Philadelphia and another in New York City in 1880. Eventually these two American branches established a High Council of the society for the United States. This Council then chartered branches in Boston and Baltimore, in the spring of 1880, and another one in Vermont. Practically every officer connected with these establishments was a Freemason, and we must quote here the words of Dr. Wescott, the Supreme Magus of the English headquarters of the organization, who said in an address: "I have been asked to speak on the Rosicrucians because I have the pleasure to hold a high office in the *Rosicrucian Society* of England,

HISTORY OF THE ORDER

so might reasonably be supposed to have studied the history of the Order. But to avoid misconception, I wish to say that *the S. R. I. A. is a Masonic body*—it is composed of Freemasons who have associated themselves in order to study the old Rosicrucian books in the light of history, and to trace the connection between Rosicrucianism and the origins of Freemasonry, the connection which has been alleged to exist by many historians belonging to the outer world.” This statement by Dr. Wescott is taken from biographical sketches in the official literature of the S. R. I. A.

In September of 1889, after nine years of operation as a literary society with banquets, the new branches of the S. R. I. A. in America decided to reform and reorganized their body with the distinctive title “Societatis Rosicrucianae in the United States of America,” (S. R. I. U. S. and not S. R. I. A.). Under this new form of name and constitution, the various branches accomplished very little, and the New York and Baltimore sections seemed to pass out of existence. One of the prominent characters initiated into the S. R. I. U. S. in Boston was Sylvester Clark

HISTORY OF THE ORDER

Gould, who became the publisher of a small Rosicrucian magazine, and who sincerely sought to learn and master the real Rosicrucian teachings. We read in the official literature of this organization the following significant statement: "Membership in these Colleges was limited to Freemasons of the 32nd degree; quarterly meetings were held, and their sessions were devoted principally to banquets, with an aftermath of a literary and philosophical nature, with little if any attempt to exemplify the Rosicrucian degrees with the philosophy they embodied."

In other words, the society had nothing more of a Rosicrucian nature connected with it than the word "Rosicrucian" which they arbitrarily adopted in their title. This was practically true of the national headquarters of the organization in London, and records of this society show that when Rosicrucians belonging to the Rosicrucian Order became affiliated with the S. R. I. A. or the S. R. I. U. S., they did not continue to remain active for a very long period.

According to the literature of the branch established in America, Mr. Gould, who was their most

HISTORY OF THE ORDER

illustrious American member, became "thoroughly awaked to the omission of the real Rosicrucian work, and having received the eighth degree of the society constituting him a provincial magus of the fraternity, engaged in special research work to recover the original rituals of the fraternity." He succeeded in corresponding with some Rosicrucian officers in Europe, and then undertook to revive the American branch of the S. R. I. A., which had become inoperative for a time. It was his intention to make the S. R. I. U. S. a typical Rosicrucian organization if he could secure the permission and authority of the Rosicrucian Order in Europe. According to the records of the S. R. I. U. S., the transition of Mr. Gould occurred on July 19th, 1909, preventing the fulfillment of his personal ambitions in regard to the society, and the work of reorganization devolved upon a few of the other members who were still interested.

It should be noted that in the very month in which Mr. Gould passed to the Great Beyond, another American proceeded to Europe to secure permission to pursue the Rosicrucian work of the international Rosicrucian Order, and made his

HISTORY OF THE ORDER

plea to the regular Order of Europe instead of petitioning the Masonic Rosicrucian society in England. The success of this plea we refer to in a future section of this history.

Those who followed Mr. Gould, after his passing, in trying to re-establish the S. R. I. U. S. in America, finally organized a new body with a different name. According to their official papers, they adopted the name "Societas Rosicruciana in America," which gave them the old familiar initials "S. R. I. A." as their official title. They adopted a revised constitution under this new name in 1919, which became effective January 1st, 1920. Their constitution states that they were incorporated under three different classifications: first, as a church; second, as an academic institution; and third, as a fraternity. In their general literature, they stated: "The Societas Rosicrucians in America, therefore, is a continuation in direct succession from the High Councils of Anglia." In other statements it is said that the society "works in complete harmony and close association with the Masonic fraternity, and constitutionally its major officers are Masons of all rites and de-

HISTORY OF THE ORDER

grees." And furthermore, "the society, deriving from the English fraternity, was incorporated in 1912, and is therefore the active American branch of the Rosicrucian fraternity." These statements have been refuted by published articles in various magazines, and of course it is well known to all Freemasons and others that no other organization of any kind can be a part of Freemasonry unless it is operating under the Freemasonic title and symbolism. And, so far as the S. R. I. A. in the United States being derived from the English fraternity of the same name or charter, or authorized by the same society in England, an article was published in the "Occult Review" of England in recent years, wherein the *Societas Rosicruciana in Anglia* denied that the society in America was sponsored by it or officially recognized by it. And this denial was later acknowledged as correct by the American S. R. I. A., which leaves the American organization standing as a distinctly separate institution operating without any charter from the general Rosicrucian Order of Europe, or any Masonic Rosicrucian body of England.

HISTORY OF THE ORDER

This organization has, therefore, continued as an independent body, establishing a few branches in different cities, and continuing to make its appeal to Freemasons who enjoy purely philosophical discussions without any of the rituals or teachings as used in the various branches of the Rosicrucian Order of Europe and other lands.

Among several other American institutions using the name "Rosicrucian" in about the same manner that the S. R. I. A. of England and America have adopted it, is one which has also caused considerable confusion in the minds of those who attempt to trace the history and activities of the Rosicrucian Order. Since the name and term "Rosicrucian" is not protected by any patents or copyrights of any kind, it may be used in connection with other words for various purposes. Hence there may be Rosicrucian societies, Rosicrucian clubs, or Rosicrucian churches without having any authority from the Rosicrucian Order. It is interesting to note, however, that only one organization throughout the world uses the ancient title of "Rosicrucian Order" and this organization main-

HISTORY OF THE ORDER

tains its active branches in all lands, under the abbreviation of AMORC.

It appears from some historical records that a man by the name of Dr. P. B. Randolph, who was a student of the occult and mystical, came in contact with some Rosicrucian literature or essays prior to the year 1856 while in America. It appears that Dr. Randolph visited London in 1858 and there met a student of mysticism known as Mr. W. G. Palgrave, who claimed to be a member of some esoteric Order in Europe, which was operating under a charter issued by a "Council of Seven." Through this man he was introduced to Mr. Hargrave Jennings, Eliphaz Levi, and several others who eventually formed the High Council of the original S. R. I. A. in England. Dr. Randolph was initiated into this Masonic Rosicrucian body and as an honorary member continued his tour, and returned to America. While in America he wrote a number of books dealing with the subjects of health, marriage, love, and sex hygiene, and in one of them introduced a story about the mystic Rosicrucians, intimating that he was planning to establish some of the Rosicrucian Masonic

HISTORY OF THE ORDER

work in America on the basis of that which was being carried on by the S. R. I. A.

Because of the nature of his books, dealing in unusually plain language with subjects not generally discussed in American literature, and certainly having none of the goodness and high idealism of the S. R. I. A. (London) teachings, he was tried in courts for such publications, and eventually abandoned his entire work because of the condemnation of his writings. Mr. Arthur Waite, the eminent Masonic historian of England, has this to say regarding Randolph's form of "Rosicrucian" activities as considered by him:

"There is no question that he was his own and his first victim, if he thought that his views and lucubrations might stand for authentic Rosicrucian teachings. But in a judgment which makes for justice, it must be added that he revoked his own claim on a vast antiquity. . . . It does not appear that in the matter of the Rosy Cross he did more than give a fresh circulation to some of the old reveries, to the extent that he was acquainted with these by common report and otherwise. . . . In other and more hectic stories, he paraded flaming

HISTORY OF THE ORDER

accounts of the Brotherhood, its immemorial antiquity, its diffusion throughout the world, with suggestions that its ramifications extended to unseen spheres. . . . I have worked through such of his volumes as are available here in England, and have concluded that mountebank as he was, he believed in all his rant and was not lying consciously when this stuff of sorry dreams was put forward unfailingly as the wisdom of the Rosy Cross. This is how it loomed in his mind, and this is what it was in a dream, for it was a thing of his own making. On this subject, he is his own refutable witness, affirming that 'very nearly all which I have given as Rosicrucian originated in my own soul'."

Randolph eventually signed himself in some letters and papers as the "Supreme Grand Master of Eulis for the world," and a few of his friends tried to explain after his unfortunate transition through suicide that he believed himself to be a Grand Master of the "Triple Order." This term is not an official part of Rosicrucian terminology, and there are no documents or papers to be found in Europe indicating that he was ever authorized to establish

HISTORY OF THE ORDER

anything of a Rosicrucian nature in America or elsewhere and none of the historical records of the Order mention his name or his branches as a part of the Rosicrucian history.

Randolph was succeeded by a Mr. Dowd, who tried to continue operating some of the branches which Randolph had established on the Pacific Coast and in several eastern cities, but, *according to their own records*, these branches constantly disbanded when the members thereof discovered that there were no real Rosicrucian teachings or rituals in the work and insisted on withdrawing from the Randolph work and uniting with the regular foreign branches of the Rosicrucian Order. Mr. Randolph and his successors claimed that such actions constituted "treason," and for many years there were bitter quarrels and arguments within his branches over this point, with the branches disbanding and remaining inactive for years at a time. Mr. Dowd was succeeded by a Dr. Edward H. Brown, who likewise was unable to secure any of the Rosicrucian teachings, or maintain Randolph's scheme against the common criticisms and the bad

HISTORY OF THE ORDER

reputation which his writings had brought upon their activities.

In a statement signed by Mrs. Randolph, and which appeared in a fraternal publication as a biographical sketch of the life of Dr. Randolph in 1917, it is said that Dr. Randolph was born in New York City on October 8th, 1825, and that his transition occurred in Toledo, Ohio, on July 29th, 1875; and she further stated that although he organized some branches as late as 1874, they "have long since become extinct."

According to Sedir, the well-known Rosicrucian historian, the work of Randolph was simply a society of "editions"—referring to the significant point that his work was mostly that of publishing various *editions of books* claiming to be Rosicrucian. This point is one which should be impressed upon the minds of every student of Rosicrucian history. The Rosicrucian Order has never been exclusively or even primarily a book publishing business, and a careful examination of the historical writings connected with the Rosicrucian Order shows that none of the books now famous as Rosicrucian manuscripts or official publications ever

HISTORY OF THE ORDER

contained a complete outline of the secret teachings or rites of the Rosicrucians, and what is more important, never *claimed* to contain such things.

It has been a serious and universal law with the Rosicrucian Order that its secret teachings should never be published in book form, or offered for sale to the public, and there is no violation of this law that has ever been brought to our attention. On the other hand, there have been many who were not a part of the Rosicrucian Order or even initiated in its teachings who have attempted to commercialize the desires of seekers by the printing and selling of books which *claimed* to be "Rosicrucian text-books" or books of Rosicrucian doctrines or teachings. It is a notable fact that *none of these books* have made any valuable contribution to mystical literature and have passed into oblivion and can hardly be found in the best libraries of Europe or America. This is true of Randolph's books which claimed to be wonderful revelations of Rosicrucian teachings, but which to-day have no place in the real occultist's library and have not been considered even worthy of preservation in the great reference libraries of the world.

HISTORY OF THE ORDER

Such books as these, catering to the gullibility of the seeker, and often misleading the worthy inquirer, are being published and sold in America today very freely, while Europe most naturally fails to support such publications. We have, for instance, in America, a book called "The Rosicrucians and Their Teachings." This book was written by a New Thought leader, who has written many other books on various subjects and who is *not* a member of the Rosicrucian Order. The book contains none of the Rosicrucian teachings. Such books are harmless in themselves, and perhaps interesting to casual students of mysticism; but they have no place in any list of authoritative publications. It is for this reason that Sedir made his satirical remarks regarding Randolph's society of "editions." The good that Dr. Randolph did as a New Thought pioneer will live for many ages, but the failure of his Rosicrucian movement was due to a complete lack of authority, and no understanding of the Rosicrucian teachings.

Mr. Randolph's work was later taken up again by a Dr. R. S. Clymer, who claimed to be the "successor" to Randolph and to have inherited and

HISTORY OF THE ORDER

acquired the Rosicrucian "authority" which Randolph had. Clymer followed in the same plans adopted by Randolph and conducted an organization consisting wholly of books, a number of which deal with love, marriage, and "sex regeneration," the latter being in such language as to be condemned in any Rosicrucian assembly, if not in any general assembly of ladies and gentlemen. He proceeded to carry on his work first under the name of a publication company, then under various names, avoiding the use of the complete name or correct name of the Rosicrucian Order, and devising entirely new and unique symbols for his Rosicrucian literature without infringing upon the correct symbols in any way. Dr. Clymer continues to operate his sale of books and presentation of personal, "Rosicrucian" teachings under different names from his home in Pennsylvania, without having established any typical Rosicrucian temples anywhere in America, and without having any connection with the regular Rosicrucian Order and lodges of Europe.

Of other semi-Rosicrucian movements in America, we find little in any of the Rosicrucian his-

HISTORY OF THE ORDER

tories of Europe to support their claims to Rosicrucian association. That which was most popular for many years was the Rosicrucian *Fellowship*, established by Mr. Max Heindel. Mr. Heindel was at one time a student of the occult, and in his desire to learn more of the Rosicrucian teachings went to Europe seeking affiliation with the Order. He became discouraged in the many obstacles presented, and finally became a personal student of Mr. Rudolph Steiner, the eminent *Theosophist*, who was an unaffiliated student of Rosicrucian history and principles. Mr. Steiner was at that time inaugurating the work of a new organization of his own creation, and Mr. Heindel became one of his enthusiastic students. Mr. Heindel claims that in addition to this short period of study in Europe, he had a "psychic initiation" into the Rosicrucian Order during a *dream* or a *trance*, whereby he was *authorized* (!) to proceed with the work of bringing Rosicrucianism to America, and later was given permission through the same unnamed and unknown Masters to write a personal outline of his opinions of the Steiner teachings, and issue this to the American public in reg-

HISTORY OF THE ORDER

ular book form. He returned to America, and in 1911 established his printing plant and offices in a very small city of Southern California, and before his transition in 1919 had written a number of books dealing with an outline of his personal "Rosicrucian" beliefs, which are claimed to be a form of "Christian philosophy." So, once again, America was presented with a representation of so-called Rosicrucian doctrines through commercialized books, dealing with many subjects not taught in the regular Rosicrucian lodges of Europe or elsewhere. Mr. Heindel made no attempt to establish lodges throughout the country, as is customary with the Rosicrucian Order in every land, for of course he had no authority from the Order in Europe to do so, and he in no way conducted the work as it is conducted by the Rosicrucian Order.

Unquestionably the work of Mr. Heindel was inspirational and added to the interesting mystical literature of America, but the name of his personal organization and the fact that all his work was conducted through the sale of books, plainly indicated to the Rosicrucian seeker that the work of

HISTORY OF THE ORDER

Mr. Heindel, like that of several others, was unofficial from the Rosicrucian point of view, and "Rosicrucian" only in name. His widow attempted to continue the Fellowship after his transition, but internal difficulties arose and she withdrew from all connection with the Fellowship in the early part of 1932, while a few of its former students attempted to hold together the remnants of an organization that reduced itself to a mere personal interpretation of Christian teachings.

Thus we have written of the various semi-Rosicrucian or unofficial organizations existing in America, including the "Masonic" Rosicrucian activity which started in England and made many attempts to establish itself in the United States. All of these bodies are doing good work in their own particular fields, and aside from the objectionable sex teachings that are found in a few of the books issued by some of these organizations, their publications undoubtedly start many casual students of occult science on a path that leads eventually to the higher teachings.

CHAPTER VII

THE FIRST ROSICRUCIANS IN AMERICA

E HAVE just been speaking of semi-Rosicrucian bodies in America, but we must not overlook the first *genuine* Rosicrucian body to come to American shores. The brief facts given herewith are taken from two excellent books. First, that by Mr. J. F. Sachse, who was an heir and descendant of the first Rosicrucians to establish an official branch of the work in the United States, and second, from Mr. Arthur Waite's *History of the Rose Cross Order*. According to these two books, and the many other books quoted by them in their histories, a movement was started in Europe in 1693, as a result of previous plans to send a colony of leaders in the Rosicrucian work from the principal European branches to America, to found not only a Rosicrucian colony but to establish the Rosicrucian sciences, arts, and trades. The plan had its inception in the book called "The New Atlantis"

HISTORY OF THE ORDER

written by Sir Francis Bacon while he was Imperator of the Rosicrucian Order in Europe, and which plan was later worked out in detail by the principal lodge of the Rosicrucian Order in London known as the *Philadelphia Lodge* or the *Philadelphic Lodge*, named after the city in the East where one of the original mystery schools was located.

In the fall of 1693, the tourists started out in a specially chartered vessel called the "Sarah Maria" under the leadership of Grand Master Kelpius, who was connected with the *Jacob Bohme Lodge* of the Rosicrucians in Europe, and with other officers from the Grand Lodge of the Rosicrucians in Heidelberg. They reached the city that is now known as Philadelphia, and to which they gave that name, in the first months of 1694, and built many buildings in what is now known as Fairmont Park, and later they moved further west in Pennsylvania. Many of their own books and manuscripts prepared in their own printing plant are still preserved in the historical collections of various historical societies of Pennsylvania, and by the descendants of early governors of the State. Mr. Sachse and Mr. Waite have examined many of

HISTORY OF THE ORDER

these manuscripts and books and find in them the undoubted connections with the Rosicrucian Order, and the presentation of the true Rosicrucian teachings. Mr. Waite discusses at length the Rosicrucian manuscripts used by these American pioneers and shows that they were the genuine secret teachings of the Order, and that the activities and regulations of the men and women forming the colony coincided with the standard activities of other Rosicrucian branches. It was here that many important American institutions were established, and valuable contributions to the scientific and art foundations of the United States were laid. The list of eminent Americans who became affiliated with the Rosicrucian activities during the first century of its existence in Philadelphia reads like the roster of American patriots and leaders. Benjamin Franklin and Thomas Jefferson were but two of the outstanding figures in the activities of this national headquarters of the Rosicrucians in America. It would take too many pages in this history to even outline the many unique forms of activities which they created in a spirit of assisting to build up a new nation in a new land.

HISTORY OF THE ORDER

We must call attention again to the fact that this first colony came to America in accordance with the rules and regulations of the 108-year cycle of the Rosicrucian Order. Having started their movement toward America in 1693, it was only natural that 108 years later, or in 1801, this first American movement should close its outer public activities and start its cycle of 108 years of retirement and secret activity. So we find, according to the records, that in 1801 the large colony of Rosicrucians in Philadelphia dispersed and proceeded to various parts of the United States where small branches had been prepared even as far west as the Pacific Coast. The principal buildings in Philadelphia were abandoned, and the members continued to carry on their work in silence. Children were carefully trained in the teachings, and as they reached adulthood were initiated secretly into the organization so that their descendants might also carry on the work.

It was well known that as the 108-year cycle of silence and secrecy closed in the year 1909, the Order would again be authorized and chartered in a public manner and therefore, documents, papers,

HISTORY OF THE ORDER

seals, and jewels were carefully handed down from one generation to another in anticipation of the coming of the year 1909. And, just as Mr. J. F. Sachse became the custodian of many of the manuscripts and jewels, so other descendants, notably those who assisted in the re-establishment of the new Order in 1909, possessed certain papers or "keys" which were useful in re-establishing or bringing to birth again the Rosicrucian Order in America, in its new cycle.

Thus we close this section of the history but call attention to the fact that during the years 1800 to 1900 the Order in France, Germany, England, Switzerland, Holland, Russia, Spain, and in the Orient, was carrying on with increasing activity, but under very difficult conditions. It was found necessary, in most foreign lands, to continue the extreme silence and secrecy originally established because of the political persecution that was made toward every sort of a secret organization devoted to the promulgation of advanced knowledge and the higher laws. But, despite such difficulties, the records show that in France, England, and Germany especially, the organization

HISTORY OF THE ORDER

operated a great many branches with ever-increasing membership; and as the year 1909 approached, many men and some women journeyed to Europe to contact the Rosicrucian Order. Among these were a few eminent Freemasons, who sought to revive the "Masonic" Rosicrucian studies, and others who sought permission or authority to assist in the new birth of the 1909 cycle. The success of their missions, and the result of their activities, will be referred to in the next section of this history.

CHAPTER VIII

THE PRESENT ROSICRUCIAN ORDER
IN AMERICA

IN WRITING this section of the history, I find that I cannot avoid using the first person pronoun because of my own intimate connection with the activities to be described, and I trust that the reader will understand this and overlook the personal element.

I have said that as the year 1909 approached, many men and women journeyed to France or other parts of Europe seeking not only initiation into the Order, but some official permission to aid in the establishment of the Order again in the United States, for its new cycle.

In France, during the years from 1880 onward, the Order became very active because the year 1880 was apparently the beginning of a new cycle of the Rosicrucian activities for several of the countries, and records show that in the years 1900

HISTORY OF THE ORDER

to 1909 the Rosicrucian branches were many, and very active indeed, especially in France. It was only natural, therefore, that those students of Rosicrucian history and those who had been partially initiated into the work as descendants of earlier members of the Order, should look to France and its high development in the Rosicrucian activities for aid in their plans and desires. As in other lands at other periods, a number of semi-Rosicrucian bodies had come into existence in France during the early part of the twentieth century, and many of these gradually affiliated with the Rosicrucian Order and adopted the strict rules and regulations of the ancient fraternity. A few of them, however, continued to use their previous titles even after affiliation with the Order, and this caused some confusion in the minds of those who journeyed to France seeking the genuine movement.

Many veiled stories regarding the Brotherhood had appeared in France, notably those by Eugene Sue, and Zola. These informed the seekers of the existence of certain Rosicrucian activities which contained clues that enabled the determined seek-

HISTORY OF THE ORDER

ers to finally contact the proper officials. From the seventeenth century onward, the Order in France had adopted the French term "Rose Croix," in preference to the Latin term "Rosae Crucis." We find even in Wassenaer's "Historisch Verhael" published in 1623, mention of the "Ordre de la Rose Croix" in France, with connections with members and other branches of the Order in Spain, Italy, England, Switzerland, Germany, Flanders, and other lands; and many prominent persons are mentioned in several French histories as having been active in the Order previous to the new cycle of 1880. I refer to such persons as Garasse, Gaultius, Naude, Richelieu, Louis XIII, king of France; and many others, even Descartes. Other records show that Jacques Rose organized before his transition in 1660 one of the newest and largest branches of the Rose Croix, and of course there were such famous leaders of the work in France as the *le Comte de Gabalis*, and Louis Claud de Saint-Martin.

The very complete history of the Rosicrucian Order written in French and other languages by Brother Wittemans, a member of the Belgium Sen-

HISTORY OF THE ORDER

ate, and an honorary member of our Order here in America, contains very interesting facts regarding the activities of the Order in France during the twentieth century. Among the independent organizations in France after 1900 were a branch of the S. R. I. A. of England, the "Masonic" Rosicrucian society referred to previously, the Hermetic Order of the Golden Dawn founded in 1887, and *l'Ordre Cabbalistique de la Rose-Croix*. The latter organization contained a number of officers connected with the regular Rosicrucian Order, and this cabalistic body devoted itself to a limited list of subjects for scientific research, and did not claim to be a part of the regular Rosicrucian Order and was therefore never considered as a clandestine body. There was also an independent organization known as *la Rose Croix Catholique*, which attracted the interest of many Roman Catholics who were misled into the belief that it was a separate organization for them. On the other hand, there was also a Rosicrucian group quite independent under the leadership of Brother Castelot, who was, and still is, a member of the regular Order in

HISTORY OF THE ORDER

France, and one of the honorary members of our Order here in America. Brother Castelot is one of the most eminent and dearly beloved workers in the art of alchemy, and has devoted his time and the interests of the few who are in his independent organization to the study of alchemical problems. He has demonstrated in their group laboratory the possibility of transmutation in accordance with the Rosicrucian teachings, and has succeeded in producing gold as told in a story published by our Order in our official magazine, the "Rosicrucian Digest."

However the real Order as established throughout the world, had several official branches in France as national headquarters. One of these was the "Secretariat" in Paris, while another was a College of Rites at Lyons, originally established by Cagliostro, and the national Council Chambers and temple, with the national archives in the environs of Toulouse, the ancient site of the first Rosicrucians established in Europe.

The meetings that were held in the various special branches of the Order in parts of France were as secret and veiled as were the activities at the

HISTORY OF THE ORDER

larger national offices, and it was as difficult in the year 1909 as it is today to locate a Rosicrucian lodge or identify a Rosicrucian member anywhere in Europe.

A survey of the history of the various occult movements that find moral and psychic support from the Great White Lodge shows that in the year 1909 more of the mystical movements of the world were reborn, revised, or changed in their form of activity than in any other year of occult history. It was in this year that Mr. Heindel of the semi-Rosicrucian independent society in America went to Europe to attempt to secure Rosicrucian information, and instead became a student of Mr. Rudolph Steiner, in his revised form of theosophy. And it was in the year 1909 that Mr. Gould planned to go to Europe to secure the true Rosicrucian rituals and teachings for his branch of the S. R. I. A. in the United States. And other leaders of other movements journeyed to Europe during this year or received instructions from foreign branches in this year, to revise or renew their activities.

HISTORY OF THE ORDER

It was in 1909, also, that I made my visit to France for a similar purpose. For many years I had held together a very large body of men and women devoted to occult and metaphysical research along Rosicrucian lines. As editor of several occult magazines I had made contact with various Rosicrucian manuscripts and had discovered that I was related to one of the descendants of the first Rosicrucian body in America—that which had established itself in Philadelphia in 1694. This gave me access to many of their old papers, secret manuscripts, and teachings. These we discussed, analyzed, and attempted to put into practice. Among ourselves, the society, composed of several hundred persons in professional life, was known as “The Rosicrucian Research Society.” Among the many prominent persons then affiliated and holding active positions as officers, were I. K. Funk, president of the Funk and Wagnalls Publishing Co., (publishers of the *Literary Digest*), “Fra” Elbert Hubbard, of the famous Roycrofters, and who was deeply interested in the work to the very day of his transition, and Ella Wheeler Wil-

HISTORY OF THE ORDER

cox, the famous mystical writer, who later became a member of the Supreme Council of AMORC, which position she held until the time of her transition. Others of equal prominence who were active members are still members of the present AMORC in high degrees. The meetings of the Society were held monthly from 1904 to 1909 in New York City. Realizing that we were not yet chartered or authorized to use the name *Rosicrucian*, the society operated publicly under the name of *The New York Institute for Psychological Research*.

Just before 1909 there applied for membership in our society one who presented paper proving the appointment of "Legate" of the Rosicrucian Order in India. Many weeks of close association with this member revealed the fact that I might be successful in my search for some form of authority to introduce the true Rosicrucian work in America at the right time. Every means of communication with any official of the Order in foreign lands was denied to me until early in the year 1909 when I was informed that the year for the public appearance of the Order in America

HISTORY OF THE ORDER

was at hand and that definite arrangements for the new cycle had been completed. The Legate from India encouraged me to follow the urge that had actuated me for six or more years, regardless of any obstacles or trials that might tend to discourage my unselfish aims.

Therefore, I went to France in the summer of 1909 and after a brief interview with one who refused to commit himself very definitely, I was directed to various cities and in each case re-directed until I finally approached a definite contact in Toulouse. There I eventually found that my plans and desires had been anticipated and known for some time, and I was permitted to meet not just one of the officers of the French Rosicrucian Order, but a number, as well as some who were members of the international Council of the Rosicrucian bodies of various European nations. At a regular Council meeting, and at several special sessions of the Order in other cities held in the months following, I was duly initiated and given preliminary papers of instruction to present to others whose names had been given to me. I was also instructed to arrange to hold preliminary

HISTORY OF THE ORDER

foundation meetings for the purpose of organizing a secret group of workers, who would receive further instructions from Legates of the Order in India and Switzerland. These instructions were signed by Count Belcastle-Ligne, the secretary of the international Council, and the venerable Lassalle, the well-known author of many historical Rosicrucian documents, and Grand Master of the Order Rosae Crucis or *Rose Croix of France*. Before leaving France I had the pleasure of meeting several of the highest officers, and met in America, on my return, the Legate from India, who presented to me the jewels and papers which had been preserved from the early American foundation.

Throughout the years 1909 to 1915, many official Council sessions were held in my house and the homes of others, with men and women present who were descendants of early initiates of the Order, and a few of whom were initiates of the Order in France during the years 1900 to 1909. In 1915, the first official public *manifesto* was issued in this country announcing the birth of a new cycle of the Order, and immediately thereafter the first Su-

HISTORY OF THE ORDER

preme Council of the Order was selected from among hundreds of men and women who had been carefully selected during the preceding *seven years*. At the first official sessions of this American Supreme Council officers were nominated and I was surprised to find that the Legate from India had been instructed to nominate me as the chief executive of the Order because of the work I had done during the seven years in organizing the new foundation. Well qualified persons were elected to other executive positions in the Order, and copies of the French constitution of the Order and official documents were presented to committees for translation and adoption in a form to fit American conditions.

These meetings were followed by the first initiation of new members, the report of which to the French High Council brought a document of sponsorship for the American branch signed by the principal French officers. As with every new cycle in each land, the first years of its activity are under the sponsorship of some well-established jurisdiction, and so for a time this new cycle of the Amer-

HISTORY OF THE ORDER

ican Order operated under the sponsorship of the French jurisdiction.

It must be noted that from the very start, and with the issuance of the first public manifesto, the correct name of the international Rosicrucian organization was used, namely, the *Ancient Mystical Order Rosae Crucis*. This is a slightly abbreviated form of the original Latin name, *Antiquae Arcae Ordinis Rosae Rubeae et Aureae Crucis*, and the initials AMORC were immediately used as well as the true and original symbol of the Rosicrucian Order—the golden cross with but *one real rose* in its center. At this time, and especially during the years 1915, 1916, and 1917 there were in existence in America several forms of semi-Rosicrucian movements, namely, the S. R. I. A., and the Rosicrucian *Fellowship* founded by Mr. Heindel. One will note that the S. R. I. A. was using the unique independent name of *Society of Rosicrucians*, rather than the ancient name of the Rosicrucians, which body always used the name *Rosicrucian Order* as used by us; and the S. R. I. A. symbol was very different from the symbol used by us. The Rosicrucian *Fellowship* likewise had

HISTORY OF THE ORDER

adopted a name that was not that of the regular organization throughout the world, and for its symbol had created a new and independent device consisting of a cross with a *garland of seven roses* around it instead of only *one rose* in its center. Both of these organizations were publishing their teachings in book form, and were carrying on a work that was undoubtedly of value to students of general occultism. The very earmarks of their organizations—their distinctive names and symbols—differentiated them from the ancient organization, and the fact that they published and sold books claimed to contain the Rosicrucian teachings, put them in a different category from any of the other Rosicrucian branches of Europe or elsewhere.

Therefore, the AMORC proceeded with the ancient customs and practices by publishing no books of teachings, but insisted that all who desired to study the work of the Order must join with and help form regular lodges or groups in various localities.

So successful was this form of activity during 1916 that branches were established from coast to

HISTORY OF THE ORDER

coast, and from Canada to Mexico. By the summer of 1917 there were so many branches of AMORC in existence and carrying on the work with such enthusiasm that a National Convention was called for one week at Pittsburgh, Penn. Here hundreds of delegates from the branches, and members of the Order, assembled officially to acknowledge the existence of the Order and adopt a National Constitution.

A committee was selected, composed of ten or more well-known Freemasons, who were eminent in the sciences and professions and who were *familiar with ritualistic and fraternal law*, to examine the translated and revised French constitution of the Order, for adoption in America. This committee rendered its report, and the National Constitution of AMORC was adopted at the sessions of the convention, paragraph by paragraph. The Committee later signed a document stating that their experience with the work as members of the Order, and their familiarity with the claims and teachings of the Order, proved to them that the Rosicrucian work as issued by the AMORC was distinctly different from anything that they had

HISTORY OF THE ORDER

contacted in their other affiliations, and worthy of the deepest and most profound study on the part of every seeker for the greater light. Other matters were officially established by this great convention, and thereafter the organization continued to grow throughout the United States, Canada, and Mexico.

The result of this increasing activity resulted in a proclamation being issued at the International Convention of Rosicrucians held in Europe, establishing North America as a complete jurisdiction of the international organization, and no longer necessary to operate as a branch of the French body.

Eminent Rosicrucian officers of France, notably Monsieur Verdier, the commander-in-chief of the Illuminati of the Rosicrucians in France, visited the Order in America and left papers of approval and recognition. These were followed later on by a document issued by the International Convention held in Switzerland, appointing the national headquarters of the Order in North America as a branch of the international body. This latter doc-

HISTORY OF THE ORDER

ument is one of the most important in the archives of the American headquarters.

During the years 1918 to 1925, the Imperator for the Order in America was honored with various degrees in the French organization, and in 1926 attended the next session of the International Conventions held both in Toulouse and Switzerland, receiving other appointments and honors; and finally in Paris during the same year at a high reception given by a Congress of the most notable of all the Rosicrucian officers of Europe, he was acknowledged as one of the highest officers of the Rosicrucian work. At the same time these high officers of the French Order, who are also high officers of other fraternal organizations in Europe, were made honorary members of the American Order, and official papers exchanged to verify these appointments.

The Order in America, known by the general international name of the Order as AMORC, continues to function strictly in accordance with the ancient traditions and in affiliation with all other recognized branches. The Imperator of the AMORC in North America is the only official

HISTORY OF THE ORDER

American delegate to the International Rosicrucian Conventions. Since the Great World War the Order in various parts of Europe, Asia, and Africa has had to operate under strict surveillance and with great secrecy, while here in America conditions are favorable to an open and frank operation of all Rosicrucian activities. Hence the principal propaganda of the Rosicrucians may be carried on in this country without interference; for this reason the work in North America has grown to such an extent that the American AMORC today is the largest metaphysical and mystical organization in the western world.

Adhering to the ancient traditions, the AMORC of North America sells no books claiming to contain the secret teachings and does not sell its services at any price. Membership is limited to those who are carefully examined and tested with preliminary studies for many months and then finally admitted into regular membership. The teachings are given freely to those who are members, and no fees are charged for degrees or titles as with organizations operating on a commercial basis. An official magazine called the

HISTORY OF THE ORDER

"Rosicrucian Digest" is sent from the national headquarters of AMORC to all members, thereby keeping every one of its many thousands of students well acquainted with the general activities of the Order in America and other lands. The Order now owns many Egyptian temples and lodge-rooms throughout the United States, Canada and Mexico, possesses much property devoted exclusively to the great work, and carries on a number of humanitarian activities under various names so as the better to avoid publicity in connection with such matters as are of no public concern.

The national headquarters were first located in New York City, but in 1918 were moved to the Pacific Coast because of property secured there which had been originally owned by the first organization established in America, and which was eventually transferred to the present Order. After establishing administration offices and a Supreme Temple in San Francisco, the executive offices were moved in 1925 for a period of two years to Florida, in order to help strengthen the work in the southeastern part of the United States. An agreement was made with the large membership

HISTORY OF THE ORDER

on the Pacific Coast that the headquarters would return within two years to the West, and so in one day less than two years the national headquarters, with the entire executive staff, returned to the Pacific Coast to occupy its own property at its present site in San Jose, California, where an Administration Building, Museum, a beautiful Supreme Temple in Egyptian form, an Egyptian Shrine Temple, a large Auditorium building and other edifices constitute the assembly buildings for all of the executive sessions and High Council meetings; and future buildings are planned. Unlike other secret organizations of a mystic nature, the AMORC in North America during its entire history has never had any unfavorable newspaper notoriety, has never been involved in legal or political disputes, and has had no detrimental or unpleasant attacks made upon it by even the natural enemies of all advanced movements.

THE PILGRIMAGE TO EGYPT

Early in 1928, the Imperator for North America received official notice of several important national and international meetings that were to

HISTORY OF THE ORDER

be held by the various Rosicrucian bodies of Europe and Egypt during the spring of 1929. Desiring to have the highest officers of the organization in North America meet many of the high officers of the Order in foreign lands, the Emperor planned a pilgrimage to Egypt, and proceeded to select members from the various groups and lodges throughout North America who could accompany him on his trip. The members finally selected represented thirty-one different cities in North America, covering nineteen jurisdictions, and every grade and degree of the work. Among these were seventeen of the highest officers of the Order in Canada, United States, Mexico, and the Latin-American jurisdictions, as well as a number of officers representing many of the secret and allied activities of the organization.

The pilgrimage started from Supreme Headquarters in San Jose, California, on the evening of January 4th, and proceeded in special cars across the United States in a unique route which touched the southern and Mexican cities and went up into the Canadian provinces in order to pick up the members from various cities and take them to

HISTORY OF THE ORDER

New York. The large party then proceeded by boat to the Mediterranean and after visiting many of the ancient cities, spent considerable time in Palestine visiting the holy shrines of the Essenes and the Great White Brotherhood, and finally reached Egypt, where the Rosicrucian Order of that country prepared a number of interesting features for the entertainment and instruction of the tourists, including a series of initiations conducted in the ancient Rosicrucian manner, beginning at the Sphinx and the great Pyramids, passing through ceremonials at Lake Moeris, and culminating in a special initiation ceremony arranged by the oldest Rosicrucian lodges in Egypt in the Temple of Luxor at Luxor on the Nile. From this place the tour continued throughout Europe, giving the highest officers an opportunity to visit the Rosicrucian landmarks in Switzerland, France, Germany, and England. The officers of the North American jurisdiction had the pleasure of visiting, secretly and privately, the oldest of the Rosicrucian temples in Europe and meeting with many of the high officers in special sessions.

HISTORY OF THE ORDER

This unusual pilgrimage not only afforded the Emperor an opportunity to attend the official sessions, but it afforded the officers who were with him an opportunity to make contacts seldom made by American mystics; and the initiation ceremony in Egypt whereby a Rosicrucian Egyptian lodge was instituted, composed solely of American members, was the first of its kind ever held in Egypt and will not be held again for one hundred and eight years.

The results of this pilgrimage will become highly significant as the years pass by; but the one outstanding fact is that the AMORC is today the only Rosicrucian movement anywhere in the world whose principal officers and active representatives in so many jurisdictions *actually journeyed to Egypt* as in the pre-Christian Era, and received in the ancient temple of Amenhotep IV at Luxor, Rosicrucian *initiation* and Rosicrucian *acknowledgment* at the hands of officials of the oldest Rosicrucian lodges in existence anywhere in the world. This gives the AMORC a special power and an international standing which no other

HISTORY OF THE ORDER

metaphysical organization in North America has ever had or probably ever will have in the future.

JURISDICTIONS OF THE ORDER

The North American jurisdiction includes not only the United States and its dependencies, but the Dominion of Canada, the West Indies, and the Central American states. In the United States there is a Supreme Grand Lodge, and Grand Lodge having direction over all subordinate bodies of each state.

Canada is similarly divided into provincial jurisdictions, with the Canadian Grand Lodge located at Vancouver, British Columbia.

In Mexico, the Mexican Grand Lodge has immediate jurisdiction over the various sections of Mexico, but the Mexican Grand Lodge itself is under the direction of the Spanish-American Grand Lodge at San Juan, Porto Rico.

The Grand Lodge of the Spanish-American jurisdiction, located at San Juan, Porto Rico, includes not only Mexico and the Spanish-Ameri-

HISTORY OF THE ORDER

can sections of North America, but all the Spanish countries and Latin speaking countries of South America, and the Antilles.

The North American jurisdiction is affiliated with the Order in all foreign lands, and maintains intimate relationship with the branches of this organization in England and the British territories, the Scandinavian countries, the Netherlands, France, Germany, Austria, China, Russia, India, Dutch East Indies, Egypt, Africa, British Guiana, Costa Rico, and other districts. The monastery for the Order is maintained in India, and an Oriental College is also maintained in South India.

The Order in foreign lands is generally known by the initials of the abbreviated form of the name, A. M. O. R. C., or by the initials of the complete Latin name, A. A. O. R. R. A. C., or abbreviated to A. A. O., or A. O., or otherwise. The universal symbol of the Order is the rosy cross with a *single red rose* in its centers, or an equilateral triangle with one point downward containing a cross with a red rose in its center. These symbols are *patented* in the United States by AMORC, and the AMORC is the only Rosicrucian movement

HISTORY OF THE ORDER

in the United States having the exclusive *patent registration* on this symbol in connection with the complete name of the organization, *Ancient Mystical Order Rosae Crucis*.

A FEW WORDS TO THOSE WHO ARE STRANGERS

If you, Reader, are not a member of the Rosicrucian Order, we wish to take this opportunity to greet you, and to thank you for the opportunity of placing in your hands this history of the organization with the questions and answers which further explain the ideals and purposes of the Rosicrucians.

There are two ways by which this book may have come into your hands, first through the courtesy of some member or interested person who has believed that you would be interested in its contents, or second through your own acts whereby you have either purchased this book or borrowed it from the shelves of some public library. If the book is in your hands through your own act, it is

HISTORY OF THE ORDER

an indication of your curiosity or your interest. We hope, therefore, that you have found in the history of the organization such information as satisfies your desire for facts, and that we have introduced ourselves to you sufficiently well to have you know us better and appreciate the real traditions of the Order as compared with the false beliefs and misunderstandings which have been so prevalent in the past centuries.

Perhaps no other organization in the world has been so greatly misunderstood as the Rosicrucians. We cannot say that all of this is due to the too brief or too mysterious presentations of the history as found in the popular encyclopedias, for much of the misunderstanding is also due to the writings of many novelists who have found in the history and traditions of the Order the basis for many weird, fantastic, and romantic plots. As stated in the introduction to the history, there was a time when such stories as "Zanoni" by Bulwer Lytton served their purpose in revealing the existence of the organization but surrounding it with a cloak of mystery and fancy which left the seeker for its portals doubtful of any success in his search. For

HISTORY OF THE ORDER

almost a century the fictitious mystery which enveloped the Rosicrucian Order has been dispelled by the illumination of research and publicity; but there are still thousands of persons seeking contact with what the Rosicrucians teach and practice who find no other account of the history of the Order and no other clue to its present existence than the same strange misinformation contained in the old encyclopedias, which are published and re-published without editing or revising.

The Rosicrucian Order today throughout the world represents a movement of high idealism and high purpose. It has become a public movement among men and women of repute and wide affairs, and is no longer the closed council for restricted membership. Its work has broadened into many channels and its place in the evolution of modern civilization has become fixed and well recognized.

If you are interested in knowing more of the organization, or desire to share in its teachings and practices, you are cordially invited to make further inquiry; and if your expressions are sincere and it is apparent that more than curiosity prompts your

HISTORY OF THE ORDER

inquiry, you will receive that encouragement which will enable you to have your desires fulfilled.

In order that the Secretary may competently take care of your inquiry, and know that you have already read this book and are familiar with the facts contained therein, he would thank you to address your letter to the department name given below.

SECRETARY-GENERAL OF AMORC,
Inquiry Department,
Rosicrucian Park, San Jose, Calif.

PART TWO

QUESTIONS AND ANSWERS

IMPORTANT INSTRUCTIONS

The questions presented on the following pages have been carefully selected from among the many hundreds asked by those who are interested in the activities and principles of the Rosicrucian Order. Such questions constitute a large part of the correspondence sent to the General Secretary of the Order in America, and from his records a list of the questions more frequently asked, was carefully compiled.

The answers to the questions given in the following pages have been prepared by those who are most familiar with the points covered by the questions, and represent official, authentic statements. In most cases the questions have been answered more elaborately and in more detail than they are usually answered in correspondence.

The reader of this book will find these questions and answers a valuable aid in the comprehension of the nature of the Rosicrucian Order, its activities, principles, ideals, and doctrines. Even members of the organization will find these illuminating

QUESTIONS AND ANSWERS

and helpful, especially since they represent official view-points.

The subjects have been indexed and cross-indexed for ready reference, and the information contained therein, in conjunction with the history of the organization, gives one of the most complete outlines of the nature and work of the real Rosicrucian Order ever presented to the public.

QUESTIONS AND ANSWERS

No. 1

Q. Do the Rosicrucians constitute a religious cult?

A. The Rosicrucians do not constitute a cult, either religious or otherwise. They constitute a fraternity of men and women like any other fraternity or Brotherhood. The members of the organization are of every religious denomination, and are not asked to change their religious beliefs to any degree. Therefore, the organization is not a cult.

No. 2

Q. Do the Rosicrucians in each country have a great leader or founder who is their absolute ruler, and to whom allegiance must be pledged?

A. The organization in every country is physically formed like a society or other organization of men and women, with chief executives equivalent to presidents, vice-presidents, secretaries, treasurers, and recorders. The organization has no national or international founders, leaders, or dis-

QUESTIONS AND ANSWERS

coverers, to whom personal allegiance must be pledged at any time or in any manner. All officers of the organization are elected and do not hold their positions by any super virtue or Divine decree that is unique to each as an individual. The chief executives of each branch in each land are on an equal basis, constituting an international advisory council like the Board of Directors of a business concern.

No. 3

Q. Are there any secret oaths or any form of allegiance to individuals which must be subscribed to before or after joining the organization?

A. There are no real secret oaths in connection with the organization whatsoever. The Great Oath of the organization is shown to every member before he or she is invited to join the organization, and each has an opportunity to read and understand it thoroughly before accepting the invitation to membership. There are no oaths or pledges which contain secret agreements or implied penalties for violations. No pledges are asked by the organization in behalf of allegiance to any individ-

QUESTIONS AND ANSWERS

ual except obedience to the rules and regulations of the organization, its constitution, and the executive decisions of the officers representing the organization.

No. 4

Q. Is one bound for an entire lifetime to the organization by taking any oaths or pledges?

A. Freely are you permitted to partake of the benefits of the organization and share in its great work, and just as freely are you permitted to resign from the organization and sever all connections. Of course, the promise to keep secret the few passwords or signs by which members may be easily identified is to be respected by every man and woman as a moral obligation, even after he believes it desirable to withdraw from the organization. And it must be said in fairness to all concerned that the few who do drop out of the ranks of the organization for one reason or another in each country have generally held in high esteem the ethical and moral ideals of the organization, and have, therefore, kept their promises in regard

QUESTIONS AND ANSWERS

to the secret elements of passwords, grips, signs, and so forth.

No. 5

Q. Are there any secret agreements or binding obligations on the part of members which may interfere with their religious, political, social, or business activities?

A. Nothing is ever asked of a member in the organization, or before he joins the organization, which will force him to do anything that will interfere with his righteous beliefs and moral obligations to God, the members of his family, or his country. And certainly there is nothing in the work of the organization that will interfere with any person's activities in connection with legal and proper business matters, or with the proper ethical and moral social relations in the world. When any special work of any kind is to be done that calls for a personal sacrifice of time and interest in behalf of a member, volunteers are asked to serve that purpose, and no one is obligated to do that which he cannot easily do or do without injury to his own best interests.

QUESTIONS AND ANSWERS

No. 6

Q. Are the members of the organization bound in such financial manner as to make them obliged to meet assessments or special taxes of any kind?

A. No assessments have ever been made and no *obligations* other than the nominal monthly dues are required in each lodge to meet the incidental expenses of rent and general operating accounts.

No. 7

Q. Why are there any monthly dues when one has always been told that the high spiritual teachings are given without a price?

A. This question is based upon the assumption that the nominal dues universally charged by every branch of the Rosicrucian organization constitutes payment for the teachings. This is a mistake. The dues have nothing to do with the instruction work whatsoever. Every branch of the organization must have general assembly rooms in which the classes can come together for their lectures, discussions, and general activities. Some means must be devised for the payment of the

QUESTIONS AND ANSWERS

monthly rent, electric light, and general operating expenses. Who shall pay these monthly dues? The master of the classes, who is giving all of his spare time to helping in the work because of his enthusiasm, or the students themselves, on the basis of an apportionment of the actual amount involved? If any lodge could meet in a proper hall or assembly place, properly equipped with necessary paraphernalia, without having had to buy any equipment or having had to pay carpenters, electricians, painters, decorators, and others for making the necessary equipment, and without paying any rent or paying for any electricity or heat, then the members might come together and without any cost to them at all receive the teachings. Since this is not possible, dues are charged by each branch and the amounts of the monthly dues vary in accordance with the operating expenses of the individual branches. Since no salaries are paid to the masters, teachers, or secretaries in these branches, the dues are very nominal. For those who desire the instructions in a personal way by correspondence, some means had to be devised to defray the cost of postage, stationery, typewriting,

QUESTIONS AND ANSWERS

and the printing of such forms and pieces of literature as are necessary to make the seeker acquainted with the organization. In addition to this, the investment in automatic machinery for the addressing of envelopes, filing of reports, as well as the rent and lighting of the many offices necessary for such correspondence work, requires some form of proportionate division of operating expenses. Nominal monthly dues constitute the only logical manner to take care of this matter. But again, such dues do not pay for the teachings. If those who desire personal instruction could travel from the various parts of the United States to the national headquarters of the organization, and thereby save the necessity of postage and stationery, and if they would be willing to meet out in an open valley where the officers and teachers could come without any expense for travelling, and if all other incidental expenses could be avoided in this way while the teachers gave personal instruction to the seekers, there would be no necessity for monthly dues in connection with personal instruction. Granting that the lessons and teachings are absolutely free, there still remains the

QUESTIONS AND ANSWERS

problem of getting these instructions from the various central points to the students. Herein also lies an element of cost.

No. 8

Q. Do not some organizations extend membership on a purely voluntary donation basis, permitting the member to pay as little or as much as he chooses?

A. Yes, there are several occult organizations in America which claim that they are operating solely upon a voluntary donation basis. An investigation of these movements revealed, however, an entirely different system than that used by the Rosicrucian Order. These others extend membership upon a purely voluntary basis, and that means that the member may donate anything from twenty-five cents a month to five dollars a month. But, in exchange for this voluntary donation, the member receives nothing but affiliation with the organization, with an occasional monthly letter of greetings which is a stereotyped letter sent to all members, and reading identically the same for all. If such members desire to take up the studies and

QUESTIONS AND ANSWERS

teachings of the organization to which they belong, they find it necessary to buy the many books published by the organization, and they find that these books are not given or offered on a voluntary donation basis, but sold at a definite price. We see, therefore, that the voluntary donation merely covers membership while the instructions and teachings must be paid for by the purchase of books. The Rosicrucian Order issues no books and sells no books containing its private teachings. The very nominal monthly dues, which are hardly more than any sincere member would voluntarily offer as a donation, cover every benefit of membership, which means more than merely a monthly letter. The magazine is sent monthly to every member, and throughout the year hundreds of personal letters of advice and instruction, especially dictated, and specially written, are included in the general membership benefits, as well as the privilege of attendance at lodges and affiliation with the various activities of the organization. In addition to all these benefits, the weekly private instructions and teachings are given to the members without any cost or price and without requiring the purchase

QUESTIONS AND ANSWERS

of any books or pamphlets. It is a fact demonstrated to practically every member of the Order that the amount of money paid in a year as dues to the organization is less than what the average seeker spends in the purchase of books, and yet the organization offers many benefits in addition to the teachings, which could not be expected or asked for if the student were merely the purchaser of books from a publishing company.

No. 9

Q. Has the organization ever tried to operate on a voluntary donation basis?

A. After the Order in North America had been operating for a number of years with nominal monthly dues, the matter of adopting voluntary donations as a basis for supporting the general operating expenses was submitted to every branch of the organization and to every member in every branch. The vote showed that ninety-seven per cent of the members believed that the definite monthly amount decreed by the individual lodges was the better system, in as much as it put every member upon an equal basis in sharing the ex-

QUESTIONS AND ANSWERS

pense of the operating expenditures, and did not throw the burden of a monthly deficit upon the several leaders in each group or branch. The members themselves proclaimed that the knowledge that their voluntary donations were not sufficient each month, and left a deficit to be met by those who were giving so freely of their services in addition to a proportionate donation to the general funds, would make them feel uneasy and guilty of a lack of duty and appreciation. It was found from the records and reports of other organizations that those who insisted upon the voluntary donation were those who sought to take advantage of the liberal method to contribute less than was their proper proportion. If it were not for the sale of books and the sale of paraphernalia by many of the organizations that operate on a voluntary donation basis, they would not be able to carry on their work with any system or any degree of efficiency.

No. 10

Q. Are the members required to buy robes, paraphernalia, or devices of any kind?

QUESTIONS AND ANSWERS

A. The general members *are not required* to buy robes, equipment, devices, instructions, or material things of any kind. Everything that is necessary for the study of the teachings, and the proper development in the work, is supplied without cost by the organization. Where there are lodges carrying on the Egyptian ritual ceremonies, and the demonstrations of the natural and Divine laws, the officers wear Oriental robes which they furnish themselves voluntarily, and the equipment is generally supplied by voluntary donations on the part of those most interested in the work.

No. 11

Q. Who prepares the teachings and the lessons given by the organization?

A. Since the teachings are not the discovery of some self-appointed leader or founder of the organization, and since they are not the personal opinion of some philosophic individual, the lessons are impersonal and prepared not by a single individual, but by groups of individuals in the highest grades of the teachings in the various branches of the Order throughout the world. The teachings

QUESTIONS AND ANSWERS

are, therefore, not stereotyped or in printed form, but continually evolving and becoming enlarged and improved through newer discoveries, newer tests, and newer demonstrations in the many branches. This gives us another excellent explanation why the Order has never permitted its teachings to be put into book form or printed form. Such books would soon become obsolete, so far as the revised teachings are concerned, and could not possibly be kept up to the minute in such matters as are of the utmost importance to the individual student. National conventions and international conventions discuss the great problems of the teachings, as well as the great problems of the affairs of man, and bring forth additional instruction and advice to be added to the lectures for the benefit of all. Research departments and bureaus in every jurisdiction contribute freely to the teachings and the extension of various systems of help and advice. The teachings as given, therefore, in every branch are uniform for the time of the presentation, and are free from personal opinion and personal bias. There is probably no other

QUESTIONS AND ANSWERS

system of instruction as flexible, as modern, and as progressive as this.

No. 12

Q. Is it necessary for the members to memorize a great many laws and principles as well as the many lessons?

A. Except for the ritualistic parts, dramatized by the officers in the various lodges, there is nothing to be memorized by any member. The lectures and lessons are so worded and so interestingly presented with arguments, demonstrations, and illustrations, analogies, and similes, that the student's interest is held without conscious effort and he unconsciously absorbs the knowledge which becomes a part of his memory without the process of memorizing. The Rockefeller Education Foundation has stated that this sort of instruction is the most ideal, and typifies the perfect method of conveying knowledge from one mind to another. Notebooks are kept by members who wish to aid their memory and in them notations are made of important principles and laws as they are given, and reference is made to them at times when problems of

QUESTIONS AND ANSWERS

our daily affairs call for the application of the principles taught by the organization.

No. 13

Q. Do the Rosicrucians teach astrology or any other method of fortune telling?

A. The Rosicrucian organization does not teach astrology or any other method of prognosticating the future. It considers the art of astrology as an imperfect science, being evolved through ages of experimentation and testing, and at the present time far from being efficient in predicting all the affairs of life. The fundamental principles involved in astrology are referred to in various lectures and lessons pertaining to the nature of the planets and the nature of our talents and dormant tendencies, but the making of horoscopes or the study of astrology is not included in the work because the absoluteness of the art is not demonstrable, and the Rosicrucians do not teach or include anything in their teachings that cannot be demonstrated by the individual members as absolute and dependable. Organizations claiming to be Rosicrucian or mystical, and which include astrol-

QUESTIONS AND ANSWERS

ogy as a prerequisite or as an important part of their work, are merely taking advantage of the fascination which astrology holds for so many, and of the help it gives in meeting the financial necessities of the organization. The Rosicrucian Order does not deal with crystal gazing or any other form of necromancy.

No. 14

Q. Do the Rosicrucians deal with spiritualistic demonstrations or means of communication with spirits?

A. The Rosicrucians do not teach anything that pertains to spiritualistic demonstrations or doctrines as commonly understood. In fact the Rosicrucian Order deplores the popular tendency to hold seances and dark room sessions, and advises against the systematic or occasional attempts to enter the trance state or any other state of an abnormal nature for the purpose of trying to communicate with so-called spirits.

No. 15

Q. Do the Rosicrucians believe that man has many forms of spiritual bodies and that he lives in these various bodies at various times?

QUESTIONS AND ANSWERS

A. The Rosicrucians teach that there are two planes of existence upon which man lives, namely: this earth plane with its material earthly problems and activities, and another plane which is not this one. It does not attempt to explain how we live or how we function on the other plane, it has no knowledge to offer regarding a number of ethereal, spiritual, psychic bodies possessed by man which function on various planes, and it does not attempt to divide the non-material or spiritual plane into various subdivisions and hypothetical, super subdivisions, as taught by various complex mystical systems which are devoted to the dissemination of puzzling philosophies. *E.g., Max Heindel*

No. 16

Q. Do the Rosicrucians believe that there are spirit entities, large or small, which hover in space and which may take possession of an earthly individual and influence him for good or bad?

A. The Rosicrucians have never taught the existence of elemental entities or evil spirits that may take possession of human beings. These teachings are a remnant of ancient Oriental supersti-

QUESTIONS AND ANSWERS

tions, and are revived in these modern days by schools of thought which cater to the credulous and the unlearned.

No. 17

Q. Do the Rosicrucians believe in black magic or the ability of one mind to injure another at a distance?

A. The Rosicrucians have said in all ages that the only power that black magic has is the fear which the unlearned have of it. The Rosicrucian teachings make most plain the fundamental fact that the Cosmic space that intervenes between two humans at a distance from each other will not carry destructive thought vibrations, since such vibrations are inharmonious and incongruous to its own constructive, Divine nature. Evil thoughts directed toward another person do not leave the mind of the individual conceiving them, and are reactive upon the individual attempting to radiate them. The teaching of the possibility of black magic by some modern schools has created a fear of it in the minds of those who do not understand the true Cosmic laws, and this fear causes much

QUESTIONS AND ANSWERS

suffering and discomfort which is immediately attributed to the black magic thoughts of others.

No. 18

Q. Do the Rosicrucians still practice the art of alchemy or transmutation of base metals into gold?

A. In some of the higher lodges of the organization where complete laboratories are maintained for testing and proving many of Nature's fundamental laws, the art of transmutation has been tested and a small amount of gold made from baser metals after a great many hours of diligent work, and at a tremendous cost, out of proportion to the value of the gold manufactured. In France, one of the great laboratories of the Order has been very successful in demonstrating to the scientific world the feasibility of the Rosicrucian principles of alchemy. The Rosicrucians have always been accused of being the makers of gold because throughout the history of the organization it appears that its members and its branches are always well qualified to meet their financial obligations and to enjoy many of the luxuries of life. The

QUESTIONS AND ANSWERS

progress and advancement which the members make as they go through the higher teachings of the Order impress strangers with the idea that some means of securing material wealth is given to the students of the organization. The real art of alchemy practiced by every Rosicrucian organization and every member of the organization consists of transmuting the baser metals of a material, mental, and spiritual nature into the pure gold products of efficiency in action, prosperity in result, and happiness in attainment. This is the greatest of all the processes of transmutation and enables each member to successfully master his own problems and bring about such realizations of his dreams as may seem miraculous or mysterious to the uninitiated.

No. 19

Q. Do the Rosicrucians constitute a body of healers or a healing organization?

A. Throughout all the ages, many of the leaders of the Rosicrucian work have been valuable contributors to the art of physics as it was originally called, or to the science of therapeutics as we

QUESTIONS AND ANSWERS

understand it today. Many of these eminent men were discoverers of fundamental principles in connection with physiology and anatomy, as well as chemistry, thereby helping to establish the many great fundamental principles of healing, as well as revealing the real nature of disease and health. The Order today teaches its members how to prevent disease through proper living, and how to cure and correct the violations of nature's laws which generally result in disease or suffering and pain. Many of the members of the organization become so fascinated with these principles dealing with health and the cure of disease that they make a special study of this branch of the teachings and take it up in addition to their regular profession. Such persons generally are physicians of other schools, and add the Rosicrucian principles to their regular practice, so as to secure more lasting results and more immediate changes in any physical condition. But the organization does not attempt to specialize in the healing work by attempting to make healers of all of its members and encourage them to go out into the world as healers or practitioners. Throughout the entire studies, the mem-

QUESTIONS AND ANSWERS

bers are advised to consult only the very best physicians in regard to any physical problem. Neither medicine nor surgery is condemned by the Rosicrucian teachings, but given their proper places in the world of therapeutics. The Rosicrucian Order realizes that a real healer must be born, and must be trained in the various systems of therapeutics to be highly efficient, and that such physicians using the Rosicrucian principles in addition to their other principles will become the very best physicians.

No. 20

Q. Does the organization offer its healing services to its members?

A. For those members who cannot come in contact with physicians of the regular schools who are connected with the local branches of the organization, the organization itself offers to use the metaphysical principles taught by it to help those who are in mental or physical need. Such work is done gratuitously, and always in a scientific manner, and without any criticism or antagonism toward the regular schools of medicine and surgery.

QUESTIONS AND ANSWERS

It is a notable fact, however, that the members of the organization generally continue to improve in health as they go through the various lectures and lessons, and finally reach a point where the need for special treatments of any kind is very rare. The organization does have ways and means of doing those things which science might call miracles and of helping in such cases where all other systems seem to have failed or where the problem is not understood in its right terms. Such service is given freely, and thousands of members in all parts of the country take advantage of it in emergencies for themselves or for members of their families. This service is one of the outstanding benefits given to the general membership.

No. 21

Q. Do the Rosicrucians insist that the members shall refrain from eating meat and become vegetarians, and refrain from smoking and drinking?

A. The Rosicrucians do not attempt to change the habits and methods of living on the part of their members by *revolutionary reforms* or auto-

QUESTIONS AND ANSWERS

cratic decrees. The teachings gradually make plain to each member the nature of his own health and physical condition, and reveal to him what is best for him to eat under any or all circumstances. Each member soon discovers whether he or she may, with any consistency, eat a diet exclusively of vegetables or a diet composed of vegetables and meat. When a member discovers the effect that his diet has upon his individual constitution, and upon his individual stage of development, he will be better prepared to adjust his method of living, and will do it with greater efficiency than if some universal, arbitrary rule was established for all members, regardless of individual needs. The same may be said in regard to fasting, smoking, drinking, or indulging in any of the other attractions or seeming necessities of the mind, body, or soul.

No. 22

Q. Is it true that the eating of animal flesh adds lower vibrations to the human system?

A. Such an idea is purely theoretical, and there is nothing in the sciences or the occult laws that shows that the eating of cooked meats adds

QUESTIONS AND ANSWERS

vibrations of a lower kind than the eating of wheat, rye, eggs, or milk. Milk contains as much of the animal nature as cooked meat. And the same may be said of butter and of cheese. Many persons who believe the theory that meat lowers the rate of vibrations of the human body, do not hesitate to drink milk and to eat cheese or to eat eggs. This shows the inconsistency of their reasoning. It is true, from a chemical point of view, that the eating of raw meat or the eating of meat that is very rare, with much uncooked blood, will add a great deal of the chemical nature of the animal blood to the human blood. But this is not true of well-cooked meats.

No. 23

Q. Is it true that the eating of meat interferes with the spiritual vibrations of the human body?

A. Some modern schools of thought have added this idea to their teachings in order that they may have another peculiar idea to present to their students. Many of these modern schools have had to invent a complete set of new ideas and new teachings in order to make their systems quite dis-

QUESTIONS AND ANSWERS

tinctive and unique. In their ambition to be very original with their teachings, they have promulgated ideas that are not only unsound, but ridiculous and contrary to natural law. However, the very uniqueness of such systems attracts the attention of those persons who are ever seeking new ideas, and especially peculiar ideas, and of course we find such persons usually fanatical and irrational in much of their thinking and acting. The truth of the matter is that man is born essentially spiritual, with as much Divine essence in his soul as he will ever acquire. There is no way by which the soul essence in the human body can be added to or subtracted from in any way. The soul of man is something so infinite, so immortal, and so superior to conditions and elements of this earth plane, that nothing of a material nature can affect it. Neither disease nor sin affects the soul as far as its essential divine essence is concerned. Man's consciousness and man's character may be contaminated by sin and by disease of the mind or body, but these things cannot affect the infinite soul within him; for this infinite soul is ever and continuously a part of the Divine Soul of the universe,

QUESTIONS AND ANSWERS

and a part of God, Himself. Therefore, the statement that certain exercises or certain actions will add to the "development" of the soul, in either essence or quantity, is absurd, as also is the statements that anything we eat or anything we drink may subtract from or charge or modify the Divine essence of which the soul is composed. The development of spirituality in a man or woman is the development of his comprehension, understanding, and domination of himself and his relationship to the universe. It is not a development of the soul essence. Therefore, food cannot affect this Divine essence, and only those leaders, teachers or schools which are seeking to take advantage of the misconception of these facts on the part of seekers for the real truth, will teach such an idea as this. Furthermore, your spiritual development will be indicated to others more surely by what comes out of your mouth than by what goes into it, as the very true statement in the Bible explains, where we are reminded that more important than the food that passes through the mouth are the expressions that come out of the mouth. Then

QUESTIONS AND ANSWERS

again we have the words of that famous sermon on the mount, which may be read as:

“Be not anxious for your life,
What you shall eat and drink,
Or where-with-all you shall be clothed;
Is not the *life* more than the meat, and the body
more than the raiment?”

No. 24

Q. Do the Rosicrucians believe that there are millions of individual souls in the universe or just one soul?

A. The Rosicrucians believe and have always believed that there is but one soul in the universe, and that is the universal soul or the universal consciousness of God. Furthermore, the Rosicrucians have always taught that a segment of that universal soul resides in each being that possesses soul. And this segment is never separated from the universal soul or is never an entity in such a sense as to make it independent and individual. The soul expression of each person, or in other words, the expression of the soul in each of us, through the medium of the physical body and through the

QUESTIONS AND ANSWERS

channel of our education and comprehension of things, may be quite different and thereby give us those characteristics or traits of personality which we interpret as individuality. But these distinctive traits are not of the soul, but of the characteristics or traits of personality that manifest through the physical body and which we interpret as individuality. In this sense, mankind is one universal brotherhood, being Sons and Daughters of God through the Fatherhood of God. This is the fundamental principle upon which universal brotherhood is understood by the Rosicrucians. And all modern mystic teachings, or even some popular personal conceptions of the Rosicrucian teachings which claim that man has an individual soul, are inconsistent with the real and original teachings of the Rosicrucians.

No. 25

Q. Has man only one body and one soul?

A. As has been intimated, the Rosicrucians have always been rational and scientific in their postulations, and they say that so far as actual

QUESTIONS AND ANSWERS

knowledge of conditions is concerned, they know of only one body and that is the physical body. We may stretch the use of a term and call the soul a spiritual body within man if we choose to do so, or we may call it the psychic body or astral body. In this case, man would possess two bodies, the physical body and that which is not physical. But to say that man has a physical body, an astral body, a desire body, a mental body, and several others is simply to state a theoretical postulation devised solely to confound the facts of life and present a very puzzling and mysterious system of mysticism which keeps the student ever trying to fathom the unfathomable, and continuously blaming his lack of comprehension of the teachings for his lack of mastership. None of the teachers of this sort of complex existence has ever been able to demonstrate his ability to function exclusively or partially in any one of these numerous bodies, nor has he been able to teach his students to function in one of these bodies successfully enough to enable the students to prove to their own satisfaction that there are such bodies. The Rosicrucians hold fast to the sane and rational

*Max
deinde
again*

QUESTIONS AND ANSWERS

law that that which cannot be demonstrated by another, or which is not demonstrable to one's self, should be cast aside as knowledge or as fact. This keeps the true Rosicrucian from sailing into the clouds of ethereal, hypothetical principles and away from the sane and solid facts of life.

No. 26

Q. Do the real Rosicrucians teach that it is possible for a man to live eternally in the same body?

A. The true Rosicrucians do not teach this, and have never taught it as a physical possibility. They know only too well the universal laws of Nature, which include the divine laws as well. They know that one of the fundamental laws of all material manifestation is the law of change. Nothing that exists at this moment is identically as it was an hour, a week, a month, or a year ago. Man's body is susceptible to this law and governed by it just as is all other matter with which we are acquainted. The soul of man, or the divine essence which animates him is the only part of man which is immaterial and which is not subject to the

QUESTIONS AND ANSWERS

law of change. It is impossible for man to live continuously or eternally in the same physical body. In fact, the physical body which man now occupies is not the same physical body in all of its elements which he had five years ago, or ten years ago. Every part of the body is being remade to replace that which is worn out or discarded and sooner or later the breaking down processes of the human body work more rapidly than the constructive processes, and eventually the physical body is cast off and rejected. This is an inevitable law of Nature, and there is absolutely no record to be found in any of the sacred mystical occult or scientific teachings of the world which disprove it. Many of the popular teachers who, twenty or thirty years ago, promulgated the idea of the possibility of very long life in the same physical body, have passed through transition and are gone from this plane. Most of them either sold secret, private courses of instruction which were claimed to teach one how to live without transition, or they sold secretly and privately to their students remedies which they claimed to have invented, and which were supposed to prevent old age. Those modern

QUESTIONS AND ANSWERS

teachers or lecturers who advocate this idea at the present time are simply catering to the gullibility of persons who believe it is possible to prevent old age or transition. No Rosicrucian of the true school, with his thorough understanding of nature's many laws, could possibly accept such statements.

No. 27

Q. Do the Rosicrucians believe that since transition is inevitable, disease is a natural thing.

A. No, the Rosicrucians do not believe that disease is a natural thing. While it is a fact that transition is inevitable, on the other hand, disease, pain, and suffering of the physical body are not inevitable. It is possible and it is ideal, for man or woman to live to such a ripe old age without disease or pain that eventually the body just gradually weakens and at some propitious time in the scheme of things goes to sleep, never to awaken again in earthly consciousness. That is the ideal ending of earthly life. It is the way that the transition of the many advanced masters and teachers of the organization have occurred, and it is the

QUESTIONS AND ANSWERS

way that the organization would have transition occur in the lives of all of its members. Therefore, the proper way to live to prevent disease and pain, and the proper way to naturally and properly remedy the cause of any disease or pain is thoroughly taught by the organization.

No. 28

Q. Does the organization sell any remedies or devices which it claims will help to prolong life or prevent disease?

A. The true Rosicrucian organization has never sold things of this kind, nor does it sponsor or tolerate the use of devices of this kind. Many occult or mystical schools claiming to be Oriental and represented in America by some foreign teacher have tried to introduce in America under great secrecy and through insidious methods the sale of chemical combinations, drug preparations, or mystical charms or talismans which are purported to give immunity against disease and old age. The literature of such teachers or organizations is filled with misleading statements regarding the ideas being promulgated, and it is unfor-

QUESTIONS AND ANSWERS

tunate indeed that America has proved to be the happy hunting ground of such charlatans.

No. 29

Q. Do the Rosicrucians of today attempt to practice or teach the Yogi principles or the other Hindu or Oriental teachings?

A. The Rosicrucian Order has never taught the Yogi principles except possibly in some branch of the Order located in India centuries ago. The Yogi teachings are distinctly the teachings of a special and limited sect of one part of the Orient, and were never considered universal teachings, applicable to all nations, nor are they of any value in the Occidental world to modern people. The fact of the matter is that the Yogi teachings were abandoned long ago as of no value except to those persons living in that part of the world where they originated. That is why the attempt on the part of some schools or movements to introduce the Yogi principles in modern lands in modern times has proven futile. To derive any benefit from the Yogi principles at all, the Oriental devotee had to spend many hours of each day sitting

QUESTIONS AND ANSWERS

in certain postures in absolute relaxation and profound meditation upon things unconnected with his material existence and unassociated with the practical duties and obligations of every-day life. Even the casual student of such teachings in modern lands finds it impractical to give this much time to the development of a side of his nature that will be of no practical advantage in his daily life. The few benefits to be derived from breathing exercises which were incidental to the Yogi teachings have found better expression and better application in more modern teachings, and a careful examination of such Yogi breathing exercises shows that they are typical of the breathing exercises taught to the average boy and girl in the school gymnasium. In their day and in their time these teachings were necessary and were undoubtedly a great step forward, but they are of no value now from the Rosicrucian point of view, which is ever progressive and practical. The same may be said of many other ancient, antiquated, and limited forms of Oriental teachings.

QUESTIONS AND ANSWERS

No. 30

Q. Is the Rosicrucian organization in any way connected with the Roman Catholic church or with the Roman Catholic Jesuit movement?

A. The Rosicrucian Order has never been connected in any way, outwardly or inwardly, publicly or secretly, with any church. The Rosicrucian organization is not a religious cult nor a religious sect in the sense that it teaches any sectarian theology or operates as a church in any sense. In the past some Roman Catholics have belonged to the organization. The historical records of the organization show that at one time one of the Popes, and in various periods many of the Jesuits, were students of the Rosicrucian work; and because some of the great Protestant leaders were also students of the work, it has often been claimed that the Rosicrucian Order was, during the reformation period, a part of the Protestant propaganda. Naturally, an organization could not be religiously biased in both directions. The organization has kept itself free from religious and political revolutions and campaigns.

QUESTIONS AND ANSWERS

No. 31

Q. Has the Rosicrucian organization ever been criticized or prosecuted by any of the great religious organizations?

A. Because the organization has never shown partiality in religious or political matters and does not attempt, through its teachings, to break down the faith of anyone in his or her religious convictions, the organization has never been officially or unofficially condemned by either the Roman Catholics, Protestants, or the Jews. It may be said in passing that the Rosicrucian organization is perhaps the only fraternal or semi-secret society that has never been singled out for any special criticism on the part of the various religious movements.

No. 32

Q. Have the Rosicrucians ever been publicly condemned or prosecuted for any of their activities?

A. Neither justly nor unjustly has the organization ever been publicly or privately condemned for its teachings or activities. The organization has been peculiarly free from public censorship,

QUESTIONS AND ANSWERS

and has enjoyed centuries of existence without the whisperings of scandal or the indictment of the courts of law. Even in modern times, when so many organizations of a mystical, metaphysical, or occult nature have been ridiculed by the newspapers or by magazine articles, the Rosicrucian Order has been highly respected and highly praised. Many writers of articles and pamphlets dealing with a review of the fads and fancies of the human mind along occult lines have definitely stated that nothing said by them was intended to reflect upon the activities and teachings of the Rosicrucians. The organization has, therefore, an unsullied history and a record of which each member may be justly proud.

No. 33

Q. Is it true that some of the principal officers of the Rosicrucians in America today are associated with the Roman Catholic church?

A. So far as the Rosicrucian Order of AMORC is concerned, the chief officers for North America are in no way connected with the Roman Catholic church, nor have they ever been

QUESTIONS AND ANSWERS

of that religious denomination. The Imperator for North America was raised and educated as a Methodist, and his connections with the church are well known. His wife was raised in the Presbyterian church and continues her connections with that organization. The Supreme Secretary is also a member of the Protestant religion, and the Grand Masters of the various jurisdictions are generally of the Protestant denominations. Some are members of the Jewish churches, with perhaps an occasional officer who was originally raised or educated in the Roman Catholic church. The Grand Master of Canada and his staff are members of the Episcopal church of England, while those of the Spanish speaking branches are of various religious denominations. Some of the teachers on the staff of the Supreme Council, being of foreign birth, are of the Buddhistic or Hindu religions, or other religions of the Orient.

No. 34

Q. I have been told that the Bible condemns the taking of oaths and the joining of secret societies. Is this true?

QUESTIONS AND ANSWERS

A. The injunction in the Bible against the taking of oaths pertains to making sworn statements in which the name of God is used to give emphasis to the statements made. We are reminded by this injunction that we should not use the name of God in this way, but to let our aye be aye and our nay be nay. There is no injunction against the joining of private societies of learning anywhere in the Bible. And in fact we find from a careful reading of the Christian Bible that private societies of learning existed in the Bible days or in the early Christian days, and were not condemned. The fact of the matter is that Jesus, as well as the other great teachers of learning, appreciated the fact that not everyone is ready or qualified to receive all the facts and knowledge of life, and that those who are ready should be given more private and separate instruction than that given to the mass. In Matthew, Chapter XIII, we find that Jesus gave His great teachings in two different methods. To the mass He revealed the principles in simple stories and parables, while to His disciples in private He explained the laws and principles more profoundly

QUESTIONS AND ANSWERS

and in detail. His disciples realized that there was a reason for this, and so we find the two following verses very interesting:

“And the disciples came, and said unto Him: Why speakest Thou unto them in parable?”

“He answered and said unto them: Because it is given unto you to know the mysteries of the Kingdom of Heaven, but to them it is not given.”

Ministers, clergymen, priests, and rabbis of the various religious denominations and churches of the world have been members of the Rosicrucian Order and are today. None of these have found anything in the work of the organization or in its teachings which would be inconsistent with the high ideals of Christianity, or the principles and teachings of any other religion.

No. 35

Q. Why is the Rosicrucian Order believed to be a secret organization?

A. Because the average member makes it so. By this, we mean that the organization itself has never attempted to make the Brotherhood a secret

QUESTIONS AND ANSWERS

among peoples, nor has it ever attempted to conceal itself so completely that it could be properly classified as a *secret society*. Certainly its ideals and purposes are not secret, nor any of its pledges to the members or pledges of the members to the organization. It has no great secret oaths which members must accept or make which have not been publicly printed and dealt with at length in histories and other books, nor which cannot be printed or exposed to public examination even today. It does not work through secret channels, nor have any secret or ulterior motives. Its meeting places are not secret, and its propaganda is not secret. Nor do its officers and members hide in secrecy. If the Rosicrucian organization could have its way or have its dreams materialized, it would give its teachings and all it has to offer freely and without limitation to every man, woman, and child in the world. It is constantly seeking ways and means of spreading its teachings to the masses. The difficulty which the organization has to face is that only those who have come to a keen realization of the need of what the Rosicrucians have to offer are really ready to accept

QUESTIONS AND ANSWERS

the help that is available through the many activities included in the Rosicrucian work. The average member is so conscious of the fact that not all are ready or willing to give a little time and thought to their own improvement and the mastership of their own affairs in life, that he is careful and conservative in his remarks and in his invitations to others to accept the Rosicrucian offerings. This attitude on his part tends to make the organization more or less private or secret, and constitutes the only reason for the seeming secrecy of the organization.

No. 36

Q. Why is it said that you must be invited to join the Rosicrucian Order and cannot ask for membership of your own volition?

A. It is a traditional custom with the Rosicrucian organization, for the organization or its members to *invite* a seeker or a worthy person to come into the circle of its activities and share in its unusual benefits. In foreign lands, for many ages, it has been considered a great honor to receive a formal or informal invitation to unite with the

QUESTIONS AND ANSWERS

organization. In the days of long ago, it would have seemed presumptuous for anyone to have made voluntary application or petition to join the organization. In America today the ancient system is respected and applied with some modification. Therefore, it is now customary for the organization or one of its members to invite the seeker or inquirer to make application for membership and have his application examined and passed upon. Therefore, all of the propaganda work is carried on in the form of invitations being sent to those who have manifested worthiness, interest, sincerity, special qualifications, or a real desire to step ahead of the non-progressive ones in life and become a real master of his affairs. This method does not prevent the seeker or interested one from writing to any of the branches or to the national headquarters and asking for further information regarding the Rosicrucian teachings and activities. If the inquirer's letter shows a sincere interest, he is immediately invited to make application for membership, and a question sheet sent to him to fill out and sign. The answers to the questions thereon are carefully considered by a

QUESTIONS AND ANSWERS

committee, and if it is found that the inquirer is more than casually interested in the work and really of a progressive trend of mind, he or she is at once accepted into the neophyte or probationary form of membership.

No. 37

Q. Are all new members placed in the probationary or neophyte classification without regard to any of their previous studies or their intellectual comprehension and attainments along similar lines?

A. All new members are placed in the same category for a short period, during which time certain fundamental principles are given to them and an opportunity afforded each member to indicate his or her special fitness for the studies, and thereafter the member finds that advancement is in accordance with his own ability and his own qualifications. No two members will find the work identical in their comprehension and understanding, and very soon after uniting with the organization, each member develops along lines particularly suited to his individual needs and previous education and training.

QUESTIONS AND ANSWERS

No. 38

Q. Is any special education or training needed to constitute qualifications for membership?

A. The ability to read and write, and to concentrate the mind for a moment or two upon each paragraph or sentence as it is read are the preliminary educational requisites. Any man or woman with ordinary school education will be able to comprehend and master even the most profound parts of the Rosicrucian teachings. High school or college education will not be of any material benefit in the general comprehension of the work. The most simple language, and the most simple methods of presentment are used in all of the lecture work, and the experiments given to the members to try, whereby they can demonstrate and prove certain laws and principles to themselves are of the most simple form, so that the average man or woman will have no difficulty whatever in performing these experiments. No memorizing, no difficult mental tests, are required anywhere throughout the work.

QUESTIONS AND ANSWERS

No. 39

Q. Are persons past middle age too old to take up the work?

A. Many who are far beyond middle age have united with the organization and found in it the start of a new life, the beginning of a new career, and the openings of channels and paths to happiness, prosperity, and health, which they had believed were closed to them. It is not uncommon to find in the various branches of our organization men and women who are seventy, eighty, or ninety years of age, and who have been in the organization but a year or two. There are many members in the organization much older than this. The usual statement made by these persons is that they regret that they had not contacted the organization fifty years earlier in their lives. It is no more difficult for an elderly person to understand and master the teachings than it is for a young person, and there are just as many opportunities in life for the elderly person to bring a new world before his comprehension and enjoy the unknown marvels of life as there are for the young person.

QUESTIONS AND ANSWERS

No. 40

Q. What is the minimum age for membership in the Rosicrucian Order?

A. There never has been a definite minimum age established in a universal sense, and each country or each jurisdiction has certain rules in this regard which it has found compatible with the conditions to be dealt with. In most lands, and especially in North America, young people who are below the legal age may become members only with the approval of their parents or guardians, and after being carefully examined as to their sincerity and serious attitude of mind. Persons above twenty-one years of age find the work intensely interesting because of the new start it gives them in life.

No. 41

Q. What has the Rosicrucian organization done toward teaching and instructing children in the right way of living and the right way of thinking?

A. In a few jurisdictions of the Order, there are junior lodges of the organization, especially

QUESTIONS AND ANSWERS

designed and conducted for children ranging from twelve to twenty years of age. These lodges are conducted like clubs or society assemblies, with a set of officers selected from the junior members, and with specially prepared lectures or lessons, consisting of instructions in lodge or social decorum, and illustrations of the proper ways to attain a cultural and ethical understanding of life in the most simple matter. Where such junior lodges are not conducted, the children of members or children of those who are not members are given special articles or manuscript instructions to read at home, and for very young children the organization conducts a subsidiary body known as the Child Culture Institute, which carries on special courses of instruction for mothers who are attempting to give cultural and ethical training at home to children between the ages of six and fifteen. There are also courses of instruction for expectant mothers, and a series of interesting stories in manuscript form to be read to young children so as to acquaint them with the important metaphysical, ethical, and cultural laws of Nature and man.

QUESTIONS AND ANSWERS

No. 42

Q. Must a member join a lodge and attend lodge meetings in order to receive the instructions and teachings of the Rosicrucians?

A. Years ago this question became an important one in North America because of the great distances between the cities where the principal lodges were located. By a special vote of the national convention of the organization, a national lodge to cover the entire North American country was organized and was empowered to offer a special series of graded instructions in manuscript form for home study. Since the organization never prints its teachings in books that are publicly sold, or does not put its teachings in printed form of a permanent nature in any way, the lessons offered by the correspondence system are especially prepared from time to time and are constantly kept up to the modern standard of the progressive work in the regular lodge. Thousands of members in North America today are pursuing the Rosicrucian studies at home in this manner, with as great success and with as much efficiency in mastership as those who attend the regular lodges. Many

QUESTIONS AND ANSWERS

members in the regular lodges are also pursuing the correspondence work at home. In hundreds of communities where there is no lodge, the large number of correspondence members have become acquainted and have formed groups which meet occasionally at one another's homes or in special halls to discuss the teachings, with questions answered by one of the most advanced members; they also carry on demonstrations and the application of certain principles. A monthly magazine issued by the national, supreme council of the organization goes each month to all of the correspondence members, as well as to the regular lodge members and in this way every correspondence member is kept informed of all the national and international activities and given the latest findings and additions to the teachings. As with regular lodge membership, the correspondence members do not have to buy any additional books or buy any special paraphernalia from the organization, or go into any heavy expenses of any kind, and the teachings are given just as freely to them as to the lodge members. In other words, no com-

QUESTIONS AND ANSWERS

mercial features nor typical correspondence school fees are charged for the correspondence work. A correspondence member is a member of the organization in the same sense as a lodge member, and is, therefore, entitled to all of the instruction, and benefits freely offered by the organization, and they may visit or attend groups or lodges whenever they are in any city or location where such are to be found.

No. 43

Q. Do the thoughts of evil minded persons create such powers or energies as will become destructive to land and property, as well as to individuals? In a book entitled, "Realms of the Living Dead," it is stated that mighty storm winds are made up of the embodied evil and malignant thought forces generated by mankind, which become entities like demons of destruction, sweeping on with tremendous power. Is this true?

A. Such an idea as you quote from the book you have read is absolutely contrary to all sensible and rational mystical thought. Storms and winds, cyclones and hurricanes, thunder and lightning,

QUESTIONS AND ANSWERS

and all such manifestations of nature and the results therefrom, good or bad, are parts of God's creative process of evolution. In the early formation of this earth, great disturbances of land and sea undoubtedly in the form of great storms, earthquakes, and other manifestations, resulted in the formation of continents, mountains, valleys, lakes, seas, and rivers. Animal life may have passed from existence, and other forms of living things may have changed their nature, but it was all for good. Every storm that blows, and every cataclysmic occurrence which man interprets as destructive, is part of the process of reconstruction. Only through intolerance, ignorance, or irrational thinking can man come to the conclusion that these things are evil. As for the thought forces coming from embodied evil minds, or malignant thinking on the part of man, affecting the earth and its elements or human beings and their lives, this is a superstitious idea continuing from the days when the ignorant minds of men believed that anything which was unpleasant to them, or disturbing to their individual peace, or contrary to conditions as they would have them, emanated from demons or

QUESTIONS AND ANSWERS

from evil, earthly minds or evil powers of the heavens. Everything that is, is good. All is for our ultimate benefit and to the glory of God. That we may be upset in our plans, disturbed in our peaceful tranquility, or aroused from our slumber in self indulgence by the activities of nature's forces, is no reason for us, individually or collectively, to believe that our judgment of what is good and evil is right. The true mystic will not believe that because he, individually, apparently loses or suffers through a natural law, the law is evil, or the manifestation of it is a manifestation of evil. What is loss to one is gain to another. What is a suffering to one must be a blessing to some one else, if the cause of these things is a natural cause directed by the benevolent, merciful, omnipotent Mind of the Creator of all things.

No. 44

Q. What position do the Rosicrucians take in regard to the Christian doctrines?

A. Collectively, as an international organization, composed of members of every religious

QUESTIONS AND ANSWERS

thought and denomination, the Order takes no definite stand in regard to the religious doctrines of any church or religious movement. Naturally, there is nothing in the real teachings of the Rosicrucians which would make a devout Christian unhappy in his orthodoxy, nor is there anything in the teachings which would make the Jew or the Mohammedan unhappy. The real teachings of the Rosicrucians can be completely studied, assimilated, and put into practical application without in any way interfering with the religious beliefs of anyone. It has been stated by thousands of students of our teachings that the continual reference to Divine principles, and the exposition of many ideas expressed in Biblical literature, has caused the students to do more Bible reading and more reading of the sacred literature of their particular denomination than any other form of study.

No. 45

Q. Why is it that some writers of so-called Rosicrucian literature present the Rosicrucian teachings as a version of Christian mysticism?

QUESTIONS AND ANSWERS

A. For the same reason that so many cults and movements, particularly in America, use some of the terms of the Christian religion in connection with their work. Whenever personal propounders of a new form of philosophy wish to attract considerable attention and secure a large following in America they organize their work as a *form of religion* and generally make it appear to be a *revelation of Christian principles*. This assures them of a large and profitable business. There is no reason for this, so far as the Rosicrucian teachings are concerned, and books or pamphlets claiming to be Rosicrucian, and which present a form of Christian mysticism based upon some individual, personal interpretation, are not truly Rosicrucian in any sense, and are simply designed to appeal to Christians without giving them the very important and valued instructions of the Rosicrucian Brotherhood.

No. 46

Q. Can strictly orthodox Christians belong to the Rosicrucian organization without compromising their position in the Christian church?

QUESTIONS AND ANSWERS

A. Orthodox Christians of the most devout kind can consistently belong to the Rosicrucian Order and study and follow its teachings with the utmost good to their lives and personal affairs, just as devout Christians might study law or music, art or chemistry, without compromising their position in the Christian church. Our records show that not only are there as many Christians in our organization as there are members of other denominations, but many of the leading Christian Divines and eminent representatives of the Christian church are members, and even officers of the Rosicrucian Order. Some of these have written considerable about the Rosicrucian teachings, and others have presented many of the Rosicrucian principles in their Sunday and other services.

No. 47

Q. If the Rosicrucians present no teachings that are contrary to the Christian teachings, or the teachings of any other church, then why should the Order claim to have new knowledge?

A. The teachings of the Rosicrucians deal with the practical things of life, and Divine prin-

QUESTIONS AND ANSWERS

ciples are included because they make plain to man the operation of natural laws. While it is true that none of the Rosicrucian teachings will contradict any positive statement that may be found, for instance, in the Christian Bible, that does not mean that the teachings do not contain *new* knowledge that will not be found in the Christian or any other Bible. In the teachings of the various churches, we are implored to live rightly, to serve God, and our fellowman, and to lead a useful life. But nowhere in these sacred writings do we find such practical instructions as tell us precisely how we are to follow out the advice given, and how we may make our lives useful and of service to God and man. Books on philosophy and ethics explain to us the need for right living and right thinking, but they do not contain the practical examples, illustrations, and methods for meeting the multiple problems of our earthly life, nor do they give us exercises and problems to work with whereby we develop such latent faculties and functions as we may possess, and which will enable us to master the obstacles in our path and attain the highest degree of usefulness and success. The

QUESTIONS AND ANSWERS

Rosicrucian teachings do not philosophize, nor expound aphorisms and abstract principles, but state definite laws and then give specific instructions for the application of these laws to our daily needs. This is why the Rosicrucian teachings are distinctly different from the abstract teachings of the many cults and philosophical movements which merely inspire the mind to seek to live better or more happily without giving the definite instructions for accomplishing the desired end.

No. 48

Q. Are the Rosicrucian teachings of today merely a re-hash of the ancient teachings of the various schools of mystery?

A. Not at all. A compilation of the ancient mystery teachings has been attempted in many books and many encyclopedias, and has never made a strong appeal except to the scholarly, analytical minds who love to read of the ancient accomplishments without any thought of fitting them into the scheme of things today. The Rosicrucian teachings have been evolutionary in their development and progressive in their spirit. They

QUESTIONS AND ANSWERS

have not kept merely abreast of the times but have anticipated the needs of each new generation and each new race of peoples and have forged a pathway through the turmoil of civilization to the new land, the new life, and the new goal which was just beyond the horizon. In all ages and in all times, the master teachers and workers in the organization have contributed to the development and progressive nature of the teachings and instructions, and many of the revelations made in the teachings have been hundreds of years in advance of the discoveries of science. The teachings in the organization today deal with the affairs of the lives of men and women of modern times, and only such principles taught in the past as are in the form of universal truth are to be found in the present day teachings. Truth never becomes obsolete, and a law never changes its nature, but only its form of application. To study the ancient teachings in their ancient form, with their many references to ancient applications, would be of little value to the modern person of the modern world. This is why the cults and schools that teach the ancient philosophical principles of India

QUESTIONS AND ANSWERS

and other Oriental lands without modification or modernization, have failed to render practical service, especially in the Occidental world.

No. 49

Q. Does one have to believe in *reincarnation* in order to master the teachings and principles of the Rosicrucians?

A. No one is asked to believe in any abstract or positive principle in order to continue with the practical teachings and benefits of the Rosicrucian Order. In fact, the organization seeks to have its members refrain from accepting anything on faith, or adopting any principle before it has been demonstrated to be a truth. The doctrine of reincarnation explains many of the mysteries of life, but the doctrine itself need not be adopted by any student of the Rosicrucian teachings unless he or she has found from personal experience that the doctrine is true. Aside from this doctrine, the other teachings of the organization will be found of such practical help and of such logical and reasonable presentation that the doctrine of reincarnation may be set aside by the student without

QUESTIONS AND ANSWERS

interfering with his progress or mastership. Whether the doctrine of reincarnation is true or not, is of no importance to the student of the practical teachings of Rosicrucianism. Those organizations which insist upon the acceptance of the doctrine of reincarnation in faith, greatly interfere with the freedom of the student's individual thinking.

No. 50

Q. Do the Rosicrucians teach that man evolved from an animal, and that if he does not live properly he may be born again in some animal form?

A. The Rosicrucians teach no strange philosophy of this kind. The Rosicrucians know that the soul of man is ever progressing and ever evolving to a higher and higher standard of pureness of thought, it never recedes or retrogrades. Therefore, it would be impossible for the soul of a human to ever be born again in the body of a lower animal. Such teachings as this are remnants of ancient superstitions and are easily disproved by scientific and by Cosmic revelations.

QUESTIONS AND ANSWERS

Man may be punished in various ways for his transgressions, but such punishment is to enable him to purge himself of his evil tendencies and rise to a higher standard. To cast the soul of a sinner back into a lower form of animal life, might serve as a punishment, but it would not contribute to his evolution and progress and development to a higher spiritual being. The Cosmic, carrying out the will of God, does not seek to punish us for our sins independently of its desire to make us better and more perfect in our living. Therefore, such retrogression of the soul as is indicated by the above question would mean a defeat of the very purpose of the Cosmic principles.

No. 51

Q. I have read in some occult books that there exists in the universe some peculiar kind of spirits called elementals or nature spirits, such as those which haunt forests, mountains, cataracts, rivers, and so forth, and are classified as dryads, naiads, elves, and so forth. It is said by several writers that these elemental spirits can seize hold of humans and make slaves of men and women, or

QUESTIONS AND ANSWERS

affect their lives. What do the Rosicrucians say about this?

A. Of all of the leading occult and metaphysical schools of the Orient, and other lands, only two of them include this fantastic theory of elemental spirits in their teachings. So fantastic, alluring, and attractive was it to some Occidental readers of Oriental literature, that these Occidentals have seized upon this weird idea and elaborated upon it, because it made an excellent foundation for that sort of propaganda known as "fear propaganda." And this is always profitable to those who intend to write a number of books. In one of such books, the author intimates that everyone should be fearful of the influence of these elementals, but should, at the same time, remember that there are formulas and methods whereby these elementals may be kept at a distance and good spirits invoked. Nothing is explained in such books as to how one may protect himself against these elementals, but the intimation is always there that by further inquiry or the buying of more books, the great protective knowledge may be obtained. This is what might be called

QUESTIONS AND ANSWERS

high pressure salesmanship, or seductive advertising in the mystical literature of the Occident. The Rosicrucians know that when God created the human as the highest manifestation of His own Consciousness, He did not create other lesser expressions of consciousness which would have the power and the privilege of arbitrarily enslaving His highest creatures. The Rosicrucians know that God has given man a part of His own protective Consciousness, and that the mind of man and the will of man, like unto the Mind and Will of God, can and does protect man against every natural danger and temptation that exists, and that no lesser forms of beings have either the power or privilege of enslaving the human being or even influencing or endangering the normal, natural course of human existence. If it were otherwise, life would be so illogical, God's laws so unsound and unsystematic, and Nature's principles so haphazard and independable, that there would be no need to study her laws or principles nor attempt to co-operate with them or use them. And most certainly there would be no need to try to find formulas or methods to protect one's self against

QUESTIONS AND ANSWERS

these invisible spirit elementals, since they would have the advantage through their invisibility, minuteness, and mystical powers, to overcome us and control us, despite all of our efforts. Only the ignorant, superstitious minds of a few Oriental countries, and only the grossly ignorant and gullible students of popular forms of fantastic beliefs in the Occident will give more than a passing thought to such theories, and then smile with toleration at the fact that a few writers can turn such fearful ideas into means and methods for filling their coffers.

No. 52

Q. What is the relationship between the Great White Brotherhood and the Rosicrucian Order?

A. The original activities of the Great White Brotherhood when first established in Egypt consisted almost exclusively of secret sessions held in very secret places for the purpose of bringing together the most illustrious minds of the period, and for the discussion and classification of such unusual knowledge as had been discovered

QUESTIONS AND ANSWERS

through experimentation, notation, observation, or revelation. The high motive in mind was to prepare teachers and workers to secretly disseminate such seeds among the seeking minds of the populace as would take root and have a very beneficial effect upon the cultural trend of their thinking. As time passed, eminent Avatars born in the organization or coming into it at an early age and being properly prepared were sent forth into other lands to quicken the reception of a new cycle and awaken the minds of the people in the higher things of life. To better carry on the world-wide activities, various forms of movements were organized by the Great White Brotherhood under various names, and these movements in several lands were wholly and enthusiastically supported by the Great White Brotherhood, which as a governing body remained secret in its central location. Among these organizations thus sponsored by the Great White Brotherhood were the Essene Brotherhood and later the Rosicrucian Brotherhood which evolved out of the Essene and Therapeuti movements. Many of the eminent Avatars born in various parts of the world who were

QUESTIONS AND ANSWERS

conscious of the inspiration given to them to bring light to the masses came under the observation of the Great White Brotherhood, and through the Masters thereof received direct support and further inspiration. Some of these Avatars were permitted to organize movements of their own befitting the time and development of the people with whom they were dealing. One typical instance of this is the work of Madame Helen Blavatsky, who throughout her childhood was a subject of Cosmic inspiration and preparation, and submitted to the Cosmic urge to establish an independent organization which she called *Theosophy* because of its appeal to the class of people with which she believed she would have to deal. As she more completely attuned herself with the Cosmic, she eventually came in contact with the Masters of the Great White Brotherhood, and in the later part of her life her work was sponsored by the Great White Brotherhood as one of its channels of operation. At her transition her work was completed as an Avatar of the Great White Brotherhood. Madame Blavatsky's writings and

QUESTIONS AND ANSWERS

teachings will remain as a monument to her contact with the Brotherhood and to the great good that such other activities can accomplish. The organization she had founded had accomplished its definite mission, and there seemed to be no need for its continuance under the name and form used by her. In fact, the very rapid growth of the Rosicrucian Order throughout the world gave the Great White Brotherhood every possible channel and every opportunity it could utilize for the dissemination of its power and knowledge. With the Great White Lodge and its Ashramas and monasteries in several lands of the Orient providing a place for the most evolved workers of the organization to come together and devote their lives to the inner work of the Brotherhood, there was no reason for the maintenance of many movements or schools under various names divided against themselves under opposing leaders. Thus the Rosicrucian Order throughout the world today represents the general, inner and outer activities of the Great White Brotherhood and the most exten-

QUESTIONS AND ANSWERS

sive western world channel for the dissemination of the secret doctrines and teachings of the great Masters.

No. 53

Q. What is the necessity for initiation ceremonies?

A. A question of this kind usually arises in the mind of a person who is unfamiliar with the real purpose of true initiation ceremonies. Very often such persons have in mind an elaborate ritual, bombastic in its settings, and pretentious in the formalities and expressions. True initiation is rather of the inner self than of the outer self. Ceremonialism may be divided into two classifications: First, that which is incident to preparation, for certain definite steps about to be taken; or, second, a dramatization and illustration of principles and ideals inwardly apprehended but outwardly incomprehensible. In regard to the first of these, we may say that any preliminary steps taken before beginning a definite course might be considered as *initiatory steps*, and any procedure wherein conditions are arranged and the individual prepared to adjust himself to the conditions may

QUESTIONS AND ANSWERS

be properly called an *initiation*. In this sense, if a student of the higher teachings receives his first lesson, and decides that in order to do justice to the work at hand, and receive the utmost from the lesson to be studied, he should have privacy, quietness, and the facilities for concentration, he is closely following the procedure of initiation. If he takes himself off to a quiet room of his home, and arranges a comfortable seat and adjusts a proper light to read by and softens other lights in the room or removes things that would distract his attention, and closes himself against intrusion and interruption, we may properly say that in doing these things he is *initiating himself* into the work or labor at hand. If in doing these things he does them with a sense of the sacredness, importance, and influence that they will have in his life, and reverently sits down in his room and proceeds to meditate awhile before starting the lesson in order to clear his mind of intruding impressions and irrelevant thoughts, he is *performing a ritual or ceremonial* in connection with his initiation. It is absolutely necessary that the student of the higher laws and principles who is seeking to have these

QUESTIONS AND ANSWERS

things become a part of his inner self should proceed with a realization that the objective or outer self, with its burden of worries, thoughts, and concerns regarding the material things in life, must be quieted and made peaceful in order that it may not interfere with the attunement on the part of the inner self. The true value of initiation lies in the attunement it brings to the inner self with the Cosmic Mind and the Universal Intelligence. Any ceremony or ritual that aids the student or the Adept to bring the inner self to a higher phase of apprehension and comprehension is of unquestionable value and has its place in the course of study and development. Processes or rituals called initiations which do not do this, but merely elaborate on the importance of the work to be accomplished, are of little value indeed. Therefore, the Rosicrucians have only such ceremonies or forms of initiation in their work as enable the student to attune himself with the Cosmic and quicken his inner comprehension. Such ceremonies are peaceful quiet, and very often conducted privately, and without elaborate ritualism, by the student himself.

QUESTIONS AND ANSWERS

No. 54

Q. Are the Rosicrucian activities related in any way to the various religions or religious-fraternal movements of the Hindus, Persians, or others?

A. The Rosicrucian organization is not affiliated with any other outer or inner movements associated with religious activities, and is distinctly different from such movements as are indicated in the question. There are a number of organizations devoted to the unification of religions and religious ideas such as the *Bahai* movement, but the Rosicrucian Order is devoted exclusively to the dissemination and demonstration of such principles and laws as are applicable to the requirements of our everyday life. While many other organizations are devoted to the spread of the idea of a universal brotherhood, with the altruistic purpose of bringing all races and all beliefs together under one symbol of cooperative thinking and acting, the Rosicrucians are quietly and efficiently going about the unification of the races of man, and the minds of man, by teaching such practical principles as enable men and women to live a more useful

QUESTIONS AND ANSWERS

life in harmony with others everywhere. Those organizations which do not attempt to teach such practical things are simply holding an ideal before the minds of men and inspiring them to work toward that ideal. The Rosicrucian Order, on the other hand, is showing all men the very practical ways to bring this about. In this way, the Rosicrucian organization is distinctly different in purpose and practice from any other international fraternal body in the world.

No. 55

Q. Why is the subject of mysticism of interest to progressive minds?

A. Because there is an inherent desire in the consciousness of every progressive thinker to inquire into the origin of things, the mystery of life, and the ultimate purpose of our existence. In the early history of civilization, such inquiries as these constituted the delving into the mystical side of our existence, and mysticism became an eminent and profound school of thought. In the unlearned minds, mysticism today is erroneously associated with modern mysteries and with magic; but there

QUESTIONS AND ANSWERS

is no magic in mysticism, and the only mystery therein is that which is unanswered and unsolved. Mysticism represents the highest expressions of Truth, and the study of mysticism is a study of Truth in all of its pristine purity and uncontaminated manifestations. Mysticism is not a religion, although it reveals and explains the greatest and most profound of the religious mysteries; it is not an unscientific study, although it does not depend upon the findings of science for its knowledge, and accepts as many of its Truths through Cosmic Revelations as it does through the analytical observation of the objective minds utilizing every scientific process known to man; it is not a philosophy, for it directs the mind to the practical application of its principles, as urgently as it emphasizes the need of inspirational meditation. It is generally conceded by every eminent theologian that the essence of religion is its mysticism; and it is likewise conceded by every artist, musician, architect, inventor, or creative artisan that mysticism is the fabric out of which he weaves the inspired impressions for objective comprehension. In this we see that mysticism is the very essence

QUESTIONS AND ANSWERS

of our higher thoughts and higher living, and without it as an element of nature, and a school of instruction, man is only partially educated and not wholly cognizant of the beauties, powers, and blessings of existence.

No. 56

Q. In what way does a mystical comprehension of the things of life enable man to enjoy life?

A. The mystical understanding of all things that exist brings to man a closer attunement with the natural laws of the universe, and removes from his consciousness the fear of the unknown and the fear of the misunderstood. This results in greater peace to his soul and mind, greater power of will, and greater determination to cooperate with the laws he knows to overcome the obstacles and limitations of his life here on earth. The study gives him a broader view of life and its miracles and mysteries, and enlarges his horizon of comprehension as well as widens his realm of sympathy and attunement. It enables him to anticipate the inevitable results of certain actions in his life, and to prepare for them. It removes the doubt regard-

QUESTIONS AND ANSWERS

ing the consequences of other acts, and gives him the power to proceed with greater sureness and security. It attunes the harmony of the physical body to the creative principles, and thereby brings better health and a greater freedom from the influences of disease and contamination. It quickens man's perceptive faculties, awakens and develops the intuitive functionings of his consciousness, and makes him fortified in many ways to master the trials and situations of his everyday affairs, bringing greater success and happiness. The mystic is ever alert to the finer things, the higher things, the better things, and the more real things of life, and he finds enjoyment, pleasure, contentment, and peace in conditions and circumstances where another is depressed, distracted, and discouraged.

No. 57

Q. Are not the great truths of our existence obtainable through *Revelation* rather than through study?

A. Even if this were so, it would be necessary for the average person to learn how to prepare

QUESTIONS AND ANSWERS

himself for the Revelations, and unquestionably the influx of Cosmic Revelations would necessitate the invention of some system for the proper classification and analysis of the knowledge thus revealed. Great truths have undoubtedly been revealed to the unprepared minds in the past, and through the partial comprehension of these Revelations, man has been able to advance civilization and to improve the conditions under which the races of man have lived. It is also true, however, that those Revelations which have come to the prepared minds have been more comprehensible and more perfectly transmuted into benefits and blessings. The whole purpose of the Rosicrucian Order is to acquaint the seeking mind with an understandable explanation and analysis as well as a logical classification of all the Revelations that have been made to man in the past, so that such as may come to the seeker in the future may be instantly and properly related to the known truths, and properly appreciated and comprehended. The teachings of the organization are not presented as dogmatic doctrines which must be accepted on faith, but as understandable principles susceptible

QUESTIONS AND ANSWERS

to application and analysis, with such demonstrations as bring conviction and remove the necessity for faith. The acquirement of this knowledge naturally and gradually attunes the student for the reception of further knowledge through his own experimentation and study, or through Cosmic Revelation.

No. 58

Q. Why is not such knowledge published in books and disseminated freely to the public instead of being held for limited dissemination among members of a private organization?

A. Neither the Rosicrucian organization nor any other world-wide movement in the past or present that has possessed a knowledge of the great truths of life have attempted to limit the dissemination of such knowledge. The great problem and serious struggle on the part of all such movements has been to discover ways and means for the widest possible distribution of the teachings or information at their disposal. If the present-day Rosicrucian organization could do so, it would have the teachings introduced into all of the

QUESTIONS AND ANSWERS

public schools where the foundation of education is laid in the minds of young men and women, and the teachings would be expounded as part of the preachments in every church. In fact, if the Great White Brotherhood could realize its dream of universal dissemination of this knowledge, there would be no need for the Rosicrucian organization or any of the schools of mysticism or mystical philosophy. But the mass does not want this sort of education at the present time, and this is proved by the fact that only one person out of many thousands is interested enough in the improvement of his own welfare and the development of his best interests to pause a moment in the mad rush of material affairs to read a pamphlet or lesson or listen to a few words spoken by an enlightened one in their midst. This condition necessitates the dissemination of the knowledge in a limited way, and in a manner that will appeal to those who are seeking for it, not the projecting of it into the affairs of those who have no time for it, and who would actively protest against its dissemination, as an unnecessary consumption of valuable time and effort. The Rosicrucian Order does not operate

QUESTIONS AND ANSWERS

as a *secret* organization, but merely as a private organization and does everything within its power to bring its work and its offerings before the attention of the public in a dignified and efficient manner. Every form of ethical procedure is used to apply the knowledge possessed by the organization to the betterment of mankind, in addition to the dissemination of the teachings; and for this reason many private forms of humanitarian and altruistic activities are conducted by the organization under various names so that great good may come to many without having it appear that it is for the purpose of promulgating the teachings or appearing to be a subtle form of proselyting. Thousands of dollars are spent annually by every branch of the organization in conducting public meetings consisting of excellent music, interesting lectures, and illuminating discussions, in order to scatter as widely as possible such seeds as may fall into the fertile minds of seekers, or perhaps awaken an interest in these matters in the dormant mind of a potential seeker. Large sums of money are also spent in the dissemination of literature, in the presentation of motion-pictures and

QUESTIONS AND ANSWERS

plays that teach an ethical or mystical principle, and in the dissemination of books or magazines containing helpful instruction. Nothing is left undone, of a dignified nature, to propagate the teachings of the organization in as efficient, economical, and impressive a manner as possible; and national congresses are held every year for the purpose of discussing ways and means of spreading the work as widely and as freely as is consistent with the awakening of the mass consciousness.

No. 59

Q. Why do we not hear more about the Rosicrucian organization in the speeches and writings of eminent persons?

A. The answer to this question is found in the reluctance on the part of prominent persons to speak of their personal affiliations for fear of appearing to be either boastful or seeming to bring their personal, philosophical connections into matters that have no connection therewith. On the other hand, many of the most eminent writers and public workers in America and other lands today

QUESTIONS AND ANSWERS

are members of the organization. In their writings, speeches, or general activities they apply the Rosicrucian principles, and in many ways make themselves known to the understanding ones as students of the Rosicrucian work. In one case in the North American jurisdiction, the general manager and controller of one of the largest newspapers and every one of the heads of the important editorial and producing departments of the paper are members of the Rosicrucian organization. Any Rosicrucian reading that paper analytically would discover in each issue hundreds of earmarks indicating that the ethical ideals and sympathetic understanding of a real mystic entered into the make-up and editorial policy of that paper. The fact that the leading editorial articles and the news of the activities of the churches and the various educational institutions and humanitarian bodies always give emphasis to the ethical and mystical side of the things of life, and that the advertisements and offerings are free from all obscene or depressing pictures and statements, would indicate that the paper was carefully edited and directed by those who understood the principles being

QUESTIONS AND ANSWERS

taught by the Rosicrucians. Even the business policy of this newspaper, dealing with its advertisers and with its subscribers contains many unusual features that have attracted attention to the paper as one having philosophical ideals of a very high standard. And yet only occasionally does there appear a story or a news item about the Rosicrucians, and always without any reference to the fact that the newspaper knows anything more about the Rosicrucians than is contained in the item. A number of eminent feature writers whose articles appear in magazines and Sunday editions of the newspapers are members of the organization, and their writings are often clipped and preserved by our members who recognize in the stories or in the articles extracts or principles from our teachings, carefully presented so as to sow seeds of thought without the objectionable feature of appearing to be some form of propaganda. In courts of law, judges who are members of the organization adhere to the principles taught by the Rosicrucians in the administration of justice and in the tolerant, sympathetic consideration of the cases brought before them. Many physi-

QUESTIONS AND ANSWERS

cians, scientists, professors in colleges, and tutors in schools who are members of the organization are devoutly demonstrating the practical nature of our work, and sowing seeds that must eventually produce distinct results. On the other hand, more and more of the popular books on religion, philosophy, morals, and ethics do make reference to the Rosicrucians; and the Rosicrucian Order in the United States has had in the last five years more widespread publicity in the form of feature articles telling of its activities, its teachings, and the lives of its principal workers than any other humanitarian movement of its kind. The organization has always tried to avoid such forms of bombastic propaganda as would make it appear to be a *cult* or a *sect* appealing for members who are desired to join in some unique reformation or school of fanaticism. Its unusual increase of members and students is more the result of the personal recommendation on the part of enthusiastic members than the result of any of its outer forms of propaganda. A Rosicrucian is generally known by the life he lives and the happy, contented, successful manner in which he enjoys his life and

QUESTIONS AND ANSWERS

carries on with his affairs than by any other sign; and often a number of Rosicrucians may be united in one church or in one service club or civic body for many years before any of them discover that there are other members of the Rosicrucian organization with them.

No. 60

Q. How do the Rosicrucians deal with the subject of hypnotism?

A. Rosicrucian teachings do not deal with hypnotism as a science or an art. In explaining and presenting all of the laws that pertain to various psychological states of consciousness, it is but natural that reference would be made to sleep, whether induced or natural, and in this manner the so-called state of hypnosis is explained scientifically and properly. Likewise, the possible or probable benefits resulting from any induced state of semi-consciousness are fully dealt with as well as the false claims made for the so-called state of hypnosis. There was a time, a few years ago, when it would have been necessary to expound considerably on the dangers of experimenting with

QUESTIONS AND ANSWERS

the popular formulas for attempting to produce the state of hypnosis, but those days have passed, and the real dangers associated with such experimentation are of little consequence as a result of the more popular understanding of other laws and principles of a superior efficiency. The popular craze for the study of hypnotism rightfully passed into oblivion as men and women came to understand the real principles of psychology and the application of them to our mental and physical requirements. Perhaps the greatest danger that was associated with the idea of hypnotism was the *fear* of it that existed in the minds of the unlearned. Nothing of a hypnotic nature could possibly be included in the work of the Rosicrucian Order because it would be unscientific, impractical, and unsound, from the Rosicrucian point of view.

No. 61

Q. If the doctrines of reincarnation are true, and all beings in the world today are incarnations of only those who have lived previously, how do you account for the increasing population?

QUESTIONS AND ANSWERS

A. This question assumes that as the world gets older month by month and year by year, the population is increasing by thousands of beings, and that there are more persons living on earth today than were living one hundred, five hundred, a thousand, or ten thousand years ago. This assumption, however, is not based upon any actual facts that are discovered by science. Regardless of what the population of the earth may be today, we have no reason to assume that it is any larger in number than it was ten thousand years ago. The assumption that the earth's population is increasing is based upon the belief that in recent centuries new lands have been discovered which were unpopulated and have since been populated without decreasing the population of other lands. It was believed, for instance, that when Columbus discovered America this continent was populated by only a few thousand Indians. If that assumption was correct, then it would appear that the hundred million population now existing in the United States means a considerable addition to the entire population of the world. On the basis of such reasoning, it would appear that ten thou-

QUESTIONS AND ANSWERS

sand or more years ago, there were only a few countries in the world which had any population, and that today those same countries have an increased population, while the new lands that have been opened to civilization have added millions of new beings to the earth's population. The findings of science, however, are constantly revealing what the ancient mystics of the Orient always contended, namely, that the North American continent, for instance, was always thickly populated at different periods in its history, and the discovery of lost cities of enormous size and the ruins of ancient centers of civilization prove that at one time North America was well populated with a highly advanced race of people, or of many *races* of peoples. The same thing can be said of parts of South America and other lands. Then we must not forget that there was a great continent called the Atlantis which was also thickly populated, but which became submerged and brought to an end the earthly existence of millions of incarnated beings. Taking these facts into consideration, it is possible to conceive that at various cycles of the earth's existence, the earth has had a very large

QUESTIONS AND ANSWERS

population, and that at other cycles the population has been greatly decreased through famine, earthquakes, storms, volcanic disruptions and other natural means of evolution. Therefore, it may be that there are no more beings on the earth today than there were thousands of centuries ago. However, all of this is purely speculative, and solely as a result of the assumption that the population of the earth is increasing continuously without the creation of new souls. There is nothing in the doctrines of reincarnation to intimate that every living creature on the face of the earth has lived before, and that no being is now living for the *first time* on this earth plane. It is very possible that many of the thousands of primitive beings that are discovered on various islands and in far away sections of uncivilized land are *new soul* expressions having their first incarnation on this earth. In fact, every scientific investigation of this class of beings indicates that this is so, and these facts help us to understand how the population of the earth can increase without presenting any contradiction to the doctrines of reincarnation.

QUESTIONS AND ANSWERS

No. 62

Q. Will not a thorough study of practical psychology cover all the benefits to be derived from the study of the Rosicrucian teachings?

A. A thorough study of practical psychology will make the student familiar with the fundamental principles of the functioning of the mind, and cast some light on the relationship of the mind to the soul. This knowledge constitutes but a fraction of the knowledge included in a complete study of mysticism, metaphysics, psychology, and ontology. Certainly the Rosicrucian teachings embrace more important and more practical knowledge than is contained in a thorough course on psychology. Furthermore, no course on psychology deals with all of the practical problems of everyday life with solutions for them and methods whereby men and women may master the serious situations in life and accomplish the things which lead to contentment, perfect health, peace, happiness, and prosperity. Hundreds of books have been written on the subject of psychology and hundreds of lecturers have conducted public and private classes dealing exhaustively with psy-

QUESTIONS AND ANSWERS

chology, and yet the average student of these courses and classes discovers that he has been merely touching the edge of a field of knowledge that becomes more and more alluring. Many thousands of the members who unite with the Rosicrucian organization have spent years in the study of psychology and come to the Rosicrucian organization seeking more knowledge and more *practical* help than they have had; and the fact that they remain in the organization and become enthusiastic regarding the work and teachings of the Rosicrucian Order indicates that they did not find in psychology the complete presentation of the principles which are necessary for a comprehensive understanding of life and all of its problems. For a number of years America was enthusiastic over the subject of practical psychology, and this study was offered as a solution to all of the ills and problems of humanity. The study of this science was bombastically offered as the *last and ultimate key* to life and its enigmas. The fad has waned solely because the thousands who devoted their time and money in close application to the study of psychology discovered that it was not the great

QUESTIONS AND ANSWERS

aid that it was claimed to be, despite the excellent help it has been in many ways.

No. 63

Q. Cannot anyone secure just as complete an outline of the Rosicrucian teachings from any of the popular books on Rosicrucian principles as by taking the course of study from the Rosicrucian Order?

A. The Rosicrucian teachings in their entirety and even in a fairly comprehensible outline have never been published in any books sold on the open market, *and never will be*. It is true that a number of publishers have been tempted by the demand on the part of thousands of seekers for such books, to publish pamphlets and books *claiming* to contain the Rosicrucian secrets, teachings, rituals, symbols, and so forth. It is notable that in every case the most bombastic of these claims and the most alluring of these books are issued by publishing companies or individuals having absolutely no connection with the Rosicrucian Order, and not operating as a part of the Rosicrucian Order. Furthermore, a casual examina-

QUESTIONS AND ANSWERS

tion of the eight or ten books published within the last fifty years in America claiming to contain some of the Rosicrucian teachings shows that no two of these books contain the same fundamental principles, use the same terminology, have the same viewpoint on essential principles in life, or offer the same explanations. Certainly, therefore, all of them cannot be Rosicrucian presentations. There cannot be and never has been any diversity of opinion on the part of the real Rosicrucian instructors in regard to the principles, laws, and teachings of the Rosicrucian work, and whether a man or woman unites with the Rosicrucian organization in Egypt, South Africa, Australia, United States, England, France, or Germany, the teachings are identical, and the uniformity of understanding and practice of these principles is one of the strong features making for cooperative action and universal brotherhood. Differences of opinion on the part of teachers or writers of popular books in regard to the same science would cause not only confusion in the minds of the students, but lead to endless speculative theories and inconsistent consequences. This is precisely what

QUESTIONS AND ANSWERS

one finds in the books offered on the open market as outlines of Rosicrucian teachings. In every case these books have been written by men or women who have had some course of reading in metaphysical or occult subjects, and have attempted to write a personal opinion of what the Rosicrucian teachings may be like or should be like without any real knowledge of them. No Rosicrucian student who has completed the course of study and is proficient and successful in his application of the principles and the mastery of his life has ever written or attempted to write a book presenting these teachings to the public for commercial price. We say it has never been done, and we further say that it never will be done; for every such student knows that it would be inconsistent and improper, and, therefore, *impossible*, in the light of his understanding and development. Several thousand men and women among the others who unite with the Rosicrucian organization every year spend large sums of money in the purchase of such books before coming into the organization, with the hope of economically and conveniently learning the principles which they believe will produce

QUESTIONS AND ANSWERS

the utmost benefit in their lives. They finally discover that the purchase of these books becomes a costly proposition, and that they are expending more money this way in one year than they would in several years in the proper manner of study. They find that they receive no benefits but are becoming constantly confused through the differences of opinions on the part of these authors and through the continual issuance of new books with new ideas written for the purpose of tempting the seeker to continue to buy books in the hope that his search will eventually come to an end. The more alluring and tempting, and the more *inclusive* is the title of any of these so-called Rosicrucian books, the more sure one can be that the books contain nothing of real value and are designed solely to appeal to the susceptibility of the unguided seeker. Books which claim to be an exposition of the Rosicrucian mysteries or a presentation of the Rosicrucian *rites and rituals*, or of the *secret doctrines* of the Rosicrucians, are not only misleading in their titles, but deceptive in the claims set forth, inasmuch as such books do not and cannot contain what is claimed for them. Attention

QUESTIONS AND ANSWERS

is called to a section of the history of the organization published in this book, which explains how and why a number of pseudo-Rosicrucian movements have attempted to carry on the impression of being a part of the Rosicrucian Order by the adoption of misleading names or simulating emblems, while doing nothing more than publishing and selling useless books. Everyone of common sense will appreciate the fact that any book offered for public sale, claimed to be a complete presentation of the *secret teachings* and *secret ritual* of the *Freemasons* would be unworthy of purchase at any price, for one would know instinctively that the contents of the book could not possibly fulfill the claim made by the title. The same may be said of books dealing with the subject of Rosicrucianism.

No. 64

Q. Is it not true that the Rosicrucian Order in America and in some other lands has published some books dealing with Rosicrucianism, even though they say that the Rosicrucian teachings are never published in any public books?

QUESTIONS AND ANSWERS

A. The Rosicrucian Order in America, like the Order in other jurisdictions, for many centuries has published certain books which present the real ideals and philosophical standards of the Rosicrucian fraternity. None of these books, however, have ever borne a title that would indicate that they contained the *secret teachings* or an outline of all of the teachings, or a presentation of the complete teachings, rituals, practices, and work of the organization. In checking up on the largest Rosicrucian bibliography, compiled in Europe a few years ago, it was found that not one of three thousand eight hundred some odd books contained a title or a sub-title that was misleading in so far as claiming the book to be a presentation of the *secret teachings* or the *complete teachings*, or the practices and arts, of Rosicrucianism. This in itself distinguishes these official books from the pretentious offerings and subtle inducements put forward in the titles of books published by concerns not connected with the Rosicrucian Order, and not familiar with the real Rosicrucian teachings. The Rosicrucian Order in America, for instance, has published a book dealing with the

QUESTIONS AND ANSWERS

“Rosicrucian Principles for Home and Business.” This book does not present the secret teachings of the Rosicrucians, nor does it claim to do so, and distinctly states in its introduction that the book presents only a few of the Rosicrucian principles with an enlargement and elaboration of their application to business and social affairs. Everyone who reads such a book and derives unmistakable benefits from the principles presented, is continuously made aware by the statements therein that the more extended and varied teachings of the Rosicrucian work are not contained in the printed pages. In other books published by the Rosicrucian Order of North America, dealing with the subject of reincarnation in story form for the sake of those who want to know what reincarnation deals with, and in books dealing with the mystical life of Jesus, the history of the Order, the early manuscript writings of the Masters of Tibet, and similar publications, only such subjects are dealt with as are not a part of the secret teachings or the practical teachings of the complete course of Rosicrucian study. Even though the Rosicrucian Order were to publish a complete library of several

QUESTIONS AND ANSWERS

hundred books, which it intends to do in the coming years, none of these would contain the complete course of study as given by the Rosicrucian Order in all the lands where it exists. Such books are helpful, inspiring, and of practical benefit to members and non-members alike, and are issued and sold at an economical price. They should be classified as valuable contributions to the occult and metaphysical literature of the world, and not as claimed expositions of the secret Rosicrucian teachings.

No. 65

Q. Why is so much being said about the Rosicrucian Order at the present time, if it has existed in all lands for so many centuries?

A. A study of the history published in the other part of this book will show that the Order has had a public and private existence in alternating periods of one hundred and eight years each. There was a time when the Rosicrucian Order was as well known in America among the populace of this country at that time as it is known today, but this period was followed by one hun-

QUESTIONS AND ANSWERS

dred and eight years of dormancy in the organization during which the public knowledge and interest in the organization passed away. In order to understand this the better, the attention of the reader is called to the section of the history dealing with "The One Hundred and Eight Year Cycle and the Mystery of C. R-C."

No. 66

Q. What are the moral requirements of membership in the Rosicrucian Order?

A. The only moral requirements necessary for membership in the Rosicrucian Order are that the applicant should be of good repute, living a life of general conformity with the moral and ethical standards of the country, and having a firm conviction in the existence of God. The Order excludes those who do not believe in the existence of God, solely because of the time that would have to be consumed and the unnecessary effort expended in establishing a conviction of the existence of God, *Supreme Architect, Divine Creator, or Omnipotent Intelligence* in the mind and heart of a prospective member. Unless such a conviction

QUESTIONS AND ANSWERS

does exist in the consciousness of a student of the Rosicrucian teachings, he or she can make no progress and can never master the application of the natural laws. Those who are engaged in any practice or hobby contrary to the laws of the land, or in any profession or study that is unethical and tends toward fanaticism, radicalism, or extreme unconventionalism are not permitted to unite with the organization. Religious differences of opinion, so far as sectarianism is concerned, have no consideration in the qualification of an applicant. Each applicant must promise, before being accepted, to honor and respect the laws of the country and the Flag under which he lives, and he or she must also promise to be a good and useful citizen in the upbuilding of a better nation. This naturally eliminates the objectors to law and order, and those who pretend to be conscientious objectors to the upholding of the nation's best interests in the time of peace or war. The sole purpose of the work of the Rosicrucian Order is not to make better beings out of individuals *in a selfish sense*, but to make better citizens in every country to the glory of God and the betterment of the nation. With

QUESTIONS AND ANSWERS

each jurisdiction in each land having the same motive and the same purpose, the organization is building up a race of men and women of all nationalities, who see beyond national bounds and limitations and are united in one grand Brotherhood for the perfection of all races of mankind.

No. 67

Q. Do the Rosicrucians have to wear any particular garb, robe, or emblem, or conduct themselves in any outward manner so as to distinguish themselves from other citizens?

A. The Rosicrucian Order does not require its members to wear anything, or act in any manner, that would designate them as being different from other persons, except in so far as their mental attitude of tolerance, sympathy, and understanding, and their success and happiness in life, would indicate them to be advanced persons, familiar with and applying a philosophy and system of living that enables them to achieve the utmost and receive the bountiful blessings of this universe.

QUESTIONS AND ANSWERS

No. 68

Q. Do the Rosicrucians read the Christian Bible and attend churches of any denomination?

A. It is but natural that the studies of spiritual and natural laws would lead to the close study of the Christian Bible as well as many other sacred books that have been written in the centuries past. Rosicrucians are devout students of the Christian Bible, for they find therein many expressions of the early comprehension of God's great laws. They are generally members of various churches of various denominations, for there is nothing in the teachings that would lead them from the church, and much that makes them appreciate the great work that the churches have done in the past and are doing today and which calls for their hearty support and cooperation.

No. 69

Q. Do the Rosicrucian teachings include *all* knowledge and *all* Truth?

A. It would be impossible for the Rosicrucian teachings to include all Truth and all knowledge. The study of facts known about *bacteria*, for in-

QUESTIONS AND ANSWERS

stance, constitutes a long and serious course, but is not included in the Rosicrucian teachings because it has no place in its system, even though it does represent Truth. All the laws of *art* and *music* are not included in the Rosicrucian teachings, regardless of the fact that they also represent Truth. There is much knowledge in the universe generally known, and much that is only secretly known that is not included in the Rosicrucian teachings, because it has no place in the scheme of things as outlined by the practical purposes of the organization. But all knowledge of metaphysical, occult, psychological, mystical, natural, spiritual, and mental laws as pertains to man's being, man's development, and man's mastership of the conditions around him, are included in the course in so far as they are of *practical value* and enable him to actually *do things* in this material world for his own betterment and the betterment of others. The teachings are inclusive enough to contain all that is good and practical and based upon Truth as presented in the teachings of all the other metaphysical and mystical schools of India, Egypt, Persia, and other lands. The fact that the Rosi-

QUESTIONS AND ANSWERS

crucian organization is extensive in all of the Oriental lands and that the greatest teachers of the individual philosophies and mystical teachings in these other lands are officers and enthusiastic workers in the Rosicrucian Order, and have been so for many centuries, should plainly indicate that whatever is good and practical and true of these other teachings would become a part of the Rosicrucian studies. The Rosicrucian work continues to be as it has been in all centuries, the most complete and most inclusive of all schools. As rapidly as any laws and principles of nature are discovered, or evolved by experimentation and test on the part of Masters and highly developed individuals in any land, in any school of thought, and in any race of people, these things are immediately brought before the national and international congresses of the Rosicrucian Order. If found of practical value in either the Oriental or Occidental world they are added to the Rosicrucian instructions in a form to be most easily understood and most efficiently applied. Not being bound by any creed or dogmas, or limited by any traditions of antiquity, the Rosicrucian Order can logically and

QUESTIONS AND ANSWERS

rightfully add to its teachings and modify them continuously in keeping with the evolving consciousness and requirement of all men and women.

No. 70

Q. Are the Rosicrucian teachings of today the same ancient teachings as those promulgated centuries ago?

A. The very fact that men and women of the Western World and of Occidental progressiveness find the teachings of *practical value* in their every day affairs, would indicate that the teachings of the Rosicrucian Order today cannot be those which were given in the schools of centuries past. Truth is never changing, and a law or principle that was sound and proved a thousand or ten thousand years ago must be sound and true today; but it may be a principle requiring no application on the part of men and women of *modern times*. Therefore, it would not be a practical one in the view of modern light and development. Many of the ancient principles in regard to diet and fasting which were sound, logical, and of practical help several centuries ago, are of little

QUESTIONS AND ANSWERS

value today because of the improvements and modification in man's living and especially in the matter of eating. Therefore, the study of the ancient philosophies in their original form includes many principles and practices of no value today, and this fact is overlooked by many who seek knowledge from ancient sources, and in the republication of ancient books. On the other hand, many of the profound principles that served man so well in years gone by have their application today in a modified form or in relation to activities and practices on our part not known to those of ancient peoples. In addition to this, every year sees the discovery or evolution of a new principle or law partially known or perhaps unknown to the ancients, but always existing in the Cosmic as a universal principle. These discoveries or evolved principles are tested and tried by the highest members of the organization in all lands and are gradually added to the teachings of the organization so as to provide the students with the very best and most modern application of the fundamental principles which are helpful to all. For this reason, the teachings and lessons of the Rosicrucian organiza-

QUESTIONS AND ANSWERS

tion are continuously revised, modified, and augmented. The revisions and modifications do not set aside any Truth that is of a practical value, nor do they make untrue that which was and always will be true. The revisions and modifications usually apply to the wording, presentation, or utility of the principle or law. The Rosicrucian teachings of each year are the most advanced presentation of these things to be found in any school or system, and are always in keeping with man's actual requirements and contemplations.

No. 71

Q. Do the Rosicrucian teachings follow in the wake of science in their revelations, or do they anticipate them?

A. The Rosicrucian teachings have always been many years, and often many centuries in advance of the findings of science. This is not a reflection upon science, for science acknowledges and gives voice to principles and laws only after it has tested them in its own way and reduced them to certain measures and methods of observation. This unique standard established by science

QUESTIONS AND ANSWERS

causes it to hold back in the acceptance of any law or principle, long after many of such principles have been known and used by progressive minds. The Rosicrucians, on the other hand, do not depend upon the rules of science for the discovery and test of natural laws and principles. They have their own way by which they may prove the truth or worthiness of a principle, and this method permits them to quickly come to the proper conclusion and with less likelihood of misjudgment than by the scientific method. This is proved by the fact that many principles and laws tested and proved by the Rosicrucians and adopted by them have been rejected or denied by science for centuries, and then later found by science to be true. Another interesting fact is that at no time in the history of the Rosicrucian Order has it ever had to *retract* or *subtract* from its teachings any law or principle expounded as true, because of a discovery that it was untrue and inconsistent with other laws and principles. This cannot be said of the material sciences, which are constantly retracting and correcting statements made, or conclusions reached, by their own methods.

QUESTIONS AND ANSWERS

In this connection we may say that scientists and philosophers have often called attention to the fact that the Rosicrucians have made most of the important contributions to scientific knowledge because of their unique methods of securing information, and their freedom from doctrinal limitations, which permits them to accept new knowledge that is proven true regardless of its uniqueness or astounding nature. New facts discovered by science, which do not fit nicely into the theories established by science, must of necessity be laid aside when there is a possibility of such new knowledge contradicting that which has been promulgated for some time. Rosicrucianism has never been in this predicament, and is not likely to be, since it has no theories but deals only with facts and truth. No discovery or revelation, therefore, of a truth can be an inconsistency with what is already known to the Rosicrucians, and cannot be so unique that it will not fit into the woven fabric of principles and laws already established and in use. In a recent article in the Sunday edition of the *New York World* a former magazine editor writing on religious, scientific, and philosophic

QUESTIONS AND ANSWERS

subjects stated that, "If my scientific friends think their labors are based on accuracy, this is nothing to the accuracy and the painstaking finality of the mystics who anticipated science, who announced discoveries in science centuries before they are worked out externally." He calls attention to the fact that the recent discoveries of Einstein, and of Milliken, and Eddington, deal with laws and principles well known to the mystics and used by them for many centuries. This probably explains why the eminent discoverers of great principles in physiology, anatomy, biology, chemistry, electricity, astronomy, medicine, music, and art have been advanced students of the Rosicrucian studies, and that today the leading experimenters in many of the greatest scientific laboratories of the world are also advanced students of the Rosicrucian work.

No. 72

Q. Is the Rosicrucian work only of benefit to the very learned and those engaged in scientific and professional occupations?

A. The larger part of the membership of the Rosicrucian Order consists of men and women

QUESTIONS AND ANSWERS

who are *not* engaged in scientific or professional pursuits. The average member is a man or woman engaged in nominal business interests or engaged solely in looking after a home, caring for children, and bringing joy and happiness into the lives of a family. The organization would fail in its great aim if its work were not directed to give the utmost of benefit to the layman or to the average individual in life. It is with the multitude and with the mass that the great work must be accomplished, and where the greatest benefit can result. For this reason every man or woman who is capable of reading ordinarily in the English language, and capable of comprehending the meaning of the average words of the English language, can easily master and succeed in the application of the principles taught in the Rosicrucian teachings. The work becomes so fascinating, the study so tempting, and attractive in its revelations and applications, that men and women who have little time for other studies or for evening devotion to unnecessary things, are happy to set aside a part of one evening each week for the study of the weekly lecture so that during the other days of the week,

QUESTIONS AND ANSWERS

in spare moments, the principles may be applied and benefits may be derived in every one of the daily affairs.

Explanatory

THE ROSICRUCIAN ORDER

ANTICIPATING questions which may be asked by the readers of this book, the publishers wish to announce that there is but one universal Rosicrucian Order existing in the world today, united in its various jurisdictions, and having one Supreme Council in accordance with the original plan of the ancient Rosicrucian manifestos.

This international organization retains the ancient traditions, teachings, principles, and practical helpfulness of the Brotherhood as founded centuries ago. It is known as the *Ancient Mystical Order Rosae Crucis*, which name is abbreviated for popular use into AMORC. The North American jurisdiction of this order maintains National Headquarters at San Jose, California, with branches distributed throughout the United States, Canada and Mexico. Those interested in knowing more of the history and present day offerings of the Rosicrucians may have a *free* copy of the book entitled the "Wisdom of the Sages" by sending a definite request to Extension Librarian, AMORC Temple, Rosicrucian Park, San Jose, California.

The Rosicrucian Library

Consists of a number of unique books which are described in the following pages, and which may be purchased from the AMORC SUPPLY BUREAU, San Jose, California.

VOLUME II.

Rosicrucian Principles for the Home and Business

THIS volume contains such principles of practical Rosicrucian teachings as are applicable to the solution of the every-day problems of life in business and in the affairs of the home. It deals exhaustively with the prevention of ill health, the curing of many of the common ailments, and the attainment of peace and happiness as well as the building up of the affairs of life that deal with financial conditions. The book is filled with hundreds of practical points dealing especially with the problems of the average business man or person in business employ. It points out the wrong and right way for the use of metaphysical and mystical principles in attracting business, increasing one's income, promoting business propositions, starting and bringing into realization new plans and ideas, and the attainment of the highest ambitions in life.

"Rosicrucian Principles for the Home and Business" is not theoretical but strictly practical, and is in its third edition, having had a wide circulation and universal endorsement not only among members of the organization, who have voluntarily stated that they have greatly improved their lives through the application of its suggestions, but among thousands of persons outside of the organization. It has also been endorsed by business organizations and business authorities.

The book is of standard size, well printed, bound in silk cloth, and stamped in gold. Price, postage prepaid, \$2.00.

VOLUME III.

Mystical Life of Jesus

THIS is the book that thousands have been waiting for—the real Jesus revealed at last! It has been in preparation for a number of years and required a visit to Palestine and Egypt to secure a verification of the strange facts contained in the ancient Rosicrucian and Essene Records.

It is a full account of the birth, youth, early manhood, and later periods of Jesus' life, containing the story of His activities

in the times not mentioned in the Gospel accounts. The facts relating to the immaculate conception, the birth, crucifixion, resurrection, and ascension will astound and inspire you. The book contains many mystic symbols, fully explained, original photographs, and a new portrait of Jesus.

There are over three hundred pages with seventeen large chapters, beautifully printed, bound in purple silk and stamped in gold.

Here is a book that will inspire, instruct, and guide every student of mysticism and religion. It will be the most talked-about book of the year. Read it and be prepared for the discussions of it that you will hear among men and women of learning.

Sent by mail, postpaid, for \$2.25.

VOLUME V.

“Unto Thee I Grant . . .”

THIS is one of the rarest, Oriental, mystery books known. It is translated by special permission of the Grand Lama and Disciples of the Sacred College in the Grand Temple in Tibet.

Here is a book that was written two thousand years ago, and was hidden in manuscript form from the eyes of the world and given only to the initiates of the temples in Tibet to study privately.

Out of the mystery of the past comes this antique book containing the rarest writings and teachings known to man with the exception of the Bible. Hundreds of books have been written about the teachings and practices of the *Masters of the Far East* and the Adepts of Tibet, but none of them has ever contained the secret teachings found in this book. This book is divided into many parts, each part containing a large number of sections or divisions and chapters.

The book deals with man's passions, loves, desires, weaknesses, sins, strengths, fortitudes, ambitions, and hopes. All are treated in detail with illuminating simplicity. The book is beautifully printed and bound in *leatherette*, and contains also the strange mystic story of the expedition into Tibet to secure this marvelous manuscript.

Price, per copy, postage prepaid, only \$1.25.

VOLUME VI.

A Thousand Years of Yesterdays

HERE is a book that will tell you more about the real facts of *reincarnation* than anything that was ever written. It is a story of the soul, and explains in detail how the soul enters the body and how it leaves, where it goes to and when it comes back to earth again, and why.

The story is not just a piece of fiction, but a *revelation of the mystic laws* and principles known to the Masters of the Far East and the Orient for many centuries, and never put into book form as a story before this book was printed. That is why the book has been translated into so many foreign languages and endorsed by the mystics and adepts of India, Persia, Egypt, and Tibet.

Fascinating — Alluring — Instructive

Each who has read the book says that he was unable to leave it without finishing it at one sitting. The story reveals the mystic principles taught by the Rosicrucians in regard to reincarnation as well as the spiritual laws of the soul and the incarnations of the soul.

It is well printed, neatly bound, and worthy of a place in anyone's library.

Price, per copy, postage prepaid, only 85 cents.

VOLUME VII.

Self Mastery and Fate with the Cycles of Life

This book is entirely different from any ever issued in America dealing with the secret periods in the life of each man and woman wherein the Cosmic forces affect our daily affairs.

The book reveals how we may take advantage of certain periods to bring success, happiness, health and prosperity into our

lives, and it likewise points out those periods which are not favorable for many of the things we try to accomplish. It does not deal with astrology or any system of fortune telling, but presents a system long used by the Master Mystics in Oriental lands and which is strictly scientific and demonstrable. One reading of the book with its charts and tables will enable the reader to see the course of his life at a glance. It helps everyone to eliminate "chance" and "luck," to cast aside "fate" and replace these with Self Mastery.

Here is a book you will use weekly to guide your affairs throughout the years. There is no magic in its system, but it opens a vista of the cycle of the life of each being in a remarkable manner.

Well printed, bound in silk cloth, and stamped in gold to match other volumes of the Rosicrucian Library. Price, postage paid, \$2.00.

VOLUME VIII.

Rosicrucian Manual

THIS practical book contains not only extracts from the Constitution of the Order of Rosicrucians, but a complete outline and explanation of all of the customs, habits, and terminology of the Rosicrucians, with diagrams and explanations of the symbols used in the teachings, an outline of the subjects taught, a dictionary of the terms, a complete presentation of the principles of Cosmic Consciousness, and biographical sketches of important characters connected with the work. There are also special articles on the Great White Lodge and its existence, how to attain psychic illumination, the Rosicrucian Code of Life with thirty laws and regulations, and a number of portraits of prominent mystics including Master K. H., the Illustrious.

The technical matter contained in the text and in the hundred or more diagrams makes this book a real encyclopedia of Rosicrucian explanations, aside from the complete dictionary it contains.

The "Rosicrucian Manual" is of large size, well printed, beautifully bound in red silk cloth, and stamped in gold. The fourth edition has been enlarged and improved in many ways. Price, postage prepaid, \$2.00.

VOLUME IX.

Mystics at Prayer

THE first complete compilation of the famous prayers of the renowned mystics and adepts of all ages. *By* MANY CIHLAR, F.R.C., *Austrian Philosopher and Mystic.*

The book "Mystics at Prayer" explains in simple language the reason of prayer, how to pray, and the Cosmic laws involved. You come to learn the real efficacy of prayer and its full beauty dawns upon you. Whatever your religious beliefs, this book makes your prayers the application not of words, but of helpful, divine principles. You will learn the infinite power of prayer. Prayer is man's rightful heritage. It is the direct means of man's communion with the infinite force of divinity.

"Mystics at Prayer" is well bound, embossed in gold, printed on art paper in two colors, with deckled edge and tipped pages, sent anywhere, postpaid \$1.00

VOLUME XI.

Mansions of the Soul

REINCARNATION ! The world's greatest disputed doctrine. The belief in reincarnation has had millions of intelligent, learned, and tolerant followers throughout the ages. Ringing through the minds and hearts of students, mystics, and thinkers have always been the words: "Why Are We Here?" Reincarnation has been criticized by some as conflicting with sacred literature and without verification. This book reveals, however, in an astounding manner the many facts to support reincarnation. Quotations from eminent authorities, from Biblical and Sacred works substantiate reincarnation. This volume PROVES reincarnation. It places it high above mere speculation. This book is without exaggeration the most complete, inspiring, enlightening book ever written on this subject. It is not a fiction story but a

step by step revelation of profound mystical laws. Look at some of these fascinating, intriguing subjects:

The Cosmic Conception; The Personality of the Soul; Does Personality Survive Transition?; Heredity and Inheritance; Karma and Personal Evolution; Religion and Biblical View-points; Christian References; Between Incarnations; Souls of Animals and the "Unborn;" Recollections of the Past.

The book contains over three hundred pages, beautifully printed, neatly bound, stamped in gold; it is a valuable asset to your library, economically priced. Price per copy, postage prepaid, only \$2.20.

VOLUME XII.

Lemuria—The Lost Continent of the Pacific

BENEATH the rolling, restless seas lie the mysteries of forgotten civilizations. Swept by the tides, half buried in the sands, worn away by terrific pressure are the remnants of a culture little known to our age of today. Where the mighty Pacific now rolls in a majestic sweep of thousands of miles, there was once a vast continent. This land was known as Lemuria, and its people as Lemurians.

We pride ourselves upon the inventions, conveniences, and developments of today. We call them modern, but these ancients and long-forgotten people excelled us. Things we speak of as future possibilities, they knew as everyday realities. Science has gradually pieced together the evidences of this lost race, and in this book you will find the most astounding, enthralling chapters you have ever read. How these people came to be swept from the face of the earth, except for survivors who have living descendants today, is explained. Illustrations and explanations of their mystic symbols, maps of the continent, and many ancient truths and laws are contained in this unusual book.

If you are a lover of mystery, of the unknown, the weird—read this book—remember, however, this book is *not* fiction, but based on facts, the result of extensive research. Does civilization reach a certain height, and then retrograde? Is the culture and progress of mankind in cycles, reaching certain peaks, and then

returns to start over again? These questions and many more are answered in this intriguing volume. Read of the living descendants of these people, whose expansive nation now lies at the bottom of the Pacific. In the minds of these descendants is the knowledge of the principles which in by-gone centuries made their forbearers builders of an astounding civilization.

The book, "Lemuria, the Lost Continent of the Pacific," is beautifully bound, well printed, and contains many, many illustrations. It is economically priced at \$2.20, postpaid.

HOW TO ORDER BOOKS

If your regular book dealer does not have these books in stock, and you do not care to wait until he secures them for you, you may save time by sending your order direct, with remittance or C. O. D., postage prepaid by us.

12. The Law of Compensation
13. Attracting Customers
14. The Skeleton in the Closet
15. The Round Table

PREFACE

to the 21st Century Edition

Rosicrucian Principles for the Home and Business was first published in 1929, and given the major business troubles of that fateful year, this new book could not have been more timely as it guided its readers through the tumultuous depression years of the 1930s. H. Spencer Lewis enlightened advice for those involved in the world of business proves to be as relevant today as it was then.

Although business conditions have changed greatly since 1929, the principles behind good business practice remain the same. They are as timeless as the laws of human nature. The chapters of this book are actually specific and practical lessons in the application of certain mystical and natural laws.

While the basic concepts presented here are as true today as they were then, some of the examples, phrases, and references in the original edition do not fully address themselves to today's fast-paced world of business and finance. For example, many of today's businesses are owned, guided, and managed by women as well as men; credit is much more accessible now than in the past; and today's business climate is much more open and diverse than it was in 1929. In fact, this important book undoubtedly contributed to the more open and honest business environment of today. For all these reasons it was vitally important that H. Spencer Lewis's timeless concepts for the home and business be brought into the context of the twenty-first century.

Therefore, our purpose in revising this Rosicrucian Classic is to make it more comprehensive for today's readers. Leaving the book's basic message intact, we have clarified and updated information, while

providing more contemporary and relevant examples for twenty-first-century readers. And though we can't be sure of this, we would like to think that this is the book H. Spencer Lewis would have written if he were alive today.

We would like to take this opportunity to define the word *cosmic* as it is used throughout this book. Some of our readers may not be familiar with this term. To Rosicrucians, the Cosmic represents the totality of natural, universal, and spiritual laws by which Divine Intelligence expresses itself throughout Creation. Consequently, we are all permanently united to that Intelligence and we possess it in the innermost part of ourselves.

We hope readers will enjoy and value this new edition of an age-old classic.

— *Robin M. Thompson, Editor.*

INTRODUCTION

How This Book Came About

FOR MANY YEARS prominent business people in New York and other cities sought out Rosicrucian Emperor Spencer Lewis as their advisor in special business matters. Even before H. Spencer Lewis founded the American branch of the Rosicrucian Order, AMORC, and became its chief executive, his astute business acumen and excellent understanding of human psychology made him an invaluable asset on many business teams. His unusual ability to sense conditions intuitively, his ready contact with the minds of others and with the universal mind of the masses, plus his extraordinary ability to direct or engineer the successful manifestation of the most involved and difficult plans, attracted the attention of important people in the business world. H. Spencer Lewis soon became the “silent partner” in many corporations and organizations, accepting only donations toward the great work of AMORC as his compensation. Wherever he traveled on behalf of his work for AMORC, people in business sought him out for brief, yet invaluable, consultations; and it became notable that whenever H. Spencer Lewis gave his approval to a plan and indicated that he would use his “special methods to bring the matter to a conclusion, *there was eminent success.*

After a number of Better Business Bureaus, boards of trade, business guilds, clubs, and associations had invited H. Spencer Lewis to speak at their weekly or monthly sessions, he was asked to prepare a series of talks to be delivered to one of the largest assemblies of business people ever organized to hear a series of lectures about the mystical principles involved in “good business,” or *business for the good of all.*

These lectures enabled those attending to achieve such phenomenal success in their personal and business affairs that reports of the results spread throughout the country, from city to city, and from one person to another.

Meanwhile, in the years following the establishment of the Rosicrucian Order, AMORC, in America, hundreds of members who had become familiar with the advanced ethical and mystical principles taught by the Order, petitioned AMORC's officers for more detailed information about how they could put the Rosicrucian teachings and principles to work in their business affairs. After all, Rosicrucianism, as presented by AMORC throughout the world today, is a practical philosophy, a *science of demonstrable laws*. And Rosicrucians have always been practical individuals, working with nature's laws for the sole purpose of improving their own and others' lives here on Earth, now.

According to the Rosicrucian ideal, each person should attempt, by every means ethical, moral, and cosmically approved, to succeed in life, to enjoy health, happiness, material comforts and the comforts of physical existence, and to attain spiritual peace and attunement. In fact, Rosicrucians have ever held that to truly fulfill the mission of our existence here on Earth, and thereby carry out the Divine Will, we should neither slight nor negate the material or worldly obligations that are incumbent upon all of us, but should meet them, master them, and make an eminent success of our earthly life. This, say the Rosicrucians, will bring us more truly in contact with the universal laws of nature and attune us more consciously with the universal scheme of things, rather than living a life of speculative abstraction or spiritual monasticism.

As examples to Rosicrucians, all of the great avatars and teachers of the past have devoted the larger part of their lives to the application of knowledge for the alleviation of suffering, the advancement of learning, the promulgation of science, and the achievement of worldly happiness and prosperity. Each has left a legacy to humanity through intimate contact with the problems of daily life and through their association with men and women struggling to live better and more exemplary lives.

None of these cosmic messengers ever lost the human touch, the companionship with their earthly brothers and sisters, nor the opportunity to work out, in a material way, the solution to humanity's actual physical problems.

Therefore, it was natural that students of the Rosicrucian teachings would become imbued with this practical and humanitarian way of life and would seek more information about how they could solve their problems and better live and prosper in today's world. The organization expected—even anticipated—this need, and through publishing *Rosicrucian Principles for the Home and Business*, the Rosicrucian Order has demonstrated its unique and distinct place in the lives of humans by providing answers to profound questions regarding the successful pursuit of health, happiness, and peace.

This book is the result of hundreds of requests that came to Rosicrucian headquarters from all over the United States and Canada asking that the original business lectures presented by H. Spencer Lewis be reproduced in print so that Rosicrucians and the public could have ready access to them. The lectures were so popular that several business magazines of the time offered to serialize the lectures in their publications, and book publishers likewise offered sizable sums of money for the exclusive right to commercialize the lectures. It was decided, however, by H. Spencer Lewis himself, that in keeping with the ideals of AMORC, instead of allowing corporate publishers to issue and sell these lecture-lessons at great profit, AMORC would publish this invaluable material in a book to be made available to Rosicrucians and the public alike for a reasonable price with a nominal profit, which profit would be used to further AMORC's important work in the world.

Rosicrucian Principles for the Home and Business resulted from this decision. The original lectures given by H. Spencer Lewis have been augmented, revised, and extended to fit the book format. None of the private teachings of the Rosicrucian Order are presented in their fullness, but every mystical method is utilized. In fact, the principles presented in this book were extracted from hundreds of AMORC's lessons that deal with numerous other vital matters, such as the

development of latent abilities, the awakening of dormant talents, and the building up of such functions as intuition, mental creation, and healing powers that enable Rosicrucian students to master their lives and succeed in being healthy, prosperous, and happy. Therefore, for Rosicrucians the information presented in this book will build on the knowledge they are already studying in the Rosicrucian monographs, while all our readers will find the information presented here to be most beneficial, constructive, and applicable in their lives.

Most people in today's business world—especially those who are likely to become students of the Rosicrucian teachings—are in business because they enjoy its activities, seek to contribute to the world's progress, and desire to meet their obligations, fulfill their duties, and carry on with their mission in life while enjoying sufficient prosperity to be able to help others as well as to help themselves. Surely, no higher motive can actuate any being in any endeavor or aspiration.

These persons deserve to succeed, for their success and prosperity in the world of business not only helps them, it also helps their families and associates, their communities, and the economy and society in general. For these reasons, the Rosicrucian Order is happy to aid and guide, to the best of its ability, our members and friends in attaining success in life and in business. We are pleased that thousands have enjoyed increased happiness and success in business and in life due to the application of the important principles explained in this book.

Chapter 1

THE TRUTH ABOUT AFFIRMATIONS

“Whatever you may have read or learned about affirmations should be set aside if you would succeed with the instructions given in these lessons . . . and you will soon find that you have contacted a new world of possibilities and a new life of realities.”

THE FRENCH PSYCHOLOGIST, Émile Coué, did not introduce anything new into the American popular misunderstanding of psychological principles when promulgated his attractively worded affirmation, “Every day in every way I am getting better and better.” In the West generally, the value or usefulness of affirmations to affect one’s physical, mental, or material conditions has been greatly misunderstood, and the same may be said of the real fundamentals of applied psychology.

In the East, those long familiar with the mystical laws of life, are quite aware of the fact that the mere affirmation of *wealth* or *health* will not bring these desirable things into the environment where they do not already exist. The real mystics of every land, and especially those who have been thoroughly trained in the Rosicrucian principles, know that certain affirmations under certain conditions have some value and a real place in the scheme of things, however they also know that an untrue or unsound affirmation is not only valueless, but really detrimental.

How can the affirmation: "I am in perfect health and in complete attunement with God," have any effect upon the physical condition of a person who, at the very moment of making the affirmation, is suffering from pain, due to some diseased or abnormal condition? Pain, as we shall see later on in another chapter, is not something that should be affirmed out of existence as a condition unwarranted by nature and unauthorized by God. It is one of God's own creations and a perfectly natural thing when the body is diseased, or in some abnormal physical or mental condition. Pain always has a cause for its existence and a reason for its manifestation. The cause may be unnatural; it generally is unnecessary. Yet pain as a result of disease is perfectly logical, natural, and a divinely authorized principle.

To affirm, therefore, that one has no pain when pain is quite manifest, is attempting to deny the existence of something that not only logically exists, but which has a good purpose for its existence and a motive which will serve us and help us if we simply realize it. Therefore, not pain, but the cause of the pain should be considered as the undesirable condition to be relieved. Nevertheless disease, or any abnormal condition of the mind or body, cannot be relieved by affirming its nonexistence.

Poverty and failure in business and material affairs cannot be altered by the affirmation that these conditions do not exist and are only imaginary things, to be swept out of the consciousness and cleansed out of the mind by a denial that they exist. For a person who seeks relief from debt and solicits the Cosmic's aid in having an abundant supply of necessities, to affirm that "I am not in debt, and I have the riches of the Cosmic at my disposal," is merely to attempt to blind the consciousness to the existing conditions and to so charm the objective mind by a false picture of imaginary conditions that, for the time being, all effort to relieve the situation in the proper way is cast aside. In this attitude of self-induced confusion, one can believe that all is well and that there is no need for effort or even thought in any other direction.

The person who has become a drug addict, and who shuts out the worries, trials, and problems of the hour by inducing sleep, or the stimulus of a flighty imagination, with glorious pictures of wealth and

contentment, is no less a victim to a false practice than someone who affirms the nonexistence of real conditions and proclaims the actual existence of imaginary bounties.

As may be judged by the foregoing remarks, mystics who are truly familiar with the laws of nature and the operation of cosmic methods know that personal control over their own affairs and the use of their *will* to regulate conditions must be directed toward changing the *causes* of conditions rather than denying the *manifestations* of these causes. The misundemanding regarding affirmations came about through a mis-comprehension of the Eastern and mystical conceptions of the fundamental laws of psychological consciousness.

True mystics know that it is wrong and unsound to admit outwardly or inwardly the existence of a condition that is not real. Mystics will not accept that they must continue to suffer pain or suffer from disease or suffer from poverty or the lack of necessities. They will even go so far as to deny these things the power to enslave them. Mystics are quite positive in their negation of the omnipotent power assigned to material things of their earthly life to control their lives and to limit the enjoyment of cosmic blessings. But mystics deny these things and rule them out of life, not by affirming that the manifestations do not exist, but by affirming that these things shall not continue to be and are not what they seem to be, and must submit to their will.

In later chapters, we shall see that just as pain is a natural result of a cause, so poverty and a lack of the necessary things of life, or even life's luxuries, are the result of a cause, and the cause must be discovered and changed.

When one suffers from the agonizing pains of toothache, it is indeed foolhardy and entirely inconsistent with cosmic and natural law to affirm: "I have no toothache and am at peace with the universe." Such an affirmation neither affects the toothache as a pain, the cause of the toothache and its pain, nor anything else concerned therewith. Nor does it bring about any substantiating proof that the sufferer is, at the time, at peace with the universe. The practical mystic— who does not dwell in the clouds of hypothetical postulations and ethereal speculations based upon theories promulgated by eminent founders

of various schools of thought— knows that he or she must direct the use of will power and the magnificent creative forces of mind to the immediate alteration of the condition which is the real *cause* of the pain in the tooth, thereby relieving the pain without giving it any undue consideration in a negative sense.

The mystic thus informed brings his or her suffering to an end and quickly demonstrates that one can be “at peace with the universe,” and truly “a child of God’s love,” by reestablishing harmonium in the body through removal of the cause of disease and suffering.

The individual who is without the immediate necessities to meet a material emergency of financial or any other form will find that the affirmation of “I need have no concern, for the abundant supply is mine,” brings no relief and simply inhibits as well as prohibits such action on the part of the individual as would actually bring about the desired relief.

In the following chapters of this book— which are really specific and practical lessons in the application of certain mystical laws— the correct use of the proper affirmations will be explained. It is the purpose of this preliminary lesson to remove from your mind the misunderstanding and misconception that may exist regarding affirmations as generally promulgated by popular lecturers, who are generally less informed regarding the mystical laws of the universe than they are about the superstitious beliefs of a multitude of persons who think that a few lessons in psychology will furnish the key to the mastership of all of life’s problems.

Therefore, whatever you may have read or learned about affirmations should be set aside if you would succeed with the instructions given in these lessons. If you have become so fond of the use of affirmations through an intimate acquaintance with them, and because of their alluring attractiveness you cannot reject all that you have read and learned about them, at least take these nice beliefs of yours and wrap them up for the time being; place them in your treasure chest among the family heirlooms and rare possessions of this material world, until such time as you have become familiar and well acquainted with the newer ideas contained in this book.

Then, after you are as intimate with these new ideas as you are with the others, you may occupy a rainy Sunday by taking the old ones from their hiding places, compare them with the newer ones, and decide for yourself which you shall make your real jewels and your ornaments of life. But until you are as well acquainted with the use of the new tools as you are with the old ones, and until you have given the newer principles as much time to prove their efficacy and demonstrate their power as you have given the older ones in your hopes and frustrated realizations, you are not competent to judge which will serve you best, and you will not be fair to yourself in rejecting what is now offered to you.

Therefore, proceed with these new ideas with an open mind, and without bias or prejudice give them an opportunity to register their logical basis and appeal to your common sense, and you will soon find that you have contacted a new world of possibilities and a new life of realities.

Chapter 2

THE COSMIC AND YOU

“Whatever is lacking in your life, whatever may be among your needs, exists for you to possess, to have and to hold, so long as you use it appropriately.”

THERE ARE TWO universal ideas connected with the practical application of psychology and metaphysics in the West that are generally associated with affirmations and with conscious or subconscious ideas held by those who are seeking the blessings of the Cosmic. One of the ideas is that each one of us is “at one with God” or “a child of God’s perfect manifestation.” The other idea is that “the abundant supply of the Cosmos is at our disposal,” or “the blessings of God are mine.”

With both or either one of these ideas as a fundamental belief, it is natural for us to feel that suffering and pain, disease and ill-health, poverty or the lack of necessities in life are not only essentially wrong, but due entirely to some trick of the mortal mind or some lack of realization of divine or cosmic contact.

If it were true that ill-health and suffering or disease were the result of some mental trick of the mortal mind, or some aberration of the mortal mind’s memory of its divine attunement, then we would be justified in believing that it would be necessary only to untrick the mind, or to establish a conscious realization of divine attunement, in order to cleanse the body or the consciousness of all suffering, disease, and pain. In other words, if all pain and suffering were the result of some false reasoning on the part of the mind, and both the cause and the

manifestation of disease and pain were the reactions of a false belief within the mortal mind alone, then it would be logical to conclude that the cleansing of the mind's conceptions and the repeated affirmation that disease and pain do not exist would alter the conditions and leave one free from all suffering.

Such is not the case, fortunately. I say fortunately, even though on the face of the matter it seems that it would be a very fortunate thing if all disease and suffering were the result of mere mistaken beliefs in the mortal mind, for that would seemingly leave healing and health easily attainable. But it is fortunate that such is not the case, for that would eventually demonstrate the superiority of the dominion of mortal mind over human will or over the fundamental and natural laws of the universe; and that cannot be, for humanity is ever and anon subject to natural laws and spiritual laws, all of which are laws of God.

We cannot change, regulate, or modify—least of all negate and set aside—any of the natural laws or any of the spiritual laws. We must abide by them! But we have the will, and with it the privilege and power of using natural law and spiritual law, to regulate our lives. We must abide by these laws, and either cooperate with them or run counter to them. Nevertheless, we are ever affected by them, and our hope and salvation from disease, pain and suffering, poverty and discomfort, lie in cooperating with natural and spiritual laws and applying them to our own advancement and perfection, rather than running counter to them.

Disease and suffering, poverty and discomfort, are invariably the result of the violation of natural or spiritual laws. The sufferer, or the victim of circumstances, may not always be the one who has violated the law, for it is true that “unto the third and fourth generation will the law make itself manifest.” But regardless of the cause, and regardless of who violated the laws, the sufferer therefrom and the victim thereof has it within his or her power to adjust the conditions by directing, in his or her behalf, the operation of other natural and spiritual laws, and living in harmony with them.

It is perfectly true that as human beings we are the highest expression of God's creation. It is also true that being created in God's spiritual

image, we are children of Divine Consciousness and an intimate part of God's own being. Therefore, it is more than a mere logical conclusion that we are children of love, perfectly created, and having within us the creative powers and the essential goodness and divinity of God's own consciousness. But this alone is not sufficient to prevent the development of disease within our bodies or to keep us continually healthy and happy, regardless of our own voluntary actions and our methods of living and thinking. We may create a perfect piece of machinery, and if it is misused, or if it is neglected or damaged, it will cease to be the perfect thing it was or could be.

It is useless to argue the point as to whether God also created evil and disease, suffering, pain, and poverty, as the opposites of all that is good. The fact is that such things do exist, and what we should be concerned with in any practical study of metaphysics or ontology is the cause of their existence in our own affairs, in our own environments, or within our own bodies.

Regardless of whether God created the dark night as well as the bright day, we know that the night is caused by the absence of light. And we know likewise that light will dispel darkness. We know these things because they are demonstrations of natural law and spiritual law. And we have come to realize that to affirm in the darkness that there is no darkness, results in no coming forth of light. Mystics may have their own symbolical interpretation of light and metaphysical understanding of darkness. But such mystics do not allow their symbolical light to become a material thing, nor their metaphysical darkness to become such an equivocal thing that in the midst of actual darkness they would affirm the existence of light while denying the existence of its opposite. Mystics know that there is but one thing that will dispel darkness, and that is light. And they know that there is but one thing that will affirm the light, and that is the actual light itself.

So it is that a practical mystic, trained in the Rosicrucian principles, is aware of the fact that all disease and suffering have resulted from the violation of natural laws or the failure to abide by natural laws through a voluntary disobedience of their authority.

To return to the familiar toothache, we may say that the tooth aches because of some cause within the tooth. The cause is a diseased condition of the tooth or the gums surrounding the tooth. This diseased condition is a result of the violation of some law of nature. The violation was not a metaphysical one, a mystical one, nor a mere trick of the mortal mind in believing that it had violated some law.

It is difficult for people to imagine that which they have never experienced nor realized. The mind that has never realized the agony of a toothache cannot conceive or imagine it, and produce through its imagination a synthetic demonstration. The mortal mind can be conscious of a toothache only through having the experience. The mortal mind may give a false importance to the toothache or may attribute to it a mistaken sense of authority, and it may even credit the toothache with the right to enslave its victim. But it cannot create that toothache, nor can it negate it out of existence. The ache is a pain, and pain is the result of a cause, and the mortal mind cannot create the cause nor can it remove the cause.

As we have said in the previous chapter, the Eastern mystics have used affirmations and their will power to prevent the mortal mind from giving undue power and authority to the ache or its ability to enslave them. They have learned how to negate the mortal minds acceptance of a false belief in the power of pain to enslave them, but they have never misapplied their correct understanding of the use of such a negative affirmation to the imbecilic practice of positively affirming the nonexistence of the pain itself.

As Rosicrucians and practical mystics, with our feet firmly on the ground during our earthly existence, and ever conscious of the material laws as well as the spiritual laws, we use our will in directing the natural creative forces within the body, and throughout the universe, to remove the cause of pain and to cure the toothache by curing the condition that resulted from the violation of some natural law. As we have intimated, this is practical mysticism. It is reasonable, rational, and sound in every way. It neither denies the existence of God and God's means and methods, nor does it aggrandize the material part of a human being and make that superior to the spiritual part of our being.

An abundant supply does exist, not only in the Cosmic, but throughout all of nature. God has provided bountifully for all the needs and most of the luxuries required or desired by every human being. These constitute the rich blessings that God promises all creatures and which God has so beautifully provided throughout all the ages.

Whatever is lacking in your life, whatever may be wanting among your needs, exists for you to possess, to have and to hold, so long as you use it appropriately. What you lack is not in your possession, or at your disposal, because you have not attuned yourself to it or have not attracted it to yourself. Affirming that you have it when you do not have it, will not attract or manifest it. Nor will the belief that since you do not have it, you cannot have it, affect the fact that you still may have it if you earn it, deserve it, or attract it and bring it into your consciousness.

All things that we may require are ours essentially and potentially, but they may not be ours actually, because of some principle, some law exercised by us or denied by us which withholds the realization of the things that we lack. To affirm, therefore, that since we are perfectly created and perfect in the image of God, we shall have no disease, regardless of how we think, live, or act, is as inconsistent as saying that regardless of the fact that it is the middle of the night, and by natural and divine law, the sun does not shine, the sun is still shining because we have affirmed that the sun exists and the darkness is not.

And to affirm that because there is an abundant supply for all, and essentially every blessing and bounty of God is at our disposal, we therefore have everything, and lack nothing, while at the time we are objectively conscious of our needs, is simply proclaiming a falsehood and hoping that our own predicament will be magically transformed by a formula that is as unscientific and unsound metaphysically as anything can be. Therefore, in a practical way, I shall attempt to show you how we may attract and bring into our existence the things that we lack and which our divine perfection and an abundant supply have established for us.

Chapter 3

MENTAL ALCHEMY

“There is a considerable difference between concentrating upon a dream or hope, and concentrating upon building that dream into realization.”

ONE OF THE most popular beliefs in the Western world regarding the application of psychological principles to our everyday affairs is in connection with the so-called art of concentration.

It is generally believed, by those who have heard public lecturers propound the simplest aspects of psychology, that through concentration upon a specific need some magical processes are set into motion that bring into materialization the thing desired. It matters little what the thing may be, or when or how we concentrate upon it, for according to the various lecturers and teachers of this “art,” there are as many methods as there are teachers who offer their personal instruction.

One public lecturer, renowned for her years of devotion to the expounding of the simple formulas of psychological magic, frankly admits that after investigating her own private formula for many years, and examining the reports of her thousands of paying students, she can guarantee her concentration method to be sixty-five percent efficient! It would seem that if there is any psychological, metaphysical, or mystical law involved in the “art of concentration,” one hundred percent efficiency should be guaranteed as the standard. Thirty-five percent admittedly fail, according to this one lecturer.

My own investigations, and the reports I have received from perhaps 50,000 persons who have tried all of the personally discovered and unique systems of concentration taught in the self-help classes conducted by these itinerant teachers, have shown that ten percent of the tests of such methods produce results that may be attributed to the practice.

Yet it cannot be denied that there is an art to concentrating and that this art can be used to bring into our lives the things that we desire or need. There is a method known to the Rosicrucians that is easily guaranteed to be one hundred percent efficient, if used as directed. I will address this later. The point I wish to make is that there is nothing wrong with the principle of concentration, but often it is employed incorrectly by those who foster in the minds of the public the false belief that it is a simple process, requiring no other consideration than to concentrate, wish for something, and desire to turn the wish into materialization.

It is an easily demonstrable fact that of the many things we need in our lives, or wish for the most, those things upon which we concentrate our attention and our thoughts most continuously and sincerely are likely to be brought into realization. It would be trite to say that through concentration upon a desire, we tend to bring it into realization. But the fact remains that there is a considerable difference between centering our conscious thoughts upon our great desire and keeping it foremost in our consciousness, and the so-called secret methods of concentrating on each and every little thing that appears upon the prospective horizon as a necessity or a desirability.

Undoubtedly, we are more apt to bring into our lives that thing or condition to which we devote most of our attention, or to which we give the utmost thought. When we become obsessed with a wish, a hope, or a desire, to such an extent that it blots out all other temptations and puts far into the background all other seeming needs or wants, we are very likely to make every one of our acts contribute toward the fulfillment or realization of the wish and to expend every possible effort as a contributing factor in its materialization.

I have found, through conversations with hundreds of people who have discussed their goals and desires with me, that for most of these individuals there has been an entire absence of true concentration effectively applied in the proper manner toward the object or goal desired.

Let me illustrate my point with a typical example. A young woman was employed for several years in the business office of a major building supply company here in the West. Her parents, successful business professionals, desired that she follow them into the business world. However, their daughter was not interested in that path. She dreamed of someday becoming an architect. Her parents agreed that this was indeed a noble profession and ambition, and they had offered to pay her way through university so that she could complete the course in architectural design and become an architect. However, the young woman refused their offer, insisting that she would not have her education paid for nor accept any further money from her parents but would find her own way in life. I believe that this independent attitude on the part of the young woman actually impressed her mother and father, but the problem remained: How was she to become an architect?

The young woman admitted that she had held this desire to become an architect for many years. She said it was her dream and her hope to one day become an architect and design beautiful buildings. She had always heard that if one held fast to a belief, a hope, or an ambition, or had maintained that wish steadfastly for a number of years, that it would lead the seeker on some path toward the desired goal. Yet here she was, doing the same work in the same way, day after day, with no indication that her great dream was to be fulfilled.

When I asked her if she had concentrated upon this great hope or dream, she enthusiastically replied that it was the main thing she thought about all the time. She said that she had no other particular ambition, and had laid aside other interests to focus her energy on this great hope.

However, my careful questioning of her revealed that her idea of concentration was much like someone who sits on a park bench and gazes across the lawn towards a beautiful home and wishes that he or

she could possess such a home, live in the home, be inside enjoying a wonderful meal in the posh dining room while appreciating the warmth and comfort of the fireplace— and the dreamer wishes and wishes, and wishes some more. At the time, the wishes and desires seem so real as the dreamer concentrates on attaining the comforts of life that others seem to enjoy. But can one say that such intermittent wishing, or the holding of a consistent desire, really constitutes the art of concentration?

The young woman admitted that in the building supply office where she worked she often met professionals in the building industry who came there to secure blueprints or to discuss their plans with the company managers. Through her work she was constantly brought into contact with architects, builders, and contractors, and through working with these professionals, she had become somewhat familiar with the process of designing and constructing buildings. She had witnessed many conversations about the intricate problems and challenges of architecture and building, and it was all very fascinating to her. However, careful questioning revealed that she had not concentrated enough on her wonderful dream of becoming an architect to make the dream a true passion. The dream had not become so dominating a factor in her thinking and acting as to have led her into conversation with architects so that she could find out how she might actually become a student of architecture.

In her desire to become an architect, the young woman had not even considered the possibility of visiting architects in their offices and observing them at work. Nor had she been urged by her dream or hope to borrow any of their books about the art of architecture. She had not even told anyone except her parents and one or two friends about her great desire to pursue architecture. Even her employer at the building supply company did not know about her desire to become an architect, nor did the drafters and designers associated with the company have any idea that this young person was eager to take up the study of architecture and thereby become a valuable aid to the company for which she was working. Concentration, indeed!

There is a considerable difference between concentrating upon a dream or hope, and concentrating upon building that dream into realization.

Had this young person been truly concentrating on building her dream into realization, she would have talked architecture, thought architecture, and acted architecture every waking moment of her life. She could not have been kept away from the presence of architects, nor away from the building plans, drawing boards, and bookshelves of architects' offices, and designers' studios. Real concentration on her great hope would have led her within a short time to trying her hand at creating plans and drawings, and undoubtedly she would have become acquainted with those who would have advised her, helped her, and mentored her, even while holding her regular job and earning an income. And her employers declared later that they would have gladly apprenticed her to work in the drafting studio in her spare hours to learn some of the practical and fundamental lessons of the first stages of creative planning and building.

To summarize, if this young person had devoted all of her energy and concentration to *becoming an architect* instead of just dreaming about being an architect, there is no doubt in my mind that she would have succeeded in receiving all the education, experience, and encouragement necessary for her to be successful in her career, and, thus, she would have fulfilled her aspiration in life to become an architect and design beautiful buildings.

In another example, a young man, nineteen years of age, took a job working in a photographic studio doing ordinary work for average wages. He had always been fascinated with photography, and loved to photograph nature scenes, but he had never had any formal training in this skill. Nevertheless, his interest in the art of photography helped him immensely in his new job, and he looked forward to learning all he could about the basics of professional photography. It wasn't long before this young fellow realized that his job had opened a whole new dimension in his life.

One day he had occasion to see some special photographic work brought to the studio for duplication, and its very nature, beauty, and rareness attracted his attention for he had never before seen such

superb nature photographs. He found out that the pictures brought into the studio for duplication were the result of a little-known process, used almost in secret by only a few master photographers who had learned the art abroad and were capable, not only of creating the most attractive and beautiful reproductions of nature, but of earning a good income and enjoying a good standard of living as they pursued their profession. The young man became obsessed with the desire to learn this unusual art and decided to devote himself to this goal. The idea—the hope and ambition—came into birth almost spontaneously as he listened to his employer's fascinating story of the rareness, beauty, and profits connected with this unusual art. For many days the young man dreamed about it, and gradually his ambition became an all-absorbing, dominating obsession in his consciousness.

In every spare moment he sought out other specimens of this exquisite art. In the process he visited art galleries, studied books about nature photography, read magazines about special effects photography, and took evening classes in photography—determined to pursue this dream and ambition. Everywhere about him, especially in nature, he saw scenes that he felt would be worthy of reproduction if he could only discover or learn this special process. His heightened awareness of the beauty in nature that might be reproduced through this unique process excited him to further exploration. He was always alert for some possible clue that might lead him to discover some description of the secret photographic method that could reproduce such beauty. Every conscious moment was centered upon doing those things, learning those things, thinking those thoughts, and arranging those thoughts that would bring him nearer to his ambition. He thoroughly investigated all possibilities. He thought photography, dreamed photography, and acted photography. He was *concentrating* in the true sense of the word upon what he wanted, and there was no mystical, secret principle about his concentration so far as he knew.

Unaware of any doubts or psychological impediments as to why he might not succeed on this chosen path, the young photographer-in-training did not waste time consulting fortunetellers or crystal gazers to find out whether he would ever be successful in materializing his dream. He had no question in his mind or doubt in his consciousness

that he had selected the right course of action in his life and that it would be realized!

Eventually his great desire and concentration led him to locate the master photographer who had brought the first specimens to the studio. Since the young man was now a serious student of photography, he found reason to call on this man in a professional way with other matters connected with the art. He called at a time of day when the photographer was working in his studio. In hurried interviews with the photographer, the young man's eyes registered everything within sight, with that keenness that comes through real concentration. He noticed names on instruments, imprints on catalogs, and other details in the photographers workroom. Later he hurried to art stores and photography supply outlets, where he purchased similar instruments and other things, little by little as his means afforded. He experimented with the process by following the very brief and almost enigmatic instructions that accompanied everything he bought. And eventually, through meditation, concentration, and inspiration, there seemed to come to him shafts of light in the form of bits of wisdom that informed him, as if intuitively, how to experiment and what to do. The results of all this effort and inspiration were small, crude specimens of pictures that were far from being admirable, but were, nevertheless, unique in their process.

Finally the young photography student took several specimens of his work to the master photographer who knew the whole art. The photographer was so astounded at the youths "discovery" of part of the secret process of this hidden art that he unintentionally perhaps, or diplomatically, told the young man where he had made some errors, and why his work was not exactly as it should be. This led to further experiments that produced better results, which he again shared with the master photographer, who came to appreciate the young man's enthusiasm and obvious artistic talents. Impressed by this young person's enthusiasm and determination to discover and refine this special photographic process, the master photographer asked him to become his assistant—an apprentice in the craft—so that he could further instruct him in the special process. This was a dream come true for the young photography student, and within a year his success in

this effort and the application of all he was learning was bringing him a good income and recognition in the world of art photography that was unusual for one so young, and within another year, his dreams and hopes were being fulfilled abundantly.

Concentration did it! But it was not the form of concentration that is taught in a course of "Five Easy Lessons," nor learned in an inexpensive paperback book on "how to concentrate upon the abundant supply for your needs." The Rosicrucians know that to truly concentrate means to have one absorbing idea at a time and to think of it to the exclusion of everything else, and then let your entire life, for the time being, cooperate with your concentration to bring into realization the thing that you desire.

This does not mean that to concentrate successfully dreamers or thinkers must remove themselves from their professions, businesses, duties, or obligations, and isolate themselves in the proverbial cave or mountaintop where they can do nothing else but think and meditate upon that one desire. Such would surely frustrate every possibility of fulfillment. Nor does it mean that concentration should be indulged in only when the mind is free and the body is at rest before the fireside in the evening or upon retiring at night. It means concentration in every possible moment of relaxation from the duties at hand. It means sacrificing every other thought that is not productive or essential. It means devoting every spare moment and every moment that is not absolutely necessary to life and its duties. It involves forsaking the pleasures and temptations, and the casual things of life, for more profound and more extended thought upon the one desire. It takes time, for it requires time. It means effort, for it requires mental activity, not passivity. It involves action, for it cannot be associated with relaxation and dormancy of the faculties. It requires faith and confidence, for the elements of doubt and suspicion will frustrate every possibility of fulfillment.

As we proceed with these little talks in the next chapters, the art of proper concentration will be made plain and more practical. One of the most important principles, however, which must be understood and brought into use before concentration becomes useful, is that of mental alchemy. The Rosicrucians of the past were well known

as preeminent alchemists. Not only have they been credited with having succeeded in making pure gold out of dross metals, and thereby bringing into realization one of their fond dreams, but it has been conceded that the Rosicrucian art, with its usual teachings and knowledge, enables its students and adepts alchemically to bring into materialization everything that they can mentally conceive and create in imagination. Thus they were proficient in the art of mental alchemy as well as in the alchemy of the crucible and physical alchemy.

Among all creatures, we have within our beings creative powers that are a part of the God Consciousness; thus human beings are uniquely endowed. We have the rare privilege and ability to concentrate and create mentally that which we desire to create eventually in material form. In this process of mentally conceiving and mentally creating, humans are the equal in some degree to God, since it is a God-given privilege for humans to use the creative power which brought into existence in this universe all that is.

But the art of mentally creating is little understood in the Western world and is practiced almost exclusively by those adepts who are often considered to be the white magicians of this earth. I say they are considered “the white magicians,” for their magic is white magic, free from evil and free from any destructive nature, as the power that they use is part of the creative power of the God Consciousness, and this creative power is incapable of creating that which is evil or that which is destructive.

The undeveloped or unevolved mind may conceive of evil and of things destructive, but we cannot mentally create or bring these things into materialization in the mystical manner by which good and constructive things will come into material form when created by the cosmic power in the mind.

When we conceive of that which is not good and seek to bring it from our mind into material form, we must labor with the grossly material elements and bring them into irrational, illogical, and unnatural relationship in order to make them manifest as evil in the material realm. But when we conceive of that which is good and constructive, we may mentally create it through the alchemical processes of our

mind in attunement with the alchemical processes of the Cosmos, and as a result of such attunement the thing created will sooner or later become manifest outwardly through the creative processes existing within our consciousness and our being.

It is, therefore, only necessary when seeking an improvement in our environment, an answer to our needs, or a beneficent item added to our possessions, to mentally create the thing we desire through concentration and mental visualization. We should do this day by day, hour by hour, whenever time permits, until the thing conceived of and in the process of creation becomes a living, vital, vibrating thing in our consciousness. It must become so real that its reality is omnipresent and so effectual in its existence that it modifies, controls, directs, and influences our thinking, acting, and living.

Such a mental creation soon ceases to appear to be a thing of the mind alone. When the eyes are closed, it is clearly seen; when the mind is in relaxation it takes possession of our being. It is ever present in all of its forms, color, size, weight, and power, regardless of its nature. It is like the unborn in the womb of its mother, ready for delivery into this material world.

All things that God created were first conceived by God in this manner. All things that materialize on this earth as blessings for humanity and contributions to our essential needs were alchemically created in the Cosmic before their existence was projected into material form on this earth plane. We must therefore exemplify and emulate the cosmic processes and the divine scheme. We cannot materialize into this world that which we have conceived without the proper process of maturing development.

In my experience with business people, firms, boards of directors, and corporations that have labored incorrectly and therefore unsuccessfully with great plans or important matters, I have found that what they desired to bring about had not been properly conceived in the first place. Seeds that are lacking in consistent relationship, or which are unimportant in nature, inharmonious in vibration, or the offspring of evil parents, cannot be brought together to effect a perfect conception or to vitalize an idea. And I have found that even where the

conception was complete and more or less perfect in every requisite, there had been no period for proper gestation, and no logical, natural course of development to bring the conception into a living, vibrant form for final expression.

It is fortunate, indeed, that all our passing conceptions and all of our mental images do not take form and parade about us to enslave us and clutter the world with misconceived ideas. It is fortunate that only those things can come into being, into concrete and material realization, that have been carefully synthesized and developed in the crucible of the mental laboratory of divine consciousness. However, because there is this element of time, and this necessity for proper development and maturity, individuals become impatient and seek shorter methods and easier ways to bring their dreams and desires into fulfillment. In this they most surely fail, and through such failure lose faith and confidence and dethrone the creative power within as a pretender.

It is not difficult for the human mind to visualize in all of its details that which the mind can conceive as a thing desired. It must be done through the concentration of the objective faculties and the use of the will power directed from the outer self inwardly, as though there were within the human consciousness a sanctum for the preparation and creation of all things desired by us.

Little by little, part by part, element by element, the thing must be put together in its visualized form, and after each addition of each stage of development, it must be examined, tested, and tried, to discover if any element has been overlooked, any part neglected, or any adjustment or association of parts and elements wrongly made. As one would build a house by constructing the walls, brick by brick, so each part of the thing desired must be mentally created and visualized, until it is ready to burst forth in its completed state and stand in the consciousness of the creator as a thing actually existing and in our possession.

So much for mental alchemy—the art of mentally creating and visualizing the thing desired. Nothing pertaining to the desire must be overlooked. One must keep in mind the usefulness of the thing desired. One must avoid attempting to create that which has no

practical use and which will bring neither profit nor benefit to anyone. The dangers from its misuse must be considered and guarded against during the process of creating. Its benefits to others must be included, and it must be so created that it cannot fail to be useful to others and to be of benefit generally to humanity. It must be so created or of such a nature that when it comes into final manifestation objectively, it will become no charge upon the happiness, peace, health, and contentment of others, nor carry within it the sacrifices and sorrow of others. It must be desired with as little selfishness as is consistent with the need of the thing. Its possession must be inspired by no motive associated with revenge or anger, hatred or jealousy, pride or arrogance. Its development and growing reality in the consciousness of its creator should occasionally inculcate a sense of humility and humbleness, for as it comes into form, the magnificence of humanity's creative powers should make the creator of each thing realize one's obligation to God and one's attunement with God's kingdom.

If all of these things are considered and made a part of the process, then truly one may feel that success and satisfying realization are imminent and assured.

Chapter 4

COMMANDING COSMIC HELP

*"How can I put my interests and talents together to make a living,
provide a necessary service to others, and make the world a better
place?"*

REAL MYSTICS KNOW that they must work through the Cosmic and with cosmic law in order to bring about the realization of their conceived and visualized dreams and plans. They never forget cosmic law, and never fail to take the Cosmic into partnership in all their plans and desires. However, there is a great difference between *commanding* cosmic help and *demanding* cosmic help. One may command cosmic help through one's worthiness, sincerity, loyalty, and devotion to cosmic ideals, but one can never demand anything from the Cosmic, for the attitude of demanding would immediately preclude any consideration on the part of the Cosmic for the wishes and desires of the petitioner.

Still, we read in many popular forms of applied psychology, and even in much of the so-called mystical literature of the day, how one may demand of the Cosmic or through the Cosmic, the realization, mediate and immediate, of those things greatly desired. Such an idea is responsible for the many failures experienced by thousands in trying to bring about concrete demonstrations of mystical processes.

Before giving you the definite methods for bringing about certain hopes and ambitions in your life, I wish to complete these preliminary

lessons by devoting the next few pages to a proper explanation of how you may secure the cooperation of the Cosmic, and how you may avoid interfering with the cosmic methods for cooperation.

When one seeks the cooperation of the Cosmic in bringing about a realization of some plan, one assumes that the Cosmic can help, and while it knows how to help and is unlimited in its means and methods, it would be almost futile to ask the Cosmic to help in many of the problems which we must solve. It is natural to think that no one would appeal to the Cosmic for help in regard to a proposition or plan which can be easily worked out by the individual independently of the Cosmic. Surely, we do not appeal to the Cosmic for help every moment of the day in mastering the minor routine problems of life. We have learned about our own possibilities as individuals because of the cosmic creative powers resident within us, and realize that most of our daily tasks and passing problems are solved or mastered without appeal to the Cosmic. This is precisely as it should be and as God and the Cosmic intended it to be. We appeal to the Cosmic only when our plans seem to meet insurmountable obstacles, or when our efforts and endeavors have been frustrated, and the efforts and endeavors of others around us seem to be of no avail. The mystic knows that he or she should not bring to the Cosmic—which is the court of last appeal in a mystical sense—any problem that can be solved without its help.

We must not forget the ancient injunction that by the sweat of our brows shall we labor and produce the necessary things of life. Those who labor diligently and persistently in an effort to produce and bring about the things they need in life meet with the greatest success, while those who dream and plan and expect the Cosmic to labor for them in the fulfillment of their dreams, are doomed to failure. Yet that is precisely the situation in the world today as a result of the mistaken information that has been taught and disseminated by so-called practical psychologists and new-thought teachers.

As stated above, cosmic help can be secured and should be secured at such times as the individual is incapable of coping with the situation, or the situation is one which is beyond human control, or of such a general nature or intense nature that too many problems or points are involved for one mind to master.

Assuming, therefore, that the Cosmic can help through unlimited means and methods at its disposal, we must realize at once that any attempt to tell the Cosmic how to bring about the desires or plans uppermost in our minds is not only an imposition on the intelligence and universal wisdom of the Cosmic, but it is one of the most frequent and positive reasons for the negative results that are so often attained.

Let me state this point again, in another way, so as to give it the utmost emphasis. Since the Cosmic has unlimited ways and means of carrying out anything that it decides to do, wishes to do, or agrees to do, it is inconsistent and injurious to the success of the plans to tell the Cosmic how to work out the solution. However, this is precisely what thousands are doing in every attempt they make to secure cosmic cooperation, and I hope that this particular lesson will prevent anyone from ever forgetting the fundamental principles involved.

Here is an example that demonstrates how one should go about securing cooperation with the Cosmic. We will begin by explaining the ineffective approach, and then demonstrate the correct and effective way of achieving one's goal. A mother and father and their two children want to move to another part of the country—in this case California—where employment and educational opportunities are much better than where they are presently living. In order to do this they must sell their home and surrounding acreage so that they will have enough money to buy another home and establish themselves in the region where they plan to move, and the mother and father both need to find employment in the new area where they want to live. They have secured the services of a real estate agent and their home has been on the market for many months, but so far there have been no buyers. After many months of trying to sell their home, three prospective buyers eventually emerge.

The first possible buyer would purchase the family's home immediately for cash if he could just get his case settled in court, which would bring him enough money to buy the property outright. However, the case is in the hands of a referee who delays in rendering a decision in the case. Prospect number two would also buy the property immediately, except that her business is in the hands of a receiver,

and she is waiting for cash to come as a result of a settlement among creditors and others. The situation is complicated by the fact that this person's recent business bankruptcy could well prevent her from securing a mortgage to finance buying the home. Prospect number three is a young person without any credit history who genuinely wants to buy the property, but who needs to secure a loan from his parents in order to do so, and the parents are not terribly enthusiastic about loaning their son the money or cosigning on a mortgage.

The family appeals to the Cosmic for help in this situation. The father and mother concentrate on the Cosmic and visualize what they would like to have made manifest or what they would like to see come about—namely, the sale of their home. Following what they believe to be the most effective way of concentrating on what they want, they project to the Cosmic Mind their requests and demands, which go something like this:

“We want to sell our home so that we can move our family to California and buy a home and start life anew. However, we cannot sell our home unless one of these three prospects secures the money to buy it. Therefore, please help prospect number one to have the referee make a favorable decision. Or in the case of prospect number two, please have the receiver bring about a settlement to that persons business. Or in the case of prospect number three, have the parents of that young man make a decision to loan their son the money or cosign on the mortgage so that he can buy our home.”

The father and mother then concentrate upon and visualize the referee looking over the legal papers and reaching a decision to release the money needed by the first prospect. Then they visualize the receiver working over his or her papers and coming to a favorable decision for prospect number two. They then visualize the parents of the young man deciding to loan him the money or cosign on a mortgage so that he can buy their home.

After spending half an hour in concentration and visualization, the mother and father feel that they have made perfectly plain to the Cosmic just what they want. And the family waits day after day for

the Cosmic to bring about a solution to their problem, but nothing happens. What could possibly be wrong?

Let us examine the family's problem and see whether or not they have been doing the most effective thing to realize their dream. In the first place, when this family consulted me— and I have selected this case from an actual occurrence— they impressed upon me very strongly the fact that their great desire was to sell their home to one of these three prospects so that they could get the money and move out West and begin life anew. That was the uppermost thought in their minds in all of their concentrating, their visualizations, and their appeals to the Cosmic.

However, when you think about it, what was their original goal? I am sure you will agree that after all is said and done, what the family wanted least of all was to sell their home and get the money. In fact, the sale of their property and the securing of the money was not the vital issue or the real thing that they desired most.

What the family really wanted was to move out West and start life over again. I demonstrated this by asking them, "Suppose you didn't sell your home but had an offer from a firm in California to come out there and work in one of the state's new expanding industries, and this offer was accompanied by a promise to pay your moving expenses and help you in relocating and finding a nice home? Would you accept that offer?"

They immediately replied, "That is exactly what we want! We would gladly accept the offer."

So you see, the real desire of this family's hopes and dreams was not to sell their home. However, from their limited, material, earthly point of view, there was only one way by which they could move to California and start life anew, and that was by selling their property and using the money to carry out their plans in the new location. The mother and father never, for one moment, considered the possibility that the Cosmic might have other ways of bringing about a fulfillment of their desires.

In other words, their desire was to move to California. So they had thought about it, reasoned it out, and from their point of view they had decided arbitrarily and finally that there was only one way for them to succeed with this plan, and that was by selling their home. Then they proceeded in all their thinking, planning, and concentrating to use this arbitrary decision, this final conclusion, this reasoning and judgment, as being the ultimate, the perfect, the only way to bring about the realization of their goal. Having once decided on this plan, they proceeded to then tell the Cosmic that it should or must accept their decision, their plan, their solution, and work it out for them. Certainly that is an imposition upon the Cosmic, and at the same time it was the worst thing they could do to bring about the realization they expected.

In other words, the family was appealing to the Cosmic to sell their home, instead of appealing to the Cosmic to help them move to California and start a new life. Or, to further illustrate their dilemma, it could be said that the family was *demanding* of the Cosmic, "We want your help in bringing about a realization of our plans. But listen, Cosmic, we have decided how it should be done and how it can come about and how you should assist. We are telling you just what we want you to do, and we want our plans fulfilled in just this way and no other way. We don't want you to provide us with some unexpected money so that we can fulfill our plans. Nor do we desire that you have any money come to us through a will or a gift or through any other channel, except through the sale of our home. We want you to give us the money solely through the sale of our property. We are not asking that you have any company or organization offer us positions or a new home in the West. We want to go there with our children and find jobs and a place to live, and find these in our own way, and bring about the goal of our plan in the way that we have decided. We do not want you to do anything unique or original that we haven't already thought of, but simply follow our instructions, and then we will know that the Cosmic is our partner."

Now I will leave it to the common sense of my reader as to whether or not such reasoning and such appealing to the Cosmic is apt to bring the desired results or not. The proof of my contention lies in

the fact that after I had talked with this family and pointed out the limitations that they were placing on the solution of their problem and the dictatorial attitude they had taken toward the Cosmic, they went home and proceeded to concentrate in the correct and most effective manner, after which they succeeded in having their hopes and dreams fulfilled abundantly. The family concentrated on the following picture:

They saw themselves traveling— not necessarily by automobile or airplane or even train— but nevertheless traveling, to California. The father and mother pictured themselves finding good jobs, excellent positions, which would make the best use of their capabilities and provide good salaries and other benefits. They saw themselves in a nice and comfortable home, without attempting to visualize all the sundry details of such a home—such as whether the home had a porch or no porch, whether it had a tile roof or a stucco exterior, whether it was one or two stories in height, with a big yard or a small yard, and so on— but a home nevertheless, comfortable and cozy, and in accordance with what they actually needed. This is all they had in mind when they concentrated and appealed to the Cosmic. They were absolutely indifferent as to all the little details, such as exactly where in California they would live, whether they would move there right away or in a few weeks or months, exactly how they would travel there, and specifically what kind of jobs they would have once they arrived there. All of these minor details and ways and means they left entirely to the Cosmic.

What was the result of this change in their approach to the Cosmic? A friend of the family who had casually contacted an acquaintance in California about this family's desires, received news that there was a job opening in a new printing plant that was being established in California, and since the father in the family had worked as a press operator and a production manager in this particular industry, and knew from firsthand experience all that needed to be done in setting up a new printing plant, there was a possibility of a position for him available in California. Upon hearing about this job possibility, the father immediately contacted the management of the printing plant, and they were thrilled to find someone with his experience to help them get the printing plant up and running. He was offered the position,

plus an advancement of salary and a housing allowance sufficient to bring him and the family to the West.

After our initial conversation, the mother in the family, who was a nurse, had realized that there was a nationwide skilled nursing shortage, and she was sure that she would be able to find a new position in California. Through a professional organization to which she belonged, she was provided with a list of available nursing positions in hospitals throughout California. There would be a position open for her; she had no doubt about this in her mind.

In less than two weeks the family was on their way to California, eagerly anticipating their new jobs and new life on the West Coast. Precisely three weeks after they had moved to California and were becoming settled in their new jobs, the children in their new school, and the family in their new temporary home, a real estate firm in their hometown notified the family that a local developer, heretofore not even considered as a prospect for buying the family's property, had made a good cash offer for the home and property, and that the offer had come "out of the blue." Hence the family found itself comfortably settled in a new home, in a new position, in a new part of the country, with money from the sale of their home to apply to the purchase of a new home in California. All of the family's hopes and dreams had been fulfilled, and even more, and yet not one detail of the realization was similar to what they had been concentrating upon in their original attempts to demand of the Cosmic its cooperation.

In another illustration, a woman whose husband died was suddenly thrown into the situation of needing to earn an income to maintain her home and support herself and her sixteen year old son so that he could finish high school, go on to college, and prepare himself for a career. Before appealing to the Cosmic for help, she quickly reasoned as to how she could bring about her hopes, and she decided that the only thing she could do to earn an income would be to sell flowers on the street with the help of her son, who would pick up and deliver the flowers to various locations where she would sell them. She had reached this decision about selling flowers by analyzing herself and determining, as she explained to me, that since she had no business

training, and it had been many years since she had worked at a job outside the home, there was no other way for her to earn an income.

In other words, after fifteen or twenty minutes of selfanalysis, she was fully convinced that she knew all about herself, knew all she could possibly do in this world to contribute to its needs or to produce anything of usefulness. I may say, in passing, that this is one of the big mistakes a great many persons make in connection with their personal problems. They attempt to decide what possibilities they have in this world. They believe themselves to be the best judges, even better than the Cosmic or God. And whatever conclusion they may reach regarding their capabilities and limitations, it is always ultimate, final, supreme, and quite definite. It never dawns upon the minds of these persons that there may be a higher and better judge, or that there may be an intelligence that knows better than any living being just what they can do in life. It never seems to come to the minds of these persons that each one of us has a certain mission to fulfill in life, that in order to fulfill this mission there are various means by which it may be brought about, and that God or the Cosmic may know more about this than we do.

However, the woman proceeded to concentrate day after day for several weeks, asking the Cosmic to help her sell these flowers, which were of inferior quality because of her inexperience and lack of a source for the best quality flowers. Her poor son was neglecting his studies and tiring out his young body trying to deliver and help her sell these flowers from place to place. Together, they had very little success, and as the family funds became exhausted and the onset of cold weather threatened to severely limit her street sales, the woman came to me in desperation and explained her problem. She wanted to know how to get the Cosmic to help her sell flowers. All she could think of was the sale of the flowers and the continuance of her efforts in that direction.

When I asked her why she wanted to sell flowers, she said it was because she wanted to earn an income. When I asked her why she wanted to earn an income, she said it was so she could maintain her home and provide for her son's education. When I asked her why she

wanted to maintain a home and provide for her son's education, she said it was because she wanted him to finish high school, go on to college, and complete his education so that he would be a success in life. So we see that after all her real problem was not that of selling flowers but of maintaining her home and providing an education for her son.

But that was not the picture she had presented to the Cosmic. That was not the picture she had concentrated upon. She had been asking the Cosmic to help bring about the ultimate desires of her heart, but at the same time she had been telling the Cosmic that it could be done only through selling flowers. Since the Cosmic probably did not agree with that plan or that decision, it did not cooperate. It had ways and means of its own in bringing about her desires, but since the woman had limited the Cosmic's cooperation to the strategy of selling flowers, the Cosmic offered no other form of help.

After explaining to this woman how to concentrate upon the real desire of her heart, and how to refrain from thinking about the method the Cosmic should use in working out her problem, it was brought to a manifestation.

Our talk changed her perspective, and she realized how she could put her real talents and gifts fully to use. With proper training geared to her talents and abilities, she found a job where she could engage in much more rewarding and constructive work than she ever could have done selling flowers, and her son was able to continue his education and eventually go on to college. The solution to her problem was one she had never conceived of and one that had never been suggested to her. Here was the perfect answer to the question: "How can I put my interests and talents together to make a living, provide a necessary service to others, and make the world a better place?"

These illustrations should make plain to you what I mean by concentrating on the ultimate desire of your dreams, the eventual hope in your plans, without limiting the Cosmic to ways and means of bringing it about.

In all of the explanations of methods for seeking cosmic help given in the following pages, it should be kept in mind that the fundamental principle outlined in this lesson should be carefully followed.

Chapter 5

SECURING MONEY

“The Cosmic cannot deliver actual cash into our possession, but must bring this about through various earthly channels”

ONE OF THE two most often desired gifts from the Cosmic is, perhaps, that of money—actual cash. The other is health.

It is strange indeed that in the ultimate analysis of most of the cases where petitioners are asking the Cosmic for money we discover that it is not the actual cash in dollars and cents, or gold or silver that is desired, but the credit. There is a considerable difference between securing credit in order to enable one to purchase, buy, or secure certain necessities, and the possession of the actual cash in material form for the same purpose. And from the cosmic point of view also, there is a considerable difference.

We would hardly think that anyone believes that the Cosmic conducts a bank and has in its vaults gold and silver, copper and nickel, as well as paper, in the form of coins and bills of all denominations and of all countries. It would seem that only the child mind would conceive of the Cosmic being able to deposit actual money into the hands of a petitioner, like raindrops falling from the sky. The moment we realize that the Cosmic cannot deliver actual cash into our possession, but must bring this about through various earthly channels, we see at once that it may be that the Cosmic can paid us in our financial needs in a manner quite distinct from delivering the material form of coin to us.

Those who have read the preceding chapter will realize that in a great many cases those who are seeking or asking for money through any occult, mystical, or psychological process may not be asking for what they really need at all. Let us say that I need a new coat and decide that I will buy it at a certain store for a certain price. In order to do this I must either have the actual cash in my hand or be able to pay for it through credit. Of course, it is preferable that I earn the money and secure the coat through my own efforts, as the Cosmic and all natural law intends. But let us say that right now I need the coat and do not have the money or credit to purchase it. Therefore, I proceed to concentrate upon the Cosmic to give me the actual money or provide the credit so that I can pay for the new coat. My entire concentration is upon the amount of money that I believe I need. The purchase of the coat or the necessity for having the coat is of secondary consideration. However, if I proceeded properly, the coat would be the primary consideration, and whether I purchased it with actual cash, paid for it by credit, or it was given to me by a friend would be immaterial. I would be glad to leave the arrangements to the Cosmic, feeling quite satisfied that the Cosmic would see to it so that I received the coat.

However, there are instances where the necessity for money in some form, or for credit to an equivalent amount, is the paramount desire, and these occasions require as much serious consideration on the part of the mystic as any other necessity or desire of a legitimate nature.

From the cosmic point of view, the use of money as it is used today is fundamentally wrong and is a method or means arbitrarily established by humanity for the purpose of getting around and avoiding most of the ethical principles established by the Cosmic. I will touch on this subject in another part of these lessons, but it should be kept in mind that the Cosmic generally is not in sympathy with the use of money, and whenever and wherever it can bring about the desired results without recourse to the use of money, it will do so. Therefore, we will presume that petitioners who are seeking money with the help of the Cosmic will have reached the conclusion that they must have money only after analyzing their necessities very carefully and knowing positively that nothing else except money in some form, or the equivalent credit, will serve their purpose.

Now there are two ways by which most petitioners expect the Cosmic to help them receive money. The first way is in asking the Cosmic to help them borrow what they need from a financial institution or from someone they believe is financially capable of lending them the amount. The other way is in asking the Cosmic to help them collect either an amount that is justly owed them, or which they expect through the settlement of some estate, will, legal paper, or other form of benevolence.

We must examine each of these situations separately and consider the proper methods whereby mental or mystical laws can be used to help bring about the desired results.

When money is owed to you, and you cannot collect it because of the indifference or the temporary inability or stubbornness on the part of the person who should pay it, then you may rightfully and ethically ask the Cosmic to help you secure what is justly yours. I must warn you, however, that if there is even a fair reason for the debtor to hold back the payment while some investigation is made, or while an adjustment is made, or until you comply with some just conditions, then you cannot expect that the Cosmic is going to aid you by setting aside the rights and interests of the person who owes you the money and force that person to make an immediate settlement with you against his or her own best interests.

It has been found in many cases that where Jones owed a bill of \$1,000 to Smith, and Smith was asking the Cosmic to force Jones to pay the money right away, that Jones was holding up the payment of the sum because Smith had not fully complied with the conditions that brought about the \$1,000 obligation. It might also have been that Smith was not willing to concede some point or agree to some just and proper point previously arranged, or that Smith was perhaps attempting to secure the money in a shorter period than had been agreed upon. In such cases, the Cosmic will not act differently than a judge in any court would act if he or she knew both sides of the case.

The Cosmic will insist upon being fair to everyone, and it is simply impossible for petitioners to come to the Cosmic with their requests and desires, thinking that they can hold back some facts about the

matter and fool the Cosmic into granting them their special wishes immediately and without investigation. If you will stop a moment, you will realize that the Cosmic, if it has any mystical, universal mind and power at all, is just as familiar with the reasons, demands, and rights of the person who owes the money, as with the person who desires the money. So we have found that petitioners seeking the payment of money that they claim is owed them must approach the Cosmic as one would must approach a court of law, with “clean hands.”

But if the money is justly due you, and there is no reason for its nonpayment, except the indifference or stubbornness or forgetfulness of the person who can and should pay it, then you may concentrate upon the Cosmic and, with patience, petition the Cosmic to intercede for you and see that your just debt is paid. As to what method to use in concentrating for such a purpose, I will have more to say briefly.

In asking the Cosmic to bring money to you that you believe is coming to you, or should come to you through an estate, a court settlement, a will, legacy, or a donation of some kind, we find that here again petitioners must be sure that they are justified in assuming and believing that the money will be given to them by the giver's own volition, but that the whole affair has been delayed through forgetfulness, indecision, or something of that kind. In this latter case, we will see an analogy with the former case. Petitioners must again come into court with “clean hands.” They must be receptive and ready to receive the money they desire. It must be free from entanglements that are unethical, and it must not be money that will bring pleasure to the petitioner alone and bring sorrow, suffering, and regrets to others; for in such a case the Cosmic will not think of giving its aid to the carrying out of a wish or a gift or help of any kind that will make just one or two happy, while it makes many others sad and unhappy.

Of course there are those cases where people petition the Cosmic for some money to meet an emergency, when they have no definite idea where the money may come from, because no one owes them any particular amount, and they do not expect any money through a legacy or a donation of any kind. Such a situation is a very difficult one in which to give advice and suggestions. In a great many cases of this

kind, the person soliciting the money is not warranted in expecting money from any source and certainly is not warranted in asking the Cosmic to create an immediate situation wherein the petitioner is suddenly made the beneficiary of cosmic gifts which have not been earned, arranged, or donated in any way.

Speaking in a general sense, the securing of money through cosmic aid reduces itself to a form of concentration that is simple and effective. After having determined that the actual money is what is needed, and not the things which are to be purchased with it, then the petitioner should decide what is the precise amount, or the smallest possible amount, that will meet the conditions. Not too much, or not more than is necessary, should be asked for. On the other hand, a sufficient sum should be included in the asking to take care of the immediate, as well as the longer term, needs. This amount of money should be visualized in its figures and not in its form.

In other words, the money should *not* be visualized as gold or silver, or bills, or in any particular denomination or form of currency. If \$1,000 is desired, the figure or amount of \$1,000 should be concentrated upon, regardless of whether that \$ 1,000 will eventually show itself in the form of a check, a draft, a money order, actual cash, or a savings bond. And every morning, every noon, and every night, at a time just preceding the meal, one should attune oneself through relaxation and concentration with the Cosmic and Universal Mind, and hold in ones mind, at the same time, the thought and impression of the amount of money that one needs. After doing this for a few minutes, with the eyes either open or closed, the person should dismiss the matter by the simple statement of "This I ask of the Cosmic!"— and then go about the business of the day, unconcerned about the coming of the money or the method by which the Cosmic will answer the petition.

Doing this for four or five days will unquestionably bring some result in the process leading to the realization of the amount of money desired. In addition, if this amount of money is justly owed to you by a particular person, you should concentrate on that person in connection with the \$1,000 and hold the picture of that person in your mind, along with the amount of money, so that the Cosmic will

receive directly from you an impression of the person who should pay the money to you. Again I must warn you about the necessity of being sure that the money is justly owed you at the moment, and that the delay in receiving it is not a just delay, and also that you are entitled to its immediate payment without further delay. Of course, after what I explained in the preceding chapter, you will not attempt to visualize how the Cosmic will make the person pay you, or just what hour it shall be handed to you, or brought to you, or placed to your credit, or otherwise made available. Such concentration upon the amount of money and the person who owes it, three times a day for a number of days, will undoubtedly help to bring about an attitude on the part of the person who owes the money that will lead to action and the eventual realization of your desires.

In the case where money is desired from an estate or from some person who is settling an estate, and where there is a delay or a hesitancy or a possible frustration through so-called legal red tape, you must be sure that there is no just reason for the delay, and that you are fully entitled to have the Cosmic come to your rescue and make immediate settlement. If you are sure of this point, then you may again visualize the amount of money desired, and with that visualization keep in mind the person or the condition surrounding the delay, with the idea that the Cosmic will contact the right person or persons and set into action the process that will lead to the proper settlement.

It has been found that in these cases where a referee or a judge or any other individual is attempting to make up his or her mind and decide whether to do a thing or not to do a thing, or whether to grant a request to one person or to another, that if one appeals to the Cosmic to bring about a decision favorable to the petitioner, the Cosmic will affect the hesitating mind of the referee, judge, or other person, and cause him or her to suddenly make a decision in favor of the person who is concentrating on the Cosmic for cooperation. I have known personally of many cases where judgments or decisions have been held up for months, and in some cases years, because a certain person could not come to a definite decision and was hesitating until a proper decision could be reached. A few days' concentration, however, upon this person and upon the necessity for an immediate decision, caused

the person to suddenly come to a conclusion that had been delayed for too long, and a favorable decision was then rendered to one of the parties concerned. In several cases, an investigation afterwards or an interview with the person who made the decision revealed that during the evening hours, while in relaxation, the individual suddenly had an impression that he or she must come to a certain conclusion that appeared to the individual to be absolutely fair and just.

You can rest assured that when the Cosmic takes up your case and impresses someone who has the right to decide about making a decision in your favor, it is because the Cosmic knows that such a decision is just and correct. In other words, the Cosmic will not make a judge or referee or anyone else decide in your favor just because you petitioned the Cosmic to do so, and the other party did not make such a petition. We see by this that if both parties concerned in such a matter were to petition the Cosmic, and each asked for a favorable decision, that the Cosmic would have to decide and impress the hesitating judge with what is his or her duty and what is proper in the points in question.

As for borrowing money, many other things must be taken into consideration. The Cosmic is not loathe to aid in the matter of borrowing, provided there is a good and justifiable motive behind the desire to borrow and the borrower has proved to the Cosmic and to others that he or she is trustworthy and repays whatever amount is promised to be repaid. Again we realize that the Cosmic will not aid in any injustice or in any matter that will be unfair or injurious to another person. If, therefore, you are attempting to borrow money without having any real need for the money, or, if a real need exists, without having any ideas as to where, how, or when you will be able to secure sufficient money to repay what you borrow, you can rest assured that the Cosmic is not going to aid you in the matter.

If, on the other hand, in your previous transactions of small or large amounts, you have always repaid what you borrowed, always given back what has been loaned to you, always met your just obligations with every endeavor to fulfill what you have promised to do, then you may be sure that the Cosmic will aid you if there is a real need for the money you are seeking. You cannot go to the Cosmic with a vague

hope that the borrowed money will be repaid some time in some way, or with the idea that when it comes time for you to pay the money back to the person you have borrowed it from, you will appeal again to the Cosmic to deliver some more money to you in order that you may square your left hand while you get ready to hold out your right hand for something more.

In seeking the aid of the Cosmic in borrowing money, it is presumed that you have in mind some person or institution, such as a bank or financial institution, from which to borrow the money; that in the case of a person, that such person can loan the money to you without injury to himself or herself; and that you will make it a regular business transaction, clean-cut, and of the proper ethical form. With these points being true, you may then visualize the amount of money and the person or financial institution from which you desire to borrow it. By concentrating upon such a visualization three times a day you may count upon the Cosmic's help, provided, of course, you have made the regular earthly, physical, material appeal to the person or financial institution, in addition to concentrating upon the Cosmic.

It is not to be presumed that you may want to borrow some money from Mr. Smith and without ever letting Mr. Smith know you want the money, proceed to concentrate upon the Cosmic and ask the Cosmic to urge Mr. Smith to come over to your house and hand you the money, as though he were being forced to do that by the Cosmic. In all cases of borrowing, it is proper that you should make your appeal and request to the persons first in a regular way and acquaint them with the knowledge that you wish to borrow from them.

In attempting to borrow money from anyone, it is always advisable to use the utmost frankness and be extremely specific. To approach any person, or institution, such as a bank or loan association, and ask for an indefinite amount of money, and in a way that demonstrates that you are not familiar with what you want, and why you want it, will surely bring a negative result. And to be evasive in your answers will likewise jeopardize your success with any person or institution, just as it would with the Cosmic.

It is understood, of course, that borrowing money is considered to be an ethical process, and many institutions and persons earn more money by loaning money. Banks would cease to exist and would go out of business if they did not loan money as well as receive money from persons who place it on deposit in their care. A bank's only real excuse for existing is to receive money from depositors and then loan and invest that money in diverse ways so that it will earn an income and produce more money. Some persons have money which they are willing and ready to loan under certain conditions, and just as with banks, such persons demand the utmost frankness and security.

In talking to the manager of one of the largest loan associations in America, the manager frankly told me that in their institution, where millions of dollars are loaned through their various branches every month, a borrower's apparent stability and integrity are major factors in deciding whether or not to make the loan. Of course, all the necessary forms are filled out and interviews conducted, however, this manager told me that such procedures and papers usually prove to be of no value whatsoever if the borrower lacks integrity.

With this loan association, and with individuals and financial institutions throughout the world, the hesitating, evasive borrower is given a negative answer in the mind of the person or entity who has the money to loan, long before any words are ever spoken. The shifting eye, the hesitating voice, the indefinite explanation are earmarks of irresponsibility. When borrowers are quite positive and definite about why they need the borrowed money, what they intend to do with it, and when they expect to pay it back, they will find a ready listener and ready money at their disposal.

Most loan associations, banks, credit unions, and persons who make a business of loaning money are interested not only in the borrowers integrity, but in the purpose for which the money is being borrowed. You can well imagine that neither a bank nor an individual would loan money to a person when that person says he or she wants to use it for gambling or betting at the race track, or for some other questionable or irregular form of speculation.

Everyone who has money to loan would hesitate to loan it to a borrower to buy luxuries instead of necessities. Clothing, food, the payment of rent, doctors' bills, the purchase of material for business, the investment of money into a growing and successful business proposition, the buying of tickets to travel to some point for business purposes, the buying of a home that is a good real estate investment, are generally considered good motives for borrowing. Borrowing money for the college education of one's children is often considered a good investment. While on the other hand, to borrow in order to enjoy a pleasure trip to an exotic faraway country might be considered a risk, and at the same time indicate that the person asking for the money has little or no sense of business values, or personal priorities.

Every firm or individual who loans money expects interest at the legal rate or sometimes a little higher. Very few persons are willing to take their money out of the bank where it is earning four or five percent and loan it to someone on the promise of securing six percent. The risk of loaning their money, plus the trouble of collecting it, and the delays in having the installments met promptly so that they would bear the proper amount of interest, would more than offset the benefit of an additional one percent or two percent that they would secure from the borrower instead of from the bank. So you must be prepared, in many cases, to pay more than the usual rate of interest if you expect anyone to take a risk of this kind.

You need not feel that you are damaging your integrity or your standing in a social or business way by borrowing money, for many of the larger firms, the most successful business institutions, and the most prosperous individuals find it necessary to borrow money from their banks or from other persons at times, in order to expand their business or carry on a special deal in an emergency. What will hurt you more than borrowing money is failure to keep your promises regarding making the return payments. What will injure your prospects of securing borrowed money more than anything else is the record of the manner in which you have lived and spent money when you have had it. Persons who have had plenty of money or sufficient money at one time or another and have squandered it for purposes that are not

ethical, cannot expect to have others loan them more money. All these things are taken into consideration by the Cosmic, as well as by the human mind.

Therefore, in asking the Cosmic's cooperation, you must be absolutely sure that you are appealing with "clean hands." And you must have made your solicitations to the persons or institutions in the usual way before you ask the Cosmic to help bring it about. The Cosmic is not going to communicate with banks all over the country and tell them you want some money, and that one of them should loan it to you. But the Cosmic will help, if you are worthy and deserving of the loan, to impress upon the minds of the persons who can make the loan that you are worthy and that the loan should be made, and it will even go to the extent of urging them to make the loan more quickly or with less delay than usual.

In securing money for business purposes, always be sure that your business venture is one that is really capable of becoming a successful, paying concern. Fantasies and purely speculative schemes are neither supported by the Cosmic nor bankrolled by financiers, and investors are usually reluctant to invest in pursuits that are highly speculative and risky.

I recall how years ago I was approached by some people with ideas for building experimental aircraft that were simply so ridiculous that one could hardly keep from laughing, and yet, with no aeronautical or engineering background, these speculators expected someone to loan them thousands of dollars to build what was only a fantasy or daydream in their minds. If you haven't built or designed airplanes or worked on them or piloted them, then you cannot expect that your speculative and untried ideas about how to further develop aircraft will attract financial backing. On the other hand, if you have worked in the manufacture of airplanes for a number of years and have had considerable experience flying them, and have discovered through experimentation, building of models, and testing that you have some new and better ideas about designing airplanes, you might be able to find financial backing.

Here is how we can apply these important principles to the present day. In order to secure financial backing for projects and business ventures, you should have the education, training, or practical experience appropriate to the business venture or profession that you want your investors to support. This is not to say that there are occasional exceptions, where someone with little training or experience, but with an inventive mind and an outstanding idea for a new product, is able to attract the rapt attention of those with money to invest. But this is the exception rather than the rule.

For example, if you are a realtor, and have succeeded in your profession, but now have an idea that you would like to open a pharmacy because you believe there is more money in that business, do not expect anyone to agree with you in your decision and advance the money to start you in the pharmacy business, unless it is someone who does not care what happens to their money. But if you have been a successful pharmacist and you wish to move into a new neighborhood and open a larger pharmacy where there is little competition and every possibility of success, you will find others ready to help you with your plan.

On the other hand, if you are a successful realtor and you would like to expand your realty business by taking advantage of further training toward becoming a broker, or perhaps moving into the mortgage end of the business, or even opening a second realty office, your proven track record should help you secure financial backing for your plans. There is plenty of opportunity, for the Cosmic is always at work, and those who are attuned with the Cosmic know that there are always new ideas, new possibilities, and new ventures ready to come into manifestation through the application of Cosmic Law.

Therefore, if you are a good accountant, or hairdresser, baker, or engineer, or whatever your profession, you can secure money to help you improve the business you are in, provided you are honest, skillful, and dependable. And the Cosmic will help you in all these legitimate propositions, and it will silently smile, by negative action, at the unrealistic ideas of the impractical dreamer.

Chapter 6

THE ATTAINMENT OF WEALTH

“The person who has a good idea, a workable idea, and a creative mind in which that idea can be mastered and visualized, is a person who has wealth, boundless wealth, potent wealth.”

CONTENTED IN LIFE, indeed, is the person who has no desire for the attainment of wealth. Few there are who do not have this desire to some extent or who do not express it in some form. Fortunately, not all of us measure wealth by the same standard, nor do we desire richness in the same measure. Regardless of what we may possess, or what may be our privilege to enjoy, most of us seek some things in abundance, and that abundance may be our wealth.

Before taking up several points of a practical process, which will enable us to bring wealth into our possession, let us consider what constitutes wealth for the average human being. It may be trite to say that one person's wealth may be another's burden, or that what one person cherishes as a rare and costly gift may be of no value to another; but it is true nevertheless, and there seems to be but one material thing that, through common acceptance by persons of all minds, constitutes wealth—and that is money. However, there is one immaterial possession or blessing which most of us enjoy, and which, by common consent also, is considered as the equal of wealth in any form—and that is health.

The power of money in the world today is unquestionably a curse for those who do not know its real place in the scheme of things and who cannot relegate it to its proper place. In a preceding chapter, I said I would speak about money, and this is my opportunity. If there were no money in the world, or no material thing that represented wealth, or had the power of fictitious valuation, health and the freedom of existence would constitute the real wealth of every human being.

In the proper scheme of things, human beings should labor to assist in producing and materializing the things necessary to live in the world. There should be no other motive for our daily labor, no other incentive for our dreaming and planning, than to assist in the carrying out of Gods constructive work. We should feel that we will share in the worlds blessings with all beings. We should know that of what we assist in producing, a portion will be enjoyed by us, and a portion will be enjoyed by our children or elders who are too young or old or incapable of producing. We should know that unless we contribute to the universal effort and take our proper place in the world, we cannot hope to enjoy the blessings of the universe, nor to indulge in the beneficent joys resulting from the labors of others.

This is no utopian plea, nor political doctrine. It is merely the mystical viewpoint of life as it should be. However, people have learned that they may enjoy life's blessings and indulge in the necessities as they understand them, by buying them with fictitious symbols which have the power to secure those things which have not been earned or paid for. Thus, some may labor diligently, and even to great extremes, to keep body and soul together and to provide the bare necessities for their families, while others may labor not at all, nor produce, nor even plan or create, but live a life of laziness and indolence. Yet, through an inherited possession or unfair scheming, the latter are able to buy with the gold that they have not mined from earth, or with metals that they have not labored to extract, or jewels that they have not physically produced, such luxuries, privileges, and such abundant supplies as permit them to flaunt their extravagant wealth, while others cry for the things these individuals have cast aside.

It is unquestionably true that the average man or woman who finds life devoid of the necessities or luxuries, and whose longing is for wealth in some form, is a victim of the human-made process of rewarding labor with money, or compensating effort with symbols of fictitious value. If money were not the thing with which the necessities and luxuries of life could be secured, then few indeed would be without that which they need most. It is neither the sluggard or indolent person, nor the person who need not work or labor, who most generally petitions the Cosmic or prays to the God of all beings to aid him or her in attaining wealth. It is the man or woman who is laboring industriously, consistently, and fairly; it is the person who is devoting most daytime hours to laboring by the sweat of the brow, and by the torment of the body; it is the one who is striving in every honorable way, and against seemingly insurmountable obstacles, to earn and deserve the necessities of life.

Those who find the battle against poverty and sorrow a most difficult one should, without losing faith or hope, and without giving up their tiresome efforts, appeal to the Cosmic and to the higher laws of the universe for aid and assistance in securing for themselves, and those dependent upon them, that which will bring them joy with their health and happiness with their necessities. Such people seek to attain wealth, and theirs is a wealth that is deserved, and their desires and petitions should be answered.

Among the practical considerations we must analyze at this time are the facts that material wealth does not always bring into our lives the real wealth we seek, and that very often we unconsciously associate the importance of money with thoughts about our needs.

In speaking with hundreds of men and women who believed that the attainment of wealth was their real ambition, we have found that in nearly every case money was desired in order to secure or purchase or even attract other things which it was believed could not be secured or attracted except through the power of money. In the preceding chapter, I have tried to show that petitioning for money in most cases was not the right way to bring about the ultimate desires within one's heart. I would like to show at this time, however, that the petitioning

for wealth—abundant wealth— may be a proper procedure, and that the desire for it may be a proper thought.

Among my intimate associates in the business world was that master of finance and big business, Mr. Arthur E. Stilwell (1859-1928), who built more railroads in America than any other living being and who was a power on Wall Street. I have had the pleasure of being the adviser to Mr. Stilwell in many and great business propositions. Some of them were cast aside after brief consideration, sometimes upon my own private recommendation, while others were developed and enlarged into successful national operations, solely through the personal effort it was my pleasure to institute.

Mr. Stilwell was a person of remarkable mental and psychic development. Always one who paid attention to hunches and the “still, small voice within,” Mr. Stilwell often recalled how his “weirdest hunch of all” warned him not to make Galveston, Texas, which is located directly on the Gulf of Mexico, the terminus of his Kansas City Southern Railroad, because according to his hunch that city was destined to be destroyed by a tidal wave, which actually happened four years later in 1900. Following his intuition, Mr. Stilwell found a more protected location on the Texas Gulf Coast and proceeded to build the City of Port Arthur and the Port Arthur Ship Channel and harbor, making that city the railroad terminus.

I am glad to note that Mr. Stilwell published, in some national magazines, articles reviewing his mental and psychological contests with major business deals and the victories that came into his life—many a time through the application of mystical laws that were demonstrated to him in secret sessions we held while I was his silent partner during the course of a number of years.

Mr. Stilwell's idea of wealth, however, was not wealth that gradually accumulated for him in the vaults of Wall Street, or even in his holdings in international marts. His idea of great wealth was the wealth of character and of mental power. He considered that there was no power in the world as strong, as mighty, as indefatigable in its processes of overcoming the obstacles of life as the *creative power of mind*. His daily

petition to the Universal Mind and Consciousness was a prayer for the continuation of health and especially of that power which was developing in his mental faculties.

On many occasions, when Mr. Stilwell telephoned me late in the night to come to his private office in New York, he greeted me with a joyous grip and a hearty smile, and the exuberant claim that "I am truly wealthy tonight, for I have a great idea!" And as we would discuss his idea, I could not help noting that he enjoyed the thought that he held. He cherished it like a loving child, not because he could see that the idea would some day produce money for himself and others, but because the idea was a thing alive with possibilities, and because it could be visualized and matured and eventually materialized into a vibrating magnetic demonstration of mental laws.

There was often no selfish interest in these ideas of his, for I have spent long hours with him discussing an idea that both of us realized we would have to pass on to another to turn into commercial form, for neither one of us would have the time nor the interest in developing the idea along business channels. But we could see in the idea a seed, and we could see this seed conscious and active with life and possibility, and often such ideas were passed over to his associates, some of whom were connected with the Standard Oil Company, or with other large industries whose executives we were acquainted with, and whose planners and builders were also individuals who appreciated the value of ideas and had the true standard of wealth in their consciousness.

The person who has a good idea, a workable idea, and a creative mind in which that idea can be mastered and visualized, is a person who has wealth, boundless wealth, potent wealth. The individual who has money, who has jewels, who has gold and silver in sufficiency or in abundance, but who has not the creative power to use such wealth, is not rich, but poor indeed.

In petitioning the Cosmic, or in using the psychological processes to bring wealth into ones personal environment, the less thought given to wealth as represented by money or gold or silver, the more quickly will petitioners attract to themselves the ways and means of attaining that which really will constitute wealth in this life.

First of all, those who believe they are deprived of life's necessities, or think they lack the abundance which should be theirs, should seek to build up the greatest wealth and blessing that is within their reach, and that is health. Perfect health, with the harmonious functioning of all the inner faculties, cooperating with the functioning faculties of the outer consciousness, is one of the greatest blessings that anyone can possess. When such health is in the body, the mind is keen and alert, and the creative powers of the Divine Mind, working through the mortal mind, are active and productive. We are then able to direct and control the obstacles that stand between us and the attainment of our desires. We are able to appeal to the minds of others without doubt and without hesitancy. We are truly masters of our lives and captains of our ships, and it is just as possible for us to steer our ship of fate and our life of destiny toward the goal of our dreams, and toward the pot at the end of the rainbow, as it is for the experienced navigator to navigate a ship to a distant point on any horizon.

The next great blessing is that of receptivity. To receive, one must give. And as we give, we receive. It is the law of compensation. No person as yet has successfully avoided this law, nor found a way to contest and negate it. Our mind must become receptive to the intuitional impressions sent forth by the Cosmic; it must become receptive to the still, small voice within that seeks to guide and direct all of our actions, all of our thinking and planning. We must become receptive to the inspirational urges of the Universal Mind. We must become receptive to the cries and the needs, the desires and the wishes, of the mass mind of humanity, so that we may hear the pleas of individuals and the hopes of groups of men and women who are sending out into universal space their creative ideas, seeking assistance in their fulfillment and materialization. The receptive mind must be able to sense what another needs, as well as what is needed by the self. The receptive mind must be attuned to the Divine Consciousness, that it may have the unlimited wisdom, the infinite knowledge, and the universal apprehension of things as they really are. To be receptive, one must be productive. One must contribute in order to expect anything in return. Life will give back precisely what one puts into it, and in a greater measure.

Let those who seek great wealth beware of seeking gold, unless it be to materialize it into the beautiful things of life, symbolized by the very nature of the metal. Let those who would be wealthy guard themselves against seeking for money. For money may come into our hands and pass out again without ever leaving its imprint of joy or a realization of the dreams that sought its coming.

In the home and in business, let each of us daily, nightly, or at every possible opportunity, petition the Cosmic for wealth of health, the wealth of mind power, the wealth of joy in living, the wealth of contentment that comes from adjusting ourselves to the conditions that surround us, and then slowly improving them. Let us appeal for the wealth of happiness that exists in our lives if we will but discover it; for the wealth of peace that the universe affords all its beings; for the wealth of life itself that permits us to know what we are, and that we are who we are. Such petitions for wealth as these, followed by prayers of thankfulness for what we have, will daily attune the individual to the abundant wealth of the universe, and each will soon find that affluence and prosperity, health and happiness, material blessings and spiritual benedictions are flowing freely and bountifully into the filling cup of life.

Then each one of us will know what really constitutes wealth and what is meant by mystics when they seek the attainment of wealth.

Chapter 7

SEEKING EMPLOYMENT

“The moment we attribute our failure in securing anything in life to exterior influences which we imagine exist, we shut the door against self analysis and fail to learn an invaluable lesson.”

WE MUST NOT overlook the fact that not everyone who is seeking help in business matters is looking for money for speculation or investment, or even any specific prize or reward in life's journey. Many ask only for an opportunity to serve and to earn all of the necessities of life, plus a few of its luxuries. In other words, not everyone is looking for large sums of money for the fulfillment of great dreams. Perhaps most of those who appeal to us for help are those who are seeking to secure better positions in the business world or for opportunities whereby they may improve their employment.

In today's business world the outstanding qualifications for employment tend to be *experience* and *capability*. I know thousands of business professionals who frankly say that when they have a vacancy that calls for a capable person to fill, they care little whether the successful applicant is a man or a woman, or a person of a specific race, ethnicity, or religion. What they are looking for is a capable person who is experienced, trustworthy, and efficient, and who will successfully meet the demands of the job.

I know there are those who will disagree with me because they feel that they have been removed from a position to be replaced by a woman, a man, or by a person of another race; or they have been

unsuccessful in securing a position because the successful applicant was a man, a woman, or a person of a particular race or ethnicity, or a specific religion, or what have you. If you are seeking employment and you are holding in your mind such ideas as these, you are prejudicing your mind and you are building up the first great psychological obstacle to your success in securing a new position or in securing a promotion in your present position.

Too many employees today fail to realize that the business world demands efficiency. Capability is the standard by which every successful business gauges its employees. And while there may be some employers who intentionally employ inexperienced and untrained people as a cost-saving strategy because they can get away with paying these employees less, sooner or later such employers will learn an invaluable lesson: namely, that they will receive in return exactly the level of efficiency and capability that they pay for. Therefore, because capability is the standard by which successful businesses gauge their employees, if you want to be successful in your business career, you will avoid seeking positions with employers who do not have such a standard for the selection of their employees.

It is therefore quite evident that when one seeks a new position or promotion in business, ideas about prejudice blocking one's way should be laid aside and immediately dismissed. As a seeker of employment, you should analyze yourself and your capabilities, with no other thought in mind than that you must discover and determine how well qualified you are as an individual to fill the position you are seeking.

These remarks are preliminary to some of the important things I would impress upon your mind as a seeker of employment.

In interviewing hundreds of persons each year who are seeking new positions or better positions, and who tell me of their failures to secure what they seek, I find that they generally have a tendency to blame their failure upon certain preconceived ideas or false beliefs that they have established in their minds.

Foremost among the false beliefs is the idea that "pull," or personal influence of some kind, is a very important factor. I have found from my own experience, and in conversation with many thousands of

business people, that the only way in which they have ever noticed that pull or influence brought someone into their employ was through the assistance of another in letting someone else know that there was a vacancy. In other words, let's assume that a top administrator is contemplating hiring a new administrative assistant or a new department manager, and expresses this intention to a friend, remarking that if the friend knows of a very capable and efficient person, the friend should suggest that person contact the administrator. And if the applicant is truly as capable, efficient, and qualified for the position as the administrator would expect such a new employee to be, then he or she may be hired to fill that position. And in this way it might be said that some pull or influence enabled the employee to secure a very fine position. But you will note that I have distinctly said that if the employee was as capable and efficient as the employer expected, then the employee might secure the position.

I know that business people will not engage an employee of inferior qualifications or capabilities just because that person comes well recommended from some friend or has some pull or influence with some acquaintance, with the employer, or with the business concern. In fact, I know of thousands of instances where influence and so-called pull have tried to place an unqualified or partially qualified person in an important position, but when the employer interviewed the applicant, and found the applicant unworthy of the position, the influence of friend or family, or even the political or financial pull of important members of the firm, has failed to secure the position for that applicant.

Of course it is quite natural for many employees to consider themselves to be as well qualified for many positions as those who are employed alongside them in a business, and it is also natural for them to feel, when one of their colleagues or associates has been promoted to a higher position, that some influence has been brought to bear in making the selection. Natural though that feeling may be, it is generally wrong. Thus, the employee who has failed to be promoted, or who has failed to secure an expected position, and who blames his failure on influence and pull, is generally doing himself or herself an injustice, as well as doing an injustice to the successful applicant.

The moment we attribute our failure in securing anything in life to the exterior influences which we imagine exist, we shut the door against self-analysis and fail to learn an invaluable lesson. The man or woman who fails in securing a desired position, or a desired favor at the hands of another, should turn that failure into a very valuable steppingstone to rise higher. This person should immediately proceed to discover why the other person succeeded and why he or she failed, and if this examination and analysis is properly conducted and conscientiously carried out, it will probably enable the unsuccessful applicant to discover how she or he may improve and prepare for a more successful attempt.

Many businesses promote employees from lower to higher echelons as employees demonstrate proficiency in their present jobs and potential for promotion to positions of greater responsibility. However, sometimes there is a point in the promotion ladder for each employee where further promotion is not possible, regardless of the employees efficiency and proficiency in the present job, and in spite of the fact that there may be openings for employees at higher levels in the business. Needless to say, this can be very frustrating. Therefore, when employees find that they have reached a point where they can no longer secure promotion and find that others are being brought in from outside the business to fill positions which these employees feel perfectly capable of filling, they should not attribute the hiring of others as due to influence, nor even feel that their failure to be promoted is due to incapability on their part. Such employees should have a frank talk with their employer or manager to discover whether they have truly reached the height of their efficiency with that firm, or whether further training and education might help such employees secure higher positions.

The one thing that warrants employers in promoting employees is the spirit of service. Employees who gives only as much time and labor and thought to their work as they are paid for are sure to find at the end of the year that they are being paid only for what they are giving. Employees who feel that they are hired and paid for doing eight hours' work a day, and that the giving of a ninth hour should be compensated for as extra labor, will eventually find that promotions do not come

their way, and even increases in salary are delayed or refused. On the other hand, employees who show that they are eager to help in every department of the business while specializing in none, and who hurry through their assigned work in order to make their willingness to work in other departments quite evident to their employer, may give the employer the impression that they are not sufficiently focused on their assigned work, and not giving it the careful attention that it deserves.

I have actually seen employees who were busy helping in so many departments, and trying to make themselves useful in more ways than they were engaged to be, lose their positions in a few months because the employer felt that they were not focusing their attention and their efforts on the assigned work, and therefore were neglecting some aspect of it, or failing to find in their particular work the possibilities of growth and extra efforts that were close at hand. However, it is natural that an employer will appreciate every special effort and every extended endeavor that an employee puts into the business, regardless of the time clock or the salary being paid.

I have heard so many employees say that if their employer would give them a little interest in the business, or even a fractional percentage of the profits being accrued, they would be willing to put more personal interest into the work at hand. And while profit sharing may act as a good incentive, employees should be willing to give employers their best efforts, regardless of whether the employer shares the firm's profits with them or pays a straight salary. Let your employer discover that you have more than merely a salary interest in the business, and the employer will gladly see to it that you are compensated accordingly. The demonstration must begin on your part and not on the part of the employer.

Another issue that is responsible for many employees losing their positions, or failing to be promoted, is the lack of loyalty to the employer or the institution wherein they are employed. Taking time off to seek better positions, or stealing occasional minutes to interview someone about a position in another firm or ways and means for securing promotion, have caused many employees to lose their positions. An employer has a right to believe that you should be loyal to your position and to your employer and that while you are working

for your employer you are devoting all your energy and attention to your job. To discover an employee seeking another position outside of the firm is a signal to any employer to release that employee and secure another one. The employer does not want to be caught off guard by having you suddenly resign, thus leaving your position unfilled and your work unattended to. If an employer believes you are seeking another position outside the firm, the employer is apt to feel that you are undependable and not loyal.

For the same reason, thousands of persons seeking employment fail to secure desirable positions for which they may be well qualified in a mental or physical way. Such persons frankly tell their prospective employers that they have worked for a number of different firms, but have left each one because they wanted to improve themselves or secure a better position. To an employer this admission signifies that the applicant is not dependable, and that to engage this person today may mean losing him or her a month from now. And if there is any one thing that harasses, bothers, annoys, and infuriates an employer as to help, it is to be constantly seeking new employees, interviewing them, and training them in their positions.

On the other hand, the employee who thinks that he or she will take advantage of this fact, and demands to be promoted or given an increase in salary so as to avoid vacating his or her position and causing the employer the trouble of seeking a new employee, is proceeding very foolishly and against his or her own best interests. Any employer would rather go through all of the tiresome procedure of seeking and interviewing new applicants, and having them trained into new positions, than to be subjected to such coercion.

From a mystical or cosmic point of view, loyalty to your employer is the keynote to success for those who are employed, and such loyalty is not only of the physical body, but of the mind and heart. And it is not something that exists only for eight hours while at the office or on the job, but should be here twenty-four hours a day.

Every employer realizes that an employee may be worth more to the employers competitors, or to someone else in a similar line of business needing a similar person, than the employee is to him or her.

Therefore, most employers try to offer the most competitive salaries and benefits that they can afford in order to attract good employees and retain their valued employees. However, in return, employers expect and count on the loyalty and reliability of their employees. Employers often offer training and educational benefits to their employees, with the dual purpose of improving and expanding the employees skills and efficiency while also expanding and building the employers business through better-trained and more efficient employees. However, employees who take advantage of this by seeking employment elsewhere upon the completion of their training, are not doing their employer or themselves any favors. Chances are that a new or potential employer will cast a wary eye on the employee who has jeopardized the former employers faith by leaving after receiving training. In the minds of most employers this raises a warning signal and a wariness concerning the potential employees faithfulness and trustworthiness. Cosmically speaking, the inexperienced employee who does this sort of thing brings about a karmic condition upon himself or herself that may bring failure and discontent for some time.

Let me give you a practical example of how karma works in this regard. A person who has just graduated from a business course applies for a position in a corporation. The employer, who needs another person trained in this particular position, hires the applicant and proceeds to use the corporations time and equipment, including the time and assistance of a number of the other employees, to train and educate this new employee so that he or she will learn the job and become proficient and efficient in this particular job. To start off, the employer is paying the new employee—the trainee—a nominal salary, with the promise that once the employee is trained and then successfully applies the results of this training on the job, there will be an increase in salary. During the training the new untrained employee is probably in fact receiving more salary than he or she is actually worth or is actually earning in that position. According to the law of averages in business, the new employee-in-training is probably receiving seventy-five percent more salary than he or she is actually worth to the employer when it is taken into consideration that the employers time and the time of a number of other employees must be used to help the new employee become completely familiar with the

duties of the job. However, the employer is investing time and money into the training of this new employee with the expectation that in future months and years this newly-trained employee will successfully apply the results of the training and earn the company more money, bring the company more customers and more business, and thus the employers investment of time and energy into the training of this new employee will eventually pay off.

However, after the first six months have passed, the new employee, convinced that he or she has truly earned every cent received, demands a substantial increase in salary. The employer realizes that instead of now having the opportunity to make good on the investment of time and money in the training of this new employee, the employer must either meet the substantially higher salary demands and continue to lose money on this employee, or face the reality of losing the employee and having to hire and train another applicant. In the employee's mind, however, there is but one thought: he or she is now trained and, with the six months of experience, can go to another similar business and find a similar job at a higher salary. In other words, this employee is ready to take advantage of the training and experience provided at someone else's expense, and turn it to profit—ungrateful and unmindful of the obligation owed to his or her present employer. Being refused a substantial increase in salary, the employee leaves the present employer and goes to another business.

A record carefully kept of 1,000 employees doing this sort of thing has shown that at the end of a year these employees were again out of positions, and in two years their changes in positions, with periods of unemployment, showed that they had earned less in the two years through their many changes than they would have earned had they remained in their initial positions, learned more on their jobs, and successfully applied what they learned to make themselves more valuable to their employers—which would undoubtedly have gained them the higher salaries they were seeking. Furthermore, their continuous changing of positions has given them a record which no employer values, and they soon find themselves among the ranks of the unemployed, and disgruntled, discontented, and suspicious of the entire employment system.

In seeking a position, therefore, be sure that you are well qualified, that you are ready to give it your loyalty and entire support, and that you are willing to work with the concern for such a length of time as enables it to secure from your services such reward as will make increases profitable to them and to you. If you are seeking promotion in your present concern or position, you will be sure of securing it if you give less thought to the promotion or to the possibility that lies before you, and more thought during your business hours to the work you have at hand.

Let your thinking about your advancement or change in position occur during your hours of relaxation while you are at home; and rather than concentrate upon your employers mind with all kinds of silly demands that he or she grant your request for promotion, concentrate your mind for a moment or two on yourself, and see if you can find how you can go into your present position the next morning and do your work a little better, or improve the affairs of your business for your employer and thereby attract the employers attention to your desires. In appealing to the Cosmic, or through any mystical laws, for advancement, promotion, or the securing of a new position, be sure that you have in mind a definite position in a definite line of work of which you are capable and in which you can demonstrate efficiency.

In interviewing an employer regarding a change or a new position, follow the suggestions given in the next chapter about interviewing and selling, for you must sell yourself. But in addition to following those suggestions, be sure that you make it plain to your employer that you are not offering the employer just your eight hours of physical labor each day, but you are offering your best mental services, your loyalty, your interest, and that degree of efficiency which may be expected.

With all of these suggestions in mind, and with the advice given in future chapters, you should be able to make your life as an employee just as successful and profitable to you as any business in which you might engage yourself and become an employer.

Chapter 8

IMPRESSING OTHERS

“Just as you cannot send a message to someone if you do not know what it is you wish to say, neither can you convey an idea from your mind to the mind of another if you do not have a clear picture of that idea in your mind to begin with.”

THERE ARE CERTAIN psychological principles that may be used and applied very efficiently, even by those who have not taken a thorough course in the subpsychology or who have not had long experience with the intricate principles involved. The most careful use of these psychological principles—in connection with that of impressing the mind of another person and the art of making the proper impression—is very important to those who are attempting to convey a message of a definite nature.

Whether you are trying to sell some merchandise to a person, or sell yourself, it is absolutely necessary that you create in the mind of your prospective buyer a duplicate of the picture that you have in your mind. Really it is the art of thought transference, but instead of being accomplished by the process of mental telepathy exclusively, you have the additional advantage of using words and using some other psychological laws that I will explain.

With some persons, the most difficult thing in the world is to talk to another and talk so impressively or so efficiently that the correct message is conveyed. Many persons find it more convenient and certainly more efficient to write letters than to talk, and I have known hundreds of successful salespeople who did all their selling by correspondence and

who were eminently successful. However, the moment they faced a prospective buyer and attempted to say in words what they had been accustomed to saying in letters, they became self-conscious, unfocused in their concentration, and weak in their presentation.

If you are one of those persons who can write a strong letter or message and present your proposition in writing better than you can in person, you certainly have an advantage and I question whether it will pay you to attempt to change your methods. But if you are in a position where you must face your prospective buyer, or where personal interviews are absolutely necessary, then there are certain principles that you can use and which will make your work more sure of results.

As I have said above, whether you are selling merchandise, or applying for a position, or seeking favors or benefits of any kind, you are either selling some material thing or selling yourself. In either case, you must create in the mind of your prospective buyer, or the person you are interviewing, that sort of impression and that sort of picture which you already have in your own mind.

Just as you cannot send a message to someone if you do not know what it is you wish to say, neither can you convey an idea from your mind to the mind of another if you do not have a clear picture of that idea in your mind to begin with. What you want your prospective buyer to build up in his or her mind must be so concrete and definite in your own mind that you never have to hesitate a moment in the process of transferring the impression from your mind to the buyers mind.

On the other hand, you cannot convey to the mind of another person an impression of positive affirmation and of wholehearted conviction, if in your own mind the impression you have there is weak or negative, or the opposite of what you wish to convey.

In other words, you cannot face your interviewer and glibly talk, positively, about the goodness and merits of something you wish to sell, while in your own mind there is doubt about the goodness of the product and a conviction that the product has no merit. You can train your lips to speak a lie, and you can glibly juggle your words so that you

are conveying a double meaning, but you cannot trick your mind into forgetting the facts it knows and creating momentarily a false picture in agreement with the false words you are speaking.

The average business executive who is accustomed to dealing with salespeople or interviewing persons who are seeking favors, benefits, or assistance, is keenly aware of the vibrating impressions from the mind of the speaker, and I will tell you frankly that I know thousands of such business people who secretly admit that they seldom pay as much attention to the words being spoken by their interviewer as they do to the thought impressions they are receiving in between the words.

I know from my own experience, and from the experience of many business executives and managers who have discussed this matter with me, that very often they reach a conclusion as to what they are going to do long before the salesperson or the interviewer is halfway through talking. Often after the first half-dozen words are spoken by the salesperson or interviewer, the business executive who is listening has received direct from the mind of the talker an impression that all is not as it seems and that the sales representative is attempting to fool, trick, or deceive the executive, through his or her sales pitch. Under such circumstances, most business people immediately decide that they will not buy and will not grant the requests being asked, and nothing that the salesperson or the interviewer says changes that impression.

The very opposite of this is also true. The average busy person in big business will often interrupt a salesperson or an interviewer by saying: "All right, I will accept," or "I agree," or "I will grant what you wish." It would appear that the business executive has made up his or his mind before the interviewer or talker has half explained the proposition. Some who witness such circumstances may think this is due to the fact that the business executive has a hunch or some intuitive way of deciding what should be done. However, this is not true. The business person has simply received from the interviewers mind an impression that reached him or her before the interviewer had spoken a half-dozen words. Busy people in business have little time for long discussions and lengthy interviews. If they can pick up impressions from a salespersons mind mentally in a moment, they would rather

have it that way than wait a half-hour to eventually reach a conclusion after a long series of complex statements and descriptive explanations.

From all of this you will see that the salesperson who attempts, nowadays, to sell something that has no real merit, or in which he or she has little faith or confidence, is lost unless that salesperson is going to try to sell the product to ignorant, unsophisticated, and inexperienced buyers. Even there the seller may fail because it must be remembered that a lack of education and culture does not prevent the human mind from being very sensitive to mental impressions. Many people lacking sophistication or education are nevertheless mighty sensitive in reading the auras and mental impressions of those trying to take advantage of them. Salespeople, or anyone else, who think they can take advantage of uneducated persons or untutored and unlettered minds and work a trick upon their inner intelligence are very apt to be fooled.

In trying to sell yourself to a prospective buyer, whether it be by seeking a promotion in business, a new position, or some special service you wish to render, remember that your own real opinion of yourself and of your service counts far more than the beautiful description that you present through words, or which may be glowingly stated in a number of testimonial letters you ask the buyer to read. If you doubt your own ability to fill the position you are seeking, if you have the least doubt in your mind about your efficiency or capability for the service you wish to render, do not think that you can buffalo your average business person by egotistical statements that are nicely worded. Glowing promises mean very little to people in business. They naturally assume that anyone who wants to work for them or serve them is going to try to do their best. The mere fact that you say you will do your best means nothing. The employer wants to know what your best really is, and if you have any doubt in the back of your mind as to how good that best is, the prospective employer is going to discover it very soon.

Many persons are full of promises in their interviews, and then they are about as dry as the Sahara Desert when it comes to making good those promises. The most promising thing I ever heard of was a Mississippi steamboat that had a twenty-two-inch whistle, and a

sixteen-inch steam boiler, and when it was ready to start away from the dock, it blew its whistle with such strong, promising tones that it exhausted its steam and moved backward.

So the first thing to do is to have the proper determination in your mind and a very complete, definite picture of the real service you wish to render, or the true value of the goods or things you wish to sell. If you are attempting to sell merchandise, whether it be stocks and bonds or articles of commerce, be sure you are so familiar with what you are selling that not only can you completely answer any question that is asked, but you can close your eyes and in a moment see an entire picture of the article from the time it began in its process of manufacture from the raw materials, to the last moment of its delivery.

Unless you are well versed and very familiar with the product you are offering to someone else, do not assume that you have a clear conception of the product at all. While you are talking to your prospective buyer, he or she will be receiving from your mind the precise picture you have in your mind, and if it is blurry or unclear, he or she will receive the same sort of reaction, regardless of the nice caption and glowing billboards that you paint for the prospective buyers to look at. Telling your prospective buyers all about what you have to offer, and at the same time having a poor picture in your mind, is like showing your customers the posters outside movie theatres, with all their glowing colors and provocative statements. They will tell you that the movie playing inside is what they want to see. Therefore, what you picture within yourself should be more definite and more clear-cut than what you or any poet or literary master could ever picture in words.

The next important point is to convey to your prospective buyer the fact that you are steadfast, honest, straightforward, and businesslike. Not only should your conversation be brief, your statements definite and to the point, and your whole attitude that of poise and self-confidence, but your every glance and movement should indicate a sureness and conviction that are unmistakable.

People in business do not necessarily appreciate sales representatives or interviewers who assume an attitude of humility. They are not necessarily impressed by salespeople who apologize for taking their

time to explain what they have to offer. If you are doubtful as to whether what you have to offer is of value to the customer, do not pay her or him a call until you are sure about the value of the product. If you have the slightest feeling that you are taking up a business persons time without profit to him or her, then do not go near that person. Unless you feel from the bottom of your heart to the top of your head, that your time in their presence will result in profit to them and benefit their business, as well as making a profit for yourself, do not bother them. Apologizing for your intrusion, or for the time you take, is merely another way of saying to your prospective customer that you do not believe you are going to show them any profit in what you are presenting, and that after all they are going to be the loser whether they buy your product or not; and you may just as well save your time and theirs at the beginning.

Of course, if you are asking merely for a favor, wherein all the profit is for yourself and none at all for the other person, you may properly explain your regrets for taking some of their valuable time in such a selfish manner. But if you have something really of merit to offer in the way of merchandise or your own personal services, and you believe what you have to offer is of benefit or value to the other person, do not apologize for taking his or her time. Business people appreciate having meritorious proposals brought to their attention, and make it their business to see and interview expert salespeople or persons who have something definite to say.

One of the sure signs of weakness in character, and inefficiency in mental ability, is the shifting eye. You will notice that often business executives and managers place their desks so that those who call on them or come to see them will be facing toward the light, while the executives or managers will face away from the light. This is so they can carefully observe and study the changing facial expressions of their visitors or those whom they are interviewing, and so that their visitors—the persons talking to them—cannot so readily see or observe the subtle changes of expression on the executives face. Because of their many responsibilities for the ongoing success and stability of the companies they manage, business leaders have good reason to be concerned about the character and integrity of those

whom they are interviewing. As the person being interviewed, you should not look upon this as being placed at a disadvantage, for if you are wise and adept you will take advantage of the situation and face the light as well as your interviewer's critical scrutiny, and fear nothing. In fact, you will make your face and your eyes serve your purpose, as I will explain in a few moments.

Of course it is understood that you will never go into the presence of another person seeking favors, benefits, or aid, or attempting to sell or promote any idea, if you are slovenly dressed, careless in your appearance, foul of breath, or inconsiderate and uncordial in your attitude. Approaching your prospective buyer or customer, you should hold the positive affirmation in your mind that you are going to succeed, not by overpowering or hypnotizing the buyer, not by having the Cosmic super-induce a state of mental coma wherein the buyer knows nothing, says nothing, thinks nothing but what you describe in words. The Cosmic will not aid in such a method, through any law or principle of the universe. If you want to throw your prospective customer into a state of mental aberration, you will have to do it by the charm of your personality and the goodness and greatness of your proposition.

There is one method, however, whereby you can keep your listener, whoever he or she may be, from letting his or her mind wander while you are speaking, or from coming to a conclusion too quickly. It is a method used by the most successful salespeople throughout the world and by diplomats, detectives, judges of the court, criminologists, psychologists, and mystics. It is a method whereby you can stand before your prospective customer or any other person and say what you have to say, provided it is the truth, and then make the other person realize it is the truth and cause that person to judge your statements and your mental pictures correctly.

The method is simply this: The moment you begin speaking to the person whom you wish to convince, be sure to concentrate your eyes all the time you are speaking on the center of the person's nose just between the eyebrows. That point of the nose is called the root of the nose, and if you concentrate your gaze there, you will be concentrating upon the root of the person's attention. You will find that the other

person will gaze back into your eyes, and he or she will feel the steadfast, permanent, convincing glance and mental attitude on your part. If you have to close your eyes or change your gaze from that position while talking to the person, do not drop your eyes and look down to the floor or down to your lap or your hands or anything that is lower than the level of the other person's face, but rather shift your eyes or your glance sideways to something in the room that is on a level with his or her face. You can rest your eyes for a moment this way, and then bring them back to a definite view upon the root of the person's nose.

Do not attempt to stare with wide open eyes at the other person, for he or she will become uncomfortable and suspicious of your motives, and you will be dismissed instantly. Let your eyes have just a perfectly natural look, and merely center them on the root of the other person's nose, instead of looking at details of the person's clothing or the papers on the desk or at your own hands or feet. Every downward glance on your part weakens your impression. Do not attempt to get close to the other person, but stay at a respectful distance. Talk softly and in a monotone. Do not try to give emphasis to certain words by pronouncing them loudly, for that will disturb the mind of the listener and upset the rhythm of the listeners thinking. Do not lean on the desk, or in any other way impose your physical self on the other persons territory. Do not become familiar, intimate, or personal. If you know the person in a friendly way, reserve your personal, friendly, more casual approach for hours after business. Make your conversations brief and to the point.

If, when all this is done, the prospective customer suggests postponing a decision, do not attempt to urge him or her to make an immediate decision, for the client will become suspicious. Rome was not built in a day, and whether the customer buys something from you or not, today or tomorrow, will not ruin or wreck his or her business. If the service or the thing you have to offer is any good at all, it will be just as good tomorrow as it is today. If you are fearful because the buyer does not accept it right away, you will convince the buyer that he or she will gain more by rejecting it than by accepting it.

Even in public speaking, and in dealing in business matters or in personal matters, be sure to always gaze at the person you are talking to with your eyes centered as instructed above. This will evoke a mental impression of a strong, magnetic personality, and it will tend to keep your listener from wandering away mentally in a field of speculation, and you will hold the listener fast to your line of thought.

A thousand people have told me of a thousand instances where this formula saved the day. It may not be mystical, it may not even be psychological, but it works.

Chapter 9

AN UNUSUAL HELP IN NEED

“How can one person influence the mind of another so that the thoughts, ideas, pictures, facts, and impressions implanted in the mind will stay there and continue revealing themselves . . . ?”

ONE OF MY good friends who is also a member of our organization, once wrote a very fetching story entitled, “A Plea for Hypocrisy,” in which she very capably outlined the benefit that all of us derive from some mild forms of amusing hypocrisy in our lives. I feel that before my readers are through with this chapter in my book they will believe I have written something that should be entitled, “A Plea for Superstition.”

Nevertheless, it is strange how many superstitious beliefs most of us really have and how greatly we are affected by them. You have heard of the sane, conservative business professional who laughed at a friend’s superstitious belief regarding the raising of an umbrella indoors, and yet when walking on the street, goes out of his way to avoid walking under a ladder. In my contact with business people throughout numerous industries, trades, arts, and professions, I have found that nearly every one of them has some sort of superstitious belief that he or she indignantly refuses to have labeled as superstition, and denies as merely a belief. Most of them take great pains and considerable time to explain to me that the strange little conviction that is in their mind is based not upon faith but upon practical experience, and therefore is neither a belief nor a superstition.

We are told that sailors are the most superstitious persons in the world, but I would like to find a business professional who is always ready and willing to start a new proposition or make a big investment on a day that happens to be Friday the thirteenth; and I would like to find the business person who is always willing to be the thirteenth director in a new company; or business people, who are willing to hand over money toward a new investment just after a black cat has crossed their path. These persons will adamantly deny that they have any superstitious beliefs.

Nevertheless, the fact of the matter is that most of the superstitious beliefs that have come down through the ages and still grip us with their possibilities, and hold us with their potential powers, are those which are actually based upon some scientific principle. I will grant you that walking under a ladder is a risky thing at any time, especially if the ladder is not well grounded and there is a person with a paint pot somewhere above. But there are many other superstitious beliefs or practices that deal with vital principles not so obviously connected with serious possibilities.

We hear men and women who are dealing with the important material things of life speaking of such conditions as luck and chance. While they may not go so far as to walk around their chairs four times just after a new deal of the cards, or slap the top of their heads three times after they have placed a marker on the board at the side of the roulette wheel, still they are prone to do other things that they believe will assure their success in the undertaking at hand.

Recently, the president of one of the largest coal combines in America came from Chicago to have a business consultation with me in San Jose. Whenever he finds that talking to me from New York, Pittsburgh, Chicago, or Salt Lake, on the telephone is too slow, he drops in to see me. During his last conversation, he told me how a president of one of the banks with which he does business in Chicago carries a lucky coin in his pocket, and he takes hold of it and grips it tightly whenever he is dealing with an important matter, because he has found that "the vibrations from this coin bring him luck." The coal magnate smiled at the story he was telling, and then he presented

me with a paperweight of a novel design for my desk, which was a duplicate of the one he had on his desk in his office in Chicago. He said it was the symbolic design of a large banking institution in New York, and that his paperweight was a reminder to him to consult them in regard to extraordinary matters, because he found he had better luck in dealing with that firm than with any other. Of course he had no superstition at all!

Now the truth of the matter is that there is one unusual practice used by so-called mystics, especially by business men and women who have heard of it, who have tried it first in a halfhearted way, and then found reason to pin their faith to the principle involved. I am going to explain it to you, and I suppose that the result will be that one hundred or more of you will go about your business affairs from now on doing this strange little thing, much to the amusement of your partners and let us say to the consternation of your business competitors.

Perhaps you have heard of the peculiar trick of “crossing your fingers,” and keeping them crossed while you are awaiting the result of some plan or the decision of some person who holds the key to solving your immediate problem. Perhaps you have thought that crossing your fingers or keeping them crossed was a superstitious practice, and perhaps it really is. I do not know about this, but I do know that it works. I have found a very satisfactory explanation for the practice, and whether you accept my explanation or not, you are at perfect liberty to try the formula and cross your fingers whenever you wish, and keep them crossed for as long as you like. If this practice does not bring the unusual results that others have secured, you are again at liberty to condemn the thing as a foolish superstition. On the other hand, if you secure unusual results, you are at liberty to attribute the success to the little superstitious practice.

I have found that when a person has visualized and built up in the mind some plan, desire, or picture representing what she or he wants from someone else, that the most difficult thing is to keep this picture in mind and have it radiate in the form of mental vibrations to the mind of the other person without interruption and without interference. I am speaking now about the man or woman who is about

to interview another person, or has just completed such an interview, seeking or suggesting that certain things be done which can be done by the person being interviewed, but which may not be done because of interference, forgetfulness, or some other interruption preventing the plan from being carried out.

Take, for instance, the individual who goes to a banker and explains the need for a loan. This person uses every convincing argument to show the banker that the loan is not only needed, but is a safe and businesslike proposition. The banker listens carefully and makes certain notations, but defers giving a definite answer until the next day. The person who wants the loan realizes that after leaving the bankers presence, other problems and matters may arise, diverting the bankers attention away from the favorable impression left by the loan applicants interview. A person in this situation always feels that if there was some way whereby he or she could hold the bankers mind in the same receptive and favorable condition that it was during the interview, there would be no question about a favorable decision a few hours or a few days later. The problem for the loan applicant is to somehow keep the bankers mind impressed with the favorable picture created in the interview.

Or, take the example of a woman or man talking to a prospective buyer of a piece of property. The seller does his or her level best to create in the mind of the prospective buyer an excellent picture of the property and a favorable impression. The buyer decides to give his or her answer a few days later. The problem here, again, is to prevent the picture from fading out of the mind of the prospective buyer and to keep the favorable impression constantly alive and vibrating.

Or, take the woman or man who interviews a prospective employer. After partially convincing the employer, the applicant is told that a final decision will be made a few days later. Other applicants are to be interviewed. A confusion of pictures and facts will be built up in the employers mind, and it will be difficult for the employer to recall clearly the next day the fine, definite picture which the applicant of today created in the employers mind. The problem here is for the applicant to keep his or her impression in the mind of the employer until a decision is made.

How can one person influence the mind of another so that the thoughts, ideas, pictures, facts, and impressions implanted in the mind will stay there and continue revealing themselves like a movie running through his or her consciousness, until he or she cannot eliminate them except by acting upon them and bringing the matter to a conclusion? You would probably agree with me that if there was a method for accomplishing this, it would not only be a legitimate thing to do—as long as we were not violating any ethical laws of business or cosmic principles—but it would also be an invaluable aid to everyone.

Crossing the fingers will accomplish this very thing. I have found it to work in many cases, and I daily hear from those who have had it recommended to them by some acquaintance and have found it successful in the first trial. Whatever faith you may put in the explanation I am going to give you may or may not have a bearing upon its successful operation when you use it, but at least you may try it without jeopardizing any of your interests and without injury to your dignity and pride.

We know from psychological laws and principles, as well as from mystical practices, that the forefinger and second finger on each hand are the terminals of certain nerves that have to do with the centers of visualization in the mind and the radiation of psychic waves in the process of telepathy. We know that these two fingers on each hand play an important part in so-called magnetic healing, or contact treatment work where the hands come in contact with the nerve centers of other bodies. We know that all through history these two fingers, with the addition of the thumb, have been used symbolically as the fingers from which there are potent radiations, often believed to be spiritual radiations, but now known to be magnetic or of the nature of the mental essence.

A few years ago, an eminent European scientist discovered that by pinching certain parts of the fingers, the outward flow of this same energy could be short-circuited for the relief of pain in various parts of the body. It was later found that all that was really done was to affect the mental activity of the consciousness. I could point out many other reasons to show that there is a relationship between the first

and second finger of each hand, and the peculiar mental and psychic functions of the human mind. But in this discussion I am not dealing with metaphysics or with other matters that are wholly within the realm of the traditional teachings of the Rosicrucian Order. I am dealing solely with the application of some principles to business affairs.

Now, according to the explanation that I have worked out, and which has been accepted by hundreds of persons who have delved deeply into the possibilities of this explanation, I am convinced that whenever we have mentally built up a definite picture or idea, thought or impression, which we are conveying to another mind, that a radiation can be created. As soon as we have completed the picture or impression in our mind and have expressed it to the mind of another, if we cross the forefinger and second finger of either hand or both hands for a half hour or so, the impression thus created in the mind is caused to radiate in the form of telepathic waves from our mind to the mind of the person to whom we have just been speaking, and whose personality we associate with the impression we have in our minds.

I have found through test and trial that if at certain hours during the day I think of a particular person who I interviewed yesterday, and once more build up the pictures that I had presented to that individual in words, and then cross my fingers and hold that impression in my mind for ten minutes, that during those minutes that person will once again recall the impression I put into his or her mind and will think of me and the picture or story that I left with him or her. A great number of experiments of this kind were conducted by myself and others for the purpose of testing the principle involved, and, as I have said before, there are hundreds of business people who are using this method many times a day and who do not hesitate to claim that the final results prove its efficacy. In many cases they have been able to ask the other person at just what hour or minute he or she had the recurring impressions, and they have found that these periods of time checked with the time periods during which the fingers were crossed.

I remember one case very distinctly, which I think illustrates the whole principle involved. One afternoon, about 2:30, a man, who had been instructed in this process, rushed to a banker to present a

proposition calling for a loan. He found that he could have only a three-minute interview with the president of the bank, for the president was about to leave his office and travel to another city. He promised the client that he would decide the matter upon returning to his office three days later. The client returned to his office after the interview, and every half hour he sat in a relaxed position, crossed his fingers for two minutes, and thought of the banker, while he built up again in his own mind the picture and story that he had given to the banker in words.

That night, at eleven o'clock, the client received a message sent from a distant city, which read as follows: "Have thought of your proposition many times during afternoon and evening, and have decided to grant your request and am contacting my bank accordingly." When the banker returned to his office, he was questioned by the client and admitted that he had sent the message in order to bring the matter to a conclusion. He wanted to make a decision because he had been unable to think of any other matter during the afternoon and evening, and he had to clear his mind of this recurring proposition in order to work on matters that necessitated the business trip.

It may seem foolish to some of you to stop in the midst of your affairs many times a day and in silence cross your fingers, and it may even seem like a waste of time. But if you had a major proposition pending, or an important matter hanging fire, you would not think it foolish if it was feasible to call the other person on the phone every half hour and remind him or her of your proposition. Such a method would probably annoy the other individual and jeopardize your interests. Crossing your fingers has the advantage of diplomacy, for the other person may not be aware of your process, and it has the additional advantage of secrecy, for you can cross your fingers behind your back without revealing to anyone around you what you are doing, whereas telephoning is not always a private matter.

If you have followed all the suggestions I have given in my previous talks, you will undoubtedly find that crossing your fingers or keeping them crossed "just for luck" will prove to be one of the luckiest things you can do in bringing your affairs to a satisfactory conclusion.

Thus I make a plea for one form of superstition at least. And so far as I am personally concerned, I care little whether some practices are superstitious or not, so long as they work and produce results, and I have an explanation as to how they work that enables me to apply the process intelligently and understandingly. After all, that is as much as we can say about many things in life, and especially in connection with business and social affairs as we meet them in our business and home activities.

Chapter 10

THE LAW OF COMPENSATION

“Many people appeal to the Cosmic or to the laws of psychology or mysticism for aid in their predicaments, yet they cannot show that at any time in the past have they cooperated with the Cosmic in liberally helping others.”

HUMAN BEINGS HAVE attempted to reduce to material form the cosmic law of compensation, although they have made a miserable failure of it in most ways. Nevertheless, spiritually minded business people, or mystical workers in the field of business, have succeeded in establishing in their own lives and in their affairs, some principles that are truly representative of the cosmic law of compensation.

As I have said in the preceding chapters of this book, money as a means for rewarding and compensating people for their efforts is a false and arbitrary medium, created by human beings without having the least relationship to the ideals of cosmic law. It is fortunate, however, that while we on the one hand attempt to compensate those who work for us and those who contribute to our needs by paying them money, the cosmic law of compensation also operates to bring to each one of us a true compensation for what we have done. And in each element wherein our method of compensation fails to reward or punish adequately for each good or evil deed, cosmic law properly, efficiently, and sufficiently compensates and makes full adjustment.

Individuals may scheme and plan to prevent the cosmic law of compensation from operating in their individual situations, and they may try to stop the great cosmic laws from adequately adjusting the compensation for their acts. They may even succeed for a time in escaping what they believe is imminent, but it is a fact that no one has ever successfully avoided, evaded, or escaped the operation of cosmic law completely and continuously. Men and women may cheat one another of their just rewards, and people and corporations may fail willfully or unconsciously to make proper compensation to those who work for them, but cosmic law never fails. It is immutable, of course, but it is also fair, just, and truly worthy of our admiration when once we understand the principles of cosmic compensation.

Both employers and employees in major corporations and small businesses alike must all realize that injustice, unfair dealing, evil doing, and evil thinking will bring into operation the law of compensation as established in the Cosmic, and that there is no escape from the operation of this law. The employer or employee who plans to take advantage of another human being, or of a group of human beings, including the citizens of a city, state, or nation, must expect the law of compensation to operate sooner or later and bring punishment to the mind and interests of the person who planned the injustice.

Although it is often said that the law of compensation does not always bring an immediate manifestation of its operation, people do not necessarily always have to wait until the close of their lives to see the results of this cosmic law. There is no warrant for the belief that the law of compensation defers its reward until the close of life. I believe this common misunderstanding is due to the teachings of certain religious doctrines that refer to the ultimate rewards that all good people will receive in some future state; but so far as cosmic law is concerned, it makes compensation adequately and properly in such ways and at such times as will render the most help and benefit to the deserving one.

For many business professionals with whom I have come in contact, their faith and trust in the operation of the law of compensation is solid and secure. I have met many business people who believe most implicitly that whenever they do a kindness or an unselfish act for

someone else or contribute in any way to the health and happiness of others, they can expect some reward or some cosmic blessing, suddenly and uniquely, at almost the following hour. They have learned from experience that the Cosmic brings its rewards not only suddenly, but at a most propitious moment, and that by helping others or contributing in whatever way they can to the needs and happiness of another, they are accruing a certain amount of cosmic blessing or help that will come to them just when they need it, and as they need it.

I do not mean to imply that such persons constantly have in mind a reward or return of their blessings whenever they do something for someone else. I have noticed from many reports, and from intimate contact with those who follow such principles in their lives, that most of the unselfish or kindly acts performed by these persons are unplanned and wholly spontaneous, and that it is only as they are performing the act or immediately thereafter, that they realize that in compensation for their rashness or liberality there will be the proper return. It is only natural for someone to promptly question the logic of a spontaneous act or sudden urge, and to wonder whether it is worthwhile, diplomatic, or reasonable. It is at such moments of consideration of the spontaneous act that these persons generally conclude that even though it is sudden and probably urged by an emotional impulse, the Cosmic is conscious of the urge and the wholehearted response to it, and will compensate accordingly.

Let me illustrate how such cooperation with cosmic law can really become a valuable asset in ones life. For a number of years I was closely associated with, and adviser to, Mr. William Woodbury, who was a wealthy New Yorker given to the study of human needs. His business affairs with which I was connected were of such a nature as to permit him to have ample time for personal matters and provided him with an income sufficient to allow him to indulge in any of the costly hobbies and practices which often become the ruination of many wealthy individuals. Mr. Woodbury, however, decided that he would get more pleasure out of life if he could evolve some plans for helping the worthy and needy who wanted to help themselves. He had no faith in organized charity and did not believe that any form of charity helped the actual person who had a real need.

Finally a plan was evolved whereby Mr. Woodbury set aside \$1,000,000 in a bank in New York for the special purpose of helping others. He informed various business and charitable organizations that if they contacted any person who had a legitimate plan and was anxious to go into business for him or herself, to send that person to see him. Mr. Woodbury opened a special office in a private residence in a secluded part of New York City, and there, each morning, we interviewed applicants for help. Briefly outlined, his plan was to find such persons who were competent in some definite line of business or trade, who had many years of experience in that particular line, and who were anxious to discontinue being employees and go into business for themselves. If such persons were well qualified in a moral and ethical way—that is, not addicted to drinking, gambling, or other extravagant indulgences—and were healthy and responsible enough to start up their own business and build up a good clientele, he would loan them anywhere from \$5,000 to \$25,000, and in some cases even more. The money was loaned to such individuals without security, and with no other pledge or promise than their personal word, and with no agreement as to the return of the money except that it should be returned from the legitimate profits of their businesses, and in such payments as they found were possible, convenient, and not injurious to the progress of their business, and without any interest of any kind.

Within a year practically the whole of the \$1,000,000 had been loaned in this manner, and during the following year it was a pleasure to see that ninety-eight percent of those who had secured the money were making various returns in accordance with the profits of their businesses, and in no wise attempting to defraud Mr. Woodbury. After four years of operation of the plan, Mr. Woodbury found that quite a few had returned not only the original amounts that they had borrowed, but had donated to the fund liberal amounts to help others, and that on the basis on which it was working, his original \$1,000,000 would be returned with a very much larger increase than if he had loaned it at six percent.

In fact, a report sent by Mr. Woodbury to me in 1924 showed that in ten years previous, his \$1,000,000 had been returned and a large additional fund accumulated. He had proved his original contention

that human nature could be trusted and that the average person, if placed upon his or her word of honor, would not take advantage of any plan that was truly conceived to be noncommercial and one hundred percent altruistic. Only a little over two percent of the persons he had tried to help had taken advantage of the situation and had either absconded or in other ways defrauded him; but he took no means to punish them or even search for them.

The most important discovery made by Mr. Woodbury in connection with his humanitarian plan, however, was that soon after he inaugurated it his other business affairs began to prosper far beyond his anticipation. Many persons who owed him large sums of money began to make payments, and in other ways he found that the cosmic law of compensation was beginning to reward him for his efforts in behalf of others. He finally organized an institution of helpfulness for people in business, and up to the very last hour that it existed before being completely abandoned in order to carry on other activities, it was one of the outstanding demonstrations of cosmic law. It is unfortunate that Mr. Woodbury is no longer around to carry on these forms of help, but there are undoubtedly others in this country, and elsewhere, who carry on the work originally begun by Mr. Woodbury.

Another illustration is that of the work of Mr. Dodge, the New York financier and philanthropist, with whom I was associated as adviser and consultant for several years. Mr. Dodge was not only well known throughout the nation as a promoter of major corporations and big business, but he was one of the most generous workers I ever met in behalf of unfortunate people in New York City. From one end of the City to another Mr. Dodge was known in the principal hotels, restaurants, clothing stores, and real estate offices. When an unfortunate person appeared at a restaurant or a hotel and asked for a room or a meal, and had a note written on the back of a card signed by Mr. Dodge, he or she was given every possible help. And a note written by Mr. Dodge provided to many individuals a receipt for a months rent for their apartment or home, or some necessary furniture, groceries, or clothing.

It was a pleasure to accompany Mr. Dodge to these merchants, and listen to their reports, and note the pleasure Mr. Dodge received in handing out his personal checks to pay for the things others needed and had received. What he had learned and what I knew of his business affairs proved the soundness of his activities. There never was one of his big business propositions that did not pay and prove to be an eminent success.

Whether on Wall Street or in the financial corridors of Manhattan, the plans proposed by Mr. Dodge always came to fruition, and he seemed to have what others called "luck." And every person who had money for investment sought an opportunity to have an interest in any proposition that Mr. Dodge sanctioned or sponsored. He knew that he had cosmic cooperation and support, because he believed himself to be one of the many silent and secret workers in behalf of the Cosmic to help others. He used to take pleasure in telling others, quite confidentially, that he was incorporated, and that his firm consisted of the Cosmic Hosts and himself. With such a partnership, no one could fail in business.

Take the case of Sam Small, the president of the board of directors of one of the large cereal companies of America. Mr. Small was at one time an abandoned waif and had to fight his way through life, but he never forgot, in his days of wealth and prosperity, the suffering of the orphans of the street. It was indeed a pleasure for anyone to accompany him in his automobile several nights before Christmas each year, in whatever city he happened to be, and watch him go into the byways of congested districts among the poor. He would take boys and girls to clothing stores where he would buy them the shoes, stockings, and overcoats that they needed, and then send them home with baskets of groceries or toys. Hundreds of children in many cities were helped in this manner each Christmas. He acted without ostentation and with no other motive than the sole pleasure he derived from helping others and the idea that some divine law had raised him from poverty as a waif to great wealth for the purpose of enabling him to carry out the cosmic principles.

He could not conceive of the possibility of his wealth having come to him for his own selfish use or the exclusive use of his immediate family, and he held fast to the true principle of being a steward of divine funds. And yet as quickly as Mr. Small expended his funds in this manner, his income was increased and increased until he finally became the head of many large companies.

Mr. Small and many others would frankly tell you that at times, when they first felt the urge to give to others and to help others, they often had to seriously consider whether the few dollars they possessed should be rashly or spontaneously divided and given away, or held in reserve for a possible rainy day. Many times the money in hand represented just a safe margin for emergencies in their business affairs, and in some cases the plan for helpfulness called for the expenditure of every available dollar and the jeopardizing of personal interests at the time. Yet there was always the conviction, based upon previous experience, that if even the last penny is given away freely and without reluctance, and with that spontaneity of good will that the Cosmic always uses, there would come a proper reward in the form of some adjustment of financial affairs that would remove any possibility of disastrous results to the giver.

And so my plea to you must be, that regardless of your station in life, or the situation of your business and financial affairs, you must not permit your own needs, and especially your contemplated needs, to interfere with the liberality of your charity or the broadness of your helpfulness. It is a positive fact that as you act spontaneously and freely, and without hesitation or long deliberation, in the giving to someone else of that which you can give but which you could use yourself, so you will find the Cosmic spontaneously and liberally coming to your aid at the proper time, and with the same lack of hesitancy which you manifested.

It is safe to say that the average person of health and business capabilities who finds herself or himself out of employment, out of funds, and out of contact with any who can help or tide over the serious situation, is a person who has failed in the past to give liberally and spontaneously when the cosmic urge came from within. Too

many people appeal to the Cosmic or to the laws of psychology and mysticism for aid in their predicaments, yet they cannot show that at any time in the past have they cooperated with the Cosmic in liberally helping others. Merely to give advice to others who seek it, or simply to give a meal to one who begs at the door, or to drop a few coins in the Salvation Army pot, or to donate some old clothing to the orphanage is not carrying out the greater work of the Cosmic. Those who suddenly feel that there is something they can do for someone, something they can give, even though it hurts in a financial or material way, or something that they can do even though it is inconvenient, unpleasant, tiresome, and costly—and without hesitation, without reluctance, wholeheartedly submit to the urge—are those who are truly cooperating with the Cosmic. They will find eventually, not in the days of the last judgment in the world beyond, but in the days here and now, that at every crisis and in every need the Cosmic comes to their aid abundantly.

It behooves everyone, therefore, who has read through this book with the hope of finding in it some help in solving personal problems, to ask themselves this question: “What have I done for others?” And perhaps this additional question: “What have I contributed to the cosmic supply that I may now appeal to the Cosmic and withdraw from the positive supply?”

If you can find no positive affirmative answer to your questions, and you believe, even half reluctantly, that you have been deficient in your cooperation with the Cosmic in this regard, it will be well for you to consider immediately how you may proceed at once to help some others while you are seeking help for yourself. Before you expect any return through cosmic or mystic laws, be sure that you have done your utmost to help someone else, not only because of the reward that will come to you, but because it is your duty, as it is the duty of every human being, to be an earthly instrument in carrying out the cosmic scheme of things. And as long as you are out of attunement with the cosmic plans, and not a part of the army of cosmic workers, you cannot expect the cosmic laws to help you and be unmindful of your neglect.

Perhaps your very situation today, in whole or in part, and perhaps the problems which you now face, and from which you have sought relief or now seek relief, is a result of your failure to cooperate with the law of compensation in the past, and therefore your present predicament is a part of your Karma. If this is so—and no one else but you can know that—it is then certain that you must first adjust your relationship with cosmic law, and then with the Cosmic Hosts, and finally with your fellow beings.

Chapter 11

ATTRACTING CUSTOMERS

“There is no surer way of attracting business than by making new and long-time customers feel that from the moment they cross the threshold of your doorway they are in a unique place and are going to receive a higher quality of attention and service than they have ever received before.”

ONE OF THE most common complaints voiced in letters to our organization is that keen competition or rivalry is responsible for the troubles and poor progress in the line of business owned or operated by the letter writers. In other words, the writers of such letters say: “I was getting along all right with my business, which was slowly building up and becoming profitable, but others near me have entered into the same line of business and the customers are now divided between several competitors and none of us are succeeding as well as we should.” Other letters say: “A competitor has entered my field of business and is near me, drawing so heavily upon my customer base that my business is about to fail. I am honest, give proper returns for the money, and have tried to build my business on a fair-and-square basis; yet I now face failure because of this competition.”

It is absolutely true that competition is the spice of commerce and that intense competition should result in increased business for the dedicated entrepreneur. There is hardly any business today that does not have competition, and if it has no competition, it soon will have; and everyone who is in business, whether for oneself or for others,

should realize that competition is no explanation for failure, but should be a real incentive for success.

I recall a minister who many years ago came to me and complained that attendance at his Sunday and Wednesday evening services was being ruined by lack of attendance because a movie theatre across the street was attracting everyone in the town and drawing from his congregations. I asked him if the theatre was hurting his Monday night, Tuesday night, Thursday night, Friday night, and Saturday night congregations, and he told me that there were no services on those nights, for his church was closed on all those evenings. I asked him to describe the front of his church so that I might get a picture of what the church looked like.

He described his church in detail and I was able to visualize one of those nice gray stone structures often seen in the heart of some middle-sized town, with ivy growing over the doorway and around the windows, an old belfry with rusty, dusty bells, a little lawn in front of the church, badly kept, and huge, wooden doors in the doorway, closed and securely locked. The structure I saw in my mind could have been a suitable place for a prison, an insane asylum, a sanitarium, or the winter home of a wealthy elderly eccentric. I asked him if he had any signs or emblems on the front of the church and he said there was a cross on the top of the belfry that was once gilded but now quite rusted, and two signs on the front of the building, one on either side of the door. When I asked what was printed on the signs, he answered:

“The sign on the left side of the door is small, with a black background and gold lettering which says that the Reverend John Blank, D.D., is pastor, and that services are held Sundays at eleven o’clock, three o’clock, and seven thirty, and on Wednesday nights at seven-thirty, and that all are welcome. The sign on the right-hand side of the door is black, with gold lettering, and states that John Sexton is the undertaker and sexton.”

Then I asked the minister: “What kind of a building is the movie theatre in?” He explained to me that the movie theatre had a white and green tiled archway with a large, well-decorated lobby, an attractive

ticket booth, many lights and attractive signs, and was in full operation every night of the week. Then I asked him to step with me mentally into the middle of the street on any evening at about seven thirty and consider the mental attitude of a person who had an evening to spare and was trying to decide where to go.

On the one side of the street was the church, and on the other side the movie theatre. The one structure is dark, gruesome-looking, uninviting. No strains of music come from within, no face appears at the door to greet you, and the only signs that you can read politely announce that the place is open on only a few occasions during the week, and that two persons are connected with it— one who is ready to tell you how sinful you are and the other will bury you when you die. On the other side of the street there is warmth, color, attractiveness, fun, interesting music, and a smiling face at a booth inviting you to come in. The signs in front of this place also tell you that a number of characters will appear before you to speak to you or portray stories and lessons, and that these stories and lessons deal with the realities of life, the actual occurrences, the things of *here* and *now*, and bespeak generally about the land of the living and a life of happiness and joy.

Of course the cleric immediately saw the point of my discussion with him. Instead of complaining and attempting to discover all the wrong things he could find about the movie theatres and the movie industry in general, he began to analyze his own situation and tried to find what was wrong with him and his church. People are unquestionably religiously inclined, and the average person would not think of having spirituality left out of community life. But the average and filled with hope and salvation that is a saving grace from all the trials, troubles, sorrows, and tribulations of this life. The church, as conducted by this particular minister was an institution of sadness and despondency. His own record showed that he was catering more to elderly people than to younger people, and that in fact he could not attract any young people to the evening services.

I found a year later, after this minister had began keeping the church open seven nights a week and arranged for some interesting and instructive programs each night of the week, that he was operating

a keen form of competition to the theatre, for the folks in the town found that they could find more uplifting and enjoyable entertainment and derive more real benefit from some of the weekday church services than they received at the movie theatre, and for a lower price! Since it was not a matter of *price competition* but of *audience*, the minister had the upper hand all the man and woman seek a religion that is *joyous* and inspiring time, but did not know it.

Speaking of theatres, I remember an early experience with a neighborhood movie theatre in the residential section of Manhattan in New York City. Several business partners who had never been in the movie theatre business, but who had some fresh ideas about how a good theatre could attract an affluent clientele, pooled their resources and turned a small store building into a very attractive movie theatre. The new theatre faced stiff competition from nearby theatres, and so it had to be attractive and appealing, and this had to be done on a limited budget. The theatre seated only 300 persons, and even by filling the theatre nightly at the going rate charged by neighborhood theatres, that amount of money would not go far in presenting first-run movies. Therefore, elaborate programs and costly features had to be eliminated, and the whole approach had to be presented in a unique manner in order to appeal to the target audience that the business partners were seeking. After everything was done to make the entrance and the interior of the theatre attractive in an especially tasteful and artistic way, with beautiful murals painted on the walls and in the lobby, and generously comfortable seating installed in the theatre itself, the movie house was ready for its opening.

In order to successfully compete with the large downtown theatres, which attracted thousands of customers nightly and were not more than a few minutes ride from this neighborhood, the business partners consulted with me in regard to a plan for attracting customers to their new theatre. We began by sending letters to city officials, school board members, business people, and residents in the neighborhood announcing the opening of the theatre and stating that the theatre would show only the best quality films for patrons of discerning taste. The films to be shown would appeal not just to adults, nor to teenagers,

but to families. Then an engraved invitation was mailed to every family within a mile of the theatre, announcing the opening of the Venetian Theatre, with its Italian decorations and European ambiance and courtesy. We assured neighborhood patrons that in this theatre they would find better movies, more comfortable seats, a more wholesome environment and intimate atmosphere, and more courtesy than they had ever found in any theatre before. They were invited to come to the opening night *free* by using the ticket that was enclosed.

The theatre was packed on its first night, and in the several years that it continued to be in business, there was always a full house for each performance. When patrons came to the theatre, they were ushered politely and courteously to their seats. Every convenience was provided, even to the extent of providing wider and more comfortable seats, and spacing the seats a little farther apart than in other theatres. For the first time in the history of New York theatre, fresh drinking water was available for free during the movies. Following the movie, as customers left, they were handed a little card thanking them for their patronage and inviting them to come again and make this theatre their home for evening entertainment. In fact, the Venetian Theatre set a new standard of excellence for neighborhood theatres and art houses, and as a result of these extra steps taken by the business partners, their business thrived.

Here the art of attracting customers was brought to a high degree, and it proved to be the best way in which to build business in the face of competition. Some nearby theatres that lost customers to the Venetian Theatre could have saved their businesses by immediately adopting the same policy utilized by the new theatre. They claimed that the Venetian Theatre had made a tremendous investment in interior decoration, smart uniforms for the ushers, and other incidentals they claimed they could not afford. The truth of the matter was that the largest investment made by the Venetian Theatre was an investment in *politeness* and *unique business methods* that did not cost anything except some thought and considerable sincerity. Combine these attributes with a quality product— i.e., distinctive movies for a discerning audience— and you have a successful business model!

And this business model can be applied to any business where you are providing a service to people. I recall a clothing store many years ago that opened in the face of keen competition and walked away with all of the neighborhood business in a few months by adding some unique features. For instance, this new store pioneered the unique idea (unique at that time) of allowing customers to actually try on neckties before purchasing them. This store did not sell neckties by hanging them on racks or by displaying them in a glass case. The store had a little booth conveniently situated with a bright light, a chair, and a mirror, where a prospective customer could sit down and try on one or a dozen neckties and see how they actually looked with the shirt or jacket the customer might be wearing. After all, people hold dresses, shirts, or jackets up to their faces to see how the color agrees with their complexion or hair color, so why not neckties? Very few men have any idea how a necktie will look when it is off the rack and close to their chin, and the store owner believed that if you tried on shoes and suits to make sure they fit and look nice, you might also want to try on neckties. The merchant was absolutely correct! The little loss through wrinkled neckties was more than offset by the tremendous business the store owner achieved.

Business people who say they are giving full measure for every dollar received, and, therefore, are entitled to customers and patronage, are fooling themselves. It is only natural for customers to expect full value *plus* for every dollar they spend, and the *plus* part of the return does not have to be in material form. There was a time when thirteen doughnuts constituted a dozen—a baker's dozen—in the bakery shop, and the extra doughnut was supposed to be a bid for patronage. However, I would argue that any bakery could have got away with eleven doughnuts for a dozen if it had handed out a *big handful of politeness, courtesy*, and a little touch of *unique service*. I saw this proved in a bakery that opened its doors in the face of stiff competition. It did not give the extra doughnut in each dozen. However, this shop provided its doughnuts in a unique bag that didn't get greasy and protected the customer's hands and clothes from any grease or frosting. Moreover, this particular bakery sold more warm scones in the afternoon than any other shop because it didn't wait for customers to come to the shop, but initially, upon opening for business, the new bakery sent around complimentary

freshly baked scones to all the neighboring homes and offices. Who could resist warm scones at four o'clock in the afternoon? The bakery was an immediate success!

Again, this business model, consisting of *politeness, genuine courtesy*, and *unique service*, can be applied to any business where you are providing a service to customers. And think about it: what business doesn't provide service to customers? So you see, these business principles don't just apply to retail stores, but can be successfully put to work by business people providing all kinds of professional services, from banking and financial services to home repairing and these important principles to work in your professional and personal life.

Many lines of business are failing today, or falling into the hands of incompetent, irresponsible persons because those with money to invest believe that some of these lines of business are not worthy of their investment or attention. This is nonsense. Any legitimate business that is providing a necessary service to customers is deserving of our investment and attention. And the company or business that provides the best in service will get the customer's patronage.

For example, we all know that a reliable automobile mechanic is a good person to know. However, many years ago the public's view of auto repair shops—which provide a very necessary service—was that they were among the lowest, meanest, and dirtiest places where one could work. Anyone driving an automobile needed this vital service; however, many believed that auto garages were dirty places staffed by ill-mannered mechanics, dishonest managers, and persons incapable of conducting any other kind of business. Thus, the average garage or automobile repair shop was seen as an uninviting and irresponsible institution. For this reason, patrons did not want to pay well, were usually suspicious about the charges asked, and took with a grain of salt any statements landscape services, and so on. Think about how *you* can put regarding the efficiency of the work performed.

However, years ago some garages and auto repair shops set out to change this attitude on the part of the public. These pioneers transformed their garages into clean, well lighted places, staffed by professional mechanics who not only completely understood the

inner workings of an automobile, but were trained to be polite and courteous, informative and honest with their customers. After all, there is no reason in the world why a garage or auto repair business, or any other business for that matter, cannot be established and maintained by following the highly successful principles we have discussed in this book. If this isn't being done, it is due to the inability of those in a particular field of business to think along unique lines and to create a new aspect and a new character for the business they are in.

There is no surer way of attracting business than by making new and long-time customers feel that from the moment they cross the threshold of your doorway they are in a unique place and are going to receive a higher quality of attention and service than they have ever received before. When customers feel that some distinct service and some special courtesy that they have not asked for and are not expected to pay for is *being given* to them, they will make a mental note of the place and decide that if everything turns out well, they will come again. And when customers can walk out of your place of business saying to themselves that regardless of what they paid or what they received, they also received *something extra* that they did not pay for, and that they did not expect, and that they did not find anywhere else, then you will have customers who will stay with you as long as you can keep them thinking that way.

There is a big difference between politeness and sycophancy, and between courtesy and servility. No customer wants to be flattered and fooled with a lot of nonsense and disingenuous information about a product. They won't be fooled for a minute; they will see right through you. On the other hand, there is a way to extend courtesy and demonstrate politeness that will leave its impression long after the demonstrator of these things has forgotten it.

No matter what business you may be in, or for whom you may be working, you will better the interests of the firm, and incidentally yourself, if you try to give every customer, remember again that the "more" need not refer to the material things being sold. A passenger rail service company is not in business just to sell tickets. It is a service company, and unless *service* is given along with the ticket, and carried

out by providing a high-quality experience, the company is not giving its customers what it is in business to provide. The ticket is simply the symbol of what is to follow: namely, a fast and convenient— and enjoyable— rail journey across the country. After all, the customer does not buy a rail or airline ticket just to have a nice, colored ticket envelope in his or her pocket. The customer is paying for what the ticket represents, and it is through the quality of that service that the customer judges the rail or airline company's efficiency.

The service that goes along with selling a suit of clothes and continues long after the customer has been wearing the clothing will bring that person back into the store again, long after the *high quality* of the merchandise for which the customer paid a *high price* may no longer have such a strong impact upon the person. When you sell customers a cup of coffee, you cannot argue with them that you are giving them their money's worth of *coffee beans* and water. It is the high every patron, every client, *more* than he or she pays for, and quality of the coffee beans, the excellence of the roast, the purity of the water, the uniqueness of the service, the comfort and ambiance in which the coffee is enjoyed, that makes a hit with the eager customer.

Therefore, in attracting customers, remember that you must use subtle and psychological principles and bring them into such outward manifestation that the person to be influenced keenly realizes these principles and makes a mental note of them. The process is entirely up to you and not up to the customer. If your competitors are taking your business away from you or from the employer who employs you, it is up to the employer *and you* to win the customers back, provided the merchandise is good and the business is an honest one. If your competitors are beating you in the game of giving *plus* in every deal, you have got to go them one better and add *plus* to *plus*. It is not a matter of the survival of the fittest, but a survival of the *best provider of service*; and again I say, the things that count most with the customer, client, or patron in any line of business are the things *he or she did not pay for*, did not expect, and which do not have any material price attached to them.

Chapter 12

THE SKELETON IN THE CLOSET

"I have found it absolutely futile and a waste of time to attempt . . . to help a person who is sick or in business trouble if that person continues to think, believe, and act on the false, erroneous, or inharmonious ideas which are the real causes of his or her trouble."

WE MAY DODGE the issue as we please and try to convince ourselves that the idea is only theoretical and not a scientific fact, but the truth remains, nevertheless— all our problems of health and personal affairs have a cause within ourselves.

An eminent medical authority speaking before a large congregation of physicians and surgeons said that his experience of a quarter of a century as a physician, surgeon, author, and professor in a medical school had convinced him that after the physician had completed his or her diagnosis of the symptoms and had made a careful examination into the pathological and histological causes of the ill-health of a person, there was still a very large and more important field for investigation. The field was the inner self of the patient. He claimed that until the physician knew as much about the personal, private thinking and acting of the patient in his or her dealings with all human affairs, the physician could not know the real cause of a mental or physical disturbance.

Psychologists and psychiatrists long ago learned to seek beyond the outer self for the cause of many peculiar mental and physical traits.

The real mystic knows that what a person thinks, believes, talks about, and does in her or his daily affairs has as much effect upon a person's health and personal problems as have contaminated foods, disease germs, unhygienic environments, accidents to the body, and stock market fluctuations.

After twenty-five years of watching the systematic and carefully recorded activities of the Council of Solace of the Rosicrucian Order in America, I have become thoroughly convinced of the universal truth and principle revealed in my personal experiences with persons whom I have helped with many problems. To sum this up, I have found it absolutely futile and a waste of time to attempt metaphysically or psychically, as well as medicinally or legally, to help a person who is sick or in business trouble if that person continues to think, believe, and act on the false, erroneous, or inharmonious ideas which are the real causes of his or her trouble.

Let me cite one case that will probably reveal this idea to you clearly and quickly. An individual came to me who had been suffering from boils and carbuncles for a little over two years. When he came to my office on the recommendation of an eminent physician, I was horrified at the painful and obnoxious appearance of his countenance through the presence of two large boils on either cheek. The back of his neck and even part of the scalp where the hair had been shaved was scarred from previous lance incisions for the removal of boils and carbuncles, and he told me he had them on various parts of his body.

His doctor verified the fact that he and other physicians had used everything known to medical science to clarify and purify the patient's blood, and there was no question about the fact that the impurities which accumulated in each carbuncle or boil came from impurities in his blood. His blood seemed to be continuously poisoned with a form of toxin that insisted on breaking out in a horrible manner. Medical science had done its utmost to cleanse his blood and body in a chemical, physiological sense. Even his food for the past six months had been carefully regulated, cleansed, and all water boiled. He was not engaged in any business that would bring him in contact with poisons of any kind. The boils were increasing in number and size. The history

of his case clearly showed that each month brought more and larger amounts of poison and pus into manifestation.

I noticed that in addition to the man's suffering from pain, he was very curt, brusque, and inclined to be impatient. I tried to ignore this attitude that was caused by his complete skepticism and insistent doubt that any psychologist, counselor, minister, or spiritually minded person could do anything for him. However, his attitude revealed the fact that he had no faith in any spiritual principles relating to the power or advantage of mental culture and right thinking. I talked with the man on various subjects, always ignoring his impatience with what he probably considered my foolish belief in spiritual things, and then sent him on his way while I seriously considered the psychic impression I received from him.

With some investigation, I discovered that the man was not only a critic of spirituality and refused even to have a Bible in his home, but more importantly, he was a typical "bully" in his home, in his social circles, and in the business place where he worked. Along with a few superb mental attributes, he also, however, displayed a most horrible temper, and his associates where he worked said it was common for him to have an outburst of temper at least once a day. During these fits, which were often provoked by the mere dropping of a tool or instrument, or the finding of something misplaced by him, he would slam things from the bench where he worked, kick the boxes and barrels or machinery near him even to such an extent that he often harmed his own person. He had been known to smash his hand through the plate glass of a window because it refused to close for him, and thereby cut his hand badly. Another time, he kicked at a piece of iron that was in his way and injured his toe. He had often pulled his hair so ferociously that he had caused his scalp to bleed.

The man became a beast or a brute without any control of himself when suddenly annoyed over some simple little thing. At home, his family was afraid to cross him in any remark or to contradict him in any misstatement. He had been known to upset the entire dining-room table, causing all the dishes and food to be thrown onto the floor, merely because of his displeasure with some dish of food. In

his immediate neighborhood, he was called “the agitator” and was annoying and unpleasant to everyone. He was firmly convinced that all politicians were crooked, that the government was being run for the advantage of the rich and the suffering of the poor. He was also convinced that the churches were built for no other purpose than to ring their bells on Sunday morning when he wanted to sleep, and the government issued money only to wear holes in his pocket.

Nothing in the world was quite right, not even himself, for he admitted that he could not live as properly and happily as he should because nothing afforded him the opportunity and that he would be better off dead than alive. If ever there was a piece of human machinery manufacturing virulent poison for self-consumption, it was this specimen of humanity. Between sunrise and sunset of each day, he created more actual poison in his bloodstream than would be found in an army of soldiers fighting in battle with all of their hatred or supposed hatred toward the enemy.

When all of this was explained to his physician, he agreed that this patient’s mental attitude might be responsible for the boils. Naturally, he was reluctant to concede that he had overlooked this condition in his diagnosis. However, knowing the possible cause did not tell us how we were going to correct it. It was unthinkable that we could accomplish anything by telling the man about his faults and asking him to change them. Even our suggestion of such a thing to him would have resulted in another outburst of temper and the creation of another ounce of poison. Most certainly, his spouse or children would not dare to venture such a suggestion. We finally secured the cooperation of his employer in the interests of medical research. The man was transferred to an experimental research station in the country operated by the concern he was working for. The concern was making a new model for home lighting and power equipment. The man was sent to a farm in Pennsylvania, eighteen miles from the nearest small city.

For four months he had to live among peaceful, quiet, retiring farmers, and do nothing but watch the operation and general results of a small light and power plant temporarily installed in an empty

barn. There was nobody he could quarrel with because all had been warned in advance not to get into any arguments with him, but to look upon him as a researcher who should be left alone, undisturbed with his thoughts. There was little opportunity for impolite or even polite criticism of food or conditions around him. After two months, his boils began to lessen and his blood cleared up considerably, for the physician who had been treating him for a number of months paid him a visit in Pennsylvania. In six months the patient returned to New York in a clean and healthy condition.

To prove that it was neither the climate nor the food, nor the water that affected his blood, he was given charge of a small experimental laboratory in the Bronx where the new model of the power equipment was being secretly perfected. He had only one young person as an assistant, and it was arranged that the patient should sleep at the plant as a caretaker at night with an extra fee for this special service. Therefore, he ate all of his meals at various restaurants and could pick the menus to suit himself. He quarreled little with the young assistant and his outbursts of temper were seldom. His blood remained in a fairly good condition and no boils appeared for another six months.

Then the patient was brought back to his old environment again, and although he had been partly cured of his habit of daily outbursts of temper, he continued to exhibit frequent outbursts because of arguments with employees and arguments at home and in the neighborhood. In six months he again experienced a few more boils, and those of us who were interested in the experiment were now convinced that mentally and physically, he himself was causing the toxicity in his system.

This is an extreme case, of course, but while this man may have created an ounce of poison in his system every day, there are millions of men and women who are creating a grain of poison of some kind in their systems every week. As can be imagined, it does not take much of this mental and spiritual, or psychic, poison to accumulate and become responsible for many mental and physical ills as well as business difficulties and personal problems. I have known of persons whose health continued to be below par solely because they continuously held

in the secret parts of their natures a lifelong grudge against another person, the mention of whose name would always cause an upwelling of the inner spirit in the form of hatred and evil thoughts, even though not a word of this was expressed. I have known of those who suffered from headaches, depressed emotions, and slight forms of dizziness, solely because of an attitude of envy, dislike, distrust, jealousy, or some other unkind thought or feeling toward some person, group of persons, or conditions.

I have found the same to be true in business or with personal problems. Business owners, administrators, salespeople, clerks, employers, employees, or anyone else going about their daily affairs with an inharmonious—although secretly concealed—attitude toward some person, group of persons, business associates, or business conditions, are bound to have trouble and experience a definite reflection of their mental attitude on their business affairs. Their business activity will decrease; they will find competitors succeeding while they fail; or they will see excellent opportunities passing them by and customers, funding, and cooperation ignoring them.

Usually it is very difficult for persons thus suffering to analyze just what it is they are thinking or believing, or inwardly expressing, that is the real cause of their troubles. The average person seems to think that a personal enmity of a passive, private nature toward some other individual is an inconsequential thing as long as he or she does not go about expressing it or allowing it to come into outer manifestation. That is a mistake. The poison is in the system just the same, whether expressed by violent outbursts of temper, conveyed in an occasional unkind word or remark, or privately held within one's mind.

There is hardly a patient that our Council of Solace contacts psychically or mentally who does not register some long-established prejudice, ill feeling, erroneous thought, or unkind sentiment lurking in the system like a germ sapping the vitality of health and causing an inharmonious relationship with cosmic laws and principles. Such persons can be neither healthy, happy, nor prosperous in any of the affairs of life until they are purged of this subtle, secret, private influence within their beings. After all, there is no one better able to

analyze these things and discover the germ within the psychic system than the patient himself or herself, if the patient would simply be honest and truthful, fair, and just in self-examination.

Therefore, whatever may be the problem confronting you in life, whether it be ill-health, a mild mental condition that is annoying, a lack of ability or power to attract success and happiness, or a continuous failure of your plans or desires, look within yourself for some subtle, mental cause, not necessarily related in any way to your health or your personal problems, but most surely related to the harmonious relationship that should exist between you and all living beings and the universe generally.

Seek for the skeleton in your closet. This is far more important than any skeletons in the old family closet that you feel you may have inherited, or any skeletons of germs and bugs that may be in your food or drink, or in the air you breathe. Get that skeleton out of your closet, dust it off, and have a good look at it, and see what a tricky, evil creature it really is, and how unworthy it is to be a part of yourself and hide within the sacred precincts of your temple. Then, after having paid homage to its subtle powers, inter it in the earth of oblivion and erect a tombstone over it with the words, "Here 'lies' an untruth." Then ask the God of your Heart and the Masters of the cosmic realms to keep you clean and holy and undefiled in your thoughts and in your attitude toward all beings. By cleansing the inside of the cup, your drinks of life will not be poisoned. No other cosmic principle, metaphysical law, or material help will bring you one iota of benefit until you are right with the Cosmic and attuned to the harmony of the universe and love your neighbor and all creatures as you love yourself.

Chapter 13

THE ROUND TABLE

“To be highly successful in life, we must cease believing or feeling that we are individuals, independent of all other persons or beings in the universe.”

IT WOULD APPEAR from a careful survey of the success attained by a large majority of Rosicrucians who have used the unique principles to improve their health and enlarge their social and financial standings, that these persons have freely employed such methods, principles, processes, and formulas as might be used by every person without limiting themselves to the exclusion of any principle or idea that was sound and sensible.

In other words, it is found in the review of the lives of most highly successful Rosicrucians that no element of fanaticism and no degree of bigotry or narrowness has entered into their application of Nature's laws and power. Just because one finds in the Rosicrucian teachings some principles that are unique and efficient and worthy of continuous application, there is no reason to reject from one's mode of living and from one's scheme for advancement any principle or idea that is good, and yet not essentially Rosicrucian. In this we see the broadness of the Rosicrucian philosophy, and it illustrates the working out of the thought constantly presented to Rosicrucians; namely, that one must be, above all else, rational, reasonable, and broadminded.

Rosicrucians come to know very early in their experiments with the teachings that the Rosicrucian doctrines are not intended to be a limited creed or an exclusive outline of the only laws and principles of value

to us in our personal evolution. As inclusive and ever evolving as the teachings are, the fact remains that each of us is constantly discovering or evolving methods and processes for our own advancement which may not be found in the Rosicrucian teachings or in the teachings of any other school or system. Some schools or movements insist that in order that success with their work may be attained, the student or the practitioner must exclude everything that is not a part of their particular system.

We find physicians of some schools of medicine who are so old-fashioned in their beliefs and comprehension of the newer laws that they insist that patients must not accept or receive any other form of help for their physical disabilities than that being prescribed by the physician in accordance with the indications of the physician's system. On the other hand, we find more open-minded physicians freely admitting that in addition to the medicine, surgery, or adjustments prescribed by them, patients may also benefit from metaphysical, mental, or psychological treatments. Such physicians are not only helping their patients to attain a normalized condition in a more rapid manner, but they are establishing faith and confidence in the minds of their patients by showing a tolerant attitude and an understanding of the possibilities of various laws to bring about certain conditions.

Rosicrucians freely proclaim and demonstrate that the human mind is capable of many marvelous controls over the physical body, and that through psychological or psychic and mental principles we may alleviate pain and suffering and produce many cures. On the other hand, Rosicrucianism plainly and distinctly indicates that where medicine or herb extracts, surgery or mechanical adjustments, massage or electricity, tooth extraction, vision correction, or any other improvement in the physical, chemical, anatomical, or functional condition of the body is indicated, these things should be attended to immediately and at the hands of a competent person, thoroughly trained in a university or school devoted to that work and licensed to practice their particular art or science. To believe that psychological principles will take the place of these other processes or methods is simply to shut the door to efficient aid and depend upon faith or the operation of natural law

to effect a gradual change or permit a temporary condition to become a chronic one and thereby more serious than it was originally.

The same thing may be said of business ills, social ills, and the general ills of humanity. Miracles are performed by the mind and also by the hand, and many of the great miracles of the past that are recorded in sacred literature as having been made manifest through prayer or the application of a divine principle are being duplicated today by science through a more direct application of natural laws. The manifest miracle is the same in both cases, and where science or the arts and laws of the natural world will competently and efficiently adjust matters for us, we are extremely foolish to ignore these other methods and depend solely upon faith or our finite understanding of infinite principles.

To be highly successful in life, we must cease believing or feeling that we are individuals, independent of all other persons or beings in the universe. It is only through a developed sense of oneness with God and oneness with humanity that we attune ourselves harmoniously with conditions that surround us, and which will carry us onward to success, happiness, and health, if we master the obstacles that seem to rise before us. Most of the obstacles in life that men and women look upon as mountainous barriers to the goals of life are fictitious things and often figments of the imagination or phantasms of the fear element that still resides in our minds as an inheritance from earlier stages of existence.

One older mystic said that the things we feared the most in life were the things that never happened; and I know from personal contact with thousands of men and women, who write to the Rosicrucian Council of Solace for aid and help in overcoming the obstacles they believe stand before them, that the statement of this experienced mystic is true. There is a trite saying that one should never cross a bridge until one comes to it, and I have found that the average person who hesitates in venturing along the path to success is not only trying to cross a bridge that is far in the distance, but is making of that bridge a greater structure and a greater test of endurance than is warranted by the actual facts. Indeed, many such persons are not even sure that there is a bridge to be crossed, but on the basis that no long road continues

in any direction without crossing over some bridges, they anticipate the existence of the obstacles or challenges in their lives and proceed to worry about the crossing.

After all, the road to success is like unto the road to happiness, prosperity, health, or pleasure. It is not likely to be entirely level, nor always straight, not always free from showers, storms, muddy spots, or even rocky beds. But these little difficulties or inconveniences are part of the game of life, and the one who is deterred or discouraged by these conditions when she or he approaches them is the one who fails to make the goal. But as I have intimated, there are many who permit themselves to be deterred on the path while it is still level, smooth, straight, and convenient, because of an anticipation of some incline, some curve, or some unpleasant condition.

We have been given more faculties and more marvelous abilities to direct and control our lives than any of the other creatures of this earth. We possess the ability to reason and reach conclusions and establish through our will power a determination to carry out our conclusions against obstacles and conditions that deter other creatures and hold them within limits unknown to us. The wildest and strongest lion of Africa, though demonstrating its prowess in many ways, is easily held within a limited area by an iron grating or a wall that would mean nothing to a human who was determined to pass beyond such an interference to his for her freedom. We know that prisoners, confined within prison walls, have pitted their ingenuity, strength, and endurance against the minds of the most skillful engineers and architects in escaping from such limitations. If ordinary people used the same amount of thought and determination in attempting to overcome the personal obstacles that beset their paths to success in life, with all the freedom of thought and action natural to human beings, their success would be assured!

We have within ourselves a creative power that is a part of the universal creative force and is a part of the creative energy that God breathed into space when the first Word was spoken, and order came out of chaos. Science is constantly proving, and the psychic powers within us are constantly demonstrating, that there is no limit to the possibilities of this creative power. We have yet to discover in any field

of science, or in the domain of psychology and metaphysics, the limit of that creative power when it is focused upon some issue or upon some condition.

The Divinity within each one of us is the only real part of our existence, and all else is but a servant unto it. The world is the footstool for this Divine Being, and everything in the universe is enslaved by the omnipotent intelligence of this highest expression of creation. This Divine Self knows neither disease nor death, failure nor discouragement. Its trend of activity is always upward and progressive. Its outlook is altruistic, optimistic, and joyful. Its intellectual resources are unlimited. Its capabilities are as wide as the universe itself. It is only the outer person who should be a servant unto the inner self, for the outer individual is limited in time of expression, in period of existence, in capabilities and endurance.

The outer person attempts to judge the world by his or her own comprehension, and this is but an infinitesimal part of the apprehension on the part of the Divine Self. It is only when the outer self attunes with the inner self that limited comprehension widens into universal comprehension, and the individual becomes cognizant of the greater world in which he or she lives. In keeping with this widening of consciousness—this round table of greater realization—there comes an influx of Cosmic Consciousness and Cosmic Attunement, and in this individuals discover a power and a strength that is beyond any power or energy of the material world.

As I have said before, people tend to think of themselves as individuals—separated, isolated, and unique unto themselves. By contemplating the Divine Self within, individuals broaden their consciousness to the extent where they sense and finally realize that the real self is a part of all the real expression pervading the universe, and that they are not separated from the rest of humanity and are not separate individuals, but inseparable segments of the universal self or soul.

In a material sense it is true that in union there is strength, and in our mundane affairs, association and cooperation bring added fortitude and security. Certainly, then, in the wider sense, the unification of all

soul expressions on earth through the inseparable association of each individual's real self with the real self of all other individuals brings security, power, and strength, and makes each of us the master of our fate and destiny. But we cannot master our careers or our lives by ignoring others around us or by disregarding the surrounding conditions through which we navigate our course in life. We can no more direct our course in life, independent of any consideration of other beings or conditions, than can a comet, swiftly hurtling through space, arbitrarily select a course for its rapid movement and successfully avoid the collisions and catastrophes that would be inevitable. The success of any one person is a joy and a benefit to all others, just as the failure of any individual is a sorrow to all others. Success begets success, as happiness begets happiness and joy. Tolerance, sympathy, and love attune people not only to one another, but to the universal laws and to the harmony of the Cosmic. Of these, *love* is unquestionably the greatest law of the universe.

Much is said in the business world of the code of ethics by which business should be standardized in operation, and in the social world we hear of the moral code and the social conventions. To the mystic who is attuned with the cosmic laws there comes a code of principles for living that supersedes the human-made code of ethics or the morals and conventions of society. The mystic learns with conviction and proper understanding why ethics in business and morals, and conventions in society, have been established and reduced to definite words by humanity, and why these things are a necessity. Mystics know that it is not simply immoral to violate one of Nature's ethical laws, but a sin against oneself and against society, as well as a sin against cosmic decree. Therefore, immorality or the violation of Nature's laws in any sense becomes abhorrent to the mystic.

The mystic realizes that the most beautiful of principles in the universe can be reduced to corruption and perversion by the undeveloped mind or the evil mind that dwells within the physical part of a human being. The mystic realizes that while love is the one universal law that is higher than all others, it must be a love that is free from the contaminations of the physical self and free from the sins of lust and selfishness. Mystics realize that while this great law of

life makes it incumbent upon each of us to love all creatures and all beings, and to love our neighbor as ourself, that to reduce this law to the selfish or personal physical love of the lower part of oneself, in an unbridled manner and with promiscuity, is to pervert a divine principle to a coarse and vulgar application.

The laws of Karma and of cosmic compensation reveal to mystics that they cannot do injustice to others, or take advantage of others, or even live a dual existence, without bringing into their lives inevitable suffering and sorrowful adjustment. Hence the mystics comprehension of ethics and morality has a clear and more definite meaning to her or him, and this elicits an obedience to cosmic law which humans are reluctant to give to mundane laws or laws of human invention.

In the home, in business, in society, and in our personal affairs, each of us must be true unto ourself, and this self must be the inner self, if we are to be true at all. We must let the divine power within us dominate the physical power of our body and the world around us. We must let the beauty, the grandeur, and the sublime thoughts of the Divine Mind of our being fill us with the inspiration and comprehension of our real place in the universe and of our relationship to all other beings. We must let the God Consciousness of our soul control and direct the health and activities of the physical self so that it may truly be the servant unto us, and not a master whipping us into submission and earthly servility. In this way will we rise to power and glory and attain the highest degree of success and happiness in all of the affairs of the home and of the business world.

THE ROSICRUCIAN ORDER, AMORC

Purpose and Work of the Order

The Rosicrucian Order, AMORC, is a philosophical and initiatic tradition. As students progress in their studies, they are initiated into the next level or degree.

Rosicrucians are men and women around the world who study the laws of nature in order to live in harmony with them. Individuals study the Rosicrucian lessons in the privacy of their own homes on subjects such as the nature of the soul, developing intuition, classical Greek philosophy, energy centers in the body, and self-healing techniques.

The Rosicrucian tradition encourages each student to discover the wisdom, compassion, strength, and peace that already reside within each of us.

DEDICATION

To the
Chevaliers of the Militia

*in the large party
of men and women from all
parts of North America who
accompanied my family and myself in
our long and tedious journey through
Palestine, Egypt, Italy, Turkey, Greece,
Switzerland, France, Germany, and England,
in search of Holy Shrines and the
verification of the facts known to us
through our years of joint
study and research.*

THIS BOOK IS DEDICATED

*as a Souvenir of our Holy
Mission and our Illumination in the year 1929.*

CONTENTS

Dedication

Introduction

1. The Mystery of the Essenes
2. The Neighbors of Jesus
3. The Parents of Jesus
4. The Virgin Birth of Avatars
5. The Mystical Birth of Jesus
6. The Birthplace and the Magi
7. The Birthdate of the Holy Child
8. The Childhood of Jesus
9. Jesus Enters the Priesthood
10. Jesus Enters the Secret Priesthood
11. Jesus Attains Mastership
12. Jesus Attains Christhood
13. The Mystic Beginning of Christ's Mission
14. His Real Doctrines and Miracles
15. The Truth About the Crucifixion
16. The Secret Facts of the Resurrection
17. The Unknown Life of Jesus

Some Interesting Criticisms

EXPLANATION OF THE TERMS “ARYAN” AND “GREAT WHITE BROTHERHOOD”

These special terms are defined by Rosicrucians as follows: In the Rosicrucian teachings the word **Aryan** is used to denote the prehistoric culture and root-language behind Sanskrit and most extant Indo-European languages today. Dictionaries state that the word *Aryan* comes from the Sanskrit *arya*, an adjective meaning noble. *The Oxford English Dictionary* defines *Aryan* as “A member of the Aryan family; one belonging to, or descended from, the ancient people who spoke the parent Aryan language.” This family of languages includes Sanskrit, Zend, Persian, Greek, Latin, Celtic, Teutonic, and Slavonic—in other words, the present-day Indo-European languages. Rosicrucians also define Aryan as referring to the prehistoric Atlantean wise beings—the “Light Bearing” or “Enlightened Ones.” As far as race is concerned, the original wise beings who taught the Aryan language and culture were called *Atlanteans*, and as a distinctive racial type, disappeared in prehistoric times. However, it was their sacred Atlantean culture—the traditions, institutions, and hieroglyphic alphabet known as *Sensar*—which was cultivated as Sanskrit, the ancient Aryan language of the Hindus of India.

In Rosicrucian terminology the **Great White Brotherhood** (G.W.B.) consists of all the enlightened soul personalities who, independent of religions and traditions, are commissioned to work in one of the twelve paths of the ancient mystical tradition. It is that invisible body of mystics composed of the most exalted and advanced spiritual leaders in various lands throughout the world. The word *White* in this phrase alludes to *Light*, the illumination of understanding, wisdom, and spirituality as expressed by enlightened soul personalities, and has nothing to do with race. Rosicrucians realize that these cosmic masters work in the service of humanity. The Rosicrucian Order, AMORC, is only one of the channels that has been used and is still being used by the G.W.B. for the development and progress of humanity’s own spiritual and esoteric unfoldment and for the improvement of civilization.

INTRODUCTION

IT IS A fact that very often *truth* is far more interesting than *fiction*. It is particularly so in regard to the life of Jesus. Perhaps it is due to the cosmic cycle through which humanity is passing, or perhaps it is due solely to our intellectual development, but people have become more interested in the life of the Great Redeemer than they have been in any other period since the dawn of Christianity.

In my contact with seekers for spiritual truths, covering twenty-five years, I have found that inevitably the student of mysticism, metaphysics, psychology and occultism is drawn to a more minute and analytical study of the life and teachings of the Christ, Jesus. His whole career, his doctrines, parables, miracles, and illuminating inferences, gradually fascinate and attune the spiritual side of mystical students, and they become restless until they can fathom the mysteries of Jesus's life.

Why there are any mysteries in the life of Jesus is revealed in chapters in this book. After many years of careful study and research, even to the extent of visiting the holy and mystical places of Europe, Palestine, and Egypt, I am still unprepared to say whether the church authorities who authorized the incomplete, partly erroneous, and greatly veiled life of Jesus as it appears in the Christian Bible were justified in their actions or not. Certain it is, not all are prepared even today to comprehend, nor apprehend, the mystical significance of most of the mysteries associated with pristine Christianity. That there are thousands, perhaps several millions, now ready for the truth is undeniable; but even so, they are but a small fraction of those who have accepted and found peace and salvation through the offerings of the Christian church.

To those who in orthodox sincerity will reject much that is presented in this book, I can say only: "Hold fast to that which is good!" If your faith, your knowledge, and your conviction in regard to Christian matters serves you well, and there is no inner urge to look beyond the veil, then do not do so. Permit nothing to weaken or lessen your adoration and worship of him who is your Savior and your Lord.

To those who believe that a more intimate knowledge of Jesus, the Son of God, the Master, the Avatar, and the Mystic, will endear him to their hearts, and to those who feel that the inner self needs more light on the mysteries of his mission, I present the chapters of *The Mystical Life of Jesus* as a comprehensive survey of things long held in seclusion by a few, but now deserving of wider circulation.

The story of the life and mission of Jesus as presented in this book makes no sectarian appeal. I know, as a fact, that the Jesus revealed herein is acceptable to as many Jews as Gentiles, to as many Roman Catholics as Protestants; and in these days of religious controversy and profound concern regarding the growth of the numberless thousands who do not attend any church and who seem to be losing their interest in religious matters, I am happy to say that I know that thousands will find in this book a key to their problem and an incentive to reread the Christian Bible and reconsider their rejection of the church.

I said I *know* these things. Through my official capacity I am in daily contact with many thousands of such persons in North America and thousands in other lands. In my public lectures throughout the United States for twelve years, in personal interviews with the spiritually restless among the populace, and in journeys to foreign lands, I have seen the effect of these truths. Parts of the chapters in this book have been used in public discourses, some of the interesting facts have been used in private lessons, and others have been presented in personal conversations. The result has always been an awakening of interest in the life and teachings of Jesus, and generally a happy realization that Jesus and his doctrines were wholly acceptable in the newer revelations.

In the past few years, certain pamphlets have appeared claiming to contain hidden facts regarding the life of Jesus. In most cases these stories contained such improbabilities or inconsistencies as to condemn them as fabrications. Several of the most popular of these have claimed that they were the result of a *discovery* of some rare manuscript or record hitherto hidden in a secluded monastery. The real origin of all that was dependable in such pamphlets was the uncovering of certain holy books of the ancients which did contain casual references to incidents in the life of Jesus rejected by the church authorities when the first versions of the Bible were authentically compiled.

The facts contained in this book are not drawn from any newly discovered manuscripts, writings, or records. In fact, it cannot be said that the facts contained herein are new to either the founders of the early Christian church, to the most profound and analytical writers of spiritual subjects, or to the most advanced of mystics in many lands.

The Rosicrucian archives in foreign lands, embracing the records of the Essenes, the Nazarenes, and the Nazarites, as well as the complete records of the Great White Brotherhood in Tibet, India, and Egypt, have always been sources of knowledge for the worthy inquirer into the history of all avatars and especially into the history of Jesus. It is from this dependable source that all the facts contained in this book have been drawn—not at one time and not without years of labor and indefatigable study and service.

Wherever possible, verification or substantiation has been secured from the writings and records of the early church leaders, historians, or archivists. Extracts have also been taken from the writings of Jews, and even from the so-called heathens, whenever possible. Such citations are plainly indicated.

I wish to take this opportunity to thank all those who in past years have carefully examined portions of my writings on this subject and have called my attention to additional points which should be covered. I wish also to thank those members in my tour to the Near East during the months of January, February, and March of this year, who acted as my companions in my special researches, and aided my secretary and myself in securing the information needed to give personal verification to the important statements contained in this book. It was a glorious work and I hope that these many companions will find some rewards for their efforts in the book which I have dedicated to them.

**Biblical quotations in this edition are from the New Revised Standard Version (NRSV) translation of the Bible.*

Chapter 1

THE MYSTERY OF THE ESSENES

BEFORE ONE CAN properly understand and appreciate the history and real story of the birth and life work of the Master Jesus, one must have an understanding of the ancient organizations and schools which contributed to the preparation for his coming.

Within the last 100 years, a great many notations in sacred literature have been discovered relating to the Essenian community and the activities of this organization in Palestine just prior to and during the lifetime of the Master Jesus. Many of these notations have verified the references to the Essenes by such eminent historians as Philo and Josephus, and have explained many of the mysterious references found in the sacred writings of the Hebrews as translated in the Christian Bible.

The possible relationship of the Essenes to the early Christian activities has not only aroused the interest of hundreds of eminent theologians and biblical authorities, but it has caused one question to be asked by thousands of students of mystical literature: "Why has the history or story of the Essenes been withheld from general knowledge?"

The answer is: Those who knew the story desired to keep the Essenian community shrouded in mystery to protect its work and teachings from being publicly discussed and eventually scoffed at

by those students or professors of orthodox Christianity who have labored so diligently to make even a greater mystery of Christ and Christianity.

The Rosicrucian records have always had extensive details of the activities of the Essenian organization, and no initiate of the Rosicrucian Order, or no profound student of the ancient mysteries who became worthy of contact with the ancient records, was ever left in ignorance regarding the Essenes. Today the veil can be drawn aside and some of the facts regarding the Essenes be revealed to the world because of the advancement that has been made in the study of occult literature and the broad-minded view that is taken by the average educated student of spiritual and mystical subjects. For this reason I feel justified in giving the following facts in regard to the Essenes.

In the first place, it probably will be sufficient in this brief outline of their organization to say that the Essenes were a branch of the illuminated Great White Lodge, which had its birth in the country of Egypt during the years preceding Akhnaton, Egyptian pharaoh and founder of the first monotheistic religion, who supported and encouraged the existence of a \ to teach the mystic truths of life.

The several mystic schools of Egypt, which were united under one head constituting the G.W.B., assumed different names in different parts of the world, in accordance with the language of each country and the peculiarities of the general religious or spiritual thought of the people. We find that at Alexandria, the members of the organization there assumed the name of *Essenes*. Scientists have speculated considerably in regard to the origin of this word and its real meaning. So many unsatisfactory speculations upon its root have been offered in the past that there is still considerable doubt, in the minds of most authorities, regarding it.

The word truly comes from the Egyptian word *kashai*, which means "secret." And there is a Jewish word of similar sound, *chsabi*, meaning "secret" or "silent"; and this word would naturally be translated into *essaïos* or "Essene," denoting "secret" or "mystic." Even Josephus found that the Egyptian symbols of light and truth are represented by the word *choshen*, which transliterates into the Greek as *essen*. Historical references have been found also wherein the priests of the

ancient temples of Ephesus bore the name of *Essene*. A branch of the organization established by the Greeks translated the word *Essene* as being derived from the Syrian word *asaya*, meaning “physician,” into the Greek word *therapentes*, having the same meaning.

The Rosicrucian records clearly state that the original word was meant to imply a secret organization, and while most of the members became physicians and healers, the organization was devoted to many other humanitarian practices besides the art of healing, and not all of its members were physicians in any sense.

The spread of the organization into the many lands near Egypt was slow and natural, in accordance with the awakening consciousness of the people; and we find that the Essenes became a very definite branch of the G.W.B. representing the outer activities of that organization, which was primarily a school of learning and instruction. Thus, for several centuries before the dawn of the Christian era, the Essenes, as an active band of workers, maintained two principal centers. One was in Egypt on the banks of Lake Moeris, where the great Master Moria-El the Illustrious was born in his first known incarnation, educated, prepared for his great mission, and established the principle and law of *baptism* as a spiritual step in the process of initiation. The other principal Essenian center was first established in Palestine, at Engaddi, near the Dead Sea.

Going through the Rosicrucian records pertaining to the Essenes, I find thousands of notations regarding these two branches, and from them I have selected the following statements as being the most interesting and most definite in their connection with the mystical life of Jesus.

The branch in Palestine had to contend with the despotism of the rulers of that country and the jealousy of the priesthood. These conditions forced the Essenes in Palestine to hold themselves in greater silence and solitude than they had been accustomed to in Egypt. Before they moved from their small buildings and sacred enclosure at Engaddi, to the ancient buildings on Mount Carmel, their principal activity seemed to be the translation of ancient manuscripts and the preservation of such traditions and records as constituted the foundation of their teachings.

It is recorded that when the time came for them to move from Engaddi to Mount Carmel, their greatest problem was the secret movement of these manuscripts and records. Fortunately for us, they succeeded in preserving the rarest of the manuscripts that came out of Egypt, and in other ways preserved the ancient, traditional stories and teachings. It is from these that we derive most of our knowledge regarding both the Essenes and the G.W.B. A picture of how they lived, and what they believed and taught, undoubtedly constitutes a story of intense interest to all modern students of mysticism and sacred literature.

Every member of the Essenes in Egypt or Palestine, or of the *Therapeutae*, as they were called in other lands, had to be a pure-blooded descendant of the Aryan race. This point is very important in connection with the facts that will be revealed regarding the birth and life of the Master Jesus. Likewise, they were students of the Avestan writings and adhered to the principles taught therein, which laid great stress upon a healthy body and a powerful mind. Before any qualified Aryan could become an adept in the organization, he or she had to be prepared in childhood under certain teachers and instructors, raised with a healthy body, and needed to exercise certain mental powers under test.

Every adult applicant who was allowed to partake of the daily meal in the communal building was assigned at the time of initiation to a definite mission in life, and this mission had to be adhered to regardless of all obstacles and all temptations, even to the sacrifice of one's life. Some chose to be physicians or healers, others artisans, teachers, missionaries, translators, scribes, and so forth. Whatever worldly things they possessed at the time of their initiation had to be donated to the common fund, from which all drew only as was needed. The simple life they led, free from any indulgence in the pleasures common to the public, made it unnecessary for them to draw upon these funds except in rare instances.

Immediately upon initiation, each member adopted a robe of white composed of one piece of material, and wore sandals only in such weather or at such times as was absolutely necessary. Their attire was so distinct or unique that among the populace they were known as the

Brothers and Sisters in White Clothing. The term *Essene* was not popularly known, and only the learned knew of it. This accounts for the lack of references to the Essenes in most of the popular histories or writings of the time.

They lived in well-kept buildings, usually within a sacred or well-protected enclosure, in community fashion. All of their affairs were regulated by a committee or council of judges or councilors, 100 in number, who met once a week to regulate the activities of the organization and to hear the reports of the workers in the field. All disagreements, all complaints, all tests and trials were heard by this council, and one of the regulations indicates that they were always cautious in expressing opinions of one another or of those outside of the organization, and they were not critical of the lives or affairs of the people they were trying to reform or assist. They also adhered strictly to one of their laws: "Judge not—lest ye be judged also."

It is possible to set forth here their definite articles of faith as recorded in ancient, secret writings. While these articles of faith appear in slightly different words in the various branches of the Essenian organization, they are undoubtedly based upon the articles of faith adopted by the G.W.B. at the time of the establishment of the Essenian organization.

1. God is principle; Gods attributes manifest only through matter to the outer being. God is not a person, nor does God appear to the outer person in any form of cloud or glory. (Note the similarity of this article to the statement of John 4:24: "God is spirit, and those who worship [God] must worship in spirit and in truth")
2. The power and glory of God's dominion neither increases nor diminishes by human belief or disbelief; and God does not set aside [God's] laws to please human beings.
3. The human ego is of God, and at one with God, and is consequently immortal and everlasting.
4. The forms of man and woman are manifestations of the truth of God, but God is not manifest in the form of man or woman as a being.

5. The human body is the temple in which the soul resides, and from the windows of which we view God's creations and evolutions.
6. At the transition or separation of the soul and body, the soul enters that secret state where none of the conditions of the earth have any charms, but the soft breezes and great power of the Holy Ghost bring comfort and solace to the weary or the anxious who are awaiting future action. Those who fail, however, to exercise the blessings and gifts of God, and who follow the dictates of the tempter and of the false prophets and the ensnaring doctrines of the wicked, remain in the bosom of the earth until they are freed from the binding powers of materialism, purified, and assigned to the secret kingdom. (This explains the ancient, mystical term of *earth bound*, referring to those who are still enslaved to material temptations for a time after transition.)
7. To keep holy the one sacred day of the week that the soul may commune in spirit and ascend to contact with God, resting from all labors, and discriminating in all actions.
8. To keep silent in disputes, to close the eyes before evil, and to stop the ears before blasphemers. (This is the original of the ancient law, "to speak no evil, to see no evil, and to hear no evil.")
9. To preserve the sacred doctrines from the profane, never speak of them to those who are not ready or qualified to understand, and be prepared always to reveal to the world that knowledge which will enable humans to rise to greater heights.
10. To remain steadfast in all friendships and all communal relations, even unto death; in all positions of trust never to abuse the power or privilege granted; and in all human relationships to be kind and forgiving, even to the enemies of the faith.

Every department of the organization was supervised by stewards, who were in charge of the material things turned into the general fund by every member. This general fund was called the *poor fund* and was used to relieve the sufferings of the poor in every land. This point reminds us of the statement in Matthew 19:21: "Sell your possessions, and give the money to the poor . . . then come, follow me."

Hospices were established by the Essenes in various communities for the care of the sick and the poor, especially during epidemics of famine or disease. These places were called *Bethsaida*. We find in this feature of their work the origin of the hospices and hospitals which became well known some centuries later. A special staff of workers who were connected with these places came to be called Hospitalers. Herein we find the origin of another branch of the community that later became a more or less separate organization. The Essenes also established rescue homes in various communities and at the entrance to most cities had a place called a *gate*, where strangers or those in need of something to eat or guidance would be cared for temporarily. Recent discoveries in Jerusalem have revealed the existence of a gate known as the Essene Gate.

The Essenes disliked life in cities, and established themselves in communities of small villages outside of the walls or limits of practically every city where they existed. In such communities members had their own little houses and gardens, and those who did not marry lived in a community house. Marriage was not forbidden among the Essenes, as is commonly believed, but their ideals regarding marriage were very high, and only those who were well mated and whose mating was approved by the higher officials were permitted to marry.

Women were permitted to become associate members of the organization, and in only a few cases were they allowed to enter even the early grades of study of the work. This was not because there was any belief among the Essenes that women were inferior to men in either spiritual or mental capacity, but because the Essenian branch of the G.W.B. was strictly an organization of men, to carry on the work throughout each community. But sisters, mothers, and daughters of the men in each Essenian community were permitted to be a part of the community and become associate members. Those of the women who were not married, and who did not care to marry, often adopted orphan children as their own, and in this way carried on a form of humanitarian work for the organization.

In considering their more private affairs, we find that there were not servants, for servitude was considered unlawful, and each household had to be cared for by the members of the household. Some of the rules and regulations recorded in the Rosicrucian records would indicate

that their ideas regarding servants and servitude were quite fanatical according to our modern point of view. We must remember that in the days when these rules were adopted, most servants in every wealthy household, or the servants of a king or potentate of any kind, were like slaves, and, of course, among the Essenes every man and woman was a free being, and slavery or serfdom of any kind was absolutely prohibited. In each community everyone took part in any work that pertained to the entire community, and all had a certain amount of menial work to do. The new initiates had to work in the fields and at certain times serve at the community tables or in the kitchen and at the tables of the rescue houses.

As with many other branches of the G.W.B., the Essenes never entered into contracts or agreements which required oaths or any form of writing. It became well known about them that their word was equal to any agreement or contract in writing. They had a definite set of rules and regulations for their lives, which were well known by all those with whom they had any dealing, and the highest potentates of the land knew that the Essenes could not be bound by any oaths, but were highly responsible when they gave their word in any promise.

Even Josephus, in writing about the Essenes of 146 B.C., stated that the Essenes were exempted from the necessity of taking the oath of allegiance to Herod. Most certainly they would make no promise in the name of God, nor swear to anything in the name of God, for to them, as with the Jews who inherited the idea from them, the name of God was to be mentioned only in a sacred manner in their temples, and at all other times the name of God was unpronounceable. In disagreements with strangers, the Essenes would pay any price demanded of them or make sacrifices as requested rather than to enter into arguments or have any strained relationships. It was for this reason that the Essenes were thought well of by the Pharisees and other sects in Palestine, although these other sects severely criticized the religious practices of the Essenes.

Speaking of oaths, however, I am permitted to give herewith the official oath which was taken by male initiates and which was the only oath they ever admitted. It was given upon their own honor, at the time of entering the final degree of initiation, or what we would call the

fourth degree of their advancement into the organization. The oath is as follows:

I promise herewith, in the presence of my elders, and the Brothers of the Order, ever to exercise true humbleness before God and manifest justice toward all men; to do no harm, either of my own volition or at the command of others, to any living creature; always to abhor wickedness, and assist in righteousness and justice; to show fidelity to all men, particularly to those who may be my superiors in counsel; and when placed in authority, I shall never abuse the privileges or power temporarily given unto me, nor attempt to belittle others by a worldly display of my mental or physical prowess; truth shall ever have my adoration and I shall shun those who find pleasure in falsehood; I will keep my hands clean from theft, and keep my soul free from the contamination of worldly gain; my passions I will restrain, and never indulge in anger nor any outward display of unkind emotions; I shall never reveal the secret doctrines of our brotherhood, even at the hazard of life, except to those who are worthy of them; I shall never communicate the doctrines in any form, but the one form in which received; I shall not add to nor subtract from the teachings, but shall ever attempt to preserve them in their pristine purity, and will defend the integrity of the books and records of our order, the names of the masters, legislators, and my elders.

After the initiate had reached what we might call the fourth degree and had taken the foregoing obligation, he was admitted to the common table to partake of the one great symbolical meal of the day, at which time meditation and contemplation, as well as discussion of the problems of the work, formed part of the period.

It is interesting to note that all the food used by the Essenes was prepared according to the rules and regulations stated in the old documents, in a scientific but simple manner, and while vegetables and especially many forms of raw foods were used, it is not true that all flesh foods were forbidden. There was never any form of over-eating or banqueting, and certainly the rules of moderation in all things pertained to eating and drinking as well; hence there was no gluttony nor intoxication.

The Essenes seldom took part in public discussions and never participated in discussions of religion or politics. They were most often silent when others spoke, and silence seemed to be their motto. They were well trained in the use of the voice and in making incantations, and knew the value of vowel sounds to such a degree that by training they became very soft spoken, even in ordinary conversation. Because of this they were often known as the *soft-spoken* ones.

It is but natural that the Essenes would have developed not only magnetic personalities, accompanied by clean bodies, clean raiment, and clean habits, but they developed such beautiful auras that on many occasions these auras became visible to the profane. This especially mystified the Jews who were unfamiliar with the development of a mystical nature, even though their own religion and traditions contained many wonderful mystical laws which they failed to put into practical application.

It was customary for all Essenes to wash their hands and feet upon entering their own homes or the homes of anyone else, and to cleanse their hands and feet before any ceremony, and before each daily prayer. In their individual homes the Essenes spent much time before the altar in their sanctums, or in the study of the rare manuscripts and books which were circulated among them according to their degree of advancement. They were particularly well versed in astrology, elementary astronomy, natural history, geometry, elementary chemistry and alchemy, comparative religions, mysticism, and natural law.

Those who were the physicians in the organization were evidently a curiosity to the peoples of Palestine who were accustomed to the healing methods of that land, which included the exercising of charms, incantations in high-pitched voices, the reciting of weird formulas, the striking of crude musical instruments, and the use of strong drugs. The Essenes spoke softly to their patients and used certain vowel sounds without any evidence of a formula. They often performed the greatest cures by the simple laying on of hands or by instructing the patient to retire to the silence of his home and sleep while the cure was conducted in a psychic manner.

All Essenes promised to educate their children in the teachings and principles which constituted the foundation of the Essenian belief. They raised each child within the scope of the organization until the child's twelfth year, when it was accepted on probation, which lasted until the twenty-first year, at which time the males were admitted to the first degree, and generally reached the fourth degree about the thirtieth year. The females were admitted on their twenty-first birthday to associate membership, and remained in that the rest of their lives if they proved worthy by the manner of their living.

Only an occasional Essene was permitted to preach to the public or perform public miracles, and then never as a matter of demonstration, but solely as a matter of service. Those in the organization who had lived the greatest number of incarnations, and were therefore the most highly evolved, were selected as their leaders, and, from among these, one was selected during each cycle to go out into the world and organize the work in a new land.

The Essenes looked forward to the coming of a great Savior who would be born within the fold of their organization and who would be a reincarnation of the greatest of their past leaders. Through their highly evolved knowledge and intimate psychic contact with the Cosmic, they were well informed of coming events, and the Essenian literature and the literature of many countries contain references to the prophets among the Essenes. Manahem was one of their prophets who became famous through the prophecy that Herod would reign.

There seemed to be a regulation or an unwritten law among the Essenes that none of their members should be engaged in a daily task that was destructive, but always constructive. Therefore we find that the list of prominent Essenes included weavers, carpenters, vine planters, gardeners, merchants, and those contributing to the good and welfare of the public. There never were any in the organization who were armorers, slaughterers of cattle, nor engaged in any practice or business that destroyed the least living thing.

It must be very apparent to my readers that the Essenes would appear to have been one of the sects of Palestine and would have been, therefore, classified as such by the Jews and by the governmental authorities. For this reason we often read in newly discovered records

a reference to the Essenes as one of the sects in Palestine. It would be natural for the Jews to consider the Essenes as a religious organization, instead of a communal or mystical one, and certainly an organization opposed to the Jewish doctrines and practices. Under these conditions it would be natural for the Essenes to establish their homes in certain communities where others of the same organization lived and where they could have that form of neighborly companionship which strengthened their interests.

These Essenes were not Jews by birth, by blood, or by religion, and were often referred to as *Gentiles*, and we find them classified as Gentiles in many of the sacred writings, even in the Christian Bible.

Editor's Note: Archaeological discoveries made in 1946— some 17 years after this chapter was written—go far to enlarge our knowledge of the Essenes and to confirm the statements made here concerning them. Read the article by Edmund Wilson in the May 14, 1955, issue of the magazine *The New Yorker*, as well as his book *Scrolls from the Dead Sea*, published by Oxford University Press, New York and Toronto (1955).

Editor's Note: Corroborative evidence of the cultural activities of the Essenes is shown in a report appearing in the *New York Times* of April 2, 1953. This concerns the discovery of a series of important manuscripts on the shore of the Dead Sea, 25 miles east of Jerusalem. We quote: "The archaeologist (G. Lankester Harding, Director of Antiquities, in Jordan) said the scrolls had been found several months ago in a cave near the ruins of a settlement now known as Khirbet Qumran. He added that it was fairly certain that the settlement was the home of the Essenes about 1,900 years ago and that the scrolls were from their library, and probably were hidden in caves for safe keeping." This new find included hitherto unknown Apocrypha and "descriptions of the conduct and organization of the Essenes, who lived in Palestine from the second century B.C. to the second century A.D. The Essenes were distinguished by their strict asceticism and such characteristics as the community of property, the practice of charity, and the pursuit of virtue."

Chapter 2

THE NEIGHBORS OF JESUS

TO FURTHER UNDERSTAND the greatness of the advent of the Master Jesus, one should know something of the people and the conditions of the country in which he was born, and with which he had to contend at the beginning of his mission.

In the first place, Palestine was not one nation of one language, with interests that held one people in common bonds, but a land of many nations, of many languages, and many diverse interests. It was a country of mixed and hostile peoples, whose interests were not only diverse, but so divided and so opposed that peace and harmony among them was impossible. Those of the Jewish faith were not all Hebrews, and those who were Hebrews were such through the beginning of a new race that had its origin at the time of the Exodus out of Egypt. Among these Hebrews were many in whose veins was Aryan blood by intermarriage; therefore, there were various castes. Hence among the Hebrews, as among those of the Jewish faith, there were those who would not recognize others in the same faith, and who believed that God had ordained the distinctions which they established.

In the midst of these people there were the heathens, whose temples were rapidly rising, and whose rites and customs were becoming prevalent. To the northeast there were the nomads, wild people living without restraint or regulation, but the vast majority of the people throughout the northeast were Syrians, Greeks, and heathens. To the east and to the west of Palestine, the Egyptian, Phoenician, and the Grecian rites contended for mastery, and in the very heart of Palestine itself the Greek language was dominant and the Grecian rites prevailed.

The educated classes throughout Palestine spoke Greek. The language of the tribes of Israel had undergone a great change, and the ancient Hebrew language, as it was called, had given place to the Aramaean dialect, except in the academies and theological schools.

In the northern section, known as Upper Galilee, lived people who were known as Gentiles. Tiberius itself was wholly non-Jewish. Gaza had its own deity. Joppa was influenced by a heathen religion, according to the Jews. Caesarea was essentially a heathen city and, to the Jews, was the symbol of Rome—the Rome of Edom—and was therefore to be destroyed; for Caesarea and Jerusalem, from the viewpoint of the Jews, could never exist at the same time.

The rabbis of the Jewish religion considered that the only real and true land of Israel was that portion immediately south of Antioch. Yet strange to say, it was here that the first Gentile church was organized and that we find the first Christian disciples.

Palestine, and especially Jerusalem, was most certainly a heathen district just before the coming of the Master Jesus. While it is true that the Jewish religion was well established, it most certainly did not include the multitudes, and it did not include all of the highest rank and power. Judaism itself was quite a problem at this time. The Pharisees and Sadducees were the two other largest sects, if we may be permitted to consider the Essenes as a sect from the Jewish point of view; but the former two held opposite principles and hated each other, while the Essenes, of course, could not be a part of either of them.

There was one common emotion which bound all these people of Palestine in one universal feeling. The high and the low, the learned and the unlearned, the rich and the poor, the heathen, the Jew, the common person or the ruling ones, united in their intense dislike for the Gentiles.

In the financial world the Hebrews represented the wealth and influence of the nations; for all money transactions and great trade dealings were in their hands. Merchandise from the Far East came through Palestine by means of Arab caravans and through the Phoenician ports, where fleets of ships owned by the Jews and operated by Gentile sailors were ever ready to convey the wares to

other parts of the world. The Jews as traders and bankers were keenly alive to the value of this situation, and through their financial influence wielded a considerable power in the political world also. They were able to obtain secrets of state and to secure such positions in the civil and military service of the other Gentile nations as permitted them to manipulate the intricacies of diplomacy so as to further the interests of the Hebrews.

It must be remembered that the orthodox Jews or Hebrews were intensely Hebraic. To their own they were very hospitable, a trait which they considered a great virtue, and to strangers, especially to the Gentiles, they manifested the very opposite in all actions.

The people living in Jerusalem, which was the most advanced habitation in Palestine, had special agents in, and corresponded with, the important parts of the world; and letters were carried from Jerusalem to many other cities by messengers and by peddlers. The wealthy Jews gave great fortunes for the support and defense of the Jewish faith, and such donations were always looked upon as investments that would bring great returns. The Hebrews had their own rulers in most cities and were allowed to have the same status as the Romans, or the rights of Asiatic citizens, and the special privileges which they demanded because of having been instructed by their God to enjoy such privileges as *God's chosen people*. Having the status of Romans entitled them to a civil government of their own, independent of the rule of the tribunals in the cities in which they lived. They enjoyed such unlimited religious liberties and exacted such religious privileges as they denied to natives in their own lands who were not of their faith.

The ruling class of the Hebrews made themselves obnoxious to the other citizens in each section of the land by closing their stores on the sabbath and going about idly in gorgeous attire, with marked display of contempt and abhorrence of everything around them. It was their secret desire to convert to Judaism the relatives of all those who wielded power, influence, and wealth, because through such converts they would promote the interests of Israel, and it was freely predicted that the ultimate aim of the proselyting was to wipe the Gentiles out of Palestine.

In the synagogues, which represented the meeting places of the ruling class of the Hebrews, the separation of the classes was strictly observed, and the women were considered as unprepared for a position in the church. We see the attitude toward women in many passages of the Jewish liturgy used in the synagogues, where thanksgiving is expressed in the following words: "Blessed art thou, Lord and God, that thou hast not made me a woman." Women were considered as having no souls and no degree of spirituality that could be developed, and they were therefore incapable of ever becoming angelic. It is always interesting to those of the Western world today in traveling through the Oriental countries to find that all the statues of angels are of the masculine sex. This idea of a soulless woman is retained in all Latin languages; for we find that word *angel* is always of the masculine sex. No rabbi would permit himself to be closeted with a woman in religious discussion, nor to deal with a woman in regard to spiritual matters.

Secretly, or silently, the Jews or the orthodox of Israel resented the fact that the scepter of power had been taken away from Judea and the chosen people of God subjected to the government of Rome. This was a humiliation which the Jews hoped to see undone. Israel hoped that the day would come when its people would rise in power and when their "King of Glory" would appear and reestablish the power and kingdom of Israel again.

And thus Israel waited. In silence and with suppressed emotion, the faithful anticipated the coming of the great day.

In my recent journey through Egypt, I felt the same suppressed emotion on the part of the Egyptians. As they moved about in silence with cold, emotionless expressions on their faces, and refrained from speaking of the days that were, and the days that would come, one could sense that inwardly there was a great fire burning which wanted only the signal to burst into a conflagration that would sweep throughout the whole country. The Egyptians, too, are waiting now for the day to come when the great power and illumination that resides within their traditions and their secret archives will make them the potent rulers of their land. Just as one could easily sense the possibility of a

great conflagration in that land, so one may understand and appreciate the condition that existed in Palestine at the time of the birth of the Master Jesus. Uneasiness had seized the people; for they had felt the yoke upon their necks and they realized that they were being held in bondage and could stand it but a short time longer.

In a social way, vice and degrading practices had become popular with the masses, and the moral standard was akin to licentiousness. Intrigue and crime were found even in the courts of law. The governing power was divided between the two classes, the nobility and the priesthood. The nobility sought only gratification of the baser senses, trying to keep within the law only as far as it permitted them to gain their selfish ends. Most of them professed to be of the sect of Sadducees. On the other hand, the priestly element, or the Pharisees, known as the “pure, separate ones,” were constantly warring in their determined effort to secure power and force strict adherence to the letter of their laws. The Sadducees were their enemies, especially when the latter were favored in any way with rank or position.

The masses were downtrodden and held in ignorance of the true conditions, but they believed that there was a possibility of rising above their environment through the coming of a great leader. It is no wonder that these persons, mostly unlearned and inexperienced in the things of life, united with any movement which promised them freedom from their bondage or an opportunity to rise to heights which they sensed in their dream world. Thus, in many ways these uncultured and uneducated ones followed leaders and principles which left them in serious situations and sorely disappointed. It was the great hope that the coming of the expected Messiah would change all of the sorrowful conditions and bring about a solidification and unification of the people of Israel. How this was to come about, no one knew; and only the pretenders who headed the false movements attempted to explain.

The House of David, out of which the true leader of the people of Israel should come, had long since passed into the hands of strangers. The high priesthood, out of which a great Messiah might come, was Jewish only by profession, being politically Roman and Greek in culture, and by birth anything but of the great House of David. Therefore, the

great Deliverer who would lead them out of bondage as Moses had done, could not come through the lineage of those who were presently at the head of the nation, nor could this person come through those who were of the priesthood.

One phrase remained in the consciousness of the people: "From among my [brothers and sisters] I shall raise one who shall guide my people!"

Chapter 3

THE PARENTS OF JESUS

NO PROPER CONSIDERATION can be given to the birth and childhood of Jesus without first becoming acquainted with the parents of Jesus and their relationship to the mystical facts involved. Therefore, let me state the first important facts, as proved by our records, and then submit the evidence pertaining thereto.

Jesus was born of Gentile parents through whose veins flowed Aryan blood, and in whose hearts and minds had been implanted the teachings of the Essenes, as well as the more secret teachings of the G.W.B. This is the simple, definite statement found throughout the Rosicrucian records.

In the Christian Bible, in the Talmud, and in many reliable works, we find verification of these statements. The parents of Jesus lived in Galilee. There is no possible dispute on this point, and they were therefore Galileans in the full meaning of the term. So our first consideration should be of Galilee and the Galileans.

In Matthew 4:15, we read: "Galilee of the Gentiles." Strange as it may seem, the average Bible student gives little thought to this expression and loses sight of its very important significance. Jesus himself was called the Galilean. For this reason, we must look upon Jesus as having been classified by his own people, or by the people of Palestine at least, as one who was different from them. This warrants us in investigating the real situation and discovering why the Galileans were Gentiles, and why Gentiles lived in Galilee.

In I Maccabees 5:15, we read that messengers from Galilee, with torn clothing and in great anguish, came to Judas Maccabaeus and reported that “the people of Ptolemais and Tyre and Sidon, and all Galilee of the Gentiles, had gathered together against them to ‘annihilate us.’” And Judas told Simon, his brother, to choose certain men to go to Galilee and rescue the Jews who were in Galilee, that they might not be persecuted by the Gentiles. Simon took 3,000 men into Galilee, where he fought many battles with the “heathens,” and the Jews living in Galilee with their wives and children were brought safely into Judea.

Here we see at once an intimation of the conditions that existed in part of Palestine, and how the orthodox Jews looked upon the Galileans as being not only Gentiles, and of a different religion and race, but as enemies to their best interests.

The transfer of the Jews living in Galilee referred to above was made in 164 B.C. At about the same time, Judas Maccabaeus rescued his brothers who lived among the “heathens” in the north of the country (and east of the Jordan) and brought them all to Jerusalem. According to this account and many others, there were Jews in Galilee long after 164 B.C. Therefore, Galilee continued as a nation of Gentiles or “heathens” until the year 103 B.C., when Aristobulus, grandson of Simon, and first king of the Jews (Maccabees), forced all those living in Galilee to adopt circumcision and the Mosaic law.

We will see by this that the Gentiles living in Galilee, which included the parents of Jesus, were Aryans by blood, Gentiles by natural religious classification, mystics by philosophical thought, and Jews by forced adoption. In other words, the Gentiles of Galilee after 103 B.C. were forced to adopt circumcision and respect the Mosaic law, and in accordance with this law all children at a certain age had to accept the Jewish faith in a formal way by appearing at the synagogue for probationary admission to the church. If this combination of circumstances and conditions will be kept in mind by my readers, it will enable them to understand the many strange statements that appear in sacred literature.

In the cuneiform inscriptions of Tiglath-Pileser, there is reference to the conquest of Galilee, but it is generally misunderstood, as are many of the other statements regarding Galilee, because few know

that Galilee is also referred to as the land of *Hamath*. The same name, Hamath, is used in the Old Testament, but it seems that modern students of the ancient writings did not recognize in this particular word the name of the ancient capital of Galilee. However, let it be known now that Hamath is the famous hot springs, half an hour south of Tiberius, on the western shore of the Sea of Galilee.

Often in the Old Testament one may read of the “entrance to Hamath” and it always refers to parts of the northern boundary of Palestine. It is the Wady Alhammans, near Magdala, three miles northwest of Tiberius, where Mary Magdalene was born. In other parts of the Bible we read that the king of Hamath, who sent his son to salute David, was a Galilean; Solomons storehouse or granaries which he built in Hamath were situated near the Sea of Galilee.

The true spelling of the name is Hammoth, or Hammath, the Assyrian form being Hammati, which means “hot springs.” Many other quotations could be used to show that Hamath was in Galilee. And we will find by other references that a great many Assyrians were sent to Hamath as colonists, and further reference reveals that the Assyrians were all Aryans. Even Sargon II tells how he deported the Median chief with kinsmen to Hamath.

It was because of this settlement of Aryans in the vicinity of Galilee, and the resulting race of Aryans in that community, that the Aryans of Egypt who were members of the G.W.B. and of the Essenian organization directed their people to go to northern Palestine, and live on the shores of Galilee and associate with people of their own race. There are also many historical notations in Egyptian records, and especially in the ancient records of the G.W.B., to show that there was close communion and intercourse between the Aryans of Galilee and the Aryans of Egypt.

Our records also show that at the time of the birth of Jesus, the Galileans spoke a language which was not Hebrew. The fact has been known among students of sacred literature for several centuries that the Master Jesus spoke another language besides Hebrew, and there are indications that he spoke several tongues. These indications have greatly puzzled the students of sacred literature, and much speculation has existed among authorities in regard to this matter.

The common agreement among these authorities is that Jesus presented most of his parables and teachings to the populace in the Aramaic language, and they also believe that he used some other language that was not Hebrew. Our records clearly show that he used Greek and Aramaic in his general discourses and conversations, and used Hebrew only when he was speaking to those who did not understand the other languages. Most of his beautifully poetic parables and discourses were in either the Aramaic or the Greek language. We will discuss, later, the manner in which Jesus became educated in the Greek language. We will find the use of these foreign phrases in the words of Jesus, in such verses of the Bible as Mark 5:41, Mark 7:34, Mark 14:36, and in many other places.

The Galilean dialect was a constant source of jest for the Jews. Peter was also of Galilee and of the Gentile race, and we find in Matthew 26:73 that some said to Peter: "Certainly you are also one of them, for your accent betrays you." There are many historical notes that show that the Jews recognized the Galileans by the fact that these Gentiles could not distinguish the various Semitic gutturals.

The foregoing are but a few of the hundreds of facts which might be submitted to show that the parents of Jesus were Gentiles and of a different tongue than the Jews. This makes us question at once the genealogy which is so exhaustively presented in the Bible in an attempt to show that Jesus was a descendant of the House of David. This genealogy in the Bible is presented in two places by two different authors, and the generations in each table do not agree. But aside from this discrepancy, the genealogy is only an attempt on the part of later admirers and followers of Jesus to make it appear that he was of the House of David, as hoped and prayed for by the Jews.

It must be borne in mind that at no time during his lifetime did Jesus himself refer to his ancestors or forebears, or intimate to the Jews that he was the Messiah of the House of David whom they had anticipated. And we find nothing in any historical records of a contemporary nature, or among the authentic Jewish records, to show that during the lifetime of Jesus, or even during the first 100 or more years after his time, that the Jews or anyone else believed that he was of the House of David. Just when the genealogy attempting to show such a connection

was prepared and introduced in the sacred writings is not known, but it is most certainly a very late addition to the writings.

Now we must deal with another phase of the history of the parents, and of Jesus himself. In much of the Christian literature Jesus is referred to as the *Nazarene*, and it is commonly believed that this means to indicate that Jesus was born, or spent most of his lifetime, in Nazareth. It is strange how students of biblical literature, and especially those who have written so exhaustively on the life of Jesus, and who have presented in their teachings and preachments the picturesque details of his life, have never given proper thought to the title Nazarene, or investigated its real meaning. It is assumed by all of these authorities, writers, and teachers, that if Jesus was a Nazarene, he must have been of the city called Nazareth, and since he and his parents lived in Galilee, the city of Nazareth must have been in that locality. On the basis of such reasoning, it is generally proclaimed that Nazareth was the home town of the parents of Jesus, and that Nazareth in Galilee was the place where Jesus spent his childhood.

I have been just recently in Nazareth and made exhaustive inquiries for the purpose of verifying the statements contained in the Rosicrucian records. Probably most of my readers will be surprised to learn that at the time Jesus was born there was no city or town in the whole of Galilee known as Nazareth, and that the city in Galilee which now bears that name is not only a city of more recent years, but was named and came into existence because of the demand on the part of investigators to find some place that would answer to the name of Nazareth in Galilee.

First of all, we must make plain that the title *Nazarene* did not imply that the person who bore that title was of a city called Nazareth. Rather, the title was given by the Jews to those strange people outside of their own religion who seemed to belong to some secret sect or cult that had existed in northern Palestine for many centuries. We find in the Christian Bible that even John the Baptist was called the Nazarene. We also find many other references to persons who were known as Nazarenes. In Acts 24:5, we find some man being condemned as a mover of sedition among the Jews throughout the world and being called a "ringleader of the sect of the Nazarenes." Whenever the Jews came in contact with one in their country who had a different religion,

and especially a mystical understanding of the things of life, and who was living in accordance with some code of philosophical or moral ethics that was different from those of the Jews, he or she was called a Nazarene for the want of a better name.

There was a definite sect called the Nazarenes, and we find them referred to in the Jewish records as a sect of primitive Christians, or in other words, those who were essentially prepared for and ready to accept the Christian doctrines. In fact, the Jewish encyclopedias and authorities seem to agree that the term *Nazarene* embraced all those Christians who had originally been both Jews, and who neither would nor could give up their original mode of life, but who attempted to adjust the new doctrines with the old. The Jewish encyclopedias also state that it is quite evident that the Nazarenes and the Essenes had many characteristics in common and were therefore of a mystical tendency. In fact, the Essenes and the Nazarenes were considered heretics by the learned Jews, but there is this difference or distinction in the use of the two terms: the Essenes were not as well known to the populace of Palestine as were the Nazarenes, and seldom was someone called an Essene unless the person was well informed and knew the difference between the Essenes and the Nazarenes; whereas many Essenes and even those of other sects who lived an atypical life or who did not accept the Jewish religion were called Nazarenes.

Jerome, the famous biblical authority, refers to the fact that in his day there still existed among the Jews, in all the synagogues of the East, a heresy condemned by the Pharisees, and the followers of it were called Nazarenes. He said that they believed that Christ, the Son of God, was born of the Virgin Mary, and they held Christ to be the one who suffered under Pontius Pilate and ascended to heaven. "But," said Jerome, "while they pretended to be both Jewish and Christian, they were neither."

Turning to the highest Roman Catholic authorities, we find that the title *Nazarene*, as applied to Christ, occurs only once in the Douai version of the Bible, and this authority states that the term *Jesus Nazarenus* is uniformly translated "Jesus of Nazareth," but this is a mistake in translation, for it should read "Jesus the Nazarene." Nowhere in the Old Testament do we find the word *Nazareth* as referring to a city existing

anywhere in Palestine, but we do find in the New Testament references to Jesus returning to a city called Nazareth. These references are a result of translating the phrase, "Jesus returning to the Nazarenes" to read, "Jesus returning to Nazareth." The interesting point here is emphasized by the Roman Catholic authorities, for they show that whereas Jesus was commonly referred to as the Nazarene, he was not of that sect at all.

Taking the Jewish and Roman Catholic records together, and comparing them with the information contained in our own records, we find that the Nazarenes constituted a sect of Jews who, while attempting to adhere to the ancient Jewish teachings, did believe in the coming of a Messiah who would be born in an unusual manner and who would become the Savior of their race. After the ministry of Jesus began, these Nazarenes accepted Jesus as the Messiah and even accepted the doctrines he taught while still trying to adhere to many of the fundamentals of their Jewish religion. The Jewish records state that the Nazarenes rejected Paul, the Apostle of the Gentiles, and that some of the Nazarenes exalted Jesus only as a just person.

There was another term for such heretics among the Jews, and this was *Nazarite*. According to the Jewish authorities, the term was applied to those who lived apart or separate from the Jewish race, because of some distinctive religious, moral, or ethical belief. The Jewish records state that such persons were often those who would not take wine or drink anything made from grapes, or those who would not cut a hair of their heads, or who would not touch the dead during any funeral ceremony.

These same records state that the history or origin of *Nazariteship* in ancient Israel is obscure. They state that Samson was a Nazarite, as was his mother, and that Samuel's mother promised to dedicate him to the sect of Nazarites. The Jewish records state also that it was common for parents to dedicate their minor children to the Nazarite sect, and they distinctly say that there are references to the fact that Jesus was said to have been dedicated to the Nazarites while still in the womb. The Jewish records say that Luke 1:15 refers to this dedication. Helena, the Queen, and Miryam of Palmyra are mentioned as Nazarites in the Jewish records, and many other persons famous in sacred literature were known to be Nazarites.

That the terms Nazarite and Nazarene had naught to do with a city or town called Nazareth is plainly indicated by many historical records. We have said that the present town of Nazareth in Galilee received its name because a place had to be found that would fit the common understanding in regard to the village in which the parents of Jesus lived and where he spent his boyhood. During the first few centuries after Christ, when the Christian doctrines were in the making and the founders of the Roman Catholic Church and religious students in general were searching for every historical site connected with the life of Jesus, each spot, place, and incident in the career of this great person was eagerly tabulated and glorified. My recent visit through Palestine made plain to me that this desire to find historical, sacred sites and glorify them has not ended and will probably continue for hundreds of years. The absurdity of most of this becomes apparent when even the casual tourist discovers that three, four, and five different places are pointed out as being the spot where some particular incident in the life of Jesus occurred.

In searching for a place that would answer to the name of Nazareth in Galilee, great difficulty was experienced, since no such city was mentioned in the Old Testament, and none of the ancient maps of the time of Christ revealed such a site. A very small settlement, however, called En Nasira was found far from the Sea of Galilee, and this was immediately renamed Nazareth and associated with the early life of the child Jesus. This discovery of the town of En Nasira was made in the *third century after Christ*, and since then has been known as the town of Nazareth, but even today it is lacking in any of the evidences which would warrant the use of that name.

In Mark 6:1,2, the statements are made that Jesus went back to his own country and his disciples followed him, and when the sabbath day was come, he began to teach in the synagogue. In the fourth verse of that chapter, Jesus referred to the fact that he was a prophet in his own country, among his own kin, and in his own house. These statements have been taken to refer to Nazareth, the town in which many biblical students believe Jesus was born and in which he spent his childhood.

Now, if Jesus did return to his home town and did preach in a synagogue to great multitudes, it could not have been at En Nasira, or

the so-called town of Nazareth; for even in the second and third centuries after the birth of Jesus, En Nasira or Nazareth had no synagogue and was not large enough to have any building in which multitudes could have listened to Jesus, nor were there multitudes in that vicinity to hear him. So the references in Mark to his hometown could not refer to En Nasira. En Nasira was only a settlement around a spring which was at that time called the "Spring of the Guard House," but I find that now in recent years it has been changed and is called "St. Mary's Well." This change of name and the giving of a religious significance to some unimportant site in Palestine is typical of the changes that are being rapidly made in that country for the benefit of tourists.

Turning to the old Jewish records, we find these state that only in the books of the New Testament, written long after the lifetime of Jesus, is the town of Nazareth mentioned as a village in Galilee, and that such a place is not mentioned in the Old Testament, in the historical writings of Josephus, nor in the Talmud. During the lifetime of Jesus, the town of Joppa was the important city in the locality of Galilee. It was the one which attracted all tourists and is referred to most often in historical writings.

In the Roman Catholic records and in their encyclopedias, we find that the town of En Nasira was known as a strictly Jewish village up to the time of Constantine and is referred to as one being inhabited wholly by Jews. Therefore, this little village surrounding a well could not have been the center of the Gentile population of Galilee. At the present time, there is a small church or chapel in Nazareth which I visited, and it is supposed to stand above the grotto where Mary and Joseph lived at the time that the archangel announced to Mary the forthcoming birth of the incarnation of the Logos.

All of the foregoing facts point out very clearly that Mary and Joseph and the child born to them were considered, along with many others in their locality, as Nazarenes, Nazarites, or people of a non-Jewish sect. And the many other references to this sect clearly show that it was one which held such religious and mystical views as permitted the acceptance of the fundamentals of the Christian doctrine. Taking this into consideration, we have at once an interesting picture of the conditions existing in and around Palestine just prior to the Christian era.

We have, first of all, a large number of men and women, even children, who were either Jewish by birth, Gentile by birth, or of various races and bloods, but who had refused to adopt wholly or completely the Mosaic law and were Jewish only because the laws of the land forced them to adopt circumcision, to appear in the synagogue when twelve years of age, and to be enrolled as Jews. Yet these persons were mystically inclined in their beliefs and followed the Jewish teachings only so far as they revealed God and God's laws and served them in their study of divine principles. They were prepared by some school or some system which made them ready to accept the higher mystical teachings as they were revealed from time to time by the progressive minds or by the teachings of avatars.

On the other hand, there was the one definite organization of mystics known as the Essenes, which conducted many forms of humanitarian activities, including hospices, rescue homes, and places for the care of the poor and needy. The Essenes had their northern center in Galilee, among the Aryans, because they had been directed to this locality by the center of their organization in Egypt, known as the G.W.B. The Essenes were not popularly known, were quiet and unostentatious in their activities, and were distinguished by the populace only by their white raiment. The Nazarites, the Nazarenes, and the Essenes mingled freely and undoubtedly sought to carry on their independent activities without interference one with the other, although they unquestionably had many ideals and purposes in common. But the Nazarites and Nazarenes were popularly recognized and known to the populace, and for this reason all who did not accept the Jewish faith, or who were heretical in their Jewish beliefs, were classified as Nazarenes and Nazarites, not as Essenes.

In and around the shores of the Sea of Galilee lived these people—mostly Gentiles of Aryan blood of the several sects, Nazarenes, Nazarites, and Essenes. They, too, were looking for the coming of the great Master, the great Avatar, the great Messiah, who would not only redeem Palestine but the whole world, and who would bring contentment to Israel and all peoples. These mystics contemplated, with true understanding, the reincarnation of one of their own great masters. We must bear in mind that the belief in reincarnation was not only an established belief among these mystics, who were classified

as heretics and as Gentiles, but also among the most orthodox of the Jewish people at that time. This accounts for the many references in sacred literature, and even in the Christian Bible, to a great leader, a great teacher, as having been *someone else at some other time*, for they believed that the greatest among them were great because of previous preparation, previous existence, and previous attainments. Naturally they looked for the new great master, the new redeemer of the world, to come out of the past in a new body and as a well prepared individual of high attainments.

The Rosicrucian records show that not only did each of the homes of these Essenes and Nazarenes and Nazarites have a sanctum, in which daily prayers and solemn meditations were held, but many hours of each day and evening were given to mystical practices and the development of a spiritual power within their beings. This made possible the many miracles they performed and the great work which they did among the poor and needy.

They were well advanced in the understanding of most of the mystical laws which the Rosicrucians and other mystics of the world today study and practice, and they knew the potentialities of certain spiritual laws when applied specifically for any definite purpose. To them, such miracles as incarnations of a highly divine nature, and the coming of a great leader into their midst, through *uncontaminated material laws*, were not impossible, nor improbable, and they lived a life typical of that which the mystics of today believe is lived by the masters in Tibet and in parts of India and Egypt.

Joseph was not only a devout Essene, and a carpenter by trade, in keeping with the rules of the organization, but Mary, his wife, was an associate member of the organization. Yet both of them had been forced to accept the Jewish religion and had identified themselves in a purely formal way with the faith in accordance with the law of the land.

With these facts in mind, let us now approach the interesting subject of the birth of Jesus.

Chapter 4

THE VIRGIN BIRTH OF AVATARS

THIS INCIDENT IN the life of avatars is one that is very difficult to approach and more difficult to present to those who have not attained that high degree of mystical understanding and awakening which naturally would bring to the student a spiritual understanding of the conception and birth of avatars.

I realize fully that the standard Christian story of the virgin birth of Jesus is one that is not accepted by those who reject *any* of the Christian doctrines. In fact, the authorized Christian version of the virgin birth is a very difficult one for the uninitiated and undeveloped mystic to comprehend, and it certainly appears to be an impossible story to those who are of an analytical mind and who do not comprehend any of the mystical laws and principles as taught by the ancient masters.

Perhaps I will do better than others who have attempted, in the past, to reduce the mystical phase of the birth of Jesus to a semi-mystical presentation, and perhaps I may fail altogether. I am not limited by any creeds or dogmas which require that I shall adhere to a standardized version; and if I fail to make my reader comprehend, or perhaps *apprehend*, the real mystery of the virgin birth, it will be because I have been limited solely by an inadequate vocabulary to express in general terms that which every mystic understands inwardly, and because of the inability of some of my readers to read between the lines of my statements and realize what I cannot reduce to such crude things as printed words.

First of all, it should be understood by those who approach this great mystery with an open and unbiased mind, that Jesus was not the first great Master, Avatar, or Son of God to be “born of a virgin.” The authorized Christian version of the virgin birth of Jesus presents the story as though it were unique and exclusively a Christian manifestation. If nowhere else in the history of God’s messengers on earth, or the working out of God’s plans for the redemption of humans in all ages and cycles, there had ever been a similar incident or a similar manifestation of the great mystic powers of the universe, operating as an unusual manifestation of God’s omnipotent ways, then the mystery of the conception and birth of this great person would be more difficult to explain and to comprehend.

To the mystics of the Orient in all lands and of all ages, the great mystery of the virgin and spiritual birth of a Son of God is accepted not only as a possibility but as a fact *natural to the life of every great avatar*. Christians or students of Christian literature in America who are accustomed to hear the mystery of the virgin birth referred to as one of the problems of faith, and one of the doctrinal points upon which the faith of thousands of Christians is broken, are surprised when they tour through foreign lands to find that even those who are not Christians and who are of the Moslem, Hindu, Buddhist, or other faiths, find no difficulty in accepting the story of a divine, spiritual conception and birth, and believe that this one feature of the life of the Master Jesus is the only one which is consistent with the claim that Jesus was the great Redeemer and Savior of the world.

In fact, during my recent trip through lands which brought me in contact with persons of Oriental faiths, I found most of them who were not Christians expressing themselves on this subject in this wise: “If you Christians believe that Jesus was a Son of God, or the divinely appointed messenger to redeem any part of the world through the message he had to give, then you must believe that he was divinely conceived and born, for there can be no question of such distinctive birth if he was a divine messenger.” When I explained to some of them that there were so-called Christians or students of the Christian doctrine who could not accept the idea of divine conception and birth, but who still believed that Jesus was a great master, a divinely appointed messenger, a true Son of God, and an avatar of unusual

authority from on high, these people merely smiled and said that such a viewpoint was an absurdity, for—according to their viewpoint—no one humanly conceived and born could attain any degree of divine authority which would make that person the Christ.

Thus we see that the great problem resolves itself into a problem not of the *fact* of the virgin birth or the divinity of Jesus, but a problem of human comprehension on the part of the consciousness in the Occidental world as compared with the consciousness we find in the Oriental world. In other words, we are face to face with the fact that not the validity of the claim of the virgin birth of Jesus should be given serious thought by students of spiritual mysticism in the Western world, but the lack of understanding and comprehension on the part of those millions who have not yet attained the proper degree of spiritual understanding regarding the spiritual laws operating in such important events.

The Oriental of any of the various faiths points out to us of the Occidental world the fact that we are attempting to struggle with a principle in the spiritual world with which we are least acquainted, and for a comprehension of which we are least prepared. The mystics of all lands agree that until human beings are prepared, through spiritual development and comprehension of the higher laws, to understand easily the actuality of spiritual conception and divine birth in its sublime fullness, we are not ready in any sense to understand the teachings and the true message brought to this world by any of the great avatars, especially that of the last and greatest of them all, Jesus the Christ.

This does not mean that it is impossible for the sincere student of Christian doctrines to comprehend at least the mystical laws involved in the possibility of a divine birth, but it does mean that such a student must try to see and comprehend the mysticism that is fundamental in all of the Christian doctrines. The Rosicrucians hold the same viewpoint that the Orientals hold in this regard; namely, that the orthodox Christianity in the Western world today too greatly slightes the mysticism and mystical principles which are fundamental to Christianity and which constituted the pristine Christianity of ancient times. In other words, too much thought is given to the literal meaning

of words and the material interpretation of all of the principles involved in Christianity, which leaves almost a total neglect of the pure mysticism that makes possible a real understanding or spiritual comprehension of Christianity in its original form.

Added to this is the reluctance on the part of the Occidental world to accept as facts and actual possibilities the so-called miracles of the Bible. I do not agree with such authorities as the late William Jennings Bryan and others who have claimed that the scientific trend of our thinking and our highly scientific education in the Occidental world has tended to blind us to the spiritual truths in the Bible or in all sacred literature. I do not believe that materialistic science is in any way responsible for the Occidental's inability to understand the higher spiritual statements found in the sacred writings of the Bible or the other books of other creeds. I believe that this inability on the part of the minds of the Western world is due to the unawakened status of the spiritual side of our natures and the absence, except in the various occult and metaphysical schools of the Western world, of such general teachings along spiritual lines as would properly prepare us for an understanding of that which is accepted readily and understood thoroughly by the Oriental mind.

I have said that we should bear in mind that Jesus was not the first of the great teachers, who came as messengers of God, to be born of a virgin or to have been conceived by Divine Principle. A few references to similar incidents in the past may help my readers to understand what is meant by this statement.

It is a fact that divine births and divine conceptions were so currently accepted among the ancients that whenever they heard of one who was greatly distinguished in human affairs, they immediately classified such a person as having been born of supernatural lineage. Even in the polytheistic religions, various gods were declared to have descended from Heaven and been made incarnate in humans. The learned Thomas Maurice, in his unusual book called *Indian Antiquities*, goes so far as to state that "in every age and in almost every religion of the Asiatic world, there seems uniformly to have flourished an immemorial tradition that one god had, from all eternity, *begotten another god*."

I may add that our own records of ancient traditions and sacred writings contain many references to religious movements in antiquity, in which the great leader was claimed to be “God’s Begotten Son.”

India had a number of avatars or divine messengers who were incarnated through divine conception, and two of them bore the name of Krishna, or Krishna the Savior. Now Krishna was born of a chaste virgin called Devaki, who, on account of her purity, was selected to become the *mother of God*. In this instance, we find a very ancient story of a virgin giving birth to a divinely conceived messenger of God.

Buddha was considered and believed by all his followers to have been *begotten* of God and born of a virgin whose name was Maya or Mary. In the ancient stories of the birth of Buddha, as understood by all the Orientals and found in their sacred writings long before the Christian era, we read how the divine power, called the Holy Ghost, descended upon the virgin Maya. In the ancient Chinese version of the story, the Holy Ghost is called Shing-Shin.

The Siamese, likewise, had a god and savior who was virgin born and whom they called Codom. In this ancient story, the beautiful young virgin had been informed in advance that she was to become the mother of a great messenger of God, and one day while in her usual period of meditation and prayer, she was impregnated by divine sunbeams. When the boy was born, he grew up in a remarkable manner, became a protege of wisdom, and performed miracles.

When the first Europeans visited Cape Comorin, the most southerly extremity of the Indian subcontinent, they were surprised to find the natives worshipping a Lord and Savior who had been divinely conceived and born of a virgin.

The serpent was used as a mystical symbol in the early sacred writings of various schools of religion. It was very often used as an emblem of the Word or Logos, and in this sense it became the symbol of the tempter in the fall of humans. The serpent was also the emblem of the Holy Ghost or the power that impregnated the life in the virgin. In this sense it was the incarnation of the "Logos." The emblem shown above represents the serpent as found engraved or carved on many ancient monuments to represent the "Logos." The Ophites also venerated this same symbol as an emblem of Jesus the Christ.

When the first Jesuit missionaries visited China, they wrote in their reports that they were appalled at finding in the polytheistic religion of that country a story of a redeeming master who had been born of a virgin and divinely conceived. This god was said to have been born in 3468 B.C. Lao-Tze, the famous Chinese teacher, was claimed to have been born of a virgin, black in complexion, and described as marvelous and as beautiful as jasper.

In Egypt, long before the dawn of Christianity, and long before any of the writers of the present Christian Bible were born, or any of its doctrines conceived of as Christian, the Egyptian people had several messengers of God who were born of virgins through divine conception. Horus was known to all the ancient Egyptians as having been born of the virgin Isis, and his conception and birth was considered one of the three great mysteries or mystical doctrines of the Egyptian religion. To them, every incident in connection with the conception and birth of Horus was pictured, sculpted, adored, and worshiped as are the incidents of the conception and birth of Jesus

among the Christians today. Another Egyptian god called Ra was born of a virgin. I have seen on one of the ancient walls of a temple along the Nile, a beautifully carved picture representing the god Thoth—the messenger of God—telling the maiden, Queen Mautmes, that she is to give birth to a divine Son of God, who will be the king and redeemer of her people.

Turning to Persia, we find that Zoroaster was the first of the world redeemers acclaimed to have been born in innocence through the conception of a virgin. Ancient carvings and pictures of this great messenger show him surrounded by an aura of light that filled the humble place of his birth. Cyrus, king of Persia, was also believed to have been of divine origin. In the records of his time, he was referred to as the Christ or the *anointed Son of God* and was considered as God's messenger.

Even Plato, who was born in Athens, 429 B.C., was believed by the populace to have been a divine Son of God by a pure virgin called Perictione. It is recorded in the ancient records that the father of Plato, who was known as Aris, had been admonished in a spiritual dream to hold pure and sacred the person of his wife until after the divine conception and birth of the child that was to come, and that this child's conception would be by divine means.

Apollonius, who was still living and performing great miracles and teaching in various lands during the early part of the life of Jesus, was also born of a virgin mother according to the stories that were recorded of him during and shortly after his time. According to these stories, the mother of Apollonius in 41 B.C. was informed by a god in a dream that she would give birth to a great messenger of God who would be known as Apollonius.

Speaking of famous miracle workers and teachers who left behind them unquestioned records of great work in behalf of humanity, we find that Pythagoras, who was born about 570 B.C., had divine honors paid to him through and after his lifetime. According to the sacred writings about him, his mother conceived him through a spectre, or the Holy Ghost, which appeared to her. His father, or foster father, was also informed through a vision that his wife was to bring forth

a son through divine conception and that the son would become a benefactor to humanity.

The story of Aesculapius is very interesting. He became a great performer of miracles, a messenger with a divine message for all humanity, and was considered a true Son of God. When the Messenians sought to learn of the birth of Aesculapius, they consulted the oracle of Delphi and were informed that an invisible God or Holy Ghost of the Divine Kingdom was his father, that Coronis was his earthly mother, and that he was born at Epidaurus.

According to the story, when Coronis experienced the sacred event of divine conception, she sought to conceal her pregnancy from her father because she did not believe that she could make worldly people understand the strange occurrence. So she went into hiding at Epidaurus, where the child was delivered months later in a lowly and humble goat stable on a mountainside. A herder of goats, named Aristhenes, going in search of a goat and a dog missing from his fold, discovered the young child in the stable and would have carried him home had he not seen, when approaching the child, that its head was encircled with fiery rays which told him that the child was a divine being. His report of the finding of the child spread throughout the land, and people from all quarters flocked to the stable to pay homage to the Son of God and brought valuable presents which they laid at the feet of the infant. The child was honored as a god not only in Phoenicia and Egypt, but the worship of him passed into Greece and Rome.

Even on this side of the great ocean, the natives of North and South America had gods that were supposed to have been divinely born. Long before the landing of Columbus, the inhabitants of ancient Mexico worshiped a savior and world redeemer whom they called Quetzalcoatl, who was born of a pure virgin according to the traditions which the church leaders, who came with Columbus, discovered in the ancient writings carved on the walls of the temples. According to the story, then long established, a messenger from Heaven had announced to his mother that she would bear a son by divine conception, and that he would be the savior of the world. There was an established Mexican

hieroglyphic which conveyed the story of the divine conception and birth of this Mexican god.

The Mayas of Yucatan also had a virgin-born god, corresponding to Quetzalcoatl, whose name was Zama; and he was termed "the only begotten son of the Supreme God." In Central America and Peru, there were other divinely conceived and uniquely born gods.

I think I have shown, in just these few out of the many hundreds of well-recorded instances, that among the Orientals, and especially among those peoples whose religions had a well developed mystical basis, the idea of virgin or divine birth was not an improbability, but a well-accepted possibility.

It has been said by many of the critics of the story of the virgin birth of Jesus, that if Jesus had been conceived and born as stated in the Christian records, it is strange that none of the contemporary writers, none of his disciples, not even Jesus himself, ever referred to this fact during his lifetime, and that only many years after his passing did the story of his divine conception and birth become established. This sort of argument would be sound and reasonable only if the virgin birth was unique with Jesus or, in other words, if he had been the first and only great messenger of God to have been considered of divine origin and birth. But if we consider that it was common belief among the peoples of the Oriental lands, and of Egypt and Palestine, that every great messenger, every avatar, every Son of God ordained by divine decree to raise the status of the peoples of that time was born of divine conception, then we can understand why in the case of Jesus, neither his disciples nor the historians considered the event of such outstanding importance as to write about it, be enthusiastic over it, or make of it the *unusual miracle* that the Christian church makes of it today.

In tracing back the very complete records of the ancient pre-Christian avatars and Sons of God that greatly influenced the development of civilization, we find in the Rosicrucian records and in some other writings that are fragmentary, that the disciples and followers of each of these avatars or messengers devoted more time and thought to the recording of the sayings, teachings, and demonstrations of the avatars than to the recording of the events connected with their births

and transitions. Even in the score or more cases where the divine conceptions and divine births of these pre-Christian avatars in various lands are recorded, the statements are brief, concise, and very often merely incidental to the story being told. The facts of the virgin birth are disposed of hurriedly as though they were of secondary importance and to be taken for granted by the reader of the life of each of these avatars.

In no case do we find that the disciples and followers of the avatars considered the divine conception and birth as a feature for adoration and worship, as we find in the case of the Christian teachings today. Very often the statements in regard to these miraculous births were made as briefly as we, at the present time, refer to the fact that some great person was born on such and such a date, with the assumption that every person *is* born and *must* be born at *some place* in a manner in keeping with his or her race and the conditions of the country in which the event occurred.

I am sure that when these facts are taken into consideration, those who have heretofore been puzzled because so few historical references can be found in ancient writings regarding the divine conception and birth of Jesus will realize that they have been seeking for something that, from the Oriental point of view, was not the outstanding or important event of his life. It is a fact that among the Orientals the lives and teachings and practical demonstrations of the teachings on the part of these avatars were considered all that was important about them, and the incidents of birth and location of birth, and of their ultimate passing, were points to be considered only by those intimately associated with the avatars and were recorded merely for the purpose of completing the record.

The next important point to have in mind is the fact that the reason for the general acceptance by mystics of the fact of divine conception lies in the common belief among the mystics and Oriental philosophers that the power of thought or the power of a mental or audible *word* is capable of impregnating matter and bringing lifeless matter into consciousness. If we try to assume that the impregnation of matter in a mystical manner like this is an unusual miracle of doubtful nature, never having been proved, and not acceptable except

on the basis of unfounded faith, then we must also assume that all the fundamental teachings of the mystics of the Orient, and all of the claims made in occult and mystical literature by competent teachers and by those whose fame and integrity have been well established, are false, unfounded, unreliable, and unworthy of our consideration. And if we assume this, then there is little hope for us in the teachings that come from the Orient, and little reason for us to believe in the superior power and hidden, secret principles of divine energy.

The mystics of all ages have claimed, and through the so-called miracles have proved to themselves, that certain latent, potent principles can be invoked by humans and are applied by God in the creative processes of the universe. The very creation of the world itself is considered by all the mystics of the Orient as the first great demonstration of the potency of the Logos, or the power of the Word breathed into space where no life existed, resulting in immediate impregnation and the manifestation of living matter. The mystics of the Orient rightfully contend that in the beginning all nonliving matter was impregnated with life by a divine process, without the application of material laws. No other conception is possible to their understanding or acceptable to them. And if the first great impregnation of life in this manner is accepted, why should there be any question of lesser demonstrations in the case of an individual being, or the impregnation of a *single cell of life*?

Mystics of all times have demonstrated that even the spoken word, composed of a properly intoned vowel, has the power to disturb the status of matter and to set it into vibration or to change its elementary nature or its chemical composition. In demonstration of this, mystics of the Orient—and some highly evolved ones of the Occident—have learned how to utter a sound, or to produce a sound upon a violin string or other musical instrument, which would cause a manifestation in matter.

It is common with the Rosicrucians and with mystics of other schools who have learned how, and who have developed to the proper degree of perfection in these things, to utter vowel sounds or, by mental concentration, to direct invisible, potent energies to such focal points as would cause a manifestation in nonliving and living matter. It is the

aim and ambition of millions of students of mystical law to attain that degree of perfection where they can perform seeming miracles of this kind. To these mystics and to the rational mind comprehending the laws involved, it would seem that if humans are capable of applying these mystical principles in such a manner as this, it certainly would not be *improbable*, let alone *impossible*, for the Mind of God to have directed certain powers to impregnate matter and bring about not only the virgin birth with which we are dealing in this chapter of the book, but many similar manifestations of an unusual nature.

Therefore, the Rosicrucian of evolved understanding, or the mystic of spiritual attainment, readily and understandingly accepts the virgin birth of Jesus and sees in it no violation of natural or spiritual law, nor any exception to truly scientific principles. Those who cannot accept the virgin birth or divine birth of the Master Jesus are probably laboring under the limiting comprehension of materialistic consideration and have not attained a spiritual development in their evolution which makes possible the comprehension and apprehension of the higher laws.

There is but one point upon which the Rosicrucians and the mystics of the Orient disagree with the fundamentalist or strictly orthodox of the Christian church, and this is in the *uniqueness* of the conception and birth of the Master Jesus. The Christian doctrines teach that Jesus was the *only* begotten Son of God, and the only instance where the Word was made flesh and where God sent upon the earth a Divine Son to redeem the world. The Rosicrucians understand that Jesus was *not* the first and only, but the last and greatest of all the messengers of God conceived in this manner and born on earth.

This brings us to another point of consideration before presenting the ancient, mystical story of the birth of Jesus. In a previous chapter, I stated that the Essenes, the Nazarenes, and the mystics of Palestine anticipated the coming of a great master who would be the incarnation of one of the former great leaders. I also stated that it was the common belief among the Jews that the Messiah which they expected would likewise be the incarnation of one of their former deliverers. In these statements you will note the belief on the part of the people of the Orient in the fact of reincarnation, which was an established belief

throughout the entire Oriental world and which is today a positive principle in the religious and philosophical thought of more than three quarters of the earth's population, questioned only by part of the people in the Western world.

The Orientals also knew, through previous experiences, that the great avatars and messengers of God, who came to them from time to time as the evolution of the races required, were the reincarnation of the previous great souls on earth and had attained in each incarnation a higher and still higher degree of spiritual expression and mastership. Just when each one of these messengers would appear in a final incarnation it was impossible for them to tell, but since all incarnations were progressive, and since each messenger was greater and more advanced than the preceding one, the Essenes, the Nazarenes, and even the Jews of Palestine anticipated that the messenger who would come to them would be greater than any of the preceding avatars and would probably be the reincarnation of one of the greatest of those who had served them in the past.

It was natural for the Jews to feel that such a messenger or Messiah would be the reincarnation of one of their previous deliverers, perhaps Moses, and most certainly of the House of David. On the other hand, the Essenes and those of the Aryan race believed (and based their belief upon a better understanding of the mystical laws than the Jews possessed) that the new great master and redeemer for the world would be of the Aryan race, in the form of a reincarnation of one of the great masters who had served the world in other lands and who would not be limited to the tribes of Israel.

For this reason, the Essenes in Palestine and in Egypt and other locations fully anticipated that from their own race and from among the members of their own organization would come the next great master, because the Essenes represented at this time the group of most highly evolved and spiritually trained beings on earth.

Chapter 5

THE MYSTICAL BIRTH OF JESUS

BEFORE GIVING THE account of the birth of Jesus as it is recorded in the ancient Rosicrucian records, I wish to call to the attention of my readers the following important points.

At the time of the birth of Jesus, the Essenian community as a part of the G.W.B. was not only well established in various parts of Egypt and Palestine with its largest center of members in Egypt, located at Alexandria, and its very large community district in Galilee, but the organization maintained a great secret temple at Heliopolis in Egypt where the supreme officers met and where the highest ceremonies of the organization were held. This temple was often referred to in ancient records as the Temple of Helios, or the “temple of the sun.” In Palestine, a smaller temple for the sacred ceremonies of the Essenes in and around Jerusalem was located close to one of the Jerusalem gates. It was in this temple in Jerusalem that officers of the Essenian organization in Palestine assembled for their high ceremonies.

Perhaps it is necessary to explain at this point, also, that in all the ancient temples of the G.W.B., Including those of the Essenes, the young daughters of the highest members of the organization served as virgins or as vestals for certain periods of their lives and were under the guardianship of the organization. In all the Rosicrucian branches throughout the world today, including those in North America, there are several vestals associated with each temple or lodge representing the spiritual consciousness of the Cosmic. These girls are always daughters

of parents who have been in the organization for some time. They are highly respected and aided in every way to high attainments in all the ethical, cultural, and educational principles of the land.

With these points in mind, I now present what is probably the oldest and most complete story of the virgin birth or divine birth of the Master Jesus, as it has been recorded and preserved in the archives of the Rosicrucian organization in Egypt, India, and Tibet. I have had to condense the story slightly for presentation in this book, in order that the entire volume might not become too large, but I have not eliminated any essential detail nor altered any of the important mystical phrases.

The following story is the one that is generally accepted with perfect understanding by the mystics of the G.W.B., and I trust that the mystics of the Western world will find in it a perfect explanation of this greatest of all mystical mysteries.

In the days of the mystic sects and sacred cults of the G.W.B. of the Orient, there was one Joachim who was high priest in the holy Temple of Helios at the outer gate of Jerusalem. He was a devout follower of the sacred rituals and had pledged to give all that was his to the great work. And when the time came that his wife, Anna, was to have a child, they agreed that if it should be a girl, and she should show in her infancy that she was divinely ordained, she should become a *Dove* in the holy temple and remain a virgin of the sacred sanctum. And in the ninth month Anna bore a child, and it was a girl as the astrologers (magi) of the temple had predicted. When the days were accomplished, Anna purified herself, and gave the child the breast, and called its name *Mary* because the sun at birth was in the sign of Libra.

When the child was six months old it was taken by the parents to the temple that the child might be examined and that which it carried from its last life revealed in the presence of the priests and the magi. The child was placed in the sanctum upon its own feet, with its face toward the East, while the mother sat upon a white cloth at the foot of the vestal fire. The baby was urged to walk and it did walk. The priests and magi noticed that the child took *seven steps* and then knelt upon its

knees before its mother in the sanctum. And as the magi chanted, the mother lifted up her child and cried aloud to the heavens: "As the Lord my God liveth, thou shalt not walk upon this earth until I give thee to the temple of the Lord." And the priests glorified in the fulfillment of the prophecy that Joachim, their high priest, should give to the temple a virgin.

The mother was true to her promise. She made a sanctuary in her home and placed a cloth from the Temple of Helios upon the floor on which the child Mary should walk so that she set foot not upon the earth until the day of her deliverance to the temple. The mother suffered nothing common or unclean to pass by her child and called the undefiled virgins of the priests of the temples to lead her about the improvised sanctuary and to carry her into the rose gardens when the sun was mellow.

The child's first birthday came and there was a sacred feast at the home of Joachim and Anna, and all the priests and scribes and magi of the temples of the community were present. Joachim brought the child Mary from the sanctuary to the priests, and she was sprinkled with undefiled water and the petals of the rose, and the magi officially proclaimed her name to be Mary, the Dove of Helios. The priests blessed her and prayed to God, saying: "O God of our Hearts, bless this child and make her name, as the magi have just proclaimed it to be, a name to be eternally named in all generations of the children of God." And all present said, "So be it, So be it, Amen!"

Her mother then took the Dove to the sanctuary to give it breast, and she sang a song to God saying: "I sing thee a song, O holy child, a song unto God, for [God] hath given me the fruit of righteousness. Harken, ye scribes of the twelve kingdoms of our land, for the Holy Dove is with me and God abideth with us." And when the feast was ended they went away rejoicing, each of the twelve scribes to bring the great tidings to their twelve temples of the twelve kingdoms.

The months passed and the child became two years old and there was another birthday feast. And Joachim said, "Let us carry Mary to the temple, that we may render the vow which we promised, lest perchance God refuse us the privilege and our gift become unacceptable." But Anna, her mother, said: "Seest not that Mary is wise and strong for her

years and blessed with an understanding not of this life but that which she carried with her to the mouth of my womb when she was born? In another year she will be stronger and of wisdom sufficient to permit her to journey to the temple alone without her father and mother as in the past.” And Joachim agreed.

And when the child became three years of age and was exceedingly bright with inner understanding, Joachim called the priests and scribes of the twelve kingdoms and invited the undefiled virgins of the priests to escort Mary to the temple. The virgins came with the sacred lamps burning with joy at the gift of God to the temple. But Mary refused escort and was carried only by her mother to the temple gate, that her feet might not touch the earth. The virgins were within the temple chanting and incensing the sanctum when Mary was received at the outer portal by the priests of Helios. The child was then taken into the temple and placed on the third step leading to the altar while the sacred fire burned and the priest prayed to God, saying: “God hath magnified [God’s] purposes and [God’s] name in all generations, and through this child God will manifest [God’s] redemption to the children of this land.” And he blessed the child, and she danced with joy and walked from the altar into the sanctum and knelt before the shekinah.

As the parents made their way toward the door of the temple they turned and saw that the child asked not to go. And as the virgins and priests and the scribes and magi walked to the West of the temple they cast rose leaves upon the kneeling child. The parents marveled at the child’s desire to remain alone in the great temple. When they had departed and the child was alone, Mary saw her own child body floating as a dove in the air, and from out of the space above the shekinah there appeared a hand as though of an angel giving Mary as she floated a morsel of food. And a voice, as if from the angel, said: “Behold, this is to be thy food henceforth, for no longer shalt thou find milk at the mother’s breast, for thou hast sucked that which God hath provided and now thou shalt eat only that which thy kin shall serve thee.”

At the time Mary became twelve years of age she was made womanly with functions which gave sign and symbol that her day had come to fulfill the vow of her parents. A council was held of the priests and the magi, who said: “Behold, Mary the Dove is become twelve years old

and she giveth sign that her day either to dwell within the temple or be given in marriage has come. Shall we take her now or wait the allotted time of twelve years and eleven months?" And the magi replied: "Go before the altar and ask God to show that which is right and whatever God shall manifest to thee, that also will we do."

And Joachim, as high priest, entered the sanctum and placed upon his official garment the triangular breastplate, and prayed for illumination. And a form appeared to him, saying, "Joachim, Joachim, go forth and summon the widowers of the [community] who hath homes and let them take a sacred staff apiece, and Mary shall be given to be cared for to him to whom God shall show a sign." And Joachim reported that which was given to him, and the scribes were informed to bring forth the widowers of their kingdoms.

Now there was one, by name Joseph, who was of the Essenian community at Galilee, and who was a devout brother of the temple of his kingdom; and when he heard that all the widowers were summoned to Helios, he laid down his axe and tools with which he was building a house, and hastened to meet the others. When all the widowers were assembled before the Temple of Helios, the high priest selected 144 sacred staffs and purified them before the altar and gave each of the widowers a staff. But there was no sign given by which Joachim could tell the answer to the selection the voice promised.

Joseph was the last to receive a staff and as he lifted it in sacred salutation to the high priest, behold a white dove went out of the rod and hovered over the head of Joseph. And the high priest said to Joseph: "Thou hast been allotted to receive the virgin which hath been given to Helios, to keep with thyself in thy home." But Joseph refused, saying he knew not what was intended by the gathering and that he had two sons and he was old, and the virgin appeared to be a young girl not yet thirteen as was the law.

The high priest admonished Joseph, reminding him what God did to Dathan and Abiram and Korah, how the earth opened and they were swallowed up because of their gainsaying. And Joseph feared and offered to take the virgin and to keep with himself the Dove of Helios. And he said to Mary: "Behold, I have received thee from the temple of God, and I will leave thee in my house and go to finish my building

and will come to thee.” And thus came Mary to live with Joseph, the widower and builder, as the virgin of the community.

And there came a time when the council of the priests of Helios was called to make plans for the making of a new curtain for the temple. And the priests said, “Let us call the undefiled virgins of our community and also our Dove of the temple.” And when the call was answered, there were seven virgins. And Mary was sent for as the Dove of the temple. When they were within the temple, the high priest ordered that lots should be cast to see who should spin the gold for the curtain and who should spin the green, the scarlet, the purple, the blue, and the fine linen and silk. And the true purple and scarlet fell to the lot of Mary, their Dove. And she took the materials and went away to her home.

As she worked upon her spinning there appeared to her a figure of a great master who said: “Fear not! I come to bring thee a message of great joy, Mary, Holy Virgin and Sacred Dove of Helios, for thy day hath come to fulfill the prophecy of the magi! Thou hast found favor with God and thy [brothers and sisters], and now thou shalt conceive from the *word* of God.” And when Mary heard this she disputed, saying: “Shall I conceive from the word of God? And yet shall I bear as every woman beareth?”

And the voice of the figure said: “Not in the manner of thy understanding shalt thou conceive, but in the manner of thy understanding shalt thou bear. For though the lips of man may kiss thee as the hands of the high priest hath blessed thee, so shalt the seed of man be thy heritage; but the *word* of God shall be breathed upon thee and its power shall make thee holy and bless the seed that it may be of God. Wherefore, also, that holy life which shall be born of thee shall be called the Son of God, and he shall attain the name *Jesus* because he shall be the *God in [humanity]* and will become the God with [humanity.]” And Mary answered: “It shall be according to the *word* of God!”

Mary wrought the purple and the scarlet and took it to the high priest. He spoke to Mary and told her he had been informed that her day had come to conceive and he blessed her and rejoiced with her, and told her that her name would be holy in all the generations of the

earth. Mary went away, in time of preparation, to her cousin Elizabeth and stayed there until her condition was so manifest that she again sought the privacy of her home sanctuary.

Her sixth month came and Joseph returned from his housebuilding and found Mary was with child and he was surprised and sorrowful. He smote his face and threw himself upon the sackcloth of the sanctuary and wept bitterly, saying: "With what face shall I look to my God? for I receive a virgin, and the Dove of our temple, and have not guarded over her and she has been defiled by man? Who hath done this thing in my home? Is not the history of Adam repeated in me?"

And Joseph arose from his sackcloth and called Mary and said to her: "Why hast thou who walked the seven steps and was raised to the third step of the Holy of Holies in our temple, permitted man to defile thee? Didst thou not receive food from the hands of an angel as a token that thou wast not to accept from the profane that which would feed the earthly desires?" And she wept bitterly that Joseph did not know and that he should mistrust her, and she cried: "I am pure and know no man!"

And Joseph was filled with awe and challenged her words, saying: "Whence then is it that thou art thus?" And she said with sweetness of voice: "As our God liveth I know not how this came but through the *word*! As I slept [*God*] came unto me with pureness of spirit, freed from the mortal body, and whereas [God] breathed not the breath of lust but spake with the breath of the *word of God*, I conceived in fact as God first conceived in thought; and as the thought preceded the creation of the world, so with me the most holy of all words preceded the quickening that came upon me."

And Joseph was afraid lest those who knew not of the laws of a God would misunderstand and misjudge, and he was in a quandary. But in the night there came to him the voice of the master, saying: "Be not afraid, for that which she hath conceived is of the Holy Spirit, and she shall bear a son and the Heavenly Hosts shall call his name Jesus because the Holy Spirit, through the *word* of God, shall be in him."

And there came later a scribe to the home of Joseph to inquire about his absence from a meeting of the community. And the scribe saw that

Mary was with child and he went forthwith to the high priest and was ready to attest that Mary had been defiled. And the high priest sent for Joseph and Mary and gave them hearing and listened knowingly to Mary's declaration of innocence and purity and then reasoned with the scribe. The magi consulted, and it was decided that the test should be given whereby their auras would manifest the color of sin, if sin there be upon them. And each was given a drink from the vessel containing the radiant water and they were placed in the dark and naught but pureness of light came from them and no sin was made manifest. And the high priest said: "If the God of our temple manifests not thy sin through [Gods] laws, then I cannot judge you." And he dismissed them as pure in heart and clean in body.

The day came when Joseph found it necessary to journey with Mary to avoid censure because of his predicament and Mary's strange experience. And they came to a cave where they rested at Mary's request, for she believed her hour at hand. Joseph sought aid and met a woman who came to the cave and met Mary and heard the strange story and believed it not. And in all directions Joseph saw that the heavens and the earth and the distant people upon it were silent and motionless and he knew that the presence of God was upon the face of the earth and that some miracle was about to be wrought.

While he and the woman waited in the cave, a great light came into the darkness and repelled them and it hovered over Mary. And the light became smaller in size and more dense in whiteness until it enveloped Mary and then slowly reduced to naught. And as Joseph and the woman watched in the silence the light was gone and there came the cry of a baby's voice and an angel appeared and said unto them: "At this hour, in humility of spirit, and with pureness of mind, to a virgin in the temple there is now born the Son of God, conceived by the Holy Spirit through the word of God. And his name will become Jesus, for that is the name of God into which the fire of spirit and the power of the word is given. But I warn thee not to tell to the profane that which has happened, for they will believe thee not but will say that unto a virgin some mortal man hath given child; and they will curse thee as a defiler of thy trust."

Joseph and Mary made ready to depart from the cave where they had been some time and were met by the magi who came, saying: "Where is the great King whose star in the heavens declares his birth? This hour should see him and his parents upon the highway, for his hour of birth is passed." And Joseph said: "I come unto Judea with the Son of God, not the King, for his Kingdom is not of the land but of the hearts of [men and women]."

And when Herod heard that a great king was born who fulfilled the strange predictions of the prophets, he made inquiries and was troubled. And when the magi of the G.W.B. heard what Herod threatened, they warned Joseph, while blessing Mary and giving to her of their script, gold, frankincense, and myrrh. And Joseph and Mary proceeded on their way by another road.

Chapter 6

THE BIRTHPLACE AND THE MAGI

IT MAY NOT be generally realized that there is a very interesting story in connection with the birthplace of the Holy Child, as for many centuries the exact *location* of the place has been an important point of discussion and is even disputed at the present time among the highest authorities.

We note in the Christian Gospel of Matthew the inference that Jesus was born in a house in Bethlehem. The words of Matthew are:

“In the time of King Herod, after Jesus was born in Bethlehem of Judea, [magi] from the East came to Jerusalem, asking, ‘Where is the child who has been born king of the Jews? For we observed his star in the East, and have come to pay him homage.’ . . . On entering the house, they saw the child with Mary his mother; and they knelt down and paid him homage.”

No comments are made in the usual Christian Bible in regard to the statement in Matthew that Mary and the child were in a *house*, and this difference of location usually passed unnoticed. We must bear in mind that the writer of the Book of Luke distinctly implies that the child was born in a *stable*, in the following words:

“And she gave birth to her firstborn son and wrapped him in bands of cloth, and laid him in a manger, because there was no place for them in the inn.”

Just why the almost universal impression exists that Jesus was born in a manger when there are two different statements in that regard will be explained in a moment. The fact of the matter is that in the early Christian days there was a third version of the place of birth that was exceedingly popular and based upon information not generally revealed in the present day Christian stories.

We find, for instance, that Eusebius, the first ecclesiastical historian, who played an important part in the Council of Nicaea, in A.D. 325, when most of the important traditions of the Christian church were discussed and decided, brought the matter of the birthplace of Jesus before the council for a positive decision. In his discussions he said little about a house or a manger being the reputed birthplace of the Holy Child, but said that the infant Jesus had been born in a cave instead. And he referred to the fact that at the time of Constantine a magnificent temple had been erected on the site of the cave, so that Christians might worship the place where the Savior was born.

In the apocryphal gospel called *Protevangelion* written by James, a brother of Jesus, we find reference to the cave again in the following words: "But on a sudden the cloud became a great light in the cave, so their eyes could not bear it."

Of the prominent leaders of the Christian church in the early days, we find that Tertullian (A.D. 200), Jerome (A.D. 375), and others, said that Jesus was born in a cave, and all the heathens of Palestine point to the cave in their land to this very day as the birthplace of the Christ Child.

We find also that Canon Farrar said: "That the actual place of Christ's birth was a cave, is a very ancient tradition, and this cave used to be shown as the scene of the event, even so early as the time of Justin Martyr in A.D. 150."

Now the facts of the matter are that Matthew was nearly correct when he said that Jesus was born in a house, for the cave in which the child was born was more than an empty excavation under a rock, or a hollow place in the mountainside. The Rosicrucian records and the Essenian records have always contained the statement that the child of Mary and Joseph was born in an Essenian grotto on the highway near Bethlehem.

I have previously referred to the fact that the Essenes possessed certain rescue houses and hospices in various parts of Palestine, and three of these were grottos. Usually such grottos were partly natural and partly artificial, and we know that grottos of this kind were quite common throughout Palestine and adjoining lands, for in early Christian days it was found safer and better to build grottos than large structures above ground when the purpose of such places was protection, isolation, and safety. The number of grottos still existing in Palestine always surprises the investigating tourists, and many of them are large enough to contain from ten to twenty rooms of a fair size, free from moisture, dampness, heat, or cold.

The Essenes made their three grottos very large, very convenient in location, and well protected from casual observation and attack by Bedouins or other tribes. Such grottos were located from twenty to sixty feet below the earth's surface, with rooms that were approached by well-cut stone stairways descending at a wide angle and well lighted by apertures in the side of the rock or rocks that protected the entrance way. Some of the rooms were carefully hewn out of solid rock while others were partly natural in their formation. In most cases, the surface of the rock walls of the rooms was covered with a mud cement over which decorations or paint of some kind were applied in an artistic manner.

Oil lamps, hung from the ceilings or set in niches in the walls, furnished ample illumination; and small apertures between the rooms, or rising upward into traversed channels, provided a proper circulation of air. Seats, or the foundations for lounges, were cut in the sides of some of the walls or were formed of rocks in the center or end of the rooms. There was always a well close to each of these places, and provision was made in each room for a large jar of fresh water. The floor of these rooms was usually finished with partly smoothed stones, much like flagging, and only in one or two of the smaller rooms used for storage or some other purpose was the floor left with its ground finish.

These grottos were usually furnished with convenient places for sleeping, eating, rest, recreation, and the care of the sick. In every way the appointments and equipment within these grottos were equal to

those found in the mud, stone, or clay structures that were built above ground. Thus, a grotto home, or hospice, was not considered less costly or less elegant than one that was built above the surface.

It was into the Essenian grotto near Bethlehem that Joseph and Mary went for the birth of the child. A few references in the ancient Essenian and Rosicrucian records regarding the event would indicate that it had been quite common for the women of the Essenian organization to go to one of the Essenian hospices for the delivery of their children. A number of these places were prepared to take care of the sick, the injured, and the needy, as hospitals do, and it was traditional among the Essenes, as it is today among the Jewish people, to give considerable thought and to provide special facilities for women at the time of delivery. We might almost say that some of these early hospices were the originals of the present-day [birthing suites] so well established in various parts of the world.

I recently visited this Essenian grotto near Bethlehem and carefully investigated the size, shape, and arrangement of the rooms, and I cannot see how any one of the millions of persons who have seen the birthplace of the Holy Child can believe that there ever was any justification in calling it a manger. The large reception room in the center of the grotto, surrounded by many private rooms, immediately indicated that it was either a very large home, much larger than any home commonly found in Palestine, or a public place of some kind.

The stone stairway descending to the rooms would certainly suggest that the place could not have been used as a stable. When one sees the careful carving of the stones, the decorations still visible in many places, the care with which the floors were finished, and the arrangement of the rooms leading off from the central room, one is impressed at once with the fact that this was undoubtedly a very well planned and cared for hospice of some kind. Even today, the rooms are dry enough, warm enough, and comfortable enough for pleasant living, and when one sees the crude structures above ground that are usually provided for cattle (when any structures are provided at all), it is quite evident that no one would have gone to such trouble and expense for the sake of providing a stable for cattle.

At one of the famous Christian councils held by the early church leaders, when so many of the doctrines, teachings, and disputed points of tradition were being discussed and definitely settled, it was finally voted that the best way to end all of the argument about the birthplace of Jesus was to arbitrarily determine that a manger was the nature of the enclosure in which he was born. This arbitrary decision settled the matter for all time, so far as the church was concerned, and regardless of the many authentic records that still exist, it is probable that the story of the birth occurring in a lowly manger will remain a part of the Christian traditions.

One other important point in connection with the place of birth and the event of the birth of the Holy Child is likewise interesting. This pertains to the visit of the magi and the homage they paid to the Holy Child. According to the authorized Christian versions the three magi were led by a great star which caused them to journey "from the East" to the very locality in which the child was born. And they carried with them treasures and gifts of gold, frankincense, and myrrh.

The story of the star appearing in the heavens at this particular time has always been a fascinating one, and it is also one that skeptics or doubters of the Christian traditions have looked upon as a fantastic element, introduced in the account merely to make it picturesque. But long ago scientific astronomers, who investigated this matter with their charts of the periodicity of famous comets and moving star-like bodies, discovered that *at* or *about* the time of the birth of the Holy Infant, there was a great star or heavenly body that was making its rapid movement across the heavens above these lands.

Not only did this discovery, which has been substantiated by many scientists for many years, tend to verify the story of a symbol that could have led the magi in their journey, but the many ancient traditions regarding similar stories reveal the fact that it was a common belief among the magi, the astrologers, the Chaldeans, and the mystics of the Oriental countries, that whenever a great comet appeared in the sky and moved across the heavens, a leader or great avatar was about to be born who would prove to be a Savior or Redeemer. So well established was this belief, and so many interesting mystical points are involved in it, that I believe it worthwhile to take a little time at this point to speak of these matters.

It is true that in the story told in the Book of Luke, the writer says nothing about magi from the "East." However, he says that shepherds came and worshiped the young child, and that these shepherds had been keeping their flocks by night, and that the angel of the Lord appeared before them saying, "I am bringing you good news of great joy for all the people: to you is born this day in the city of David a Savior, who is the Messiah [the Christ], the Lord."

That statement in the Book of Luke was evidently written for the purpose of trying to explain the ancient belief that when a great star appeared, moving across the heavens, it was a message from God that a Savior was born, and the writer of Luke reduces the idea to a definite statement made by the Lord to the shepherds in the field.

In investigating the origin of this belief, we find from the old Essenian and Rosicrucian records that when the divine child called Krishna was born, a great star in the heavens proclaimed the fact, and Krishna was immediately adored and honored by the magi, who brought gifts to him. The old records state that the gifts consisted of sandalwood and perfumes. Likewise, at the time of the birth of Buddha, a great moving star in the heavens proclaimed his divinity, and the magi again visited the place of birth and paid homage and presented gifts.

The birth of Confucius in 351 B.C. was heralded by a great star moving across the heavens. This was observed by the magi, who found the location of the great child through the movement of the star, and went to the place of birth and paid homage: We find the same story in regard to Mithras, the Persian savior, Socrates, Aesculapius, Bacchus, Romulus, and a host of others.

We must remember that astrology was the one highly developed science among the magi and mystics of the Oriental lands, and that out of this science grew the present-day science of astronomy. It may be inappropriate, but I cannot fail to take this opportunity of stating that the ancient practice or art of astrology was more highly developed than it is today, and it did not deal with the petty things of *luck* and *misfortune* with which our present-day astrology deals, and which so shamefully blasphemes an ancient and honorable mystical science.

The magi referred to in the Bible were not just astrologers, or mediocre philosophers, who might have also been shepherds in the

field, or ordinary persons of everyday affairs, but were the learned instructors and high representatives of the great academies and mystery schools of the Orient. The title of *magus* was granted only to one who had attained the very high degree of initiation in the mystery schools by proving to be a master of the arts and sciences, and by being a highly evolved mystic in every sense. The magi were consulted by the kings, potentates, and learned people of all lands, not only in regard to matters of astrology or astronomy, but in regard to history, medicine, natural law, spiritual law, and hundreds of other subjects which required profound thinking and unusual learning to explain or comprehend. They were the great oracles for the learned. They even occupied the position of the highest advisers in courts and councils of last appeal involving disputes of many kinds.

That a few of these magi should have observed the symbolic star and noted its significance was but natural in their time. But we must not presume that their observance of the star occurred only a few hours before the birth of the Holy Child, and that they hurriedly left their sanctums or their places of occupations and journeyed rapidly across lands to the birthplace. According to the ancient records at our disposal, we find that, as in all other cases, where the symbolic star had been noticed, the movement of this particular star had been observed for many months prior to the birth of the Holy Infant. For several weeks prior to the birth, close and careful tabulations had been made regarding the movement of the star and the probable time of its ultimate significance. And those who had been selected by the mystery schools to journey to the place of birth and represent the Essenes and the G.W.B. had started on their way to Palestine several weeks prior to the time of the birth.

We find from the records, also, that these magi knew the story of the selection of Mary as the preordained mother of the Holy Child, the location of the home of Mary and Joseph in Palestine, and the arrangements that Mary should go to a particular grotto hospice near Bethlehem for the delivery of her child. The record states that Mary was at the hospice three days before the child was born, awaiting the important hour. The magi were in the vicinity of Bethlehem, also awaiting the hour.

When the star appeared in the heavens at its highest point and then began its sudden and rapid descent toward the horizon, the magi knew that the day and hour had come—and they had but to journey a short distance to the grotto to see the child that had been expected. They brought not only the things that are itemized in the Christian account, but greetings from the highest officials of the G.W.B., jewels of a symbolic nature for the mother and father, and a rosary containing a rare emblem for the infant to wear about its neck, that it might ever after be identified as the anticipated Son of God.

The magi, after having officially visited the child and formally presented their gifts and greetings, journeyed on to Mount Carmel and there made a report of the birth, and left official instructions for the keepers of the monastery and school at Carmel in regard to the education and care of the child throughout its infancy and childhood. Then these magi went on to Egypt and made their report to the high priests and the supreme officers of the G.W.B.

Chapter 7

THE BIRTHDATE OF THE HOLY CHILD

THERE HAS ALWAYS been considerable discussion regarding the year in which Jesus was born, but it is not my purpose to participate in this dispute at this time. The fact of the matter is that the actual year, according to the various calendars then existing and now existing, is of little consequence, for a definite year in one calendar would be a different year in another calendar. It would be very difficult for most people to work out a calendar which would enable them to figure correctly the true year of birth.

That the writers of the books of the Bible were confused in regard to the actual year is very apparent after even a casual examination of their statements. For instance, in the Book of Matthew, we are informed that Jesus was born in the days of Herod, the king, and the writer of the Book of Luke states that Jesus was born when Cyrenius was governor of Syria or later. These two statements have caused a great deal of discussion, for the days of Herod ended 4 B.C., and biblical authorities state that Cyrenius was governor of Syria from 4 B.C. to 1 B.C., and again in A.D. 6. Even the matter of the taxing referred to in the stories indicates that a different year is referred to than is commonly accepted as the year of the birth of Jesus.

The very interesting point in regard to the time of birth, however, pertains to the day of the month and the month itself.

For many centuries after the life of Jesus, the Christian church founders and eminent ecclesiastical authorities were unable to decide as to the birth date of Jesus. Among the early Christians, the anniversary of the Nativity was celebrated with a great festival in May, sometimes in April, and on other occasions in January. Some of the earliest traditions in the Christian church definitely stated that May 20 was the correct date, while some of the church leaders insisted that April 19 or 20 was the true and correct date. Even up until the fifth century after the life of Jesus, the matter was still in dispute, but in that century, the community at Rome held one of its famous councils and made a definite decision by selecting December 25, or midnight of December 24, as the true time. And in this decision we find a very beautiful and important mystical story.

It must be understood by my readers that the many facts revealed in this book which are different from the authorized Christian versions of the life of Jesus are not facts which were *concealed* during the early Christian days, but were *known* to all of the leaders of the Christian church and to the high ecclesiastical authorities who gathered in councils from time to time and established the doctrines, traditions, and forms of ceremony to be officially a part of the Christian theology. What motives these early authorities had for disregarding facts known to them, and for withholding from the masses certain facts of intense interest to us at the present time, and in changing other facts to symbolical falsehoods, must be left to the intuition of my readers. The popular statement that “the end justifies the means” was unquestionably one of the thoughts in their minds.

We find in the writings of these early authorities a statement made many times that certain changes and inventions which they established in connection with the traditions of the life of Jesus were “theological necessities.” In other words, in order to utilize many of the ancient, mystical ceremonies which church authorities derived from the temples of Egypt and from the doctrines and practices of the Essenes and the G.W.B., they had to invent certain points and principles in connection with the life and work of Jesus so as to make these ceremonies adaptable and consistent. In order to establish a new theology and many new doctrines, they had to ignore and set aside many facts which would have been inconsistent with their decisions.

When, however, it came to some important points that had to be definitely decided, they were forced to rely upon the ancient principles and doctrines that had been established and were known to the *true spiritual laws* so that they would have some foundation upon which to base their decisions. The decision that *midnight of December 24* was the actual birth time of Jesus was one such case, and the reason for this is intensely interesting from a mystical point of view. This decision, however, conflicted with one of the points in the traditional story of his birth, namely, the story that at the time of the birth *shepherds were in the field caring for their flocks*. It has always been said by those who knew the conditions in Palestine at that time that the latter part of December is not a season when shepherds are in the fields caring for their flocks at night or at any other hour of the day, and that this incident was introduced in the story when the belief was common that Jesus was born in the month of April or May.

However, the great fact which the church leaders had to take into consideration in reaching their decision was that throughout all the preceding centuries, all the other great avatars who had been born of virgins, who were Sons of God, and who were known as Redeemers or Saviors, had been born on or about December 25. The other fact that they could not fail to consider was that there was a spiritual law or a cosmic law for the birth of these great avatars on December 25, and that no Redeemer of the world could have been born at any other time.

We must bear in mind that the birth of a great avatar or a Son of God is not a simple incident in the scheme of things, nor a casual accident of conditions. The birth of an avatar is the result of certain laws preordained and established in the cosmic scheme and coincident with a series of events leading up to and culminating in the Divine Birth. The cosmic birth of Jesus, as of every other avatar, is an interesting story in itself and has no place in this chapter. But in order that my reader may be familiar with the manifestations of this great cosmic law, I will present the following facts from the historical records of the G.W.B.

In the first place, there is a correspondence between the spiritual law, cosmic law, and mundane law pertaining to a universal condition

manifesting about December 23, 24, or 25 of each year. It is at this time that a cosmic change occurs called the Birth of the God Sol, and this event was always celebrated by the ancients as the Accouchement of the Queen of Heaven or the Celestial Virgin of the Sphere.

In India this period was one of great rejoicing everywhere. Many centuries before the Christian era, this period in December was celebrated as a religious festival, at which time the people decorated their homes with garlands and they were prolific in their gifts and presents to friends and relatives. So far back in antiquity can this religious festival in December be traced that its origin is lost in obscurity.

In China, also, long before the Christian period, the people recognized this period of the winter solstice as a holy time, and on December 24 or 25 they closed all their shops, their courts, and their places of business activities. Among the ancient Persians, their most splendid ceremonials were in honor of Mithras, whose birthday was recorded as having occurred on December 25.

Among the ancient Egyptians for many centuries, December 25 was celebrated as the birthday of several of their gods. We find this referred to in all of the histories of the religions of ancient peoples, as, for instance, in the book entitled *Religion of the Ancient Greeks*, by De Sepehenes, who says: "The ancient Egyptians fixed the pregnancy of Isis (the Queen of Heaven and the virgin mother of the Savior Horus) on the last days of March and towards the end of December they placed the commemoration of her delivery."

In some cases the celebration of the birth dates of some of these ancient gods was changed by high proclamation, just as the birth date of Jesus was changed from May to December. The birth date celebration of Krishna is now held in July or August.

In Bonwicks *Egyptian Belief* we find a verification of what is contained in the Rosicrucian records. He says in regard to Horus: "He is the great god—loved of Heaven. His birth was one of the greatest mysteries of the Egyptian religion. Pictures representing it appeared on the walls of temples. One passed through the holy *adytum* to the still more sacred quarters of the temple known as the birthplace of Horus. He was presumably the child of deity. At Christmas time, or that answering to

our festival, his image was brought out of that sanctuary with peculiar ceremonies, as the image of the infant *Bambino* is still brought out and exhibited in Rome.”

The Christian figure of the *Bambino*, or the Christ child. It is this form carved in marble or stone that is exposed in the churches on Christmas morning and kept on view from Christmas to Epiphany. It is claimed that Saint Francis of Assisi was the originator of this statue in the 13th century, but research has revealed that a similar statue of a Holy Child was exhibited on Christmas Day in many lands before the Christian era.

It is interesting to note here that the word *Bambino* is now a sacred word among the foreign Christians, and it is a term used for representations of the infant Christ Jesus in swaddling clothes. It is customary in Rome to bring out to public view, early on Christmas morning, an image of the Bambino carried with great ceremony for the public to salute and greet, in honor of the original birthday. This

little incident of Roman Christian ceremony is just a continuation of the ancient customs established in the mystic lands by the G.W.B.

Osiris, son of the holy virgin, or Neith, was born on December 25; and the Greeks celebrated this day as the birthday of Hercules. Bacchus and Adonis were also born on December 25. Tertullian, Jerome, and other founders of the early Christian church, who labored so diligently in the formation of Christian doctrines, ceremonies, and creeds, inform us in their early writings that the ceremony of the celebration of the birthday of Adonis on December 25 took place in a cave and that the cave in which they celebrated this mystery was in Bethlehem, and was, in fact, the same cave in which the child Jesus was born. This is but another verification of the fact that the Essenian grotto in which the Holy Child of Mary and Joseph was born had been used for the celebration of previous avatars, such as Adonis. This is why the magi knew where to find the new avatar on his birthday.

The fact that December 25 was celebrated generally as a day associated with the birth of *Sol*, or the cosmic birthday of certain laws and principles manifested by the Sun, is shown in many ancient records of the early Christian celebrations in Rome. We can turn to the writings of the Reverend Mr. Gross, who has written very thoroughly and authentically in regard to these matters, and read as follows: "In Rome, before the time of Christ, a festival was observed on the 25th of December, under the name of *Natalis Solis Invicti* (birthday of Sol, the Invincible). It was a day of universal rejoicing illustrated by illuminations and public games. All public business was suspended, declarations of war and criminal executions were postponed, friends made presents to one another, and the slaves were indulged with great liberties."

It is interesting to note, also, that among the ancient Germans centuries before the birth of Christ, these people celebrated annually, at the time of the winter solstice, a sacred period which they called their *Yule-feast*. On this occasion all agreements were renewed, the gods were consulted as to the future, sacrifices were made to the various gods, and the people indulged in jovial hospitality. Of this ancient ceremony the word *Yule* still survives as the old name for Christmas, and the ancient custom of burning the Yule log on Christmas Eve is still the usual practice.

It is interesting to note also that the word *Yule* in French is called *Noël*, which is the equivalent of the Hebrew or Chaldee word *Nule*. Among the ancient Scandinavians there was a yearly celebration at the winter solstice that was observed as the *mother-night*, and the feast was called *Jul*. It was in honor of Freyr, the Holy Son of the supreme god and goddess. The celebration included all sorts of demonstrations of joy and happiness, and the bestowing of gifts.

In Great Britain and Ireland the Druids celebrated December 25 as a holy day and burned great fires and lights on the tops of hills. Even in ancient Mexico, the last week of December was celebrated as a sacred feast, in honor of the birth of a god.

The use of evergreens and mistletoe at Christmas time is derived from ancient practices. Tertullian, the early church leader to whom I referred previously, writing from a distant land to his colleagues at home, described this custom of December 25 and the use of evergreens and mistletoe. Saying that it was “rank idolatry,” he described how the natives of this region decked their doors “with garlands of flowers and evergreens.”

From the foregoing we see that when the G.W.B. in Egypt set down in its records the statement that the *day and hour of the winter solstice* was the cosmic period for the birth of avatars, as observed in all the ancient notations, it was not *ordaining* a time or arbitrarily establishing by decree a period for the celebration of the birthdays, but was merely proclaiming what it had observed and proceeded to state how the cosmic law had made itself manifest. Just why avatars should be born in the winter solstice, and why so many of humanity’s great leaders were actually born at such a time, is a matter that deals with the principles of reincarnation, cosmic cycles of existence, and cosmic laws relative to the periodicity of the stages of advancing civilization. Such points as these have no place in the present volume.

Of course, those who are interested in the profound mystical principles and spiritual laws of the universe, and who are anxious to know just how these affect every man and woman in his or her personal development and attunement with the Cosmic Consciousness, will make contact with some school or system which deals with these subjects thoroughly, conscientiously, and without bias or prejudice.

Naturally such information is never sold and never put into book form for public sale at any price. For this reason the seekers will vainly search among bookstores or in the offerings of private publishers or commercial movements for the information desired. Only such organizations as the Rosicrucians, for instance, or branches of the G.W.B. operating in foreign lands, will give the seeker this information in a private, personal way, and with no other motive than the benefit that each individual will derive from the instruction, if he or she is found worthy to have such knowledge.

Chapter 8

THE CHILDHOOD OF JESUS

WE FIND TWO periods in the authorized Christian version of the life of Jesus which are passed over without comment and without detail. These are the years constituting his childhood and up to and including his appearance before the learned authorities in the synagogue, and the period from that time until the beginning of his mission in the Holy Land as an adult.

The silence in Christian literature regarding these two periods has unquestionably been responsible for a great many discussions that have led to severe criticism of the entire story of his life. Aside from the orthodox version of his birth, which so many reject because they do not understand it, the two gaps in the story of his life referred to above have constituted excellent reasons for the rejection of the story of the remainder of his life. Those who cannot accept the immaculate conception and divine birth of Jesus do not hesitate to point out the two gaps in the early part of his life as proof that the real story of the life of Jesus has never been told.

The highest critics of the authorized version of the life of Jesus point out with some justification that if the biblical accounts did not go into such detail and put such great stress upon the events of his conception and birth, the absence of details regarding his childhood and youth would be immaterial and would cast no reflection upon the entire story of the latter part of his life. But when every important and casual event leading up to his birth, and the events of the birth itself,

are recorded by so many witnesses and glorified in such detail, there appears to be some significance in the silence regarding his youth.

Surely those who felt it their duty to gather, record, and preserve the essential and nonessential points regarding the birth, and all that led up to it, must have had access to the facts pertaining to his childhood, and these facts must have been more definitely recorded and better known to a larger number of persons than the events pertaining to the conception and birth of Jesus. Why, then, the silence and the complete absence of those details which would have been highly interesting and extremely illuminating to those who would adore Jesus and seek to worship every phase of his life?

Be it known, therefore, that the facts regarding the childhood and youth of Jesus are not lacking and are not absent in those records which were kept and are still preserved by those groups of persons and organizations which have not been influenced by the rulings of religious councils or the dictates of synods and who do not find in those facts any event or any incident belittling to the greatness and supreme mastership of Jesus the Christ.

I am aware that some of the facts pertaining to the childhood and youth of Jesus have become public in various lands at various times and that some of these facts have found their way into the mystical writings of the Occidental world. But the complete story and the most important details have been withheld by those organizations who know them well in the belief that until the Western world was ready to understand them in their richness and illuminating significance, it would be better to withhold them. There is no reason why these facts should not be revealed at this time, and I am glad to say that the authorities who have the records in their archives, and with whom I have recently held consultations in this regard, agree that the present recklessness throughout the Western world in regard to religious matters, and especially the desire on the part of so many millions of persons for a more complete outline of the life of Jesus, warrants the publication of the facts now given for the first time in Western sacred literature.

That Jesus must have had some unusual preparation and very thorough education is quite apparent to any student of Christian

doctrines and to every analyst of the life of this great teacher. The mere fact that at an early age he could astound the learned of his country by his ability to answer and ask profound questions proves that during the first ten or more years of his life, he was carefully educated and carefully trained. We may assume with perfect reason and logic that as a Son of God or a messenger of God, he was inspired continuously and could find in his immediate contact with the Consciousness of God the illuminating thoughts which he expressed. But with the same reasonable logic, we must believe that he had to receive that education and training in the mundane schools of this world, which would make it possible for him to *express* those ideas and those thoughts in the words and tongue, in the images and pictures, understood by the multitude.

The greatest of the masters in art have undoubtedly painted their masterpieces under inspiration. Nevertheless, each of these masters had to be trained in the technique of expressing that inspiration in a medium that would convey the thought, the idea, the picture, from one mind to another. The greatest of the composers have unquestionably written under inspiration, and by their own admission they have found that the most beautiful passages in their music came to them as from Heaven; nevertheless, these artists had to be trained in the technique of expressing that which was inspired within their souls.

No matter how completely and perfectly Jesus may have been in spiritual contact with the Cosmic Mind and with the Consciousness of God, he had to have that training, that education, and that practice in the use of words and in the expression of thought which enabled him to say the most beautiful things in the most beautiful language ever spoken. We cannot conceive of an uneducated, untrained, unprepared instrument speaking such thoughts and doing such things as he did, even under the most perfect inspirational contact, without preparation and training.

The argument that any such training and preparation in mundane schools and at the hands of earthly advisers, instructors, and guardians would weaken the claim of divine preparation and unique Sonship, is absolutely absurd. Have we any reason to believe that the mother of Jesus did not teach the little child to walk or to eat? Or shall we assume that these things were divinely inspired in him, and that from the moment of birth such things were known to him? After all, is

not the matter of walking upright, instead of crawling about, a matter of earthly wisdom and regulation, and not a rule of the Cosmic or an establishment of God, which God would inspire in the minds or consciousness of all beings? Is not the use of certain words, of certain languages, and the grouping of these words into grammatical phrases, a result of human regulations and rules rather than cosmic laws and principles? If these things are earthly products, then they must be acquired at the hands of humans and must be taught by humans.

Most certainly Jesus was taught to speak the Hebrew, the Aramaic, and the Greek languages, for we cannot conceive of God's having inspired the knowledge of these languages in the consciousness of Jesus without earthly education. For why should these three languages have been selected by God as the modes of expression on the part of one who was to be a Redeemer of all peoples in all lands, with many tongues? If Jesus was taught how to speak and teach several languages, with the ability to interpret the inspiration of his soul into sounds and words that would convey meaning to others, there is no reason to believe that he was not taught other things necessary to carry out his great mission in life. All this is for the purpose of presenting the logic and reasonableness of his education, and not for the purpose of attempting to prove that he must have had such education. There are ample records to show *how* and *where* he was educated, and we will deal with these at this time.

In the first place, I have already shown that Jesus was born in the family of two devout Essenes and in a community of Essenes. This in itself was sufficient to guarantee the young child the very highest education obtainable in any land at that time. Not only were the preparatory schools conducted by the Essenes sufficient to give every child an excellent education at the hands of teachers and masters who had been trained in many lands and raised to the highest degree of ethical and literary attainments, but the associations and connections which the Essenes maintained with their other branches in foreign lands guaranteed a very liberal education to this special Son of God and this special charge of the Essenian community.

We are told in the accounts of his birth how the magi, who were the learned individuals of the mystery temples and the chief instructors

of the highest principles of education, came to the birthplace of Jesus to pay homage to him as the preordained avatar of the new cycle. This acknowledgment on the part of the great magi indicates that the little child was anticipated and expected by the Essenes and by the Great White Lodge in all lands, and that he would be guided and protected throughout his life. To assume that these magi paid such homage and adoration to one whom they knew to be the great and expected leader of humanity, and then did not show any further interest in his education, development, and training, and played no part in the development of his life, is to assume something that would be more of a mystery than any other phase of the life of Jesus as it appears in the authorized Christian version.

I have said that at the time of the birth of Jesus, the Essenes constituted a large community in Galilee, and that they had hospices and refuge houses in various parts of Palestine for the care of the poor and needy. They also maintained the Supreme Temple in distant Egypt and minor temples in Palestine and other places. I must point out now one other fact that has been held in secrecy for many centuries, and that will probably explain many strange references in the sacred literature of the Christians and other sects.

The Nazarenes, the Nazarites, and the Essenes had united their interests in regard to one essential work—a work that is referred to by many authorities in religious and sacred histories and encyclopedias as being one of the common interests which bound the Nazarenes, the Nazarites, and the Essenes. This work was the maintenance of a great school, college, and monastery on Mount Carmel. The introduction of this historical place into the life of Jesus may seem surprising to a great many of my readers. For this reason a brief resume of the history of Mount Carmel may be not only appropriate, but of value to those who wish to make further research in this regard.

Just when Mount Carmel became the secret, sacred place for the maintenance of an isolated, protected school of mystics and of the G.W.B. is not definitely known. The earliest historical incidents of a religious nature connected with Mount Carmel are those associated with the lives of Elijah and his son. The ancient Jewish documents,

as well as many of the writings preserved by the Roman Catholic Church, which in later years became greatly interested in the Mount of Carmel, show that from the earliest known period of the history of this Mount, a tabernacle, monastery, or temple of some kind was located there, and that when Elijah went to this mountain to carry out the many marvelous things recorded of him, he found a temple and an altar there. We also know, from references in various records, that many of the great masters of the G.W.B. spent part of their lives on this mountain in the temple or monastery.

Even Pythagoras spent part of his life there, and in the history of his life this retreat of Mount Carmel is referred to as “sacred above all mountains and forbidden of access to the vulgar.” We find even in the Roman Catholic records, which have traced the history of Mount Carmel very carefully, references to the fact that “in ancient times the sacredness of Carmel seems to have been known to other nations besides Israel; thus in the list of places conquered by the Egyptian King, Thothmes the Third, there is a probable reference at Number 48 to the ‘Holy Headland’ of Carmel.” Those who are students of Rosicrucian history know that Thothmes III was one of the great founders of the early mystery schools of Egypt and a leader in the movement that became the G.W.B. The Rosicrucian records also point out that Thothmes III conquered Carmel in the year 1449 B.C. and released it to those who sought to maintain in this out-of-the-way place a school and monastery for the mystery teachings.

Now it is well known that Elijah was a Nazarite and an Essene, and that both the Jewish and Roman Catholic records refer to him as such. This one fact alone would be sufficient to indicate the nature of the demonstrations which Elijah performed on Mount Carmel and the nature of the monastery and temple maintained on the summit of the mountain.

In many of the old stichometrical lists and writings and papers of the ancient ecclesiastical writers, mention appeared of an apocryphal Apocalypse of Elias, from which some citations are said to be found in I Corinthians 2:9, and elsewhere in the Bible. This old book or Apocalypse of Elias was known to the mystics of the G.W.B. and is known to all of the Oriental Rosicrucians as a very sacred record of

the early history and teachings of the Essenes and the Nazarenes. In the early Christian centuries and during the lifetime of the Master Jesus, the Apocalypse of Elias was well known and used in the sacred classes of the most advanced members of the organization. But like many other very valuable and illuminating records of early periods dealing with the more secret teachings, it was withdrawn from public use and became "lost."

However, in 1893, Maspero, the famous historical writer, connected with the Rosicrucian Order of Egypt, found a Coptic translation of it in one of the Order's monasteries in Upper Egypt. Since then several other translations in other languages have been discovered in the archives of the G.W.B., and parts of these have been used in the recently issued higher teachings of the Rosicrucians. From this Apocalypse of Elias and from the other Rosicrucian records, we learn much about the establishment of the monasteries and schools at Carmel, which were known as "the school of the prophets" or "the school of the Essenes."

As years passed by, the attendance at the school and monastery at Carmel became so large that a community was established there, composed of those who were students. They adopted a distinct form of dress and remained within the monastery grounds throughout their entire lives except for the periods when they went forth to other lands as missionaries. It was here that many of the most ancient manuscripts were translated and illuminated on parchment and sent to the various archives of the G.W.B. throughout the world. A wonderful library was also maintained at Carmel for many centuries. Members of this community were present at Saint Peters first sermon on Pentecost, and they built a chapel in honor of this occasion. Many other historical structures existed there, such as El-Khadr, the school of the prophets; El-Muhraka, the traditional spot of Elias's sacrifice; Elias's Grotto; and the monastery itself.

About 400 years after the Christian period, the monastery and school at Mount Carmel were abandoned as the principal place of education for the G.W.B. The wonderful library and the thousands of manuscripts and records were transferred to the secret monastery of Tibet, where these things are now preserved, and where the greatest

school of mysticism and sacred literature in the world is maintained. Some centuries after this abandonment, an order of a monkish nature was established in Carmel, and the members of this organization claimed to be descendants of those of the original organization, but likewise claimed to be Roman Catholic in faith. This contention caused much dispute for several centuries, and it was finally settled when Pope Innocent XII in 1698 decided that the claim of direct succession was not correct and that the new organization had no connection with the early Carmelite organization. Out of this decision grew the present organization known as the Carmelites, or White Friars, as they are called in England, which is a Roman Catholic organization popularly known as the Carmelite Order. Today in the midst of the ruins of the ancient Essenian structure can be seen the Roman Catholic convent of the Carmelite organization.

According to the Rosicrucian records, we find that in the sixth year of his life, the youthful Jesus was placed in the school at Carmel and began his preparation and training as a Son of God and an avatar. There is no question about the authenticity of this statement. It is recorded in too many places and in too many different ways, and it is verified by so many later incidents in his life, that any question of this fact cannot be reasonably raised. The records further intimate that while he was an apt and perhaps unusually bright student, he was given every special advantage that the entire organization, not only in Palestine, but in Egypt as well, could give to one that was known to be their special charge and the greatest among them. It is also recorded that young Jesus was not entered in the school under the name of Jesus, but under the name of Joseph, and this presents another interesting fact for those who desire the most intimate details of his life.

It is commonly believed by biblical students that the name of Jesus was given to the child at the time of his circumcision, in accordance with the custom of the land. This is based upon the fact that he was called Jesus later in his life, and that before his birth it was said that his name would be or should be Jesus. The Gospel of St. Luke tells us the familiar story of how an angel appeared to Mary and told her that the unborn child would be called Jesus. But this statement and that in Matthew are really prophecies. They say simply that Mary shall bring forth a child who *shall* be known as Jesus. In the historical record

presented in Chapter 5 of this book, we find that Mary was told that the “holy life which shall be born to thee, shall be called the Son of God, and he shall *attain* the name of Jesus.”

Nowhere in the Christian Bible do we find the statement that he should be christened Jesus at the time of the circumcision, but we do find reference to such naming at his circumcision in the Gospel of the Infancy of Jesus. But these statements were added to these gospels on the presumption that the name he bore later in life was the name that was given to him at circumcision. The Gospels were written long after the lifetime of Jesus, and they contained similar assumptions and inferences without foundation. From the time that the disciples knew Jesus or came in contact with him, until the close of his life, he was known as Jesus and bore that name. Since they never knew him or contacted him before he bore that name, they had no reason to believe that he ever had any other name. The fact that such a name was predicted for him, and that he eventually attained such a name, causes us to investigate the meaning of the name *Jesus*.

We know that the word *Christ* comes from the Greek word *Christos* which means “Messiah.” We find that the word *Christos* was introduced to other nations when the Septuagint was prepared about 100 B.C., and that it was used to translate the word *Mashiach*, which means “the anointed one,” or, in its more complete form, *Meschiach*, meaning “Yahvehs Anointed.” Cyrus is called “the anointed,” and in Psalm 105:15, the plural form “anointed ones” is used to apply to the patriarchs. In the Old Testament, the word “anointed” is limited to mean a Jewish king, except in the case of Cyrus and the patriarchs, which exceptions prove that it could mean a person *great in more ways than one*. The word or title *Christos* had been used in the mystery schools and in the Orient for the name and title of many of the former avatars.

Going back to the Septuagint, we find that the Greek word *Christos* originally came from the name of one of the Egyptian deities. There was old Hermes, whose name has been corrupted or translated into “Hiram of Tyre,” who built the temple without the noise of axe or hammer. The Latin form of this name is Mercury, while the Greek form is Hermes, and the Egyptian form was Tachut. Now in Hebrew, the word *Tachath*, which is called *Thoth* occasionally in Greek, means

“under” and “beneath.” Thoth was the Lord or God of Maa, or the Egyptian Maa or Maat, meaning “truth.” And *Maa kHeru*, meaning “true words” is the basis from which came the Greek form *Mercury* or *Mercury*.

The Egyptian letter or diphthong *kH* is a highly aspirated H and by the Greeks is usually transcribed as X and, vice versa, the value of the Greek X is usually transcribed as *ch*. The *kHeru* of the Egyptians would be therefore *cheru* or *Ch-R*. These latter letters form the famous XR or the cryptogram of the early Christians, which I personally saw and traced on several stones of the tombs in the catacombs of Rome. It is generally accepted in all Christian historical records that this *XP* referred to Christ, and in the Greek Gospel of John, Jesus is called the *Logos*, which is a word having a similar meaning. Therefore, we see that the term *Christ* was a title to be specifically applied to and attained by one who had been especially born and deified as a messenger of God.

Now the word *Jesus* presents the same understanding. The old Hebrew form of the word as found in the Old Testament is Joshua, or Jeshua, and was often rendered as Jesu. The Greek form of the name is responsible for the final *s*. Originally, the Hebrew form of Joshua meant “helped of Yahveh,” while the later Hebrew form means “to deliver” or “to save.” Therefore, Jesus came to be known as meaning “savior.”

In the Synoptic Gospels we do not find the disciples at first calling their master by the name of Jesus, but they did call him *Rabbi* meaning “teacher” and *Adonai* meaning “master,” and other titles of respect and love.

The record of his entrance into the school at Carmel shows that he was entered as Joseph, the son of Mary and Joseph, and the reincarnation of Zoroaster, the “Son of God.” When and how he attained the name of *Jesus* is explained in another part of this work.

Chapter 9

JESUS ENTERS THE PRIESTHOOD

THE ONE DEFINITE comment made on the early life of Jesus in the popular stories of his life, especially those of churchly origin, tells about the wonderful impression which the child made upon the learned doctors and masters at the time of his visit to Jerusalem in his thirteenth year. Even among the most advanced of Christian theologians and in nearly all of the extensive histories of his life, the real facts pertaining to this visit to Jerusalem are misunderstood or misrepresented through a lack of knowledge of what actually occurred.

I have already said that Jesus and his parents lived as Gentiles in the Gentile section of Palestine but had to obey the Jewish customs and regulations of the land. One of these regulations was that in accordance with strict Jewish law, it devolved upon each boy in his thirteenth year to attend one of the feasts at Jerusalem. He had to appear officially under certain conditions and at a certain place for a definite ceremony, and he then became what was called a *Son of the Commandment*, or of the *Torah*. The usual time for such a visit was on the first paschal feast after the boy had passed his twelfth birthday.

According to the story, the parents of Jesus took him with their other children in the company of other Nazarenes to Jerusalem. The text of the Christian version seems to indicate that it was “their wont to go” up to the temple. This is evidently a mistake on the part of the writers or translators, because as Gentiles, the parents of Jesus

were not accustomed to attending all of the feasts and ceremonies of the Jewish church, for the law did not require that of any but those who were strictly orthodox and wholeheartedly affiliated with the Jewish religion. Since Jesus was the first born of the children in the family and, therefore, the oldest, he was the only one of the children of Mary and Joseph who had attained the age when such visits were compulsory, and so this must have been their first obedience to this law of the land. I find that even some of the highest critics of Christian literature agree that the phrase "it was their wont" to go, should be read in that sense which puts the participle in the present tense and not in the past. Hence we understand how glad Mary and Joseph were to avail themselves of this opportunity to visit the Holy Sanctuary in Jerusalem and to bring their wonderful child before those officials who would conduct a formal examination.

This paschal feast in Jerusalem was held in the spring. Caponius was acting as procurator and Annas ruled in the temple as high priest. Out of Galilee walked this holy family, accompanied by a host of other Gentiles, Nazarenes, Nazarites, Essenes, and some Jews, chanting as they went and making of the event a gala occasion. The ranks of these travelers were swelled by other festive bands who united in chanting the Psalms of Ascent to the accompaniment of the flute. Unquestionably they also discussed the spiritual principles involved in the ceremonies to be held.

It was a long journey as we would view it in these days. Recently I made the trip in a very fast automobile from Nazareth to Jerusalem, and I found that it required the better part of a day to do it. All through the beautiful section of Palestine which these pilgrims had to traverse, composed of hills and valleys, magnificently tinted with the beautiful green of that country and spotted with flowers, one could still see the ancient trail of footpaths that led up over the hills and down into the valleys in almost a straight line from the present site called Nazareth to Jerusalem and over which the pilgrims walked in their journeys to and fro. Even today the natives of that country walk these same paths or ride on their donkeys garbed as in the times of Christ, presenting a picture that carries one back hundreds of years.

When the tired pilgrims finally reached the gates of Jerusalem, the problem of being housed and cared for must have been a serious matter, for the feast brought nearly the entire population of Palestine into the environs of Jerusalem for three or four days. The Essenes, Nazarites, and Nazarenes were fortunate inasmuch as at the city gate, and in places nearby, there were special houses and structures owned by the Essenes and Nazarenes for the care of their own people and for pilgrims and strangers who needed their care.

The scene must have been a glorious one for the youthful child, making perhaps the first long trip in his life. The school at Carmel is but a short distance from the villages of Galilee, as compared with the long distance that stretches between them and Jerusalem, and we may easily realize how impressed the child must have been with the sight of so many pilgrims, the chanting, the music of the flute, the wayside prayers, the excitement, and finally the greetings and preparations at the city gate.

So little has been told about the Temple and Sanctuary where Jesus attended the feast that perhaps a few words about this place will be of interest to my readers. As the pilgrims reached the place of the Temple, they found it necessary to ascend a mount crested by beautiful buildings symmetrically proportioned and gigantic enough to hold within their walls not fewer than 200,000 persons. The mount on which the structures stood rose abruptly from out of the valley, much like an island that rises out of the sea. And around it, in the greenness of the valley, was a mass of walls, palaces, houses, and streets reflecting the bright sunlight from the snowy marble and glittering gold. About 1,000 square feet of the mount was occupied by the Sanctuary and Temple. At the northwestern angle and connected with the main structure was the Castle of Antonia held by the Roman garrison. The lofty walls were pierced by massive gates. One unused gate known as the Tedi was on the north; on the east was the Susa Gate which opened on the arched roadway to the Mount of Olives. There were also the two Huldah Gates, which led by tunnels from the priest-suburb Ophel into the outer court. On the west were four other gates.

Within the gates the court was surrounded by double colonnades with benches here and there for those who resorted to prayer, or for conferences. The southern double colonnades, with a wide space

between, were the most magnificent. The eastern colonnade was the most venerable, and was known as the ancient Solomons Porch. Entering the court from the bridge under the Tower of John, the pilgrim would pass along the southern colonnade to the eastern extremity over which rose a tower known as the Pinnacle, that is referred to in the history of the Temptation. From this lofty pinnacle, the priests each morning watched and announced the sunrise, and 450 feet beneath this tower yawned the Kedron Valley. Within these colonnaded areas were the meeting places of the first and lowest of the three sanhedrins, known as the Temple; the second or intermediate court of appeal usually held in what was called the Court of the Priests; and the highest of the courts known as the Great Sanhedrin, which was often referred to as the Hall of Hewn Square Stones.

Passing out of the colonnades and porches, one would enter the court of the Gentiles, or what the Jews called the Mount of the House, which was the widest on the west side. This was called the *chol*, or profane place, to which the Gentiles retired during the feast, and it was here also that the marketplace was located for the sale of various needful articles, along with the money changers. Beyond this Gentile section was a wall which marked a space beyond which no Gentile or person not strictly orthodox might proceed. Thus, the Gentiles—which included the Essenes, Nazarites, Nazarenes, and those who had not adopted the Jewish faith completely—had to assemble in a special place set aside for them.

The Sanctuary itself was on a higher terrace than the Court of the Priests. Twelve steps led up to its porch, and here in separate chambers was kept all that was necessary for the sacrificial services. A two-leaved gate opened into the Sanctuary which was divided into two parts. The holy place had the golden candlestick in the south, and the table of the Shewbread in the north, with the golden altar of incense between them. The mystical *Veil* referred to so often in the ceremonies of the mystery temples of Egypt, from which the Veil in the Jewish sanctuary was derived, concealed the entrance to the most Holy Place, which was an empty place in the Temple containing nothing but the piece of rock, the *Eben Shethiyah*, or foundation stone, which, according to tradition, covered the mouth of the pit, and on which the world was founded.

These few details cannot give an adequate idea of the vastness of the temple buildings, for all around the Sanctuary and colonnaded courts were various chambers and outbuildings which served different purposes connected with the services.

It was in the Gentile section of the entire enclosure that Joseph and his parents along with the others of their class assembled. It was necessary for the Gentiles to be present only for the first two days of the feast. On the third day, therefore, were held the special ceremonies for the strictly orthodox. Thus, for the rest of those in attendance, the third and following days were so-called half-holy days when it was lawful for all in attendance to return home if need be. It was at this time that Joseph was brought before the learned doctors immediately after the ceremony for examination and questioning. Undoubtedly there were many other children of his age present on this occasion, and undoubtedly the questioning was the same for all of them. Yet we are told that the answers which Joseph gave provoked intense interest in him, and that after the usual questions had been asked of all the children, and the parents and children had proceeded on their way, young Joseph was retained for further questioning and a special examination.

We are told in old records that on the last days of the feast, and when the actual feast itself had been celebrated and the usual ceremonies completed, it was customary for the doctors of the Temple-Sanhedrin to come out upon the terrace of the Temple and there preach or discuss certain doctrines and conduct a forum, or ask questions of those in whom they were especially interested. It was in such an audience as this, out on the terrace and informally conducted, that Joseph was found after his parents had started on their way home with their other children and missed him, according to the Christian version of the story.

As I have intimated, there was nothing extraordinary about the fact that one or more children had been retained by the doctors for special examination. Many writers of the life of Jesus, and many Christian authorities who have analyzed this incident in his life, have attempted to speculate upon the nature of the questions and answers which brought Jesus to the attention of these doctors. Some of them seem

to have come to the conclusion that Jesus was taking part in one of the usual scientific classes designated as *Kallah*, at which time not only the doctors but the most analytical of the Jewish scholars discussed the doctrines, practices, customs, and habits of the Jewish religion. Such sessions required considerable preparation on the part of the lecturing rabbis or doctors and considerable Talmudic knowledge on the part of the attendants.

Many of these discussions dealt with the establishment of new rules and regulations, as well as the authoritative interpretation of Jewish rules. For instance, the great Hillel took part in a discussion in this court regarding the propriety of offering the Passover on the sabbath. By his great logic he proved that it was appropriate to do so and was honored for his services in this regard. It is hardly to be believed that the youthful Joseph could or would participate in such discussions as were common to the *Kallah*, even if the learned doctors had considered him old enough or wise enough to be present. Furthermore, the fact that Joseph was a Gentile, and not of the strictly orthodox faith, would have prevented him from participating in this class. And there is another consideration: these classes were held in the last month of summer (Elul) before the feast of the new year, and in the last winter month (Adar) immediately before the feast of the Passover, but it was in the spring that Joseph attended the paschal feast.

Another speculation on the part of some theological writers is to the effect that perhaps the parents of Joseph, realizing that the boy was about to enter into a new cycle of his life, informed him regarding his divine birth and Sonship and that he in turn presented these facts to the learned doctors at the temple and discussed the important principles involved. This explanation is more unsound than any other, for the simple reason that the young man was on his way to the Temple in obedience to a law which definitely outlined the procedure and the purpose of the occasion. Thus, it would have availed him nothing to have argued in behalf of his special appointment from on high. It is very doubtful, indeed, if the doctors assembled at the court would have permitted him to make any plea or explanation in behalf of his own divine place in life, and certainly they would not have set aside other tasks to listen to any such unique presentation.

We can thoroughly understand just what did happen when we examine the facts in the case and reenact the entire scene. The youths of Palestine were called upon to come to the Temple in their thirteenth year in order to partake of the paschal feast, and thereby acknowledge obedience to the Jewish religious law. It was a purely formal registration intended to supply the church with a complete list of those who had attained that age where they could be counted as of the faith or out of it. It was natural, therefore, that before being permitted to partake of the feast, every youngster was questioned in a categorical manner, being asked a list of questions, which would reveal the religious faith and ideas of each applicant. These questions had been asked for many years and were considered a standard catechism. The catechism for Gentiles was different from that used for those who were strictly orthodox and born in the faith. In other words, the questions asked of those who were assembled in the Gentile section of the court were quite different from those asked of the youths assembled in the orthodox section.

Our records indicate that Joseph had been somewhat prepared by his education at Carmel and by his contact with the orthodox Jews to answer the questions that would be asked of a Gentile registrant at the feast. It was the belief that only such questions would be asked of him as were asked of other youths, and that he would answer them in proper manner, that made his parents leave their child alone in the class for youths while they went into an adjoining building where adult Gentiles were given a different examination preparatory to participating formally in the paschal feast. It was probably the plan that after young Joseph had finished his examination and had entered the Sanctuary along with the other youths in the Gentile class, he would meet his parents out in the general court and proceed with them on their return.

According to the story, the parents proceeded homeward with their other children and with a large band of others who were returning to Galilee, and it was not until they were halfway home that they discovered that young Joseph was not in the large party of pilgrims. The fact that his absence was not noticed during the first part of the trip plainly indicates that young Joseph was relied upon to take care of himself and to look after his own interests, and that the parents were more concerned with the care of the younger members of the family.

That young Joseph was well educated, unusually alert of mind, and in every sense well prepared to take care of himself is not only indicated by this incident but by what actually happened in Jerusalem. It is recorded that during the formal examination, while young Joseph was answering the categorical questions put to all of the youths, he gave explanations concerning some doctrinal points that involved a new angle, a broader insight, and a higher idealism regarding the mystical side of the theological points. This so surprised the learned doctors that they asked young Joseph to remain after the class had completed its work and after they had all partaken of the paschal feast. He was then called before a group of learned doctors of the Great Sanhedrin and further questioned, and he was then requested to remain within the temple grounds until the following day, when he would be interviewed by a court composed of the highest officials, high priests, and learned teachers. It was here that young Joseph was found on the third day. According to the records, I find that young Joseph did not put any particular emphasis upon his divine appointment as a Messenger of God, nor refer in any particular manner to the preordained mission of his life. He did reveal the fact that he was a special student of the Essenes at Mount Carmel, and that it was his intention to carry out the plans of the organization and visit the higher schools of instruction in foreign lands, including the academy and mystery school at Heliopolis. What this may have indicated to the minds of the learned Jewish doctors is not definitely stated. One question put to young Joseph does indicate that they immediately suspected him of being a *selected leader* for the future work of his community. However, this in itself would not have aroused any curiosity or particular interest on the part of these doctors, and evidently it did not antagonize them, inasmuch as they did not express any idea regarding young Joseph's apparent refusal to do otherwise than accept merely the *formal commandment* making him an *adopted Jew of the country*.

Their surprise and keen interest centered around the unusual insight that young Joseph had regarding religious, theological, and mystical principles, and his very clear exposition of spiritual laws. For this reason they were amazed at his "combinative insight," or unusual spiritual intelligence, and "discerning answers." If young Joseph had revealed to these doctors some of the principles taught by the Essenes

and was the apt student which the organization records in its reports, then he must have astounded these doctors who were learned only in the traditional teachings of their own faith and unaccustomed to the newer and higher ideas taught in the Essenian schools.

Young Joseph did reveal, however, in very positive terms, that in a few months he would finish the preliminary courses of instruction at the school at Carmel, and that in accordance with the rules and regulations of the organization, he would leave Galilee early in the fall to go to the schools in foreign lands, and that he would not return to Palestine for many years. Thus he explained his reasons for not doing more than formally obeying the command to appear for registration and not promising to attend the synagogues regularly or becoming a true disciple of the Jewish faith. The fact that he had been circumcised made him *potentially* a Jew so far as fundamental preparation for admission into the Jewish faith as a Gentile was concerned, but there was no way by which the Jewish clerics could force this young man, or any other of the Gentile youths, to become an orthodox follower of the Jewish religion.

Young Joseph was not the first ambitious youth of the country who had gone to Egypt and other lands to acquire a higher education or to make more successful contacts with the larger things in life, and the fact of his determination to travel for the betterment of his education did not cause any surprise in the minds of these doctors. However, his entire attitude and the free and easy manner in which he spoke of his plans did surprise these authorities who were accustomed to having the youths of the land show them greater consideration and less independence.

So when the parents of young Joseph found him sitting in the midst of a group of learned doctors and succeeded in calling him aside and reminded him of their concern and sorrow when they missed him, he may have made the reply which Christian literature has made very famous, and which our records do not reveal at all. But if he did say that he had been very busy attending to his Father's business, we can understand that he was referring to the entire scheme of his life. Certainly he must have felt that he was about his Father's business when he was making plain to his inquisitors the nature of his beliefs

and convictions, the reason for his contemplated journeys to other lands, and his inability to become a devout attendant at the synagogues in Palestine.

After young Joseph and his parents returned to their home village, he was sent again to the school on Mount Carmel, there to live and finish his term of preliminary instruction.

Chapter 10

JESUS ENTERS THE SECRET PRIESTHOOD

LITTLE IS INTIMATED in the Christian Gospels about the life of Jesus between the time of his appearance before the learned doctors in Jerusalem and the beginning of his mission in Palestine. In fact, the first revelation regarding the preparation of Jesus for his work as a Son of God is in connection with his baptism in the River Jordan. We are told that at this time Jesus came out of Galilee and permitted himself to be known to the public.

Certainly the baptism of Jesus could not have been the beginning of his preparation for the ministry; and most certainly more preparation than this was required to carry on the work which he efficiently conducted for so many years. I have intimated in previous parts of this book why it is unreasonable to believe that Jesus required no preparation for his ministry, and I have tried to show that his whole life demonstrated deep study, careful preparation, and unusual guidance during his youth.

We now approach a period in his life that is not only interesting because it is generally *unknown* to the students of Christian doctrines, but is highly significant in the light of the work which he accomplished during his lifetime.

According to the Essenian records, young Joseph completed his official schooling early in the fall, when he was still in his thirteenth year. With all of his precociousness and brilliant mind, he was not

permitted to shorten the usual period of study and preparation in the School of the Prophets at Carmel. Therefore, we must presume that he was given careful attention and tutored by those who added such special subjects to his instructions as would have kept him engaged in his attainment of knowledge until the prescribed time had come for his transfer to other teachers and other schools.

The records also outline very clearly and definitely the incidents of his life from the time of the transfer from Carmel until he was ready for his great mission. The details of these incidents in his life are too exhaustive and unimportant to present *in toto* in a book of this size and character, but the essential points and the interesting incidents may be outlined as follows:

According to the instructions sent to the school at Carmel from the Supreme Temple at Heliopolis, the young avatar was to complete his education by a thorough study of the ancient religions and teachings of the various sects and creeds most influential in the development of civilization. In other words, he was to become familiar with the tenets of the so-called heathen religions before taking up the study of the development of the pagan beliefs and rites into the higher principles and creeds taught in the mystery schools of Egypt.

In modern times, students preparing for the ministry must become familiar with comparative religions, but they are able to do this in great universities, where the sacred books and writings of the ancient religions are expounded, analyzed, and carefully digested before the modern forms of theology are undertaken. Students do not have to leave their own lands and journey into distant places in order to contact and become acquainted with the ancient religions or schools of ethics.

In the time of which I am writing, however, it was considered absolutely necessary for students of religion or philosophy to journey to the very seat of each of the ancient religions, where they might have access to copies of the authentic versions of each religion and an opportunity to live among the people, thus becoming intimately acquainted with the rituals, rites, and practices of the tenets. Many of the great avatars in the past had journeyed to distant places for this purpose, and it was in this way that knowledge of the various ancient teachings had become universally disseminated.

So young Joseph was placed in the charge of two magi, who came to Carmel for the purpose of conducting the youth to his first distant school and place of experience. The records show that Joseph was permitted to spend about a week with his parents in Galilee, while the magi made their preparations and held various consultations with the officials at the Carmel school. They also instructed the parents of Joseph as to what they should expect and what they should do in his absence. The records further state that when Joseph and the magi started from Galilee, a special ceremony of the Essenes was held in one of their small assembly places. Then, without attracting unnecessary attention, the magi and the boy proceeded with a number of others who were going a short distance of the way, in a caravan, by the shortest route to Jagannath. This city was located on the east coast of India, and its present-day name is Puri. It had been the center of pure Buddhism for many centuries; and on a mountain near the outlying districts of the town there was a monastery or school containing many of the ancient Buddhist writings and the most learned instructors of Buddhas doctrines. It required nearly a year for the magi, young Joseph, and others, who joined the caravan en route, to reach this point in India, while the magi continued to instruct Joseph. During their many trials and tribulations they pointed out to him the sufferings of humanity, the weaknesses and strengths of the peoples ideals, and the popular fallacies of the day.

According to the records, young Joseph remained a little over a year in this monastery school and became thoroughly familiar with the ancient teachings and the evolved rituals of the Buddhist faith. The principal teacher of young Joseph at this time was one known as Lamaas, to whom young Joseph took such a great liking that later in his life he sent for Lamaas to come and unite with the Essenes in Palestine.

When it came time for young Joseph to leave the monastery at Jagannath, visits were made to the valley of the Ganges with a several months's stop at Benares. We must bear in mind that the great monastery and world headquarters of the G.W.B. had not yet been established at a spot in Tibet; for if it had been, Joseph and his magi would have undoubtedly proceeded to this place and remained there for a considerable time. In Benares, young Joseph had an opportunity

to pursue the study of ethics, natural law, languages, and similar subjects constituting the offerings of several of the great schools there which were renowned for their culture and learning. It was in Benares that young Joseph became greatly interested in the Hindu method of healing, and he took a short course in the Hindu principles under Udraka, who was reputed to be the greatest of the Hindu healers.

After a visit to other parts of India, merely for the purpose of contacting the art, law, and culture of the peoples, Joseph returned to the monastery at Jagannath, where he remained for two more years. His advancement in the subjects being taught was such that he was appointed a teacher in a small town called Katak, and this gave him his first opportunity to become familiar with the art of teaching or instructing by the use of parables or stories.

As a result of his contact with eminent teachers and the learned of Benares, young Joseph was visited by a high priest from Lahore. It appears from the records that he had already introduced new ideas and truly mystical principles in his discourses and instructions to children, and these appealed to the most learned of his hearers, but aroused the antagonism of the unlearned and strictly orthodox Hindus. Therefore, early in his life he learned what it meant to have enemies as well as followers. The high priest from Lahore tried to persuade young Joseph to change his teachings slightly and at the same time cease his journeys among the lower castes and common people. Here was Joseph's first temptation to hold himself aloof from the common touch and to change his attitude so as to appeal to the aristocracy and the influential. However, young Joseph refused to listen to the petitions of the high priests, and he even refused to accept gifts that were offered.

It was while he was thus drinking the bitter draughts of life, that Joseph received the sad news that his father in Galilee had passed on, and that his mother was grieving, and none was able to comfort her. Messengers informed him that no word had come from him and that his mother was unable to learn of his whereabouts. Even though she had been informed by the Essenes that silence on the part of young Joseph had been predicted, and that he was safe, she could not be consoled. It was at this time that young Joseph expressed himself for the first time in definite words, which were recorded and are still

preserved. According to the several translations of the message which he sent by the Essenian messengers to his mother, it read as follows:

Beloved mother: Be not grieved, for all is well for father as with you. He has completed his present work here on earth and has done so nobly. None in any walk of life can charge him with deceit, dishonesty, nor wrong intention. In his period of life here he has completed many great tasks and is gone from our midst truly prepared to solve the problems that await him in the future. Our God, the Father of all of us, is with him now as [God] was with him heretofore; but even now the Heavenly Hosts guard his footsteps and protect him on his way. Therefore, why should you weep and suffer? Tears will not conquer your grief, and your sorrow cannot be vanquished by any emotion of your heart or mind.

Let your soul be busy in meditation and contact with him who is gone, and if thou art not idle, there will be no time for grief. When grief throbs through the heart, and anguish causes you pain, permit yourself to rise to higher planes and indulge in the ministry of love. Your ministry has always been that of love, and in the brotherhood thou canst find many opportunities to answer the call of the world for more love. Therefore, let the past remain the past. Rise above the cares of earthly things and give your life to those who still live with us here on earth. When your life is done, you will find it again in the morning sun, or even in the evening dew, as in the song of birds, the perfume of the flowers, and the mystic lights of the stars at night. For it will not be long before your problems and toils here on earth will be solved also, and when all is counted and arranged you will be ready for greater fields of effort and prepared to solve the greater problems of the soul. Try then, to be content until I come to you soon and bring to you richer gifts than any that you have ever seen and greater than those made of gold or precious stones. I am sure that my brothers will care for you and supply your needs, and I am always with you in mind and spirit.

Your son, Joseph

This letter and other writings, written during the years which followed and which have been carefully preserved and recorded, plainly indicate the rapid development of his mind and the marvelous comprehension he had of cosmic laws and principles.

It is stated in some ancient records that after Joseph had completed the studies of the Buddhistic teachings and the Hindu doctrines in India, he journeyed to Lhasa in Tibet. While still in India, a messenger came to Joseph with some manuscripts from a Buddhist temple in Lhasa, sent by Mengtse, who was considered the greatest of all the Buddhist sages. For a considerable period messengers from Lhasa brought manuscripts to young Joseph, and it was this intercourse and the effects it had upon his life that may have caused him to journey to Lhasa personally. However, when Joseph was ready to leave Jagannath, his journey took him westward toward Persia, where, in the city of Persepolis, arrangements had been made for his further studies. This was one of the ancient cities of the kings and the center of the learned magi of that country who were known as Hor, Lun, and Mer. One of these magi, a very old man, was one of the three who had visited the infant at the time of his birth in the Essenian grotto and had brought to him gifts from the monastery of Persia.

Great homage was paid to Joseph by these magi and by the priests of the temple. Other learned individuals from various sections of Persia came to Persepolis and remained there as instructors and students during the time of Joseph's education. It is even recorded that at the close of each day when the instructors had finished the day's lesson, they asked Joseph to become their teacher and inform them of the higher principles which he seemed to comprehend through inspiration.

It was here that Joseph finally made plain to the elders that the greatest instruction he had to give was that which he had obtained in the silence after meditating upon some important law given to him in the course of his reading and studying. Thus, Joseph established a system of *entering the silence* which became an important feature in later mystical methods. It was in this city, also, that Joseph demonstrated considerable healing power. After months of analysis of the power within his being and a careful study of the principles involved, he revealed to his elders his belief that the faith or *mental attitude and attunement* on the part of the patients had a considerable effect upon the results. This laid the foundation for the later teachings of the secret conclaves of the disciples of Jesus—*inner or psychic attunement and mental preparations* are necessary in all forms of spiritual healing.

After a year spent in Persia, Joseph and his guides proceeded to the Euphrates. Here he contacted the greatest sages of Assyria as well as magi from other lands who came to see him and hear him speak; for he had already attracted great attention as an interpreter of the spiritual laws in a more understandable, mystical manner. Joseph spent considerable time in the cities and towns of Chaldea and in the lands between the Tigris and the Euphrates. His healing powers and methods were becoming so rapidly perfected that it is recorded that multitudes in these lands were benefited by his methods. It was also about this time that the magi who were his guides informed him that the development of the ability to heal would be one of the tests in his final examination of preparedness for his ultimate mission.

From this country Joseph and the guides journeyed through the ruined Babylon, and spent some time in examining the fallen temples, ruined gates, and the empty palaces. It was here that he became familiar with the trials and tribulations of the early tribes of Israel when they were held in captivity in Babylon, and he saw where Daniel and the Hebrew children had experienced their great tests. He was unquestionably impressed with the sins of pagans and the error of ancient beliefs.

Then Joseph and his guides journeyed to Greece, where he came in contact with some of the Athenian philosophers. He was under the personal direction and care of Apollonius, who opened up the ancient records of Grecian lore for him. In this country Joseph attracted unusual attention among the wise and the magi, and they implored him to remain a long time; but his itinerary had been definitely decided upon, and in a few months he sailed from Grecian shores for Alexandria.

He stayed but a short time at Alexandria, just long enough to visit some of the ancient shrines and to be entertained by the special messengers who went there to greet him. He was taken immediately thereafter to the city of Heliopolis and settled in a private home specially arranged for him. He had several servants, a beautiful garden, and a personal attendant whose records as a scribe would place him today in the category of a personal secretary.

Very shortly after his arrival in Heliopolis, Jesus was approached by representatives of the pagan priesthood of Egypt, who had heard of his teachings and his demonstrations of mystical power and disapproved of them. Once again he learned to drink of the bitters of life through many trials and tribulations which would have tempted the average person to accede to the advice of the priesthood and resort to hypocrisy and deceit in regard to his purposes and intentions.

It was at this point in his life that Joseph began his preparatory initiations for the entrance into the higher grades of the G.W.B. I will treat these in my next chapter, for the details are worthy of complete presentation.

Chapter 11

JESUS ATTAINS MASTERSHIP

IN ORDER TO understand the advancement of Jesus through the various grades of the priesthood leading to mastership, it is necessary to explain the operation of the G.W.B. in which he became an initiate.

The G.W.B. referred to so often in the preceding chapters was a nonsectarian organization formed in a primitive way by the ancestors of Amenhotep IV, pharaoh of Egypt, who became better known in philosophical literature as Akhnaton. We do not definitely know which of these ancestors was the first to proclaim the foundation of the organization, but we do know that Thothmes III established many of the important rules and regulations for the conduct of the organization, and that these regulations were in effect for many centuries.

In one of the Rosicrucian records, we find that at the close of his reign as pharaoh of Egypt in 1447 B.C., there were thirty nine men and women constituting the high council of the secret organization. The council meetings were held in one of the halls of the temple at Karnak in Luxor where Thothmes III had erected two obelisks on which were carved the famous cartouche which became the seal of the G.W.B. and which is used in Egypt and America today as the seal of the organization known as the Rosicrucian Order. In establishing this cartouche as the seal of the organization, we find the following words written in the record in regard to its use: "In testimony of the great work of our teacher (Master) to be forever a mark of honor and loyalty."

The son and grandson of Thothmes III sponsored the continuation of the secret group and permitted it to increase in size and activity. In 1378 B.C., was born Akhnaton, the great-grandson of Thothmes III. He became the great reorganizer and founder of the present rules and regulations of the worldwide organization known as the G.W.B., which developed out of the secret organization established in ancient times.

The original plan of the secret organization was to bring the wisest men and women in Egypt together, and especially the most advanced of the magi, for the purpose of discussing, analyzing, recording, and preserving the great knowledge that constituted the light of the world. Egypt had become the center of the world's culture and scientific knowledge, as is attested by the remarkable attainments made by her people under the leadership of the learned individuals in the sciences generally. To Egypt came students from all parts of the world, to obtain the highest education and to contact the mystery schools, as they were called, under the direction of this secret society.

Akhnaton was the reincarnation of one of the previous great avatars and became what historians call the world's first great individual. He, too, had a great message for the world, and during his short lifetime he accomplished more for the advancement of philosophy, religion, and ethics than any individual preceding him. It was he who began a very strenuous attack upon the heathen priesthods of Egypt which held the masses in slavery, and it was he who established the world's first monotheistic religion, for Akhnaton declared that there were not many gods, but only One, "the ever living, sole God." In his doctrines, which he introduced into the G.W.B., he laid the foundation for the present-day monotheism and for most of the doctrines and creeds used in the Christian and Hebrew religions.

It was while Akhnaton was pharaoh that the children of Israel dwelt in Egypt and the leaders of those tribes became initiates of the G.W.B. It was also at this time that Moses, as one of the initiates, became acquainted with the fundamentals of the religion which he afterward modified to present to those who followed him out of Egypt into Palestine. It was also to Akhnaton that Moses made his appeal for aid in taking the tribes of Israel out of Egypt, and it was through the aid thus given by Akhnaton and by the G.W.B. in secrecy that the tribes of Israel evaded the heathen priesthood and had a safe journey.

As stated in an earlier part of this book, branches of the G.W.B. were established under various names in many parts of the world during the first ten centuries before Christ. The original body of members in Egypt became the international council or supreme body maintaining the name of the G.W.B. and eventually adopting the rose cross emblem as their esoteric symbol. But the branches established in various parts of the world were permitted to adopt such names as were significant in the various languages or symbolical to the peoples with whom they had to deal. Thus it was that a large branch formed at Heliopolis adopted the name of *Essenes*, which name was later used by the followers in the northern part of Palestine; whereas in Greece the name of *Therapeutae* was used, and other names in other places. All these branches, however, used the same seals and symbols, adhered to the same general rules and regulations, and paid allegiance to the supreme body known as the G.W.B. in Egypt.

Out of the organizations monasteries, schools, and temples, and its branches, came most of the famous philosophers, teachers, priests, and avatars of the future. Today we find that in the branches of the organization known as the Rosicrucian Order, which name has become practically the exclusive worldly name for the organization, there are students in preparation for the ministry, for positions as teachers and professors in colleges, those who are to become eminent physicians in various schools of therapeutics, including medicine and surgery, and those who are also preparing for research work in the various fields of science. We also find in the membership, hundreds of thousands of men and women who are students of the teachings of the Rosicrucian Order, because of the personal benefit they derive and the assistance the organization gives them through private teachings and instruction for the betterment of their living, the attainment of personal evolution, and the awakening of those latent or dormant faculties which enable them to achieve the highest degree of success and happiness in their individual careers.

Therefore, it was natural that the new avatar should be one of this organization, as had been most of the avatars in preceding centuries. It was also perfectly logical and reasonable for this young Son of God to have his footsteps directed toward the organizations great schools

and teachers in Egypt, where he might complete his preparations and receive his final instructions before entering upon his divine mission.

Before initiates of the G.W.B. could go out into the world and proclaim the doctrines and teachings which would enlighten civilization and bring about the gradual evolution of humanity, they had to be tested and tried in such ways as would not only prove to the entire organization their worthiness, but would also make them familiar with the tests and trials they would inevitably face during their mission.

Thus we find Joseph now at the threshold of his final preparation and ready for the symbolical tests and initiations leading to the degree and attainment of mastership which would qualify him to go out into the world and fulfill the mission for which he had been cosmically and divinely ordained.

When Jesus was ready for his entrance into the organization's supreme college and monastery at Heliopolis, he found that the first requirement called for three months of meditation, prayer, and study in the quiet of his own home, during which time many of the organizations eminent masters would contact him in the cosmic or psychic sense, through mental processes.

The records show that he was surrounded, as we have stated, with every comfort and convenience, and for his study he was given many of the rarest manuscripts containing the texts of ancient doctrines and creeds. Then came the first of the tests. It is stated that one night at the midnight hour, a door in his chamber was opened, and a priest in Oriental garb came to Joseph and pleaded with him that he abandon his intention of staying in Egypt and receiving the authority of the G.W.B., because his mission and plans were antagonistic to the priesthood of Egypt, and the priesthood was plotting to take his life or to imprison him.

The priest offered various methods whereby Joseph might secretly and easily leave Egypt and return safely to Palestine. Young Joseph had seen many evidences of the enmity which his presence in Egypt had aroused, and as I have said before, he was drinking of the bitter cup. For this reason the pleading and offering of the priest were certainly tempting. But young Joseph absolutely refused to abandon his plans

or to change his decision. Joseph summed up his argument with this statement: "I shall not bargain with deceit, nor sell my soul for the safety of my body. I shall deceive no one, and I will be no partner of hypocrisy. Return to your people and tell them that I shall remain true to God and to myself."

His decision was reported to the organizations high authorities, and Joseph was commanded to appear before them. Then the hierophant placed his hand on Joseph's head and gave him a scroll on which was written just one word, *Sincerity*. Joseph knew that this had been a test of his sincerity and that he had yielded not to temptation.

Some weeks later another messenger called upon Joseph in his home and presented a very interesting story. This messenger claimed that he had at one time been in the same position as Joseph, and he had suffered all the trials and enmity of the priesthood of Egypt while remaining steadfast in his determination to become a master. He claimed that he had attained high degrees in the organization and had finally been admitted to their great ceremonies and to their secret conclaves. But then he had found that all of the work was corruption and that their rites were sacrificial, in which innocent children, women, men, and animals were burned as offerings to false gods. He had finally escaped and now urged Joseph to think well of the future and to stop before it was too late.

When Joseph questioned him as to how he had gained access to his chamber, the man replied that as a trusted priest of the organization he knew of passageways and doors that permitted him to enter any of the organizations structures. Joseph then accused the man of being a traitor and said that he would refuse to listen to one whose hands were not clean and who could not show a higher purpose than he had shown. The man disappeared, and again Joseph was brought before the hierophant who once more placed his hand upon Josephs head and handed a scroll to him which contained but one word, *Justice*. And Joseph learned that this was another test and that he had passed it successfully.

About a month later, another priest approached him one afternoon, when he was in the midst of meditation in the quietness of his sanctum. This priest began to comment on the grandeur and richness of the

rooms in which Joseph dwelt, and he called the attention of Joseph to the fact that the great teachers in Egypt had undoubtedly provided these luxurious surroundings for Joseph because to them Joseph was the greatest of them all, and that the healing Joseph had accomplished in foreign lands, the wonderful interpretation he had given in answer to questions asked in India and Persia had proved that he was the greatest philosopher, the greatest mystic, and the greatest teacher in all the world.

Therefore, he urged that Joseph should not submit to the dictates of the G.W.B., but go out into the world at once and organize a priesthood of his own which would overthrow all others and bring triumphant victory to him personally. It is recorded that this man made eloquent pleas to young Joseph and pointed out to him the rosy path to fame and popular acclaim, bringing to him wealth, honor, and unlimited power. The man left the presence of Joseph at the psychological moment of his beautiful presentation, and for many days Joseph wrestled with the idea that had been implanted in his mind. But always there came from within the voice of the Divine Self pointing out clearly the duty for which he had been cosmically ordained.

Finally Joseph sent a message to the man and stated that he was thankful for the contest that had raged within him and for the victory which had come to the better self, and that he wanted not glory, fame, nor wealth, but only an opportunity to serve and to keep the faith while life was in his body. Once again he was called before the hierophant, and this time a scroll was handed to him upon which was written the one word, *Faith*. And Joseph learned that this was another test of his faith and that he had passed it successfully.

Thus Joseph completed the first of the three preliminary degrees of initiation, which were really degrees of test and trial, before being admitted into the organizations important fourth degree. Having passed these tests, and further examinations which were held before the conclave of high priests, he was finally honored with the title of Master and admitted into the highest circle as a duly prepared and qualified *Master of the G.W.B.*

This title of Master was always used by the Essenes in speaking of Jesus throughout his entire ministry, when the conversations dealt with

his public affairs or reference was made in general conversation aside from any of his special activities as a divine Son of God. The title of Master was also used by many of the Jews who greatly admired Jesus for his work among them and especially for the valuable instructions which he gave. It was always reverently used by those who understood its real meaning, just as it is reverently used by the Rosicrucians today when they speak of the *Great Master Jesus*.

Chapter 12

JESUS ATTAINS CHRISTHOOD

HAVING ATTAINED THE degree of Mastership in the G.W.B. placed Joseph among the most learned of the high priests and second only to the hierophant of the organization. This entitled him to attend the highest conclaves, to have access to the most sacred and sublime ceremonies, to indulge in the transcendental experiences at certain cosmic periods of the year, and to attune himself by the highest spiritual laws with the Consciousness of God.

It may be argued that since Jesus was divinely ordained, divinely conceived, and divinely born, and predetermined to be the Son of God and the Savior of the world, that no earthly power and certainly no earthly council could either grant or fail to grant him the privilege of such attunement with the Consciousness of God. This is unquestionably true. Nowhere in the records with which I am dealing and nowhere in the present-day teachings of the Rosicrucians is it intimated that if Jesus had not passed through the preparation and experiences outlined by the G.W.B., he would have been unable to attune himself just as completely with the Divine Consciousness or become conscious of the Godhood or Christhood within him.

From the very hour of his birth all of the magi, high priests, and most learned advisers of the organization were his inferiors in divine attunement and soul preparation for the great mission. It was no presumption on the part of these great leaders to perform their time-honored duty of accepting Joseph as a neophyte and giving him

every one of the tests and trials and offering him every opportunity for development as had been offered to the greatest among them. Nor did Joseph himself consider the attitude assumed by the organization in treating him as a neophyte, and as one who had to be prepared, a failure of recognition, on their part, of his superior position among them. We shall see later on that even after Joseph had completed all the preparation that the organization prescribed for him, and they had acknowledged him ready for his mission in life, he *voluntarily offered himself* for a final act of preparation in the knowledge that all these things were necessary for the work he desired to accomplish and which had been cosmically planned for him.

Naturally, I wish it were possible for me to outline here the further initiations, ceremonies, and steps of preparation through which Joseph passed during the years in which he remained in Egypt. These things are never revealed to those who are not high initiates; and Jesus himself, during his entire mission, revealed them to no one but his apostles, whom he carefully selected and whom he constituted as his sacred council and initiated as he had been initiated. I hardly think that any of my readers expect these things to be published in any book of this kind or in any book for the general public; and I am sure that the most learned and reasonable of my readers would doubt the authenticity of any printed record which claimed to contain such details.

It is possible, however, to speak of the last and final stage of his preparation for the ministry, which was held in the chambers of the Great Pyramid now known as the Pyramid of Cheops.

Much has been said in various books and magazine articles in recent years about the chambers and secret rooms of the Great Pyramid, and space in this volume does not permit even a brief explanation of the intricate arrangement of the passageways and ancient chambers that are built within and beneath this great structure. The average tourist to Egypt sees the several pyramids that are grouped almost as a unit just outside of Cairo and close to the famous Sphinx. These tourists are generally told that the Great Pyramid was built as a tomb, and that it is a solid structure built over a burial chamber. Even the most ingenious of the guides who escort the tourists to the pyramids refuse to admit that there are secret chambers and ceremonial rooms within

this unique building. However, during my recent visit to the Pyramid, and while in the company of several high officers of the Rosicrucian Order of Egypt and a number of officers of the Order in America, we were permitted to enter these secret rooms and to verify the facts contained in our records.

It may be surprising to my readers to know that in the ancient times, or in the times with which we are dealing, the entrance way to the principal ceremonial rooms of the Pyramid was not through any doorways in the Pyramid itself, but through a secret passageway built between the two huge paws of the Sphinx. These paws rest upon a high foundation wall, forming two sides of a court in front of the Sphinx, in the center of which stood an altar. Back of this altar, still partly in ruins, and just beneath the breast of the Sphinx, was the well-guarded, secret doorway, opening only by application of certain secret contrivances which only a few knew. It led under the sands and the foundation walls of the Pyramid to long subterranean passageways under the Sphinx and to the great reception hall far below the surface surrounding the Pyramid.

It was to the outer court in front of the Sphinx that the neophytes who were well prepared and deemed worthy of the secret of the entrance way to the Pyramids were brought and given their first induction into the mysteries of the higher degrees. Such ceremonies usually occurred at midnight, when the neophytes and the few who conducted the outer-court ceremony wended their way separately to this sacred spot, guarded and protected by trusted sisters and brothers who remained at distant points from the Sphinx and the Pyramid as watchers and sentinels. Only those who once actually passed through the ceremony within the Pyramid knew of the secret entrance way and the existence of the rooms and passageways.

Joseph was brought before this outer court of the Sphinx and clothed in purple robes during the preliminary ceremony held at midnight. At the completion of the ceremony, he was escorted through the subterranean passageway to the reception room beneath the Pyramid. After further ceremony here in this room, the sublime ceremony of being raised to the highest pinnacle of initiation began. This was performed by escorting Joseph up various inclines to the

several different levels within the Pyramid, on each of which was a small chamber.

After having reached the highest of these chambers, practically in the center of the Pyramid, the final ceremony took place. During this the royal diadem was placed upon the head of Joseph, indicating that he was no longer a neophyte, nor even a peer among the Masters of the G.W.B., but the greatest of them all. For over an hour a pontifical ceremony was conducted, culminating in a period of silence and meditation while Joseph knelt before the altar. Then a great light filled the chamber, which was otherwise lighted only by candles and three torches. A white dove descended in the light and rested on the head of Joseph while the hierophant rose, and various bells in the chambers beneath began pealing the great announcement to the world. A slight figure rising behind the hierophant like an angelic being commanded Joseph to rise while the voice of this being proclaimed: "This is Jesus the Christ; arise!" And all within the chamber united in saying "Amen."

The symbol to the left is called in Christian mysticism the *Monogram of Christ*. It is also often used as a symbol of Christianity. The author of this book traced this monogram on the face of a number of tombs in the catacombs at Rome and in some of the ancient carvings of Egypt. Early Christian missionaries were misled by the discovery of this symbol in foreign lands, and believed it indicated the presence of earlier Christian missionaries. The symbol was in use long before Christianity adopted it. It was the original monogram of Osiris. The sacred banner of Constantine called the *Labarum*, on which was placed the sign by which he was to conquer, was inscribed with the sacred monogram. It was also the mystical sign of Jupiter Ammon. The monogram had a mystical origin in the mystery teachings of the Egyptian Mystery

Schools, and it has been found engraved on a medal of Ptolemy, king of Cyrene. An identical monogram was also found on the coins of Herod the Great, issued before the Christian era. The *Roman Catholic Encyclopedia* claims that the X and the P are the first two letters of a Greek work meaning “Christ.” (The letter R in Greek looks like P; X is the English Ch.) This authority also admits that the monogram was used in pre-Christian periods as a mystical emblem. The monogram composed of X.RN., shown on the right, is another symbol of the title “Our Lord Jesus Christ.”

The foregoing is but a very brief, greatly condensed outline of the final ceremony. The complete details present one of the most picturesque and elaborate settings ever recorded in the organization’s secret writings, and it is known that no such ceremony has ever occurred since then.

As the ceremony ended, the officers and members of the high council surrounded Joseph, who had now attained the name *Jesus* and had been acknowledged the *Christ*, and paid homage to him and proclaimed him the incarnation of the *Word*, or the *Living Logos*. Then followed the ceremonial march to the chambers below, where the first of the Lords suppers was held as a symbolical feast.

Messengers were sent the next day, in all directions from Egypt to every land in which the organizations branches were located, to proclaim the coming of the Savior and the announcement of his mission of redemption. Among these was one John from the Essenian community in Palestine, who had been a student at the schools in Egypt, preparing for his mission in life. He was known to be the reincarnation of Elijah, and he was sent to Palestine, the land in which, as Elijah, he had once before served as an avatar and had attended the monastery at Carmel. It was his mission, like that of the other messengers sent to other lands, to proclaim the coming of the Christ.

The symbol shown above is often called the *Crucified Serpent*. We find in many ancient records a cross of this kind with either a dove, a rose, the sun, or the serpent on it. The serpentine crucifix represented in this ancient symbolism the sun after it had lost its power. In some mystical writings it was used as an emblem of the crucifixion of the Christ to indicate that through such crucifixion the Son had lost his divine power.

And so all the peoples who were ready for the coming of the Lord were duly notified, and the great work of *Jesus the Christ* began.

Chapter 13

THE MYSTIC BEGINNING OF CHRIST'S MISSION

WHEN JOHN REACHED Palestine he appeared in public in the most humble clothing and with great humility. His work was to announce among the lowly and the humble in spirit the coming of the great Redeemer. He presented an entirely new idea inasmuch as he preached the doctrine of baptism for *redemption* or *regeneration*.

It may not be out of place here to state that baptism, or the immersion in water and the use of water for purification in a symbolical or cosmic sense, was introduced into the rites and ceremonies of the G.W.B. in Egypt by one who was known as El-Moria. He was one of the great avatars in the organizations early days, and he had learned through meditation and Cosmic Illumination that water would cleanse in a cosmic sense as well as a physical sense. It was through his learned discussions before the organizations high council in this regard that pools of purified water were introduced in front of every altar in the mystery temples of Egypt and other lands.

It was this same great avatar who first introduced public baptism for spiritual regeneration by holding such ceremonies at Lake Moeris, in the Fayum district of Egypt, around which centered one of the earliest of the advanced civilizations of Egypt.

Recently I made a trip to this place in company with others of our Order. There I saw the beautiful lake which is still a mystery to those who have tried to discover the source of its beautiful water, far

from the Nile and in the very heart of desert lands. Here many of us reenacted in the utmost sublimity the early form of baptism and symbolically celebrated the ancient rite. According to the records of the Rosicrucian Order, this is the first time that scores of men and women united in one reverential party to participate in this ceremonial rite since the days before Christ, and of course it was the first time in the history of the world that such a group of persons from America ever received baptism at the shore of Lake Moeris. For hundreds of years this beautiful lake has never been visited by European or American tourists, and for a thousand years its history and its connection with the Christian rite of baptism has remained unknown except to those in the Rosicrucian Order and those in the high branches of the G.W.B. in Tibet, India, and Egypt.

John was looked upon by the Jewish people as one of the sturdy race of Judah. Since he came from the wilderness into their midst in pious clothing, they looked upon him as an ascetic. His camel's hair cloak was a symbol of penitence, and his words were those of an ancient prophet. John picked out the banks of the Jordan as his special territory for the work he wished to do. Appealing, as he intended, to the lowly and the humble, he attracted the attention of multitudes, who seemed to drink in his words and find hope in his proclamations.

In selecting the valley of the Jordan, he had chosen a place that seemed to be separated from the rest of the world and filled with terrifying contrasts to the rest of Palestine. Around about was the rough land of volcanic formation and volcanic destruction. In fact, the part of the shores selected by John was known as the Sea of Solitude, but it was here that the Essenes had originally held such wonderful ceremonies and had established one of their first communities. It was truly holy ground to John.

John's message was that which most of the Jews had hoped to hear in their lifetimes—the coming of the Messiah. But he warned them that they must prepare for this coming and prepare for it in a true spirit of repentance. His earnestness, and the power with which he proclaimed that only the repentant, the purified, and those who were purged of all sin would see the Messiah, shocked the holy ones and antagonized the strictly orthodox.

From all parts of Palestine came those who wanted to hear the message of John and witness his strange ceremonies in the waters of the river. About this time word came from other lands that other prophets were foretelling the coming of the Messiah. Over and over was repeated the ancient prophecy that *out of the land of Egypt would come the Son of God*.

Camps were built around the lake where earnest souls remained for weeks, many of them hoping that the Messiah would appear in the midst of the thousands who gathered there on feast days. A number asked permission to form a group to take up the work of John and to serve under him in the beginning of a holy war. Rumors of this plan reached the rulers of Palestine, and the priests at Jerusalem began to feel uneasy at the excitement of the populace. Other conditions in Palestine seemed to indicate that a great crisis was at hand. Tiberius, now seventy-four years of age, was indulging in such debauchery at Capri as was rapidly hastening his transition. Pontius Pilate was continuing his persecution of the Jews and becoming more furious. It was in the midst of these conditions that Jesus the Christ quietly and without recognition returned to Galilee and greeted his mother, brothers, and sisters in their little home. He awaited patiently the hour when the first message was to be given. To Jesus came the reports of the work being done by John, and how John was insisting that all who were worthy of regeneration and redemption must be baptized by water. Finally Jesus decided that he should set the great example among the Gentiles of Galilee by proceeding to the Jordan and submitting to John's baptism.

And so it was that Jesus entered the throngs of those standing by the shores of the Jordan listening to the preachments of John. Here he heard the voice of John thundering, "Repent ye, prepare ye the way of the Lord, make his path straight." As he baptized each applicant, he made his famous prophecy of the coming of the Messiah, saying: "I baptize you with water only, but he will baptize you with fire."

Jesus stepped forward, and he and John faced each other for the first time since they had met in one of the conclaves in Egypt. Instantly John knew that he was in the presence of the Christ, and he folded his arms across his chest with the right hand over his heart, and the left hand over his right breast, making the salutation common among

the Essenes. Jesus replied by making a similar sign. Words passed between John and Jesus which have been variously recorded, but which constituted the formal recognition on the part of John that was due the great Master before him. Then Jesus stepped into the water and submitted *voluntarily* to the baptism. As stated in the preceding chapter, this act clearly shows that Jesus recognized the necessity of formal preparation and ceremonial procedure, even though he knew of the divine, cosmic appointment of his Messiahship.

It is one of the important doctrines of the G.W.B. that spiritual illumination and Cosmic Consciousness enter our being only when we are ready. There is an ancient belief based upon the mystic teachings of the Orient that *when each individual is ready for the coming of the Master, who is to guide and instruct her or him in the higher things of life, the Master will appear*. But the emphasis here should be placed upon readiness, which includes worthiness and sincerity of purpose. Unless one is truly ready and properly prepared by instruction, guidance, and the help that lies in the process based upon spiritual laws, no Master will appear, no bursting of inner Cosmic Consciousness will become manifest, and no great illumination of transcendental light will come. Worthiness must be attained, preparedness made manifest, and readiness earned by voluntary effort.

Just as John was sent ahead to prepare the way, just as the great avatars of the past found it necessary to preach and teach in order to prepare the many for spiritual regeneration, and just as Jesus taught his disciples and hosts of others that they might mentally comprehend and spiritually apprehend the laws and principles leading to spiritual awakening, so have the teachers and Masters in the mystery schools in all lands maintained the systems of instruction and methods of preparation that have proved to be adequate and efficient. The seeker for divine effulgence and Cosmic Consciousness who attempts to await the coming of the Master and the brightness of illumination *without study and preparation, and without association with those who are likewise qualified to aid and assist*, delays the coming of the great day and often closes the door to the coming of the Master. It is in this fact that we find warrant for the establishment of the churches and for the maintenance of the secret orders and societies devoted to the spiritual preparation of humanity.

Another monogram for Christ is that formed of three letters, supposed to be the first two and last letters of the Greek word for “Jesus,” but the last letter was finally changed to the Latin letter S so that the I.H.S. stood for *Jesus Hominum Salvator*— “Jesus, the Savior of Humanity.” The letters were also used to mean *In Hoc Salus* and *In Hoc Signo*, meaning “*In this Cross is Salvation*,” or “*By This Sign, Conquer*.” The / and J in the early Latin language were identical in form, and in the early monograms composed of the letters I.H.S., the mark of abbreviation was put above the letters. These abbreviation marks were later misunderstood or so crudely carved that they were considered to be a cross over the H, and in this wise a new monogram was evolved appearing as shown above, with the cross resting on the letter H. This monogram is now the official emblem as adopted by the Jesuits.

So Jesus entered the water and immersed his body in it, while John stood by ready to give him humble benediction. As Jesus rose erectly in the water, and before John could speak, a great light came down from the heavens and surrounded Jesus and remained with him as a magnificent, blinding aura of iridescent illumination. John stepped back, more in fear of the brilliancy of the light than through astonishment, and the multitudes stood aghast, speechless and spellbound by the sight before their eyes.

Then from out of the heavens there descended a great, white, luminous dove, as bright as molten silver and as magnificent as the spiritual light which surrounded the body of Christ. The dove lighted upon the shoulder of Jesus, and while all stood silent and motionless, a voice came from the center of their attention, melodious but resounding like a trumpet call, proclaiming: “This is my beloved Son!” John knew, as did the other Essenes who were assembled there, that the Holy Ghost had descended upon Mary, and had created in Jesus a new being— the divine being of Christhood and Sonship *with* God— as it had created in Mary a new being and a Sonship of God.

Chapter 14

HIS REAL DOCTRINES AND MIRACLES

THE WHOLE PUBLIC life of Jesus, from the time of his baptism up to and including the Crucifixion, was an outer, objective manifestation of the series of initiations through which he had passed secretly— or more or less subjectively—during his years of preparation. This important fact is often overlooked by those who are analytical students of his mission and life work, and it is certainly slighted in emphasis by those who attempt to interpret his doctrines, teachings, activities, sufferings, trials, victories, and defeats.

I have intimated in many places, in the preceding chapters, that the fundamental mysticism of Christianity has been unwarrantedly neglected by modern Christianity and churchanity, but it is being reintroduced into Christianity by the foremost theologians and the clergy. At a recent conclave of one of the high Protestant churches of America and England, the statement was made by one of the foremost ecclesiastical authorities that the salvation of the Christian church today depended upon the proper emphasis of the mystical foundation of Christianity.

Pristine Christianity was intended to carry on the teachings and doctrines revealed by Jesus the Christ, and these were highly mystical though reduced to worldly parables. The apostles of Jesus, who were carefully selected by him because of their previous experience in life and their worthiness, were carefully initiated by him and spiritually developed during the secret conclaves which he held, and which never

became a part of the public records of his life. The work that these apostles carried on, and which was later taken up by the leaders of the Christian church, was dual in nature. There was the secret or *inner circle* of students of Christianity, who were gradually developed in the mystical principles involved in the doctrines revealed by Jesus; and there was the *outer circle* which heard only the parables and preachments given to the multitudes by Jesus and amplified by his followers.

For many centuries after the life of Jesus the early Christian church was more of a secret mystery school than a public place or system of general religious worship. It was not until the conclaves of the church authorities in the 4th, 5th, 6th, and 7th centuries, that the present-day system of churchanity, separate from mystical Christianity, was adopted. And even so, the few in every land who were deemed worthy and properly qualified were permitted to enter the little-known inner circle and bask in the brilliant light of transcendental illumination. That the outer circle, with its churchanity, had a glorious work to do is unquestionable, and I do not mean to criticize the plans which permitted the outer work to grow with greater strength or to a more enlarged form than the work of the inner circle.

Even today the proportion of those who are ready to enter the inner circle is so small, as compared with those who are only partially ready for the broader and more general work of the outer circle, that it often seems like a hopeless task to make the inner circle sufficiently large to carry on the great work that must be carried on to retain the mystical elements of Christianity for future development. I cannot agree altogether with those who criticize the Church and claim that system and organization have eaten away the heart of Christianity, or that outer pomp and ceremony, structure and operations, have denied any place at all to the mystical work of the inner chamber. Spiritual development is a matter of evolution, and progressive evolution is rapid only with the few. The greatest work must be among the masses in order that the occasional one in every thousand persons may find the path that leads to the inner circle.

Before Jesus could begin his great work in life, and before he would lay the foundation of this work by the establishment of his personal school and personal council, composed of selected *neophytes* who

would be his trusted apostles, he had to face once again the tests and trials of higher initiation. This time, however, he would not approach these things as a neophyte, but as the ordained *Christ*. And since his work would be in the objective world, so would his tests, trials, and initiatory experiences be of the objective world. For this reason, we see why it was that the first incident of his public career was his retirement into the silence for meditation.

In a previous part of this book I have referred to this principle of entering the silence and have commented upon the benefits of silent meditation. In the books of Matthew, Mark, and Luke, of the Christian Bible, we find reference to Jesus entering the silence, or going into the wilderness, whereas nothing is said of it in the Book of John. John was the most mystical of the writers of the New Testament, and his gospel emphasizes more of the mystical principles of Christianity than any of the others. His reason for skipping over the incidents of Jesus's meditation in the wilderness is probably because of its personal nature and because it had no bearing upon the work of Jesus with the public.

Throughout the Christian Bible we find so many references in both the Old and New Testaments regarding those who went up on a mountain for illumination or for intimate contact with God or God's Consciousness. The proof that these references to *mountains* of inspiration or *mountains* of illumination have not been considered in their true mystical light is found in the fact that expeditions composed of scientists and ecclesiastical authorities have sought for many of these "mountains" in the Holy Land and have labored diligently to select the proper one to fit the various incidents described in the Bible. In many cases, the mountains selected have proved to be mere hills, much like thousands of others to be found in such a rolling country; and surprise has been expressed by a great many that such places should have been called mountains at all.

The truth of the matter is that *going up onto a mountain for illumination* is a symbolical, mystical statement, indicating no actual, physical mountain and referring to no physical height at all. We are surprised to find that the ancients who lived in lands where there were no mountains or even large hills referred, in their writings, to the illuminations which they received upon mountaintops. Even some of the early Christians in

Egypt spoke of the illumination which came to them out in the desert on the mountaintop.

Going up onto a mountain meant, in the mystical terminology of the G.W.B. and in all of the mystical writings of the avatars and masters of the past, the raising of one's inner spiritual self to a great height where cosmic contact, or Cosmic Consciousness, was definite and complete. We find that all such experiences in the Old Testament, including the one regarding Moses and the spiritual contact he made with God, were for the purpose of attaining spiritual illumination or the development and test of some spiritual principle. Logically, the very opposite of this expression was also true. Whenever one of the great mystics or masters of the past had to contact or come in contest with one of the earthly, nonspiritual phases of life and wrestle with a problem that was purely worldly, he went into the *valley* or into the *wilderness*, and not to the mountaintop.

Thus we see why the first incident of the life of Jesus, which concerned objective principles and earthly trials and tribulations, took him into the desert wilderness instead of onto a mountaintop. We read in the Christian writings that he spent forty days and forty nights in this wilderness. During this time he fasted and hungered, and in other ways suffered the conditions of the body and flesh.

It is interesting to note that the numbers *seven* and *forty* are the numbers mostly used in mystical literature, because they have a mystical significance. I will not take the time to recall to my readers the number of times the number seven is used in the Old and New Testament, beginning with the creation of the world and the number of days in the week, and the fact that the seventh day was made the holy day; for I am sure that a few minutes's reflection will bring to mind many such uses of this symbolical number.

The number forty is used so many times that its significance becomes apparent even to the casual student of the Bible. It is found very frequently in the most ancient of sacred writings in many lands. The Egyptians claimed that the body was not completely freed of the soul until after forty days of preparation. Moses abstained from bread and water for forty days and forty nights during his period of cosmic contact. Moses was on the mount for forty days and forty nights, and

he was on Mount Sinai the second time for forty days and forty nights. Those who went to Canaan were forty days on their spiritual journey. It was prophesied that no foot of human or beast would pass through Egypt for forty years.

Elijah was forty days and forty nights on Mount Horeb, and the same number of days and nights on Mount Carmel. The children of Israel were in the hands of the Philistines for forty years, and for forty years the children of Israel ate manna. The people of Nineveh had to repent for forty days. We find that Saul, David, Solomon, and Joash reigned as kings for forty years. So we should not be surprised to find that Jesus went into the wilderness for forty days and forty nights.

We must also remember that both Moses and Elijah began their public ministrations by fasting for forty days and forty nights, and preparing for their final acts. In the case of Jesus, however, his first acts were to be those dealing with material, earthly affairs, while with Moses and Elijah they were to be of a spiritual nature, dealing with spiritual problems. Hence, Jesus went into the lowlands of a wilderness while Moses and Elijah went up on the mountaintop.

We find from the Christian accounts of the experiences of Jesus during his forty days in the wilderness that it was a period of temptation, and the story being told symbolically, the temptations of the earth are personified as coming from the person of Satan. The temptations, however, through which Jesus had to pass were symbolical of those presented to him during his initiation in Egypt, when he was being prepared for the ministry. According to the old records Jesus himself meditated upon what form of temptations the world would present to him during his ministry, and one by one these temptations were stated by himself as though being spoken by the "tempter." Then he reviewed the nature of the temptation, analyzed it carefully, and formulated what answer he would give and what attitude he would maintain throughout his life, if ever brought face to face with such temptations.

Therefore, the entire process was one of self-examination; and it is recorded that the ultimate result of the self-examination and a consideration of the conditions that Jesus would have to face brought

him to the point where he realized that he would come to the final close of his career during a public attack upon his methods and life, culminating in his Crucifixion. Therefore, we understand why Jesus made prophetic reference a number of times to the sad close of his life, and why he anticipated and was more or less prepared for what actually occurred. In truth, he knew that he would not be the first of the avatars who had been crucified and who had been accused wrongly by the very people who would have benefited the most from the instructions and teachings offered.

In fact, we find that as soon as Jesus had completed his forty days of meditation and self-examination, and had outlined his plans for his ministry, he learned that John, who had baptized him, was already in prison because of his missionary work. So we know that Jesus was aware of the fate that awaited him, and yet it did not deter him nor discourage him, for all these things were tests of his sincerity.

So Jesus began to preach the doctrine of repentance. This doctrine was not unique with Jesus, but it was a new form of preachment for the public in Palestine. El-Moria in Egypt, centuries before, had introduced the doctrine of regeneration as the reward for repentance, and it had been a doctrine with the G.W.B. in all lands; but Jesus added an inspired hope to the hearts and minds of all— “The Kingdom of Heaven is at hand!”

Analyzing all of the doctrines introduced by Jesus, we find that each and every one of them had a mystical principle as its basis, and these mystical principles were natural, spiritual laws. Comparing the pristine doctrines of Christ and the general tone of his message to present-day Christian doctrines and messages, we find an outstanding difference. Jesus preached a message of hope which might be expressed in these words: “Believe in me and my teaching, love and act in love toward all and let hope be the soul of your deeds, for beyond this present existence there is a more perfect life to come. I know this, for I have come therefrom, and thither I will lead you. Aspiration alone will not serve you. To attain the more perfect life of the future, you must begin by realizing it now, first by finding it within yourselves, in the Kingdom of Heaven that is within, then afterwards finding it in humanity through the acts of love and charity.”

Present-day doctrines preach a message of despair which must be phrased briefly in these words: "Ye are all children of evil, born in sin and living in sin, and in sin shall ye die. The Kingdom of Heaven is far from thee, and can never be attained except ye are born again and through regeneration become purified and saved from the sins which ye have inherited."

We can understand, then, why the multitudes of Palestine followed him and found peace and renewed life in his words. Nowhere in the records of the Order do we find that the miracles of Jesus nor the wonderful demonstrations of healing which he performed attracted as much attention or brought as much hope and happiness into the lives of the public as did his message. Those who are well acquainted with the principles involved rightfully feel that the present-day emphasis upon the miraculous healing of Jesus is a mistake, for in his time these things were but mere incidents and not the objective of his mission, nor the paramount benefit which he bestowed. His cordial message of "Come to me, all you that are weary and are carrying heavy burdens, and I will give you rest," was one which meant more to the multitudes than the raising of the dead or the healing of the sick. Think again of the contentions, the struggles, the bitter disappointments, the blasted hopes, and the peaceful aspirations of the people of Palestine at this time, and you will realize what such a message meant to them.

Jesus's famous Sermon on the Mount represents an image of the Kingdom of Heaven which he was already bringing into consciousness in the hearts of the people. Did he require them to do great fasting, make unusual sacrifices, or suffer public penance? None of these were recommended by Jesus; he merely said that all should lift up their eyes and attune their spirits with the new Kingdom. "Blessed are the poor in spirit; for theirs is the Kingdom of Heaven," was the consolation that he offered to the downtrodden and those who were forlorn and in despair. His presentation of the four Beatitudes—the marvelous power of humility, sorrow for others, the inner goodness of the heart, and hunger and thirst after righteousness—were the mystical doctrines or spiritual principles which he taught as being the *Way* to the Kingdom of Heaven. And like the sound of a mystic silver bell in the temples of old, resounded the pure, pristine principle of "Blessed are the pure in heart, for they shall see God!"

Even his doctrine of regeneration called for no material, physical sacrifice as demanded by others who had left the multitudes in despondency. "... no one can see the kingdom of God without being born from above," meant no difficult thing for those who understood the spiritual, mystical laws involved; for Jesus explained, "Very truly, I tell you, no one can enter the kingdom of God without being born of water and Spirit." These words are recorded in the Book of John; for John was careful to preserve the mystical statements of Jesus, knowing the importance of this part of the divine messages. Regeneration by water, rebirth through baptism, and awakening of the Divine Consciousness within through the Holy Spirit was the Way to the new Kingdom.

In the G.W.B. and in the Rosicrucian Order of today all of the doctrines, teachings, thoughts for meditation, and principles for experience are intended to enable the student to awaken that inner consciousness and permit the Holy Spirit to bring about the attunement which leads to the finding of the Holy Kingdom. With the coming of Cosmic Consciousness, through the awakening of the Holy Spirit, comes illumination of the mind, peace to the soul and body, power to the mental faculties, intuition, the healing touch, the ability to master and accomplish, and the prowess to overcome the earthly, material obstacles to success and happiness. These are the offerings of the Order in all lands, and freely are they offered and freely must they be accepted, in sincerity, and with an open mind. No material price can be placed upon these things, nor can they be commercialized in books and public manuscripts. For ages have the Rosicrucians preserved these teachings and carried on with the divine principles without bias and without price or prejudice. To the few who are worthy, these things are accessible. To those who are curious and demand a sign or a symbol, nothing is shown and nothing is given.

The miracles performed by Jesus were never supernatural in the sense that they extended beyond the limitations of natural law or found their manifestation through a unique application of an unusual law. To the mystics of old and to Jesus, the Master of these things, all laws were divine laws, all principles were godly, and there was nothing supernatural, nothing super divine, unique or extraordinary, in what he

did. His power to perform miracles was dual: mental apprehension and comprehension of the laws involved, with the ability to apply them properly and direct their operation; and the divine within him which enabled him efficiently to direct the creative processes of the God Consciousness in his soul. Half of his power was a divine gift born in him; the other half, a power developed through study, training, and experience.

To some degree all men and women are born with the divine power to perform, and to some degree all men and women may attain the mental mastership necessary for the application of the divine power. Jesus himself is the authority for the statement that others could do the things which he did— even greater things. Great avatars before him had performed similar miracles, and even today there are those who heal and who raise those who are literally dead, through the divine power that is God's greatest gift to humanity.

Jesus did not teach that so-called death or transition was something which might be stayed, continually prevented, or completely eliminated from human life, but that it was an *inevitable event* in the life of all beings. In this we see a distinct contradiction of the unsound and unnatural doctrine that transition may be avoided and life made continuous in one body. "There is no death!" is true of the real part of humans, and of the physical part as well; but Jesus and his disciples taught that there is a change in all material things and that transition of the soul and body are manifestations of the spiritual law. However, disease and suffering are abnormal and preventable, and this Jesus demonstrated. Also, he taught how to live that the physical body might be free of suffering and the mind free of the tortures of sin. The Rosicrucians of today teach how we may live in harmony with natural law and avoid the suffering of the flesh and the sins of the body, so that we may dwell in peace and happiness until the hour of transition comes.

It is easily understood that the teachings and demonstrations of Jesus antagonized those of the orthodox faith. Jesus was a *modernist* in every sense of the word, and he came into the land of fundamentalists with doctrines and demonstrations of doctrines that were contrary to all that had been taught to and believed by the multitudes.

In my recent journey through Palestine I noted the contest between the various sects, and especially the determination of the strictly orthodox to adhere to the ancient customs and rites of their ancestors. It was quite evident that if Jesus came to Jerusalem today and preached once again as he did before, and made demonstrations of the truth of his teachings, he would be crucified again by incarceration, by rejection on the part of the strictly orthodox, and by ridicule on the part of the skeptics and doubters. Undoubtedly the same would result if he came to the Western world and right into the midst of those who are at present discussing the evolution of our thinking, and the advancement of our comprehension, which effects a change in our beliefs and faiths.

During the period of the public ministry of Jesus, he passed through four ancient, traditional stages of initiation as outlined centuries before by Pythagoras, which were: The first degree, or *preparation*, culminating in the Sermon on the Mount; the second degree, or *purification*, represented by the miracubus healings and the demonstrations of Christian mystical therapeutics; the third degree, or *illumination*, manifested by the raising of Lazarus; and the fourth degree, or *spiritual vision*, manifested by the transfiguration.

How these events and stages of his mission culminated, and what they meant to this great Master, I will present in the next and following chapters.

Chapter 15

THE TRUTH ABOUT THE CRUCIFIXION

WITHIN RECENT YEARS, one or two pamphlets have appeared, presenting what claims to be a story of the Crucifixion as recorded by an eyewitness. The story told therein is very short and merely throws some light of a questionable nature on a few points of the story of the Crucifixion. The statements in that pamphlet which were worthy of consideration were taken from several reliable sources and fictitiously enlarged by an unknown author who was merely making his appeal to those who desire a surprising story.

The true story of the Crucifixion is recorded in a number of ancient writings, all of which are very dependable and consistent in their outline of the incidents. Even Judas left a brief outline of his connection with the affair and what he noted of it. His story merely substantiates some of the points contained in the other records. The principal and most complete outlines of the story are contained in the three manuscripts written by different scribes and preserved in the monasteries of Tibet, Egypt, and India.

It is generally believed by biblical students that the only record or story of the Crucifixion is that contained in the Christian Gospels. Critics of the Christian doctrines and biblical stories have often argued that they did not believe the story at all because they could find no verification or substantiation of it in other records or in the writings of contemporary historians. These persons seem to forget that at the time

of the Crucifixion the event was one of paramount importance to the followers of Jesus and to the several sects, the members of which were associated with the work being done by Jesus and his apostles. The event was of little importance from a national point of view and from the point of view of the orthodox Jews and the powers of Rome.

For this reason, contemporary historians, writing of the broader and larger events of the day, did not look upon the crucifixion of a religious leader as an event of such national importance or such worldly consideration as to warrant a place in their writings. From our present-day point of view, the Crucifixion appears as one of the most important events in the history of civilization; but that is because time has given us the proper perspective, and the results of the Crucifixion have enlarged themselves into a worldwide effect that is still vital to the lives of men and women. Many events in recent years have passed by hardly noticed in the historical records and have since become of extreme importance. The assassination of one man in one country in Europe, in 1914, might have passed by with little comment in the newspapers, and certainly without any comment at all in the history of the nation, if the future developments associated with that event, or gradually resulting from it, had not quickly given it a place of worldwide importance, connected with one of the greatest wars in human history.

In the case of the Crucifixion of Jesus, the real importance of the event and the greater effect of it evolved very slowly, and only after many centuries had passed. Those who wrote about it while it was still fresh in their minds dealt with it, not as an event of worldwide importance, nor as an event that needed to be set forth in minute detail, but as an event that had its categorical place in the scheme of things associated with the purely religious activities of their sect. For this reason they recorded only those points which had a religious or spiritual significance, according to the individual writers personal opinion. Hence the difference in presentation of the story and the difference in emphasis of the various points involved. This explains the lack of details in the Gospels.

However, in the record of the writers who intended to preserve the complete story in the archives of the G.W.B. and its associated organizations, the matter was viewed as one that had an important

connection with the series of events that had occurred in the history of the organization in ages past. The writers presented evidence in the relationship of this event with similar events substantiating the doctrinal teachings and traditions of the cosmic and spiritual laws as made manifest in the lives of every great avatar and every great leader of human evolution. In the opinion of these writers, many incidents connected with the Crucifixion were of extreme importance and were carefully recorded, while the same incidents were passed over as inconsequential by the writers of the records published in the Christian Bible.

Another reason for a considerable difference between the story as told by the Gospel writers and the story as told by the scribes of the G.W.B. lies in the fact that the writers of the Christian Gospels were writing for the purpose of establishing and maintaining certain doctrines and principles which were becoming the foundation of a new religious sect. Therefore, they had to adhere to the traditional story of the Crucifixion, as it had been officially outlined by the apostles and presented as the theological basis for the Christian foundation. Every incident of the Crucifixion inconsistent with these theological principles and foundation traditions had to be eliminated from their stories, not for the purpose of deception, but in order that those unprepared and not ready for the complete story would not be confused, or their attention distracted from the principal elements, by the presentation of mystical elements reserved only for the inner circle and the more advanced followers.

The emblem shown above is one of the oldest of the popular mystical signs and has been mistakenly attributed to the American Indians because it was found freely used in some of their mystical decorations. Recent research found it engraved among the very old symbols of the Mayans in Yucatan, where it was probably in use hundreds of years before the Christian era. It has also been found as one of the signs in the ancient Buddhist zodiacs and is a symbol in the Asoka inscriptions. It was the sectarian mark of the Jains and the distinctive badge of the sect of Xaca Japonicus. The earliest form of the cross found in the Christian catacombs is in this form. This symbol is one of the most sacred in use in the monasteries of Tibet by the G.W.B. In Christian symbolism this cross is supposed to represent two capital Gammas, crossed and reversed, and is used as the sign of "faith in the crucified."

From this the reader will understand that the complete story and the real facts of the Crucifixion were accessible to and known by the founders who established the early Christian church in the 4th to 7th centuries A.D. In fact, these founders had easier access to these records, and to many others now lost or hidden, than we of the present time, despite any connections we may have with the greatest and most complete existing library of secret manuscripts.

We know that the church authorities had access to these secret records, because in the council meetings of the early Christian church, and in the discussions that took place between the highest authorities of the early church, reference was made to certain portions of manuscripts and official records dealing with the Crucifixion and other incidents of the life of Jesus which are now concealed or have been destroyed. That many such records were destroyed is proved by the fact that at certain times in the past these various councils of the early church authorized the destruction of certain manuscripts which were discussed by them, because they decided that the existence of such records might embarrass them in the future. The official records of many of these councils contain long and lively discussions regarding these manuscripts and their contents; and we find that a number of eminent authorities in the early church seceded from the councils and brought the wrath of the early church upon their heads by their refusal to agree to the destruction of these important manuscripts and the plan to conceal certain known facts.

In previous chapters of this book I have referred to the statements of some of the church authorities that demonstrated how familiar they were with the secret or hidden details of the life of Jesus. Unquestionably many of these important records and manuscripts are today preserved in the Vatican at Rome, for it was the ambition of the church leaders during the 7th to 12th centuries to procure and take away from public or even private study, all books and manuscripts in the rare collections in Oriental lands which might contain statements differing from those established by them as the official traditions and doctrines of their church. We know, for instance, of one incident which took place during the Crusades to the Holy Land, at which time one magnificent library containing 20,000 rare manuscripts of historical importance, dealing mostly with religious matters, and especially with the affairs preceding and during the lifetime of Jesus, was destroyed completely—reduced to ashes after a selected few of the manuscripts were forwarded to Rome.

Fortunately for us, some very important manuscripts have survived all of the destructive processes, and it is from these that many incidents regarding the life of Jesus have been extracted for this book. The incidents of the Crucifixion, taken from these records, are especially illuminating, and because they are too long to be placed in any one volume, I find it necessary to select at this time merely the highlights from these records and piece them together in the following paragraphs.

First of all, we find that the Crucifixion of Jesus did not come about at the hands of the Jews as a protest against his teachings or as a punishment for his attempted leadership. The idea that the Jews persecuted and eventually crucified Jesus is a viewpoint adopted by the founders of the early Christian church, because it was consistent with the theological principles they wished to establish and with the traditions they wished to make the basis of their doctrines.

It is generally contended by Christian authorities that Jesus was an outcast among the Jews except for the few hundreds or thousands who constituted his followers; but there is no foundation for this idea in any of the incidents of his life, nor in the facts as we find them. While it is true that the Jews did not consider Jesus a Jew, but a Gentile, and many

of them ridiculed the idea that anyone from Galilee or anyone who was believed to be a Nazarite could do anything that was good, nevertheless they would not have crucified him because he was a foreigner, nor even if they had considered him an “upstart” in their midst. The idea that he was destroying their religion or wrecking their church is not supported by any of the real facts. Jesus himself said, on more than one occasion, that he came not to destroy the law or the words of the prophets, nor to belittle the prophets and pull them down from the high place they held among the Jews, but to fulfill the predictions of the prophets and to support the laws they had established.

It has also been said that Jesus attempted to turn the faith of the Jews from their one God toward another, or a *trinity of Gods*, and for this reason brought condemnation upon his work. We find no foundation for this belief either; and when Jesus was asked as to what was the first commandment, he answered: “Hear, O Israel, the Lord our God is one, and thou shalt love the Lord thy God with all thy heart and all thy soul and all thy mind.” Certainly that was consistent with the Jewish religious viewpoint and could not have been antagonistic. While it is true that he did criticize a few of the practices in the synagogue and did attempt to direct the thoughts of the people to higher ideals, this in itself would not have warranted the Jews to crucify Jesus, nor to do more than simply ignore him.

Jesus was no more radical than Isaiah had been and no more liberal in his orthodoxy than Micah. He did not attempt to establish a new sect or a new church of any kind, despite the statements of many Christians who think that Jesus himself established the first Christian church and started the first Christian movement toward the foundation of a separate and individual sect. Even if he had done so, this would have been no new thing in that land, for among the Jews there were various sects, some very old and some very new, such as the Pharisees, Sadducees, Essenes, Nazarites, Nazarenes, Kuthites, Boethusians, and many others. And yet not one of the founders of these various sects was ever punished by death.

Jesus may have proclaimed himself as a Messiah, much to the disgust of the strictly orthodox, but according to Jewish custom any member of the House of Judah might have believed it without being killed by

the Jews for such a belief. He may have referred to himself, although we have no record of it, as the “unique and only begotten Son of God,” but we doubt that the simple claim of being the “Son of God” would have antagonized them in any way; for all Jews believed that God was their “Father” and always prayed to God as their *Heavenly Father*, and referred to themselves as the *Children of God*. Such a conception of the Deity was common in Israel.

The one outstanding point in connection with the Crucifixion of Jesus is the use of the cross. That one thing tells the story that Rome had ordered his death, and that it was a Roman punishment and not a Jewish one, for the Jews would have stoned him, in their usual manner, had they desired to get rid of this man for any reason. The fact that his death was ordered in the Roman manner, and at the hands of those officially delegated to carry out the death sentence in a legal manner, indicates that the whole affair was not one of mob violence or religious persecution on the part of the Jews, but a sentence officially proclaimed at Rome.

We must remember that more important than the claim of the apostles or the disciples of Jesus that he was a Messiah and the Son of God, was the title being bestowed upon him by the enthusiastic followers who idolized him and, without discrimination or discretion, proclaimed him *King of the Jews*. This was a serious thing and the real reason for his Crucifixion.

The Jews were anxious to have a leader, whether he was the true Messiah or one anticipating or representing a Messiah to come. And if this self-appointed or truly ordained leader brought them a message of peace and happiness and performed miracles of healing, he would have been tolerated by the majority of the Jews if not by all of them. The restlessness among the Jews in Palestine and their hopes and plans to be freed from the yoke of Rome had caused Rome considerable anxiety in the past. Everywhere the spies of the Roman government were watching for the possible uprising of a rebellion and the selection of a leader that might start another war; and when the whisperings or even the open professions of the enthusiastic followers of Jesus proclaimed him the *King of the Jews*, it was a matter serious enough to be immediately reported to Rome and be given official attention.

Jesus was undoubtedly feared by Rome, according to many ancient records that deal with just this phase of the matter. His simple teachings were opposed to those taught as the official doctrines of the Romans. His preachments tended toward *holy socialism*, and the tyrannical imperialism of Rome could never harmonize with such teachings as this. The only offense that can be attributed to Jesus throughout his whole career was a political offense from the Roman point of view. The Roman standing army in Israel and the spies maintained by the Romans made it possible for that government to take stringent measures whenever there seemed to be a traitor in their midst or a possible uprising.

Caiaphas would appear to have been a spy for the Roman government if we are to judge by the secret reports that he made to Rome regarding the activities of Jesus. On the other hand, he may have been merely a personal enemy, for he certainly did do everything possible to keep Rome informed about Jesus and to make it difficult for Jesus to continue his work. Even though Caiaphas was an eminent leader of the Sanhedrin, he did not represent this body in the reports he made, nor in the attitude he assumed. It is even indicated that Caiaphas went so far as to present large sums of money for the purpose of procuring evidence and making sure that a warrant would be issued by Rome for the arrest and trial of Jesus. So we find in this man a greater enemy to Jesus and his work than Judas.

It appears from some of the ancient records that most of the contentions and revolts that became quite popular in Palestine at about this time were purposely attributed to Jesus, or more precisely to his followers. Gradually Rome became convinced that it could end the enormous expense to which it had been placed in constantly investigating and watching the Christ movement in Jerusalem, thus cutting short the trouble it had experienced in dealing with these matters by removing the leader of the so-called new political faction. Therefore, by the time Jesus entered Jerusalem for the purpose of carrying on the culminating phases of his work after a long and successful tour in the outlying sections, a warrant for his arrest was already in the hands of officials in Jerusalem. Owing to the fact that he arrived at the approaching festival period, it was deemed advisable not to interfere with the quietude and sacred peacefulness of the Jewish feast days. Caiaphas anticipated an

uprising when the hour for the arrest came. Such an event would have been disastrous to the traditions of the church, would have upset the celebration of the feast pilgrims, and incidentally would have detracted from the very large financial harvest which always resulted when there were so many thousands of pilgrims in Jerusalem.

There are a number of references in the ancient records showing that an assassination of Jesus had not only been thought of, but had been planned by some of the hirelings of both the religious fanatics of Jerusalem and the local Roman authorities. It was decided, however, that such an act would be attributed to the Jews rather than the Romans, because the Romans had every reason and every power to proceed openly and have Jesus condemned as a political troublemaker.

The story of Judas as presented in the Christian version is a garbled one, modified in order to illustrate the fact that among the followers of Jesus, as with every great leader or avatar in the past, there was one who represented the evil forces and principles of the world, and who typified the untrustworthy element met with in all phases of life. The facts of the story are that the officials appointed to arrest Jesus realized that if they attempted to arrest him in public while he was preaching or performing his miracles, they would have to contend with a mob situation resulting in the use of arms and force, the destruction of life and property, and the creation of a condition not desired by either the Roman or Jewish people. Therefore, it was decided to arrest Jesus in private, when he was outside of the city and accompanied by but a few of his followers. Someone was needed, however, who could identify him at a distance in the white raiment which so many of the Essenes wore. Judas was willing to serve in this case for the bribe that was offered him, and in truth he did typify the element in life which the story in the Christian Bible presents.

That Jesus knew of the coming events, and that treachery and false reports were about to end his career, is evidenced not only in the Christian stories but in many of the private records. The soldiers representing the Roman government followed the directions of Judas and found Jesus in his usual environment in the Garden of Gethsemane where he was wont to hold secret consultations with Nicodemus, Mathaeli, Philopoldi, and Yousef of Arimathea. While the soldiers

were arresting Jesus, Yousef of Arimathea made off hastily to inform others of what had occurred and to make immediate plans to aid Jesus. Pilate was consulted and he agreed to delay matters till after the feast days. He feared there had been some illegal trickery or action in what had occurred and that criticism would result, thus jeopardizing his own position. Reading between the lines of the various ancient stories, we cannot feel that Pilate was moved by any inner or outer sentiment in his dealings with Jesus that was impersonal or unselfish.

The warrant called for immediate trial, and Pilate found reason legally to delay matters without antagonizing the Roman authorities and yet serve his own purpose. There were those who called upon Pilate and represented themselves as Jews, while others represented themselves as supporters of the Roman government, who demanded that the order of the emperors prefect be carried out at once. The warrant was of a nature that called for the death sentence if the person arrested was found guilty as charged. It is recorded that the decisions of the minor judges and witnesses were reported to Pilate that very night, but there was not found in these decisions that testimony which Pilate believed was sufficient for him to permit immediate execution.

In some of the Christian stories there is an intimation that some persons in Pilate's household were followers of Jesus. We find no reason for this statement except that Pilate himself had had some absent healing conducted by Jesus, which had resulted in the cure of a diseased hand. But if all those who had been healed or helped by Jesus had been true followers of him, there would have been such a multitude of followers in Jerusalem that no one would have even dared to plan the Crucifixion, let alone carry it out. It is not uncommon for avatars to have the very arm that was once paralyzed and cured become the arm and the hand that smites them first. Pilate was pleading for delay, but pressure was being brought to bear and so he yielded.

The attempt to transfer the case to Galilee, because Jesus was not a Jew, and therefore bring it under the direction of Herod, who was attending the feast in Jerusalem, also failed. Herod himself was not in such a position of stability and so free of criticism that he dared to take part in an affair that he knew was a more serious matter than appeared on the surface. The intriguers, in the meantime, feared that

Jesus might slip out of their clutches, but no attempt was made by his followers to do otherwise than demand fair trial and sufficient delay to enable them to prepare their defense.

Jesus himself seemed to be unconcerned regarding the controversy among the higher magistrates, for it is recorded that during these very bitter hours he continued to give treatments, teach, and carry on with a peaceful mind. We must think of the majesty of such a mind that was able to do this, knowing, as Jesus knew, what was really in store for him. The followers of Jesus who were attempting to prepare some defense for him, or to secure his freedom, recalled the fact that it was customary on the occasion of such feasts to give life and liberty to some criminal, and this point was presented before the officials with the request that the multitude preferred Jesus as the one who should be the receiver of such a feast gift. Even this plan failed. Finally, Pilate turned Jesus over to the mob of accusers and personal enemies, and the process of scourging began as a preliminary to the Crucifixion. The manner in which the leaders of the mob exerted themselves at this time, as recorded in all the records, shows that the greatest enmity and ill feeling was felt on the part of a few of the Jews who were personal enemies.

However, the apostles and the Essenes were carrying on their plans silently and appealing to higher authorities to save the life of their Master. Those who knew what was being done in the form of appealing to the emperor for a reconsideration, and appealing to other authorities for intervention, could not understand why these things did not come to an issue more quickly. According to the records, a great many of the followers of Jesus thought that more trickery was being perpetrated, while those who knew realized that Jesus had advised them of the real nature of the Crucifixion, and how it would terminate, and what it meant to the great work of the secret organization. Therefore, there were two groups who watched the developments: one moved by anxiety lest each hour would produce no effect that would stay the proceedings, and the other group that knew intuitively, and perhaps from secret information given them, that all would not end as the others believed.

Nearly a week had elapsed since the warrant had been issued. Hour by hour passed until finally the body of Jesus was raised on the cross on *Golgotha*, a little hill just outside the city walls, that was so round and suggestive of the shape of a skull that it was called Golgotha. Here other condemned men had been crucified, as had been the custom of the Romans for many years. The cross had always been a device for Roman crucifixion and persecution, and to the Essenes it was an emblem of human suffering, tests, and trials; but the raising of this particular cross with its precious burden became at once a new symbol to the Brothers and Sisters in White Clothing and the secret organization. From that hour the cross had a new meaning in spiritual and mystical thought. The Jewish factions which had gathered round to witness the raising of the cross dispersed to prepare for the approach of the sabbath, and only the Gentiles and the members of the secret organizations remained there to watch and to protect the body of their Master.

Considerable comment has been made in recent years, and perhaps in many of the years gone by, concerning the words spoken by Jesus while on the cross. Those who have tried to argue that Jesus was not the great Master and Son of God as claimed by the apostles and the disciples refer to the words in the Book of Mark 15:34, which are given there, in one of the languages which Jesus spoke as "*Eloi, Eloi, lama sabachthani?*" which is translated in the Bible as meaning, "My God, my God, why have you forsaken me?" The Book of Matthew gives practically the same wording. However, the four books of Matthew, Mark, Luke, and John agree in saying that immediately after speaking these words, *Jesus yielded up the ghost, or gave up the ghost.*

These words spoken by Jesus and the statement that he gave up the ghost are highly significant in a mystical sense. It was the Holy Ghost which Jesus yielded up at that moment, and this was the same Holy Ghost that came into the womb of Mary and manifested the creative power of the Logos. It was the same Holy Ghost that descended upon Jesus at the time of his baptism and which infused him with the authority and power to be the living representative of the Logos on earth. At the time of yielding up the Holy Ghost, while on the cross, Jesus permitted the special power and authority to return to the Cosmic Consciousness and leave him as one who had completed his

mission and was no longer the living power of the Logos on earth. This is why Luke expresses the incident by having Jesus say, “Father, into your hands I commend my spirit,” and John wrote that Jesus said, “It is finished.”

Every mystic will understand that these references to giving up the Holy Ghost cannot possibly refer to the giving up of *life, vitality, or vital consciousness*. Those who have attempted, since the 5th century A.D., to advance the idea that Jesus actually *died* while still on the cross, or that his transition occurred at that time, attempt to use the term *giving up the Holy Ghost* as meaning giving up *life* and *consciousness*. If the Holy Ghost is to be considered in this particular instance as meaning vitality, life, and animation, then we must be consistent and interpret the term in the same way in every instance where it has been used in connection with the life of Jesus. Can we say then, that when Jesus was baptized and the Holy Ghost descended upon him, that it was life, vitality and consciousness, and that this was the beginning of his existence as a living being?

It is quite evident by the whole story of the baptism in the Christian Gospels that the descent of the Holy Ghost was the *holy authority* and *divine power* coming into the body of Jesus, or into his consciousness, completing his preparation and perfection of development as a divine Son of God, an avatar, and the living Christ. It was the reversal of this process—the Holy Ghost and the Christhood withdrawing into the spirit and consciousness of God—which occurred on the cross as the culmination of his brief mission and the end of his official Christhood.

We realize, now, that the words *Eloi, Eloi, lema sabachthani?* could not mean, “My God, my God, why have you forsaken me?” and that there is either some hidden meaning in this expression or the words have been misinterpreted. Going to our ancient records and the original version and transcriptions that are recorded in reliable archives, we find that the words written there are *Heloi, Heloi, lema sabachthani?* We find, then, that what Jesus said was, “My Temple of Helois, my Brethren of Helois, why have you forsaken me?” and that he was referring to the brothers and sisters of the Temple at Helios where he had been

initiated. They were expected to prevent any unnecessary suffering and be ready to render any aid that was necessary. Just at this time, in the midst of his intense suffering, Jesus was not aware of all that was being done for him and probably looked upon the absence of so many of the brothers and sisters as a lack of attention at a crucial moment. It was at this moment that Jesus entered into the stage of *transition* from *Divine Master* to *human Master*, and the transition had its culmination in the Ascension as described in the next chapter. We see, therefore, that the problem regarding his last words on the cross resolves itself into a further indication of his real majesty and divine attunement.

Just as the sun was casting its last rays over the horizon and the sky seemed to be darkening more rapidly and threatening a storm, which appeared highly significant to the faithful, a commotion was occurring in the palace of Pilate. A herald had arrived with a document bearing the private seal of Tiberius, and all were anxious to know its contents. This document instructed Pilate to cancel the warrant and to stay all proceedings until a complete investigation could be made by Cyrenius. In the meantime, Jesus was to be set at liberty until a full report could be made.

Pilate immediately sent a messenger to those who were in charge of the Crucifixion stating what had occurred, and he instructed that no further persecution or torture of the body was to be permitted. In fact, his instructions stated that if there was any life still in the body of Jesus, it was to be taken down from the cross and sent to a hospice to be cared for. This was the news anticipated by Nicodemus, Mathaeli, and Yousef of Arimathea, and of course it was unpleasant news to the intriguers, and especially the Covenanters.

The storm soon broke and delayed the removal of the body of Jesus for a few hours, but in that time food and drink were given him, and support was placed under his body to prevent it from pulling too greatly upon the nails which tortured his flesh. The few faithful ones noted with great anxiety that a somber stillness and a numbness was passing over the body, and that gradually Jesus lost consciousness. At the earliest possible moment, when the storm quieted, torches were brought and an examination of the body revealed that Jesus was not

dead. The blood flowing from the wounds proved that the body was not lifeless, and so the cross was immediately taken down and the body removed from it.

The body was then taken to a burial vault owned by Yousef of Arimathea, which had supposedly been built for the care of his family; being a wealthy man he made it an elaborate and well-constructed burial place. The body was placed in a special part of the tomb which had been prearranged for its reception, and physicians connected with the Essenian community were at hand to render every possible assistance in caring for the wounds.

The Essenes had secured permission for the use of this tomb as a burial place for Jesus, and the authorities had granted this permission in the belief that it was to be the permanent tomb of Jesus. Therefore, shortly after the body was placed in the tomb, some outer guards belonging to the organization announced the coming of the officials who were to inspect the tomb and approve of the burial. Jesus had just attained complete consciousness, and his wounds had been dressed sufficiently for the Essenes to wrap his body in clean white clothes, in preparation for a short sleep, when the officials reached the tomb. The officials were permitted to watch the closing of the tomb and affix their seals upon the stones and the door which closed it securely. Apparently everything of an official nature to make the tomb a permanent burial place had been done according to law, and yet according to our records, much was left undone because the Essenes had made sure that the officials did not go too far in the process of sealing and closing every means of entrance and exit.

The description of the tomb in the records from which I quote is not complete enough for us to understand thoroughly its form and structure, and we are not sure whether there were two doorways or only one. It appears, however, from all records, that a great stone was used to close up the doorway after the doors had been shut, for the purpose of hiding the doorway so that the burial place, which was in the side of a rock, would not be too apparent or attract too much attention. It was also recorded that Nicodemus was fearful that some trick might be played, as he realized there were those who knew of the trickery on the part of Caiaphas, and that the resentment of the

followers of Jesus might take the form of some plan to thwart the law. So he demanded that the sepulchre be watched for the satisfaction of Caiaphas and the law.

Late in the night the storm which had only partially ceased raged fiercely again throughout the whole valley of Judea, and thunder and lightning echoed and flashed in the mountains roundabout. According to the records, it was such an unusually severe storm that it cleared the streets of Jerusalem and the roads just outside of the walls of all pilgrims, and it even forced some of the guards and soldiers to take cover.

Chapter 16

THE SECRET FACTS OF THE RESURRECTION

SHORTLY BEFORE SUNRISE, Yousef of Arimathea and other Essenes who had been hiding nearby approached the tomb when the guards were trying to protect themselves from the rain by seeking shelter in some cattle houses at some distance. Using the means they had previously provided, and taking advantage of the laxity of the officials in sealing the doorway properly, they caused this great stone to be thrown over and the doorway to be opened. When they entered the tomb, they found Jesus resting easily and rapidly regaining strength and vitality. After an hour the storm ceased sufficiently for the Essenes to escort him from the tomb.

Jesus had used every one of the powers coming into his being, through the perfect attunement he had with the Cosmic, to restore strength and consciousness to every part of his body and to all of his highly developed faculties. Therefore, it was possible for the Essenes to place his body upon a colt and cover him with some heavy garments while they led the colt with its precious burden through the mild rain and deep darkness to a secluded place belonging to the organization, not far from the walls of the city.

In the Book of John in the Holy Bible, is revealed one of the interesting facts concerning the Crucifixion which appears in the ancient records from which I am quoting, and which incident is often overlooked by the most critical of the Bible students. It is that although it was a common practice to break the bones in the body of every

crucified person and to cause their bodies to hang upon the cross for several days so there would be no possibility of the body remaining alive, nevertheless the body of Jesus was taken down without the bones being broken, even though the soldiers broke the bones of the two criminals that were upon the crosses close by.

This was not an oversight on the part of the soldiers by any means, for not only did they fulfill the law by breaking the bones of the two criminals, but they had been so accustomed to this procedure for many years that we cannot believe that after having performed their duty with the other two, they would forget the practice, momentarily, in the case of the third body upon the cross. The ancient records to which I have been referring state that when the soldiers were notified that the body must be taken down immediately because a release had come, and that everything must be done to permit Jesus to regain his consciousness and strength if he had not passed through transition, they realized that they were not to injure, torture, or in any way affect the ease and comfort of Jesus, but to relieve him as quickly as possible from the agony in which they found him.

It may be interesting to call attention to the fact that nowhere in the Gospels of Matthew, Mark, Luke, and John is the positive statement made as an observation of one of these disciples that Jesus *died* on the cross or that he was *dead* when they removed him from the cross and placed him in the tomb. In John 19:33 there is the statement that the soldiers *believed* Jesus to be dead, but John does not make a positive statement of his own, and when he continues by mentioning the spear thrust, we have no reason to believe it was more than a surface wound, while, on the other hand, the fact that blood and water flowed forth would indicate that Jesus was still alive. I know that in the Apostles's Creed used in the average Christian church, the statements therein refer to the fact that Jesus suffered and died on the cross, and it is commonly believed that the statements in this Apostles's Creed were taken from the statements made by the different apostles.

The truth of the matter is that the present-day Apostles's Creed went through a number of changes in the centuries after the Crucifixion at the various high councils of the church, and the first drafts of the creed, which I have before me, are considerably different from those

later adopted. In the third of the five drafts of this creed, we find the statement that Jesus was “fastened to a cross, he rose the third day.” In the first and original draft, the statement is that Jesus was crucified under Pontius Pilate and “on the third day brought to life from the dead.” In the last draft, the wording was changed to read, “suffered under Pontius Pilate, was crucified, dead, and buried.”

The statement in the early draft of the creed that *Jesus rose from the dead* should be associated with the wording in Luke 24:5, wherein the question is asked of those who were seeking for Jesus, “Why do you look for the living among the dead?” We must bear in mind that Jesus was placed in a tomb that was intended for the dead, and in an environment intended exclusively for the dead and surrounded by the so-called dead. In other words, the question might be reworded as follows: “If you are looking for Jesus, the everliving Son of God, why do you come to a cemetery and peer into tombs and sepulchres looking for him? Why do you expect to find a living person where only the dead may be found?” The early drafts of the Apostles’s Creed clearly show that the idea meant to be conveyed was that after the Crucifixion, Jesus was temporarily placed in a tomb among the dead, and that he quickly rose from that place and out of that environment, and returned again to his place among the living.

There is absolutely no intimation in the early drafts of that creed, nor in any of the discussions which occurred in the high councils of the church when the creed passed through its many changes in the different centuries, that Jesus was believed to have died on the cross or in the tomb immediately after the Crucifixion. The creed was composed so long after the days of the apostles and the writing of the books of the Bible that it had to be invented and created like the many newer doctrines of Christianity. In the *Roman Catholic Encyclopedia* we find admission that many of the highest authorities state that the creed can be traced to no earlier period than the second half of the 5th century A.D., and there is the further admission that the idea that the apostles composed the creed on the day of the Pentecost is merely a legend dating back to the 6th century. We read also this interesting statement in the *Roman Catholic Encyclopedia*: “Modern apologists in defending the claim to Apostolicity (of the Apostles’s Creed) extend it only to the old Roman form, and are somewhat hampered by the objection that if the

Roman form had been really held to be the inspired utterance of the Apostles, it would not have been modified at pleasure by various local churches, and in particular would never have been entirely supplanted by our existing form.”

According to the Rosicrucian and other ancient records, various persons came to the tomb to see the body of Jesus after the sabbath was over. They brought spices, clean linens, and other things as was their custom in the case of any who had passed away, but they found the tomb open and Jesus gone. The storm and lightning, and perhaps a mild form of earthquake, had left much ruin and havoc in the cemetery. A number of tombstones were thrown over and a number of sepulchres were opened by stones rolling away or sliding down from their proper position.

The soldiers who were supposed to be on guard to watch and protect the body of Jesus, but who had slipped away into some sheltered place, were on hand bright and early to meet those who came to the tomb of Jesus, and they had a very ready explanation of what had occurred. They did not admit their own neglect, which would have caused them to be severely punished and imprisoned, but stated that during the height of the storm all of the tombs were opened by some miraculous power and that a great blinding light came down and surrounded the tomb of Jesus, and in this light they saw mysterious figures which escorted Jesus, who had returned to life. This story did not appear to the soldiers to be much different from hundreds of other stories being told about Jesus and his miracles, and about the manifestations of God's wrath and God's love in connection with many unusual things during the preceding nine years.

The public, and especially the followers of Jesus, were ready to accept the story that the soldiers told. Since Pilate realized that the body of Jesus had been saved and that the stories were only an explanation to satisfy the curious, and since Rome had authorized the release of Jesus, and therefore cared little regarding his present whereabouts, no investigation was conducted. Thus, the story of the soldiers and the followers became the accepted explanation.

The other incidents regarding the Resurrection, as told in the Christian Bible and in other sacred writings, may or may not be true

in their minute details, for they are based upon testimony of various persons and are somewhat conflicting. Only one fact of interest is noted in the Rosicrucian records regarding the tomb of Jesus, and this is to the effect that during the first years after the Resurrection, the tomb of Yousef of Arimathea was used as a shrine by thousands who were followers of Jesus. The tomb was in a badly damaged condition, partly split open by a huge crack in the rock which sheltered it and a crack in some of the stone masonry that supported one side of it; the tomb had every appearance of having been struck by lightning during the terrible storm. If the storm did such damage as this to the Holy Sepulchre, and to the other tombs and burial places in the vicinity, we can easily understand why the soldiers conceived the story that they told and why it was so readily accepted.

As quickly as possible the Essenes escorted and conveyed Jesus to a home of one of their associates in Galilee. It was their intention to have Jesus rest and recuperate before escorting him to a place of secrecy and isolation for a time. Jesus recovered very rapidly so that he was able to walk part of the way on his journey. He was met by a few who knew him and who were surprised to find him still living. We have many traditional stories regarding his contact with his disciples and others during the time of his recuperation.

The appearance of Jesus in the midst of his disciples on various occasions during his period of recuperation constitutes in several cases, a mystical demonstration of the ability of the Master to project his personality and consciousness to places distant from his physical body. Such demonstrations of the higher spiritual laws as this were common not only to Jesus, but many of the eminent avatars of the past. In fact, some of his apostles and disciples and many of the sisters and brothers of the G.W.B. very often made themselves visible to others at distant points. We find in the present-day teachings of the Rosicrucians, in various lands, the simple laws which help men and women to attain that high degree of psychic development which enables them at will to project the psychic or soul consciousness to a distant point and become visible and even sensible to the higher faculties of persons who are likewise developed to the proper degree of receptivity.

The time was coming, however, for Jesus to close his public missionary work quite definitely and enter that stage of silent activity into which all great avatars of the past have entered, and which is always the goal of every messenger of the G.W.B. Jesus was devoting most of his time to teaching his disciples the doctrines and principles which they should present in their work with the public, thus preparing them for the missionary work they would have to continue after his retirement.

The great change that had come about in the personal appearance of Jesus after the Ascension of the Holy Ghost from his consciousness while he was on the cross caused a great many, who had been familiar with his physical appearance and spiritual aura, to fail to recognize him when they saw him clothed in different raiment and appearing as a simple Essene during his days at Galilee. The disciples knew that a still greater event in his life was imminent, and of course the eminent officers of the organization were already preparing for the final manifestation of his divine place among humans.

For forty days Jesus continued his close association with his disciples and apostles, and we find that this forty-day period is again significant and coincides with the other forty day periods mentioned in another part of this book. During these forty days Jesus attended several of the suppers or symbolical feasts which were typical of the Essenes and which later became one of the forms of ceremony in the Christian church. One of these, the so-called Last Supper, became important in Christian doctrines of Jesus's life; but there were many other such feasts thereafter in privacy not revealed in the Christian records, probably because they were not significant or attended by as large a number of his disciples as the one referred to.

So, on the fortieth day the apostles assembled, in accordance with instructions, on a mountaintop outside of the city of Jerusalem, where they would be separated from the multitude and out of sight of any passers-by. It was just at sunset that Jesus came into their midst and arranged them before him in a group forming a semicircle, facing the setting sun. He stood before them so that as they faced him they saw his magnificent figure outlined as a silhouette against the red and

gold of the sky. He proceeded to explain to them the purpose of this unusual secret session and the real work that was to be accomplished by them in the future.

According to the records, he first announced that not one of them was to leave the circle or depart from the mountaintop until he had received from his Father in Heaven the Holy Ghost and the divine authority to carry on his work as an official apostle. In other words, he announced that apostolic power was about to come to them from a divine source and that they must not break the spell of cosmic attunement which he was about to establish until each one had experienced the influx of the Holy Ghost. In the light of what actually occurred, we can easily realize how important it was for Jesus to command them to remain where they were and not depart too quickly; for he knew that there would come a moment when each would believe that the strange session had ended and that there was no further need for remaining on the mountaintop.

Naturally, the apostles asked questions, and it appears that they sought to determine what form of activity they should adopt and just how their work would affect the establishment of the Kingdom of Heaven which Jesus had announced as imminent. But Jesus replied by rebuking them for their inquisitiveness at that moment and then assured them that in due season all would be explained to them. He further stated that after the Holy Ghost had come upon them, and they went out in the world to carry on their individual missions, they would be representing the great work in all parts of the world.

With further instructions regarding their first acts after they departed from the mount, Jesus directed each one to rise from his sitting position and fold his arms across the chest in the form of the Essenian salutation. Then, stepping some paces away from them, but directly in a line between them and the last edge of the setting sun, he lifted his hands and arms toward Heaven and prayed. While the apostles watched and listened, a great light surrounded Jesus and then a mist formed over his head and gradually enveloped him.

When the mist lifted and ascended toward the sky again, they saw that Jesus was gone and was no longer before them. In their astonishment, they looked toward one another as though each expected the other

to make some explanation. A few of them were about to move from their assigned positions when one of them spoke and said, "Hold, for were we not warned to remain as we were until the coming of the Holy Ghost?" Realizing that the time for departure had not yet come, they remained standing, and in a few minutes there appeared before them two figures as faintly visible as though they were of a violet light.

One of these figures addressed the standing apostles, saying, "Gaze no longer into the mists in which your Master has ascended, for as he left you, so shall he come to you again and again; for his earthly mission is accomplished and he shall dwell in your hearts and in the hearts of those who love him and will henceforth direct the mission of his life through his messengers of light. Receive ye, therefore, from your Father which art in Heaven, the Holy Ghost and the Word, and by these ye shall have the power to teach and to demonstrate the spiritual laws of the Kingdom of Heaven, and the keys to the portals of the future." Then the figures disappeared as if dissolving before their eyes. The apostles then knew that they had been glorified by their Father in Heaven and that they had received the Holy Ghost.

In quietness and peace the apostles journeyed to their homes in Galilee to dwell among their brothers and sisters. That night Jesus appeared among the high priests in the monastery at Carmel and retired to the rooms that had been set aside for him as his sanctum. Thus the door of his public life was closed to humanity.

Chapter 17

THE UNKNOWN LIFE OF JESUS

ACCORDING TO THE stories in the Christian Bible, the life of Jesus the Christ ends or culminates with the Ascension. Various other sacred books, originally forming the library of sacred writings from which the present books of the Bible were selected, contained accounts and incidents of the life of Jesus not presented in the selected ones, and for this reason they were rejected. These rejected books of the Bible, which constitute a separate volume, are used today by a great many ecclesiastical authorities because of the interesting light they throw upon many other important incidents of the life of Jesus and his apostles.

The Ascension, as described in the previous chapter of this book, was wholly a mystical and psychic event, and there is nothing in the original accounts of it to warrant the belief that Jesus arose physically or in his physical body in a cloud into the heavens. The words of Jesus that he would go unto his Father, or return to his Father in Heaven, most certainly did not mean to indicate that his physical body would rise, nor did he intend to intimate precisely *when* or *how* this return of his spiritual being would occur.

This important event in the life of Jesus must be viewed in the mystical and spiritual sense, the same as his statements regarding the necessity for being born again in order to enter the Kingdom of Heaven. He distinctly explained that in the case of rebirth through repentance, he did not refer to a rebirth of the physical body during the earthly

lifetime of any individual. The idea of the Ascension has, however, become misunderstood as a spiritual doctrine and it has developed into a belief in the resurrection and ascension of the physical body. This misunderstanding, encouraged by theological support, is responsible for the rejection of many of the Christian doctrines on the part of those who cannot conceive of these things in a physical and material sense.

The description of the Ascension given in the books of Mark and Luke are slightly different, for in one we read that Jesus was received up into Heaven, and in the other we read that he was carried up into Heaven. In the Book of Acts, the wording is that he was taken up to Heaven and a *cloud received him out of their sight*. In carefully analyzing these three accounts we note that the cloud which surrounded him and “received him out of their sight” has a spiritual significance which all students of mysticism will appreciate. Among the work of the masters of Tibet, Egypt, and India today, and even in the work of such masters in the Western world, the formation of clouds or bodies of mist that can be called out of the invisible to surround a person, and thus shut one out from the sight of others, is a demonstration often performed to prove the operation of many cosmic and spiritual laws.

It is not my intention to intimate that the cloud which descended upon Jesus and shut him out of the sight of the disciples or apostles was of the same nature as that mystic cloud which the masters today draw around themselves when they wish to fade out of sight gradually and disappear temporarily. I believe that the disappearance of Jesus was unique and has not been duplicated by any of the great masters or avatars since his time; but I wish to call attention to the fact that disappearing in this sense or in this manner should not carry with it the idea that because the cloud or mist *arose* after Jesus had disappeared, that Jesus himself, either physically or spiritually, arose with the clouds into the Heavens. Not being able to see him after the clouds started to rise, it was natural for the disciples to assume that he was in the cloud. Later when they wrote their records, and knew that this incident actually ended his public appearance only, they stated their impressions as though Jesus had actually disappeared in the cloud, as they believed at the time.

We find, in going over the ancient records, that Krishna, who was crucified and saved from the dead, was also credited by his followers with having ascended into Heaven. The ancient description says that at the time of the ascension a great light enveloped him, and he disappeared in the light. They also assumed that Krishna returned with the light as it rose from the earth and returned to Heaven. The records also show that Buddhas last appearance was on the top of a rock on a mountain in the presence of his followers, when a great light surrounded him and he disappeared in the light. Buddhas followers claimed that he then rose to the celestial regions; and for several centuries after this occurrence, impressions in the rock were shown to pilgrims as being those of the feet of Buddha where he stood when the ascension occurred. Zoroaster, another one of the great avatars, was also credited in all the pre-Christian accounts with having ascended to Heaven at the end of his earthly career.

The Egyptians celebrated the resurrection and ascension of Adonis for many centuries preceding the Christian era. In fact, the festivals in honor of the resurrection and ascension of Adonis were observed in Alexandria, Egypt, the very cradle of Christianity, in the time of St. Cyrio, bishop of Alexandria, A.D. 412, and at Antioch, the ancient capital of the Greek kings of Syria, during the time of Emperor Julian, A.D. 361-363.

Even the children of Israel worshiped Adonis under the Jewish designation of Tammuz, and there was an altar in his name in the Temple of the Lord in Jerusalem. Several of the Psalms of David were parts of the liturgical service employed in the worship of Tammuz, especially the 110th Psalm. On this point, Dr. Parkhurst, the eminent Jewish authority, says in his book called *The Hebrew Lexicon*: "I find myself obliged to refer Tammuz, as well as the Greek and Roman Hercules, to that class of idols which were originally designed to represent the promised Saviour (Christ Jesus), the desire of all nations. His other name, Adonis, is almost the very Hebrew word 'our Lord,' a well-known title of Christ."

At least twenty other ancient avatars and gods of the people are credited in the ancient writings with having risen from among the dead (not out of death) and having ascended into Heaven as the closing

incident of their public careers. It is to be noted that in most cases there is no intimation that the disappearance of an avatar from public sight; and the ascension of his spirit to the invisible realm meant a bodily ascension into the heavens or a cessation of physical existence on the earth plane. We note that in the ancient teachings regarding the great avatars, the emphasis was always put upon the fact that the divine spirit or spiritual light of the avatar returned to God or to the celestial regions, after which *the light of the world went out*. These ancient peoples, whom Christianity called pagans, had no idea of intimating that the physical body rose or disappeared, except that it remained out of the sight of the public.

Contrary to this, we have the gradual development, in the Christian doctrines, of the idea of the Resurrection and the Ascension of the body *in a physical form*. Such an idea was not in the original and early Christian doctrines, but was added in the later centuries, when so many other Christian doctrines were invented or made theologically necessary, as explained in an earlier part of this book. This change of interpretation of the Resurrection and Ascension has caused much of the argument in modern times against the acceptance of the Christian doctrines in their entirety.

The disappearance of Jesus from public sight, thus closing his public work and public mission as the Christ, was not the end of his existence on the earth plane in the physical body. This is definitely stated in so many ancient and reliable records that it is surprising that the founders of the Christian church attempted to make his ascension a physical fact and proclaim it the end of his earthly career. In many of the discussions of the church councils in the first centuries after Christ, there were frank admissions on the part of the greatest of the authorities that Jesus lived to be fifty, sixty, or even seventy years of age. In some of these early discussions, the matter of apostolic succession was taken up and seriously analyzed for many years; and during those discussions much evidence in the way of writings and the word-of-mouth traditions was submitted to show that after the Ascension Jesus had labored with his apostles.

It was not until the doctrine of the Resurrection of the body and the Ascension of the body in a physical sense appeared to be an

important theological necessity that these early church leaders decided, in their high councils, to eliminate all references to the activities of Jesus after the Ascension, and to make the Ascension appear to be the culmination of his *physical* existence, as well as of his *Christly* mission.

The ancient records of the G.W.B. and other records in the Rosicrucian archives clearly show that after Jesus retired to the monastery at Carmel, he lived for many years. He then carried on secret sessions with his apostles and devoted himself, through meditation and prayer, to the formulation of doctrines and teachings which his apostles should give to the world.

The original twelve apostles of Jesus were all Gentiles and selected from among those who were living in Galilee. Perhaps it has never occurred to the average Christian student to look into the lives of the apostles and note that all of them were living in Galilee at the time of their selection to form the private council of the Christ movement. Of the twelve, all but three—Lebbeus, Paul, and Judas—were of Aryan blood and were members of the Essenian community. Lebbeus and Judas were of the Jewish race, but they had adopted the Gentile religion by becoming heretics and abandoning much of the Jewish doctrines. After the passing of Judas and others, the vacancies in the council of twelve apostles were filled by other Gentiles of the Essenian community selected by the council itself.

The council of apostles met at the monastery, and the members practically lived in the environs of the monastery because of the daily sessions that were held in what might be called the apostolic school or college. It was this college or school that was the basis for the later establishment of a similar college in the Roman church.

According to the records, Jesus appeared but once a week before most of the apostles. This was always on a sabbath when a ceremony of a mysterious nature was held, and all who were not away on missionary work indulged in a symbolic feast. During the other days of the week, sessions were held for the purpose of instructing the apostles in their work, and these were presided over by the several high priests of the monastery.

It is this phase of the work of Jesus with his selected apostles that constitutes the great unknown period of his life. Only a few outstanding facts are given in the records regarding the closing years of his life and his association with the apostles. We find that about ten days after the retirement of Jesus from public life his apostles were assembled at a place in Jerusalem for the purpose of establishing the first congregation of the movement which was to be organized and known as the *Christine Church*.

Jesus himself had no part in the foundation of this movement, for it appears in the records that the apostles anticipated only a public assembly for the purpose of continuing the Christ teachings. But so large a congregation assembled, and the power of the Holy Spirit became so manifest, that the enthusiasm of the men and women and the prayers and cries of the repenting ones attracted the attention of scoffers and others. Therefore, it was found advisable to organize the work of the apostles into a definite movement, having a definite name and a regular place for meeting. There is nothing in the records to show that Jesus agreed to this plan or gave it any consideration, since his contact with the public was ended and his interests were solely in instructing and guiding the apostles in their own personal development and comprehension of his teachings, so that they might be proficient in their work. Ever since the occasion of the Ascension, when the Holy Ghost came upon the apostles and granted to them the same authority to carry on his work as he had carried it on, Jesus considered the apostles his successors as public messengers. Whatever plans they made to facilitate and improve their work with the public seem to have received no comment from Jesus, so far as we can find in any of the records.

After a year had passed, the movement of the Christine Church developed to such an extent that it was organized in a wider sense so as to include an inner circle that was devoted exclusively to the preservation of the Christ teachings and the maintenance of certain traditions and symbols. It was at this time that the cross, as a Christian symbol, was adopted; but strange to say, it was not adopted with a crucified body upon it, but a *rose*.

The Essenes, as a part of the G.W.B., had always used the cross as a symbol. This device originated as a mystical or esoteric symbol in the days of Akhnaton, pharaoh of Egypt, who used the cross in his mystery schools as an emblem of the human body with arms outstretched, representing the physical body with its sufferings and the trials of earthly life. The cross at that time had not been used before for the purpose of crucifixion, but it was used in the mystical sense because the human body with arms outstretched suggested it, especially when facing the sun at sunrise in making the usual mystical, morning salutations; for at such a time the shadow of one's body thrown upon the sand is in the form of a cross. The fact that this shadow is but a passing thing, an unreal thing, and merely of temporary existence, suggests itself as emblematic of our physical body and physical existence. In many of the ancient writings of the mystery schools of Egypt, and even in some of the hieroglyphic writings on the walls of these mystery schools, the cross was carved or painted in connection with esoteric principles.

At a time between the adoption of the cross as a symbol of the physical body and the formation of the Christine Church, a rose was added to the cross as a second element in the mystical symbol. The rose was likened to the human soul, because of its gradual unfoldment, beautiful perfume, richness of color, and manifestation of maturity. By adding the rose to the cross, the esoteric meaning of the combined symbol was that the soul personality evolves and becomes rich in experience and manifestation through the sufferings, trials, tribulations, and incidents of the physical body and physical existence.

The rose was also placed upon a cross as a symbol of the Crucifixion, like unto the dove, the sun, and the serpent. The crucified rose became the official symbol of the Rosicrucians, but was used by the various branches of the Essenes and G.W.B. before its official adoption as a universal emblem. The emblem of the early Templars was a red rose on a cross, adopted by them because of its use by the Essenes. In some of the early mystical manuscripts, we find this rose referred to as the *Nauruts*, *Natsir*, or *rose of Isuren*, of Tanuil, or *Sharon*, or the *Water Rose*, the *Lily*, *Padma*, *Pena*, *Lotus*—crucified in the heavens for the salvation of humanity. Jesus the Christ was called *The Rose*, and the *Rose of Sharon*, or of *Isuren*. In this we see the relationship of the Rosicrucian emblem to early Christian mysticism.

Thus the rose and the cross became an emblem of soul expression through human, physical experience. We can see in this mystical symbology a beautiful reason for the combination of the rose and cross as the emblem for the Christine Church. Later in the history of Christianity, Jesus himself was called the *Rose*, the *Rose of Sharon*, the *Beautiful Rose*, and the *Holy Rose*; and the rose on the cross was interpreted by many to represent the soul of Jesus on the cross, in all of its beauty and maturity, uncrucified. It was not until many centuries later that the church authorities, in their high councils, established the cross with the crucified body upon it as an emblem of the Christine movement.

The inner circle of the Christine Church also formed itself into a militant organization for the preservation of its sacred symbol, the cross, and later adopted a name which, when translated into Latin, would read *Militia Crucifera Evangelica*. This militant organization, which was to include those who would be selected in every country to represent it and carry on its activities, was to protect its sacred emblem from being adopted by other unauthorized organizations, and especially to protect it from being misused and misrepresented in matters that were not truly according to the Christ principles. This militant organization finally included the Hospitalers, the Knights of the Cross, and similar organizations, which were carrying on humanitarian activities in the name of the cross and in the name of the Christ principles. For many centuries the organization remained a very secret and little-known body of several hundred individuals,

controlling and directing the activities of a number of other allied organizations; and during the time of the Crusades for the redemption of the Holy Land from the control of the so-called infidels, the Militia directed and controlled the important activities of the armies.

It is interesting to note, also, that after many centuries had passed, the organization suddenly became a nonsectarian body of defenders of the Cross, through a convention called at Liineburg, Germany, on July 27, 1586, which was sponsored by Henry IV of France, Elizabeth of England, Frederick II of Denmark, and the potentates of many other lands. At this convention the ancient records of the organization were revealed, and the doctrines of the organization and of the Essenes and the G.W.B. were reviewed and adopted as the rules and regulations, teachings, and practices of the Militia. All these things were then compiled into one great book of almost 2,000 pages which was completed in the year 1604, and officially called the *Naometria*. The Militia became an important organization in the prevention of further wars and forms of persecution in the name of religion. Membership in the Militia eventually became an honor resulting from unusual and distinguished service rendered in behalf of the pure symbolism of the cross and in behalf of humanity's mystical and religious development.

Early in the formation of the inner circle by the apostles in Palestine, members thereof were delegated to go to various lands and spread the work of the newly formed church. Peter was sent into Jerusalem, Antioch, and Rome. The elder St. James worked also in Jerusalem. St. John, after some missionary work in Jerusalem, centered his activities in the establishment of a church at Ephesus. St. Paul aided, first at Antioch, and then at Iconium, Lystra, Derbe, Troas, Philippi, Thessalonica, Berea, Athens, Corinth, and other cities. The other apostles labored first as assistants in the new churches and then went off to other lands. The Christine Church thus had its foundation among the most advanced nations.

In the meantime Jesus outlined and perfected the doctrines and teachings which he had received through inspiration during the days of his Christhood, and in the confinement of his sanctum he outlined these teachings to the high priests and the apostles who came to see him from time to time. Most of these doctrines and teachings were

preserved by the apostles and especially by the high priests of the G.W.B., and from these preserved writings the organization extracted many of the teachings which it now uses throughout the world. An outline of the secret teachings of Jesus, as revealed in his public and private sessions with his apostles, disciples, and officers of the G.W.B., constitutes a wonderful volume of the principles of metaphysics and spiritual law. Perhaps these will be given to the public in time, for they would prove of inestimable value to the student of Christianity and to the student of mysticism.

The ultimate passing or transition of the great Master Jesus is recorded in the ancient records as having occurred peacefully and in the presence of the sisters and brothers in the monastery at Carmel. His body remained in a tomb on the mount for several centuries, but it was finally removed to a secret sepulchre guarded and protected by his brothers and sisters.

Thus endeth the story of the Great Initiate—the Messiah and the Son of God—the AMEN of the world, Lord and Redeemer.

SOME INTERESTING CRITICISMS

IMMEDIATELY FOLLOWING THE issuance of the first edition of this book and throughout the worldwide sale of the first and second editions, many letters were received by the author making critical comments regarding the contents of this book. Many of these comments will be interesting to the reader. Naturally, it was expected that this new version of the old stories of the life of Jesus, and the presentation of some hitherto unpublished facts regarding his life, would bring forth many serious objections on the part of Christian orthodoxy and many critical comments from two classes of persons—the defenders of the faith, and the careless students of Christian theology. It was never believed by either the author or the publishers that any of the Christian priesthood or clergy would approve of and endorse the book. Yet this very thing did happen in a great many cases.

One of the interesting facts revealed by the letters of criticism received, and by the critical comments about the book published in various newspaper articles and magazine contributions, is that many eminent Christian clergy who should not have attempted to criticize the book without first becoming well versed in Christian history rushed into print with their condemnations of the book and centered their arguments in one sweeping rebuke. Taking all of these rebukes and melting them, so to speak, into one mold, we find the following words typical of the expression used.

“The author of *The Mystical Life of Jesus* presents us with a unique story which challenges many of the statements contained in the Gospel records, but absolutely fails to give any Christian authority for a single challenging statement that he makes.”

Other clergy have privately and publicly denounced the book with the statement that “the author quotes no Christian records, nor any part of the Gospel records to substantiate the statements he makes.”

Such criticism of the book is unfair, or at least disqualified, for the book itself claims to be a version *different* from that generally held by the Christian authorities relating to the life of Jesus, and common sense would tell one that an entirely different book with challenging statements in it could not rest upon quotations taken from the Christian Bible or the Christian writings.

The author feels that if in writing about the life of Jesus he were limited to quotations from the Christian histories and to statements made in the Christian Gospels, there would be no need of writing another book, for the Christian faiths have given to the world as interesting and attractive histories of Jesus as their inner light would permit. To merely re-quote the Gospels would be equivalent to attempting to paint the lily. If no facts had been discovered which were contrary to the statements in the Christian Gospels and no further facts found which were absent in the Christian records, there would have been no need to prepare another book dealing with the life of this great Son of God.

It seems strange however, that these Christian clergy could find no other points upon which to base their sincere objections to the book. The various chapters of this book make many challenging statements which if untrue should have been pointed out by the critics of the book as falsehoods and as unsubstantiated statements, but which if true should have forced the orthodox Christians to admit that this new book contained newer light and newer knowledge.

Why, for instance, should all of these clerics in writing their condemnations of this book refuse to answer or explain away the statement that Jesus did not live in Nazareth and was not a Nazarene by virtue of his association with a city that did not exist in his lifetime?

Not one of the thousands of criticisms published about this book by the orthodox defenders of Christian records contains a single comment regarding this point. Yet, if the point raised about Nazareth in this book is true, it opens wide a very large door to a serious criticism of an important fundamental claim made in behalf of Jesus.

Another interesting point is the fact that none of these learned or unlearned orthodox critics attempted to show that the records contained in this book relating to the events of the unknown youth of Jesus were inconsistent, improbable, or of any importance. Yet to the thousands of persons who have read the book and valued it, the facts relating to the youth of Jesus were outstanding in importance because they cast a very important light upon the whole of the life of Jesus.

It is probably sufficient unto themselves for these critics to throw the book aside, as they say they have done, or confine it to the rubbish heap, as they unhesitatingly reveal to the author with the declaration that "the whole book is an unsupported and uncorroborated piece of fiction." Such an attitude has been assumed by the learned and wise ones throughout all of the ages in regard to every new revelation not only in the field of religion and philosophy, but in science. It was this attitude that caused the church to cast aside the words of warning and the sound advice given by those who became illumined with the new truths. Many of these were burned at the stake or condemned to eternal imprisonment, but later made saints. In all ages there have been those who refused to believe the new facts of life and have condemned the one who attempted to reveal them.

Among the many peculiar ideas advanced in some newspaper and magazine communications regarding the book is a typical one which appeared in the letter column of the *New York Sun* for August 15, 1929. In the letters on this page one gentleman wrote his criticism of this book and made the following comment:

"A letter appeared in your page recently in which it was stated that H. Spencer Lewis had written a book on the life of Jesus from data contained in the archives of the Rosicrucian Order. It seems rather strange to me that after nearly two thousand years something should turn up that adds anything to our present knowledge on this subject."

This idea seemed to form the basis of the objection on the part of a great many readers of the book. Why, they asked, has it taken almost 2,000 years for such interesting light on the life of Jesus to find publication? Why, asked others, should we believe that at this late period in history anything new could be found regarding the life of Jesus after thousands of investigators or seekers have spent hundreds of years searching in vain for such matter?

Such questions and critical comments do not deserve extended answers nor explanations. One might say, why would the forty-niners who went to California from the East find any gold in the hills after the padres and the Indians and others had spent scores of years vainly hunting for gold? Why should astronomers be scanning the sky even at this very hour in the hope of finding new worlds or new planets after so many years of minute search that has seemingly revealed everything that is to be found? Why believe that there can be any light found that will add to the accumulation of human wisdom? And why, may we ask, assume that the matter published in this book is “a new and recent discovery of historical facts”?

Such a claim is not made for the book or the facts it contains. The facts contained in this book have been known to and preserved by eminent authors for hundreds of years, and we know that most of these facts have been called to the attention of prominent clergy of the world for several centuries, but these clerics refused to publish the facts, refused to add them to the old records, and refused to reveal the new facts in any form. But even if these facts had been discovered only recently and just brought to light for the first time in the history of the world, it would not be surprising, nor make the facts appear to be incompatible with truth. Excavations are being made in Egypt and in parts of the Orient today for the purpose of discovering new facts relating to human history and the advancement of philosophy and religion. Each year sees new light cast upon the lives of the people and the incidents of history relating to the periods covered in the Christian Bible.

Scores of newspaper clippings have been sent to me along with magazine accounts and other records showing that in various parts of the world research work is being carried on with the hope of

finding new facts relating to the life of Jesus and the whole story of creation as contained in the Christian Bible. Expeditions composed of archeologists specializing in biblical research and of theologians devoted to the work of translating and making researches into the earliest scriptural records have gone forth into Palestine and the Near East at great expense, exclusively for the purpose of obtaining more light regarding the periods dealt with in the Christian Bible.

Within recent years such expeditions have brought to light many new tombs and burial places containing indisputable evidence of early Christian burial with certain writings, notations, dates, and other facts which have cast much light upon the life and work of Jesus and his followers in these countries.

History distinctly tells us that many books of sacred writings were rejected when the present Christian Bible was compiled. Many of these rejected books have been brought to light and are found to be of intense interest. More are being found and translated, and there is no reason to suppose that all of the facts relating to the life of Jesus have been uncovered by orthodox investigators or by others.

It is not strange that the Rosicrucian records have contained these facts for many centuries, and it is not true that the Rosicrucians have wilfully and deliberately concealed these facts, nor held secret the fact that they possessed ancient records of this kind; but up to recent years the best translators and workers on new variations of the Christian Bible and Christian history have refused to examine the Rosicrucian records or the records contained in the archives of India, Egypt, and other lands, on the basis of either prejudice or ecclesiastical condemnation.

Returning again to the statement made in the forepart of this appendix to the effect that the book has been endorsed by many eminent clergy, much to the surprise of the author and the publishers, the author feels that this is the proper place to express his appreciation to these many learned and broad minded theologians and Christian advocates who have written him and thanked him for this new history, and especially for the emphasis that had been given to the mystical side of the life of Jesus. And there are those Christian workers who have used chapters from this book in adult Sunday school lessons and in Bible class lectures over a large number of radio stations. In this wise

the facts contained in the book have been brought to the attention of many thousands. A direct result of this has been a deeper and more careful reading and analysis of the pages of the Christian Bible.

The letters of appreciation, endorsement, and requests for the privilege of quoting from the book in classes and public lectures have been very pleasing to the author and the publishers, and their sole purpose in issuing this book has been to give these new facts to the world. And if these facts can be given without the necessity of further editions of this book, or the selling of the book, it will bring still greater joy and happiness to the author and publishers. The publishers have donated nearly 2,000 copies of the book to the largest libraries throughout North America so that millions may have the opportunity to read it. That it will continue to be condemned and criticized is taken for granted, but the criticism of truth *cannot* destroy it, and there are thousands of Christians in the world today who say that their faith has been strengthened by and through a better and more intimate, as well as more sympathetic, understanding of the mystical life of Jesus.

THE ROSICRUCIAN ORDER, AMORC

Purpose and Work of the Order

The Rosicrucian Order, AMORC, is a philosophical and initiatic tradition. As students progress in their studies, they are initiated into the next level or degree.

Rosicrucians are men and women around the world who study the laws of nature in order to live in harmony with them. Individuals study the Rosicrucian lessons in the privacy of their own homes on subjects such as the nature of the soul, developing intuition, classical Greek philosophy, energy centers in the body, and self-healing techniques.

The Rosicrucian tradition encourages each student to discover the wisdom, compassion, strength, and peace that already reside within each of us.

PREFACE

ARGUMENT AND CONTROVERSY are not the primary reasons for writing this book, despite the fact that there is much *argument* in it and that it will unquestionably arouse some *controversy*.

Facts are stubborn things. The truth will reveal itself even when it is hidden behind a veil or intermingled with allegories, parables, and strange interpretations. Most of the facts contained in this book are very clearly revealed in the Christian Bible and particularly in the New Testament. This book, however, is not an example of how the Christian Bible may be misinterpreted or misquoted or promiscuously and arbitrarily quoted in parts to prove an idea, a theory, or a postulation. It has been said that almost any strange theory or staggering proposition can be proved by taking unconnected and unrelated passages from the Bible and piecing them together in such a manner, or giving emphasis to certain words in them, so that they form a new and wholly incorrect representation.

The quotations from the Christian Bible used in this book are surprisingly and strangely illuminating when used precisely as they appear in the New Testament and without separating them from the general text. They contain facts that have been deliberately overlooked or is interpreted, for they are not susceptible of several interpretations. They either mean something—or nothing at all.

Where the New Testament states that Mary, the mother of Jesus, was one of his secret students or a member of his band of disciples meeting in a secret place, it does not mean and cannot , mean that it was any other Mary, or that she was a member of some other group of students, or that she was merely spiritually or symbolically or allegorically one of his students. It may be very surprising to learn that

Jesus included a woman among his members—whether it was Mary his mother or some other woman. But just because it is a surprising fact is no reason to challenge either the truthfulness of it or its implication, its definitely intended meaning, and the significance that lies back of it. If Jesus had his mother, as a woman, among his private students or secret disciples or band of disciples, it is very significant, and not just because she was Mary, his mother. And if this fact is surprising, what then are we to think of the other passages in the New Testament stating that there were other women besides Mary among his private disciples and that, therefore, all of his disciples and selected students were not men?

Not that this should be something important enough to write a book about, for after all, women have been eminent students of the great Truths of life, and great teachers and great preachers, and certainly were qualified in those days as they are today to be disciples equal with men in any and all circumstances. The significance lies in the fact that either the church or its ordained representatives, or some of them, or the Christian movement in the past centuries has deliberately or unconsciously evaded this significant feature of the great work of Jesus the Christ.

The same is true in regard to the brothers and sisters of Jesus being members of his secret, private school. Are we giving too much emphasis to this relationship and to these heretofore veiled incidents of his life? We think not, in the light of the fact that many great sermons have been preached, and pamphlets written and chapters in books carefully prepared to interpret the attitude of Jesus toward his parents and his flesh-and-blood relatives. Think for a moment of how many millions of times clergy, in preaching and writing, have attempted to explain the New Testament passage which appears to be a rebuke to his mother on the occasion of his delay at the synagogue. That strange incident has been held before the eyes of Sunday School and Bible students as well as adults as an indication that Jesus had little or no patience with his parents, that they had little or no understanding of his mission in life, and that he could even be unkind, intolerant, and inconsiderate of women and their inquiries concerning his affairs.

Such explanations and interpretations have left in the minds of many the doubt as to whether Jesus was as perfect in all human things as he was in all things divine. Is this fair? And are the interpretations of that incident fair in the light of the facts which show that Jesus was broad-minded enough, understanding enough, to allow his mother, brothers, sisters, and other women to be secret, private students of the great “mysteries” which he taught them?

If it appears that the author of this book is going too far in giving emphasis to any possible secret meetings of a private school of discipleship, let it be kept in mind that the Bible itself is the very best authority for such statements and goes far indeed in giving emphasis to the fact that Jesus taught the multitudes in one manner, taught an outer circle of private students in another manner, and intimately taught and instructed an inner, private school in still another manner. We have the repeated statements of Jesus that the great mysteries, the great secrets which he taught to the few in his private discourses and secret meetings, were not susceptible of revelation to the multitudes nor were they susceptible of understanding by the average person. Yet, the Christian church of today fails to make it plain to the masses that there are secrets, there are truths, there are facts, which they do not comprehend because these are difficult to comprehend, but which can be revealed and demonstrated to the worthy, the qualified, and the specially initiated.

These facts give a different coloring to the picture of Christianity as a religious, philosophical, or moral system. In fact, they help us to understand that the original and true Christian instruction, and the original Christian doctrines, were divine things not intended for all human beings. Rather, they constitute a system of transcendental truths, esoteric revelations, and divine laws of unlimited application and omnipotent power. It remains for the challengers of the facts contained in this book to prove their contentions. The author sets forth his facts and the truths that are revealed by them. If the quotations used and the facts contained in them reveal truths that are contrary to those contained in this book, then readers who challenge the book must present their interpretations and show that they are superior to the ones found herein.

THE SECRET DOCTRINES OF JESUS

Either the many quotations from the New Testament, the many intimations, the many revealing situations and conditions mean something very definite—or they mean nothing at all. The reader with the open, unbiased mind will be the better judge

That the Rosicrucian Order, AMORC, throughout the world is devoted to the perpetuation and continued revelation of these ancient truths, and the carefully guarded dissemination of such truths to properly qualified individuals, does not separate the true doctrines of Jesus or his great truths from the original system of Christianity. This book, therefore, is not in essential nature or intent any propaganda for the Rosicrucian Order, AMORC, but a contribution solely to the esoteric literature of thousands of years ago and today.

* Biblical quotations in this edition are from the New Revised Standard Version (NRSV) translation of the Bible.

Chapter 1

AN ASTONISHING DISCOVERY

NO DOUBT MOST Christians will be surprised at the intimation that Jesus taught secretly any divine principles, or practiced any divine art that he did not reveal to all the world.

The author was astonished when he first discovered that this was true. As a devout attendant at Christian services for thirty years or more, and after many years of Bible reading directed by the leaders of Protestant Christian thought, it seemed to him almost unbelievable that such important facts regarding the life of Jesus, and the early creation of the Christian doctrines and practices, should have been either overlooked by the keenest of the analytical students of Christianity or deliberately concealed from the public for some reason which might have appeared good and sufficient. As soon as the key to support these facts revealed itself unmistakably in passages of the New Testament, and unlocked many of the mysteries of the life and activities of Jesus and his disciples, the numerous puzzling, and even doubtful, passages of the Bible became plain, understandable, and positive evidence in support of the discovery.

In order that the reader may understand and truly comprehend the great secrets which Jesus taught exclusively to his tried and tested disciples, it is necessary to outline the story revealed by the facts discovered so gradually as to appear to be a truly divine and cosmic revelation.

Here are the facts: That Jesus had many private and secret meetings or sessions with his disciples and trusted companions is hinted at in many parts of the New Testament. There is unmistakable evidence of this fact.

That Jesus possessed some rare, secret, divine, or spiritual, as well as semi-scientific knowledge that enabled him to perform miracles and to convey this secret knowledge and power to others is also unmistakable if we give careful consideration or acceptance to many of the passages in the New Testament.

That the early Christian workers constituting the very foundation of the Christian religion were capable of performing miracles, or applying divine or cosmic principles in a new and different manner from that which had ever been applied before, is impressed upon our consciousness as we read and analyze the Synoptic Gospels and other parts of the New Testament.

That the early Christian church was devoted to two phases of essential activity—preaching, teaching, postulating, *and* performing, healing, demonstrating—is beyond question.

That the Christian church of today no longer practices or demonstrates those principles of healing or calling upon divine and natural law for unusual manifestations, but concentrates almost exclusively upon preaching and postulating, indicates that the Christian church of today and of the past centuries has either abandoned fully half of its great work, or that some secret knowledge possessed by the early Christians has not passed down through the ages from priest to priest, clergy to clergy, sect to sect.

The foregoing statements constitute fundamental keys for unlocking the mysteries of the mission of Jesus the Christ while on earth. As a result of a careful study and extensive investigation of the foregoing keys, and the many correlative facts revealed by and through them, the author outlines here the astonishing contentions which he will present in the following chapters of this book:

THE SECRET DOCTRINES OF JESUS

1. That Jesus the Christ was divinely born, and thus especially prepared—spiritually, mentally, and otherwise—to receive, test, and try certain secret knowledge which would enable him to carry out a special ministry on earth;
2. That having been properly prepared divinely, spiritually, intellectually, and otherwise for this great mission, it was also decreed that he should dispense this knowledge and convey the special powers which the knowledge developed in him to others who were well qualified and worthy, in order that they might carry on his mission throughout the ages, and do “even greater things”;
3. That during the early years of the ministry of Jesus, he sought, found, trained, and prepared those men and women of Palestine, Egypt, and Syria who would be spiritually worthy and morally and ethically qualified to perpetuate the knowledge he brought to earth and the powers that had been conferred upon him through his divine birth;
4. That these persons so prepared and trained constituted a secret group of adepts and companion workers assembling from time to time as a secret college for instruction, test, trial, and critical practice of the secret principles;
5. That such a secret society was formed by Jesus, and maintained in continuous functioning and action throughout the last years of the life of Jesus, and did not become extinct at the time of the crucifixion and ascension;
6. That the men and women bound by secret oaths into this secret society numbered 120, it not being limited to just his twelve apostles or disciples, and that this astonishing and startling fact is clearly stated in the New Testament;
7. That like any other secret society that had to guard carefully its teachings, principles, membership list, and ideals and purposes against political or aristocratic persecution, this mysterious body of divine students had several definite, fixed, continuously used meeting places in Jerusalem with branches for occasional meetings in outlying districts;

THE SECRET DOCTRINES OF JESUS

8. That its principal meeting place or “temple” was well guarded and well protected, known by a secret name, and known only to the tried and tested members—a fact also proved by very definite passages in the New Testament;
9. That the secret society also had passwords, signs, symbols, and other tokens by which the members recognized one another, thus preventing spies or political persecutors from joining them or becoming acquainted with their secret work—which is also proved by quotations from the New Testament;
10. That when the members of this secret society were called together by Jesus on regular and special occasions they had to approach their secret meeting place one by one with the greatest care and be guided by secret signs which were changed from period to period;
11. That among the 120 members were not only those who were later known as the twelve disciples and who constituted the secret executive committee of this secret society, but also others who were interested in the mysterious, secret work of the society, including the mother of Jesus and his brothers and sisters;
12. That during the course of study and preparation for the secret work Jesus not only taught them the secret lessons, but aided them in developing within their own beings the same mysterious, secret, spiritual power which he possessed, and—once having accomplished this and having made them ready in every way, he conferred upon them the divine authority to use the special power they had developed and to represent him and the Kingdom of Heaven throughout the future centuries;
13. That among the 120 secret students were wealthy individuals, and a few who possessed political influence and power, and who later came to the aid of Jesus in his hours of persecution and performed certain acts which they had all promised one another to do in case of such an emergency;

THE SECRET DOCTRINES OF JESUS

14. That the parables and allegorical instructions which Jesus gave to the public, and particularly to those of the public who followed him more or less carefully, were veiled and deliberately concealed secret truths which cannot be understood and properly interpreted today unless one possesses an outline of the secret teachings given to his secret student body;
15. That this special secret society may or may not have been affiliated with the Essenes—another secret society with which Jesus was well acquainted;*
16. That each of the secret teachings constitutes a divine law spiritually applied and materially manifested, and that each is outlined in almost perfect detail—hidden in parts of the New Testament—and can be pieced together for complete and perfect understanding;
17. That these secret teachings and practices are missing in the instructions of the Christian church today, and because some of these secret truths have been discovered by those outside of the Christian church, various sects and cults utilizing this secret knowledge have come into existence as rivals of the Christian church;
18. That if the Christian church of today would make itself learned in this secret knowledge, and spend time in teaching, preparing, and qualifying certain devout students of each section of the world to practice and demonstrate this secret knowledge, it would become the most potent, powerful influence for peace, happiness, health, and contentment. It could do away with most of the other problems of life and bring about the Kingdom of Heaven on earth with the gradual elimination of national and international war, strife, contests, and personal error and sin.

All of the foregoing facts will be presented in the succeeding chapters of this book. The foregoing synopsis represents the authors postulations and theme. Undoubtedly it will be rejected by the average cleric, pastor, or priest, and scoffed at by the average devout Christian. Strange as it may seem, however, the followers of so-called heathen, pagan, or non-Christian religions will be among the first to recognize the truth of this book and to bring forth from their own experiences in

life, and from their archives, bits of evidence to support it. And those of Christian birth or inclination who have gradually wandered away from the Christian path, or the Christian church, will hail this book as a correct explanation of what they conceive to be a weakness in the Christian church today and a good reason for their delinquency and indifference in support of Christian institutions.

To the students of mysticism, metaphysics, mystical philosophy, and cosmic law—such as Rosicrucians, Theosophists, Freemasons, Hermeticists, and Martinists—this book will be welcomed, and supported by the most common incidents of their lives and the ancient records of their organizations.

* The discovery of the Dead Sea Scrolls confirmed the author's reference to the Essenes and their secret teachings which preceded Christianity and with which Jesus must have been well acquainted. A partial news report ("Dead Sea Jewels." *Time Magazine*. Sept. 5, 1955) on the findings of such archaeologists as English-born G. Lankester Harding, Director of the Jordanian Department of Antiquities, is as follows:

"Most startling disclosure of the Essene documents so far published is that the sect possessed, years before Christ, a terminology and practice that have always been considered uniquely Christian. The Essenes practiced baptism and shared a liturgical repast of bread and wine presided over by a priest. They believed in redemption and in the immortality of the soul. Their most important leader was a mysterious figure called the Teacher of Righteousness, a Messianic prophet-priest blessed with divine revelation, persecuted and perhaps eventually martyred.

"Many phrases, symbols as precepts similar to those in Essene literature are used in the New Testament, particularly in the Gospel of John and the Pauline Epistles. John the Baptist's use of baptism has led some scholars to believe that he was either an Essene or strongly influenced by the sect. The scrolls have also given fresh impetus to the theory that Jesus may have been a student of Essene thought. It is notable that the New Testament never once mentions the Essenes, though it casts frequent aspersions on the two other leading sects, the Sadducees and the Pharisees."

—Publisher.

Chapter 2

THE NEED FOR SECRECY

THE FIRST QUESTION that naturally arises in the minds of the devout Christian and the sincere student of the Bible is, “Was there any need for a secret instructor and the preservation of secret knowledge in connection with the mission of Jesus?”

A second question might be, “If it is conceded that Jesus was divinely ordained to be the Savior of humanity, as well as the teacher and instructor of those who sought eternal life through divine truths, why was he made to preserve the knowledge and power in such secrecy and to convey it only to a few?”

We hear similar questions asked today by those who are prejudiced toward churches of all denominations. They believe that God should have revealed all knowledge to all human beings and should continue to reveal such knowledge so as to confer extraordinary spiritual and worldly powers upon all individuals, thus bringing about more rapidly and more surely a Kingdom of Heaven on earth.

Looking back through history we find that on scores of occasions, dating back into great antiquity, God has inspired certain wise and select characters to be revelators or avatars. Their role is to teach and preach such knowledge as would lift human consciousness to a higher plane, making our understanding and comprehension broader, and bringing us closer into attunement with the principles of eternal life and truth. Each of these great lights has contributed to the advancement of civilization and to the moral development of humanity. But the process was slow and lacked efficiency. The increasing population of the world, accompanied by an increasing demoralizing influence of

a satanic nature and the rapid deterioration of sound principles that make for stabilized morality among men and women, necessitated the sending to earth of a Savior who would found or organize and maintain a permanent system of guidance and instruction that would reach throughout the world.

It is a fundamental truth, as true today as it was 2,000 years ago, that not all humans are prepared or ready or qualified in any sense to receive or to comprehend and use the higher truths of life and the miraculous power that comes from such knowledge. God must have seen, as God must see today, that until individuals become worthy spiritually, as well as intellectually and socially, they neither deserve nor can they absorb and properly apply the greater truths that make us free and start one on the path of eternal life. The very experiences of Jesus in carrying out his mission give us excellent reasons for the principle of secrecy. Even among those who were carefully tested and prepared and qualified, there were those who became doubters, those who sought to use the knowledge and power for personal and selfish purposes, and who became spies and enemies, as well as traitors to the cause.

The persecution as well as the prosecution that came to Jesus point out an excellent reason for the principle of secrecy. It is true that the mission of Jesus ended early, just as he was reaching his prime, and it is true that every conceivable thing was done by the prosecutors and persecutors to destroy the knowledge and power that Jesus had brought to humanity; however, vestiges of the truth and faint elements of the miraculous power he conferred have come down to us through the ages and have been the means of our gradual redemption. Had it not been for the system of secrecy, had it not been for the secret organization, the careful test and trial of each who has been the guardian of the great mysteries, the Great Light which came to earth in the first thirty years of the Christian Era would have gone out at the time of the ascension of Jesus the Christ. Today the teachings and practices which he made so magnificently real and universally applicable to the needs of humanity would have been lost, and humanity would have fallen back into the errors of the past and the world would be today without the faintest glimmer of that Great Light.

THE SECRET DOCTRINES OF JESUS

The early Christian church, after the passage of the “keys” from Peter to the next and successive Christian leaders, maintained that it actually carefully preserved for a century or two the spirit of the early secret organization founded by Jesus. The history of the early activities of the Christian church shows that while the populace constituted a large outer circle of worshipers and students of the Christian teachings, they were given only a veiled and very carefully moderated form of the Christian principles. Meanwhile, in a secret inner circle, of a limited number, probationers were led step by step through the higher secret mysteries and teachings to a degree of development and unfoldment where they could carry on the work that Jesus had started and which he transmitted to his disciples. But, as the centuries passed, the secret teachings became more and more exclusive, while the allegories and incomprehensible principles of veiled instruction became distorted, ritualized, and aborted in the darkened minds of the masses.

It is unquestionably true that in the archives of the Roman Catholic Church, and in the hearts and minds of its great, sincere, and saintly leaders of the past centuries, the true secret teachings and divine power transferred by Jesus have been preserved, and they are conscientiously used in limited ways for the up-building of the strength of that church and the protection of its high authority. But it is equally true that among the rank and file of Christians today, both Roman Catholic and Protestant, the great secret knowledge is unknown and even unsuspected. We see, therefore, that in every real sense the keys to the Church of Christ—which Jesus transmitted to Peter as the leader of his great school of disciples—were actual keys indeed. The keys that should pass from each successor of Peter to the next preserver and expounder of truth are not mere allegorical keys, but golden keys that unlock the gates—that open the portals—to all of the Christian temples and tabernacles, to all of the hearts and souls, and to all of the schools of life that exist today.

Chapter 3

THE GREAT SECRET SCHOOL

HAVING DISCOVERED THE keys that confirmed the existence of the secret society, it was not difficult to turn to ancient archives and records, to historical and scriptural writings outside of the Christian Bible, and to many passages in the New Testament which, when put together like the rosary beads on a string, give us a very definite picture of the manner in which Jesus proceeded to fulfill his great mission in life.

In the first place it should be kept in mind that there was ample precedent to guide Jesus in the matter of organizing a worldly, physical body such as the secret group we are describing. Throughout the preceding centuries there had been in Egypt, India, Persia, and other sections of the Near East, secret schools and movements devoted of the preservation and perpetuation of revealed wisdom. In most of the progressive countries of the Near East there was an official state priesthood devoted to the spread of the state religion and the preservation of the religious traditions and beliefs of antiquity. There were also in each of these countries one or more secret organizations composed of freethinkers, philosophers, illumined mystics, and religious devotees who sought for the truth regarding the mysteries of life and preferred the spiritual and cosmic revelations that came to them as a blessing from God and a gift to humanity, and, little by little, cast aside the ancient traditions, superstitions, and mythological beliefs of their ancestors. Therefore, in all lands there had been for

many centuries a contest between the seekers for revealed truth and the protectors of the older and false forms of religion.

As might be expected, the state priesthood had every physical and worldly advantage in forcing its beliefs and practices upon the populace while the seekers, skeptics, heretics, and the illumined ones found it necessary often to sacrifice their lives and all of their worldly belongings to preserve the greater truths that had been revealed to them or which they had discovered through the use of revealed keys.

The bitter fight between the cult of Amenhotep IV and the established priesthood of Egypt is a typical example of this continuous contest between light and darkness. The great illumination that had come to the Pharaoh Amenhotep IV, making plain to him for the first time in the history of civilization the truthful principles of the existence of but one everlasting God, and the falsity of a multiplicity of gods, constituted an awakening and a shocking reaction throughout his country. It was inevitable that although he gave his time and his fortune and his very best interests to the development of this new revelation, this monotheistic religion, and built temples and shrines to the everlasting God, and destroyed those statues, temples, tablets, and walls that adhered to the older beliefs, his life would be taken and the crafty priesthood would be successful in the overthrow of what it considered a dangerous rival movement. And although the pharaoh suffered intensely and was brought to an early transition, the young man had accomplished so much in the nationwide spread of his religion that hundreds and even thousands of years have not dimmed the brilliancy of his doctrines and prayers to the God of all creatures; nor have they been lost to posterity.

After Jesus had received the baptism, and the Holy Ghost had come down upon him, filling his very being with that divine wisdom and power that transformed him from a soul incarnate in the flesh of the world into a Christ to redeem the world, he could not have failed to realize that each revelation, each divine urge, each vision, each spoken message that came to him from the lips of angels or from God, was leading him along the same path of suffering, intrigue, treachery, and ultimate crucifixion that all of his predecessors had witnessed in their careers as lights among humanity.

The records of the activities of all preceding leaders of divine thought, and creators of secret organizations to preserve and perpetuate the divine teachings, must have furnished Jesus with an excellent map and an impressive picture of the path he must take in working out his ordained mission.

I shall not touch upon the preliminary education and training which Jesus must have received even as a young boy to make him so brilliant of mind in his twelfth year that he astonished the elders of the synagogue of his country, nor shall I refer to the higher worldly, as well as spiritual, education that came to him as a young man during the beginning of his mission and which enabled him to deal in allegories, analogies, and metaphors related to the personal affairs, occupations, interests, desires, hopes, and trials and tribulations of peoples in many distant nations, in many trades, occupations, and professions, and in many private walks of life. The young man born to a carpenter of very mediocre circumstances could not have acquired all of this knowledge in the primitive schools of his own land, and he could not have been sent to any very distant country to attend a private school of training, because of lack of funds.

The preparation which he had as a youth and then as a young man was not solely the result of inspired visions and messages coming to him through the Cosmic from the consciousness of God, for his development, training, and education were of a dual nature. He was familiar with the customs and habits, the deceits, the hypocritical beliefs, the worldly temptations and weaknesses of people of many lands, and he seemed to possess a limitless knowledge of spiritual and divine laws and of great cosmic truths which he could not have learned except by placing himself wholly and enthusiastically in harmony with God his Father who ordained that he should go forth from the Heavenly Kingdom to the kingdom of earth and transform it into a land of peace as the Kingdom of Heaven on earth.

There can be no question of his spiritual education, preparation, and illumination in regard to the higher things of life. It was unquestionably revealed wisdom, revealed religion, and revealed law. From no other source could such wisdom come. But it is equally true that his worldly

knowledge, so minutely comprehended in its true relationship to the worldly things of life, as shown in his hundreds of allegories and metaphors, could have been attained in no other way than through personal contact with these worldly situations, with these worldly people and their worldly ideas.

The early education of Jesus (known as Joseph until his baptism) is fully covered in my previous book, *The Mystical Life of Jesus*, and there is no need for further reference to the importance of this early training. But we must not overlook the fact that part of this early training included the study of the trials and successes, the failures and the hopes and aspirations of those who had formed or organized or supported secret schools and movements in other nearby lands, and who had done so with more or less the same purpose in mind as must have moved Jesus at times when he had a keen realization of the spiritual contacts that were being made by him and of the obligations he would soon have to assume.

We are not surprised, therefore, to find that in carrying out God's wishes and organizing a secret society, and in protecting it and advancing it, Jesus resorted to and utilized many of the points and principles of organization which were then already established among secret schools in the Near and Far East. Even some of the terminology and secret symbols which Jesus used and to which he referred in a veiled manner in his conversations, preachments, and allegorical stories, were identical with those of other schools and instantly recognized by members of foreign or distant secret movements, and these are the same today in many ways.

And so we find from a careful examination of the old records in various archives of the Near East where references to Jesus are still carefully preserved, and from isolated and specially emphasized passages in the New Testament, that soon after his baptism and the influx of the Holy Ghost which began his mission in life, he mixed with the rich and the poor, the good and the bad, the cultured and the publicans, the righteous and the sinners, and gained much from their conversations and from their discussions of the fixed or established religious customs of the day. Possessing a keen insight and a special

divine gift of intuitive reception of knowledge from the mind of God or the human mind, and having only honesty to serve and truth to reveal, he gradually gathered together in the olive groves and in the open spaces along the great highways of Palestine those men and women who showed any inclination toward listening to him while he preached.

At the close of a brief period of instruction Jesus would suddenly ask questions of his hearers as though desiring to have them argue with him or discuss the important points, but always with the idea of learning how the human mind was assimilating and accepting the rational and futuristic principles which he claimed were necessary for human salvation. Because of political opposition, and knowing what had happened in past centuries, he held nearly all of his preliminary meetings of testing and selecting worthy disciples in the open spaces adjoining the highway, where the Roman soldier, the Jewish official, and the suspicious Arab or others could observe what he said and discover no technical error, no crime against the state, no gross insult against the established religions, and no violation of the military regulations.

At first many scoffed at his broad and positive statements that were like proclamations and prophecies, while others smiled at his descriptions of the misery that would come into the lives of the wealthy and the rich, the lazy and the neglectful. The learned persons of the synagogue, the religious rulers, the political controllers, smiled in ridicule at the growth and development of his little band of followers. He was looked upon as a harmless radical or a harmless extremist who might catch and hold the interest of a few for a few minutes. But to those who were sincere and those who in every generation and period of time constitute the real seekers for truth, there was something strange and mystical about his manner of delivery, about his method of performing a demonstration of the simple but mysterious laws of nature. So it was not long before Jesus found himself surrounded by two classes of men and women—the doubters and scoffers, and those who believed in him and his teachings but were fearful of being forthright about this among those who were either for or against him.

THE SECRET DOCTRINES OF JESUS

Jesus soon found it necessary to carry on his work in a twofold or dual manner. It was necessary to continue the open meetings, the open demonstrations and performances of miracles along the highways in the presence of the multitudes, but it was also necessary for him to meet, at various times of each month, his honest and sincere coworkers whom he had carefully selected in past months to carry on his great work. Here is where Jesus found the experiences of previous avatars and leaders of great value, and the records would indicate that he did not deviate very greatly from the methods used by them when it came to the details of physical, worldly recognition.

Evidently there were two types among the men and women whom he admitted into his secret schools or into his secret meeting places. The first of these constituted those who were sincerely anxious to know the facts, but who deliberately took these facts with a grain of salt and who demanded from time to time signs and demonstrations. They became sincere students as far as a desire to master the principles of these demonstrations was concerned, for such mastery would enable them to go forth and heal the sick and make the lame walk and the blind see as Jesus had done, but they were not anxious to follow his spiritual precepts and to change the course of their personal lives so that they might become of that ideal state that Jesus held forth as the ultimate goal of his mission.

There was a second class who accepted in sincere faith all of the great truths postulated by Jesus and who cared naught, or very little, for continuous demonstrations of his power, finding in the virtue of their improved lives all the reward that they sought.

These two factions within his group of followers caused him to go to many extremes to impress upon them the importance of the work which he had to do and which he realized had to be continued by these followers in future years.

It was no easy task that Jesus had in organizing such an institution or school as he visioned, and we have ample evidence that he went into loneliness or into the silence on many occasions and wept and prayed and asked God for special guidance. The sins of the world did not sadden him nearly as greatly as did the indifference and the insincerity

of those who were truly worthy of becoming his great disciples but who still held fast to the pleasures of the world and who could not give themselves wholly and completely to the new movement. But we find that as time passed he selected 120 of his followers and students to be actual members of his secret society. There were those whom he had to cast aside and leave in the outer circle of membership representing the casual or the insincere seeker for truth.

We have the same class of individuals today going hither and thither to listen to the words of wisdom of great preachers and orators, buying books and manuscripts, ever seeking, as they claim, the great truths of life. But in the sanctums of their own hearts and in the still hours of their own meditations and self-examinations, they classify the truths they have received and analyze them in the light of their own previous beliefs and especially in the light of their own most convenient beliefs and convictions. They create a philosophy, a code of life, a religious doctrine, or a creed of their own which is an intermingling of their own beliefs and those which they have found it convenient and possible to accept from the hearts and minds of others. They never really discover or comprehend and inwardly understand the great truths that they are seeking. They close their lives still sure that the one great teacher who could have revealed to them all the truths that they could accept and which would be unmistakably proved to them, had not made an appearance, and that somewhere this great teacher still lived while they sought here and there, daily passing by the portal of the temple they hoped to find.

In order that the unworthy and those who had been in the outer circle might not participate in the secret instructions and divine revelations that God had promised Jesus would be given to his disciples, it was only natural that Jesus should have planned that he and his 120 tried and tested and duly qualified companions should meet secretly in some definite place and should have some sign or word or token by which they might identify themselves. And so in the very heart of Jerusalem, in a street where it would not have been suspected, and where protection against annoyance from the Roman soldiers was guaranteed, they acquired and maintained a secret meeting place which had a very vague name and was known only to Jesus and the 120 associated members.

THE SECRET DOCTRINES OF JESUS

All of this may seem like a bit of fiction or imagination and invention, but I shall show a little later on that these statements are facts supported by unquestionable proof found in the New Testament in phrases, paragraphs, and words that could have no other interpretation or meaning and which have appeared strange and mysterious to students of the Bible heretofore.

And so on certain nights, according to the phases of the moon and the regulation of the Jewish and Roman holidays, with which they did not want to conflict and thereby draw attention to themselves, and in harmony with the ancient customs of previous avatars who knew the value of the harmonics and beneficent aspects of the heavenly and cosmic conditions, these 120 students and their divine leader met on stated occasions without any special notification; and on special occasions, because of an emergency or because of some great revelation that had come to Jesus during the day or at night, they would be called together by a cryptic message passed among them.

It was in this way that Jesus gradually unfolded to his selected pupils the great secret truths of the mysteries of life and of death, of the spiritual values here on earth and the spiritual values of the Kingdom to come. It was at these meetings that he proved and demonstrated to them that his doctrines were not alone philosophical, religious, moral, nor merely of value ethically, but of practical value in dealing with the affairs of life. He taught them the nature of disease and its cause, and the cure of all disease. He taught them the fallacy of exclusive dependence upon drugs or herbs, black magic, incantations, and other things when there was a great divine power that could and would exert itself through them, and which had in it as its essential element the creative power that God used in the beginning of time in the creation of the universe and all that existed on or above or below the surface of the earth.

The changing of water into wine, the giving forth of blood from stone, the instant knitting of broken bones and torn tissues, the restoration of impulse in the lifeless heart, the giving of light and sight to the darkened eyes, the making of bread and manna from the invisible elements of space, and hundreds of similar demonstrations

of natural and divine law working in unison, were parts of the procedure at each one of these secret meetings. The way to eternal life, the true immortality of the soul, the purification of the body and the self within, the attainment of spiritual beauty, divine power and attunement with God were explained carefully, step by step, in class lessons and personal instruction. The Law of the Triangle and the significance of the Trinity were fundamental in all of the philosophical discussions and in all of the alchemical or physical demonstrations of God's universal laws.

We can close our eyes and see, possibly with the vision of the mystic, the most important meeting place. It must have been quite large indeed to have accommodated 121 persons with ample room for demonstrations. We know positively that this room was set aside for a long period of time for the exclusive use of Jesus and his students and that it had a significant name, a name that meant something very definite to the disciples but has evidently meant little to the students of Christianity in the passing centuries. We may see a little later that the name of this room would furnish one of the important keys to the situation, although as a key it had been overlooked throughout the past 1,900 years.

Most of the secret temples and meeting places of the mystic philosophers in past centuries had been in grottoes or in ruined subterranean spaces where safety was assured and where silence was an important factor. A few such meeting places, however, had been above the ground and even above the first story of some old structure, and we find in this particular case that Jesus and his disciples had selected a large room above the first floor where the passers-by on the streets of Jerusalem would have suspected nothing, especially if the disciples carried out the rigid instructions of entering the old structure one by one while a guard secretly watched the street and gave warning of an approaching passer-by. With the windows heavily curtained but with the ceiling open in a large square to the heavenly stars above, an altar in the center with candles upon it to give sufficient illumination, no degree of the light could be seen from the street.

Perhaps the most astonishing thing about this society and its meetings is the fact that when Jesus selected, very carefully and undoubtedly with spiritual guidance and revelation, the 120 worthy ones whom he could entrust with his very life, he included his own mother and his brothers and sisters. I say it is astonishing not because he found his mother or his brothers and sisters worthy, but because the average student of the Bible and the average devout Christian will question this fact and say it is impossible because it is not revealed by the word of God in the Bible. But the truth of the matter is that it is revealed in the New Testament and so definitely that it cannot be questioned. It is to be found in several passages which I shall quote later and it makes plain and understandable other incidents of relationship between Jesus and his parents connected with his life mission, which are not understandable without a knowledge of this association with Jesus in the secret society.

In fact, there are many Christians who will read this book and who will deny that Jesus had brothers and sisters. I have heard my statement in this regard challenged so often in public lectures and in Sunday night discussions in churches that I have found it easy to turn rapidly to various parts of the New Testament and read the positive statements to an astonished congregation. Is it any wonder, then, that the average Christian student of the Bible is so unfamiliar with much of the secret work of Jesus during his earthly mission?

If the Bible can be read by so many millions and analyzed by so many learned preachers and interpreters, and if so much can be written and expounded about the life of Jesus without making it generally realized that Jesus had brothers and sisters who were born after him—if we are to believe many passages in the Bible—or some born before him and some after him if we are to believe other records—then we should not be surprised that the real, secret purpose, the real, secret laws, ideals, and doctrines of Jesus should have become lost to Christians of modern times.

Jesus continued with his students and with his secret school until the last hour of his life. He had told his pupils over and over again what the great teachers of all ages have told the sincere pupil, that a time

would come when perfection or mastership would descend as from heaven and rest upon them as a result of their devotion to their studies and their patience with their lessons and performances. Jesus assured his disciples that the time would come when God's promise would be fulfilled and the Holy Ghost descend upon them as it had upon him, and that with this benediction from God, he, as their master-teacher, would also give them authority to go out into the world and not only teach and preach as he had done, but perform the miracles that he had performed and do even greater things.

Year after year these students looked forward to this greatest of all graduation exercises, this greatest of all graduation days, when the miracle or miracles would be performed in their behalf. But Jesus had warned them also that before this might occur he would have to descend into hell and carry his cross, sacrifice his earthly life, be crucified and buried. He knew from the lives of the previous lights of the world, from the prophecies of the great patriarchs, from the visions that God had revealed to him, that he must suffer this persecution at the hands of the very ones he would help and that he would be betrayed by one he trusted; and that again, as in thousands of instances in the story of past civilizations, one traitor must be found in the midst of the true and loyal to exemplify the spirit of darkness and the character of Satan.

And then came the dark hour and all that had been anticipated and prophesied was fulfilled. Silently the majority of his students, pledged by their very lives to secrecy, stood back from the hordes of gossiping spectators with that understanding that the others could never attain, and watched the dramatic performance and fulfillment of the old cosmic principle that the great Master must carry his cross to the place of persecution and suffer upon it and be entombed as of the dead and thus be prepared for his ultimate ascension into the Kingdom of perfect peace and love. The special twelve students who represented his bodyguard and executive board, and who were to be known to the world as his only secret followers, performed their proper duties during the hours of his suffering while the 100 or more, including his mother, performed their silent duties, always mindful of the watchful eye of the enemy. And one of the richest of his secret members came

forward—as though suddenly inspired—and offered to care for the body at just the timely moment when the law had been decreed that this duty should be fulfilled.

Then the curtain closed and dropped upon this great scene without the soldiers and the politicians, the scoffers, the critics, and those who had thrown stones and who had spat upon him ever knowing that a band of 120 had surrounded that theater of Golgotha, making a mystic circle, the power of which raised Jesus beyond human injury or human defilement; that instead of this being the final act and the closing of the tomb bringing an end to the career of a mysterious miracle worker, it was merely the temporary closing of a tomb that would be opened again and from which would arise the great Redeemer of humanity whose power had ascended while he was upon the cross, but would descend again, not upon one, but upon the mystical number of 120; that through this transformation of Jesus and the transference of his power, there would be brought into the world the beginning of a new Kingdom that would be eternal on earth.

Chapter 4

THE SECRET MISSION OF JESUS

CONSTANT REFERENCE HAS been made in the preceding chapters to the great mission which Jesus was to carry out in his lifetime on earth. Since that mission seemed to be so greatly associated with all the essentials of secrecy and mystery, it may be well to pause for the moment and give that mission itself some consideration.

We have already referred to the fact that throughout the preceding centuries illuminated characters had arisen upon the horizon and shed light and divine revelations among the peoples of various nations. Even when we hesitate to accept at face value the strange statements found in the mythological records of ancient philosophies and religions, and even when we greatly discount the allegorical statements found in the history of the Egyptian and Hindu religions, for instance, we still have a mass of facts which plainly indicate that the populace of these countries believed for many centuries that the great leaders who arose among them and led them out of spiritual darkness into light were divinely born and divinely ordained to carry out a mission of illumination.

As was pointed out in my book dealing with the mystical life of Jesus, there were many such characters in behalf of whom claims were made of immaculate conception or divine conception and birth, and there are recorded incidents that almost parallel the stories of the conception and birth of Jesus. Even if we do not accept these statements in past records as true, but merely as allegorical, we must

come to the conclusion that it was a common belief among the peoples of ancient times that these mystic philosophers and illuminated sages were the representation of their god or gods, and had been uniquely as well as spiritually appointed and ordained to appear among humanity at various stages of developing civilization to point out the next path, or the next higher path, and the better way to journey out of their present situation into better and more noble circumstances.

We can easily understand how the admiring and adoring, and even worshipful, followers in each cycle of time invented or created exaggerated or fantastic stories about the extreme divinity and uniqueness of these sages after these leaders had passed on. We are given in this day to making extraordinary heroes out of those who achieve any kind of greatness in any field of earthly endeavor, and we still have a tendency to look upon every greatly illuminated mind as having been not only ordained to fulfill a mission of illumination, but as having been unique in even a physical, mental, and biological sense.

This tendency of attributing to the wise and illuminated leaders of humanity certain distinctive qualities not common to everyone is still carried out, for instance, among Christian worshipers who feel that each of the disciples of Jesus must have been cosmically conceived as a soul and physically born on the earth plane in a unique manner to have attained the great heights and the noble position that they occupy in the Christian religion. Despite the fact that Christian literature and Christian records tell us, for instance, that St. Matthew, before his conversion to Christianity, was a publican or a tax collector residing at Capernaum, and that after becoming a great preacher and a great light among those seeking the Light—leaving several spiritual records that will remain immortal in the Christian Bible—he died a natural death, Christians seem to feel that he is deserving of the title of saint, not because of the good he accomplished in the latter part of his life as a disciple and missionary, but because of some unique qualities which must have been assigned to his soul and his personality before that soul projected from the Kingdom of Heaven, or cosmic space, into the little physical body born on earth, and that even his birth must have been attended by some unique incidents or conditions not common to all people.

Despite the fact that Christian records tell us very definitely, and without any attempt to paint any fantastic picture, that Saint Mark was really one by the name of John whose surname was Mark, and despite the fact that little is known of his personal life before his conversion to Christianity, and no event is attributed to him that would have attracted to him the attention of the public before he began to preach as an associate of the other disciples, Christians tend to visualize him as a devout and holy child growing into magnificent spiritual adulthood, preordained to be a great light in the Christian church, and a saint. This is the situation with all of the characters associated with the Christian history.

But one thing is certain in connection with the ancient records regarding the avatars and great lights who preceded Jesus: they did fulfill a mission in life, regardless of whether or not it was divinely ordained, or they were uniquely born. It is not because these ancient mystic philosophers and sages pretended or claimed to be divinely sent that history acclaims them as divinely inspired and appointed to a life mission of uniqueness, but because of what they actually accomplished for developing civilization, and because of the illumination and light they shed throughout civilization.

In studying and analyzing the writings or teachings of these ancient philosophers we find revealed truth and inspired wisdom constituting the theme of their continuous contributions to the moral and spiritual thought of the day. Whence came this wonderful knowledge, and what is it that can lift someone out of an ordinary position in life and cause that individual to cast aside all of the opportunities for personal comfort and selfish attainment so that he or she will work diligently and long in behalf of the spiritual—or at least the moral and ethical—make every human sacrifice to uplift humanity, and suffer bravely the final and ultimate reward that humans seem insistent upon giving to those who help them the most? History clearly records that most of these illuminated ones of the past suffered the treachery, suspicion, jealousy, and envy of certain sects and classes of people of their time, and in most cases passed through transition as glorified beings, hung upon an allegorical cross at least, and mocked by those who should have been most appreciative of their accomplishments.

Nothing but some cosmically arranged plan, some divinely preordained scheme, some idea conceived and authorized by God, should be responsible for the unique position that these ancient philosophers occupied in their time, and for the great wisdom they gave to the world and left in impressive records. The recorded teachings of these philosophers clearly show that the revelations of the great truths of life not only came from a divine source through special messages and visions, promptings and urges, but the truths thus revealed and presented to the mass of humanity were progressive and served as steps leading onward and upward toward the higher planes of existence and conscious understanding. Each one of these avatars seemed to lay a foundation and then build upon it a structure that rose until it lifted human consciousness to a point or plane where it could rise no higher in that cycle of the development of civilization and spiritual progress on earth.

Then, after a long period of silence, another avatar would appear and would carry the development on to another higher plane. In analyzing the teachings of these ancient mystics and wise sages, we find that the last of them had brought the unfoldment of spiritual consciousness, and human moral and ethical comprehension, up to a point where humanity was ready for the surprising and startling truths and principles that Jesus revealed in even his earliest discourses. When Jesus stated to his sincere followers that he brought them a new way to eternal life, that he brought them a realization and fulfillment of the prophecies of the sages and avatars of the past, he meant precisely what he said. The development of Christianity and Christian principles has revealed to us, in the more than 1,900 years which have passed, that perhaps he spoke more wisely than he knew, or that he did know whereof he spoke because of his prior preparation and training for his ministry and mission in life.

What, then, was that mission? Was it to be similar to the missions of the preceding sages and illuminated ones? Was he merely to rise in the darkness of the cycle of time and lift human consciousness one degree higher as his predecessors had done, and save humanity from faltering on its way, or returning to its ancient beliefs and practices?

Was he, after all, to be but another one of the divinely inspired and preordained Saviors of the passing cycles of time?

No matter how we may view his ancestry and the immediate conditions surrounding his physical conception and birth, the fact remains that Jesus, as the newest and greatest of divine lights, arose in the midst of a people seemingly un-needed of a new religion or a higher religion, or a more sincere religion. If we analyze the Jewish religion that surrounded him on the one hand, we find that aside from some beliefs which Christians look upon today as perhaps wanting in sincerity, there is no question about the general sincerity of all the followers of the Jewish religion, and particularly regarding their adoration of "the one ever-living God." And if we analyze the other religions that surrounded his place of birth, we find them not wanting in earnest followers and deep devotion. That a great Messiah was anticipated was no indication that a new religion was anticipated or needed, or that any radical changes were believed necessary. In fact, it was because Jesus announced very early in his mission that he did not agree with and could not support all of the ideas embodied in the Jewish faith that he attracted antagonism toward himself and made most of the Jews feel that he could not be the anticipated Messiah.

Only once before in the history of civilization had there come to earth a spiritual leader and guide whose teachings and practices were so radically different, and whose first steps were to tear down the established religious beliefs of the times. That one great light was the Egyptian pharaoh, Amenhotep IV, who later became known as Akhnaton and who directed the spiritual meditations of humanity away from the multiplicity of symbolical gods to the "sole ever-living God."

And so we find that Jesus came into the midst of a comparatively new country where a new religion, or a revision of the existing religion, seemed to be the least needed, and from the very start spoke as a modernist of the highest quality. What, then, can we say about the life mission of this greatest of all modernists? We find the answer symbolized in one of his own statements where he said that he came as a messenger of God to be the redeemer and Savior of humanity.

He did not come with a sword to destroy life, but with a fiery sword to destroy evil and to give truth more power. He came to see that the laws revealed to human beings in all the ages past were no longer to be ignored and abrogated at will, or denied, but to be obeyed and fulfilled.

But he did have a secret mission which he explained in detail to his secret students in his secret school. That mission, we will find in later chapters, was to suffer vicariously for the sins of all humanity, vicariously to purge them of all evil, even of the original sin inherited by all humans, and to suffer and sacrifice his earthly appointment and divinity that they might receive the Holy Ghost and establish on earth the Kingdom of Heaven. What a marvelous, as well as unique, mission!

Is there any reason to wonder why he enshrouded his mission with mystery and secrecy? Was he not to reveal to humanity the greatest of all mysteries, and were not these mysteries profound secrets? Was not such a mission fraught with dangers and with dire consequences to all political, social, and religious standards and practices throughout the world?

We find in analyzing his mission, and by taking his own words and putting them together to compare with his practices and his private instructions, that in addition to appearing before the public as a light of humanity, as another John the Baptist, or another Amenhotep, or another leader of spiritual unfoldment, preaching openly and to all, publicly, he was to lay the foundation—the strange, mysterious foundation—for that invisible superstructure that was to constitute the miracle of all miracles, the “Atonement” for humanity’s sins and the washing of their souls in the “Blood of the Lamb.”

Throughout the ages the lamb had been the symbol of a great mystery, and its blood had been spared for special sacrifice at times and places in cycles of unfolding civilization when the populace had never realized the spiritual or mystical significance of the ceremony, and it had remained the mystery of all mysteries unrevealed even to the greatest lights that had hinted at its significance. Jesus, as part of his great mission, was not to continue to mystify his followers with the symbol of the lamb, or with reference to its blood, or with further reference to the possibility of the complete redemption and

purification of humanity, but to actually demonstrate the mystery, rend the veil asunder, and expose to the soul of all human beings the process of purification and the way to salvation.

Such a tremendous mission had to be carried out in its earliest stages with the greatest degree of secrecy and care. A premature revelation of the facts, an untimely discovery of his plans, a profane application of his mystical principles, would have made his mission harder, would have frustrated many of his fondest hopes and desires. More serious than this, it would have prevented the ultimate and final demonstration of the proof of his teachings by which the faith of the world was drawn to him and his teachings, and the “rock” of his church firmly placed in the proper cycles of human evolution.

So we find that the divine appointment, pre-ordination, birth, and earthly preparation of this greatest of all leaders occurred in just that cycle of human history, in just that period of human unfoldment and development, in just that place, and in just the right conditions where the greatest good could be accomplished. The realization of this alone should warrant every Christian, and every analytical thinker, in believing that Jesus was uniquely conceived and born to fill a *unique* mission, and to make manifest to the world the secret mystery—the mystery of all mysteries.

Chapter 5

THE STEWARDSHIP AND DISCIPLESHIP OF THE CHRISTIAN MYSTERIES

THE AVERAGE DEVOUT Christian will be surprised, no doubt, to read that the true Christian doctrines and practices are fraught with real mysteries and that the secret mission of Jesus and his disciples was to first practice and apply these mysteries and then dispense the secret laws involved in them to the worthy disciples and thus enable them to carry out their special missions throughout the world. The Christian church of today, with its rituals and modernized doctrines, leaves in the mind of the sincere follower the impression that all of the mysteries of Christianity pertain to the sacraments and features of the ritual and do not deal with natural law or divine laws applicable to natural and practical affairs of life.

From a careful cross-questioning of the understanding of thousands of Christians in the past years, I have found that these persons, despite long and careful Bible study and sincere analysis of the Christian principles, have a general idea that whatever mysteries there may have been associated with religious rites and doctrines were contained in the ancient pagan ideas and teachings, and that these mysteries were dispelled and classified and in most cases made inconsequential and wholly transparent by the revelations given to the world by Jesus.

In other words, they seem to think that in the primitive teachings of the people of India, Egypt, Persia, and elsewhere, there were so-

called strange and mysterious claims and pretentious demonstrations, often dramatized and presented with impressive and hypnotizing surroundings. These were called “mysteries” in order to dumbfound and perplex the followers of these rites and blindly lead them on or tempt them into a form of worship that forever kept them in the dark regarding the truth of these so-called mysteries. The persons who hold to this belief logically conclude that the coming of Christianity and the diffusion of new light by Jesus and his disciples cleared away these mysteries which were held as facts by the multitudes and freed them from being enslaved to false beliefs and mysterious powers that were not divine or supernatural but magical, and produced, or made manifest, through trickery intended to deceive the gullible.

The truth of the matter is that the early Christian doctrines and practices contained more mysteries and more genuine secrets of mysterious laws and principles than were ever known to the pagans. While it is unquestionably true that in the early pagan religions we find many so-called mysteries which are only clever concealments of truth and magical manipulations of natural law, nevertheless, many of them were based upon fundamental truths representing the genuine mysteries of life. The illuminating teachings of Jesus and his disciples did dispel the trickery in many of the mysteries of the pagans, but Jesus brought new light to bear upon many of these ancient mysteries and thereby developed the mysteries into sublime and transcendental revelations and demonstrations of truth.

The mysteries that Jesus taught his disciples, and which he and they used in their specific forms of missionary work, were never separated from the Christian church and have never ceased to be an element essential to Christian theology and Christian doctrine. It is true, however, that as the Christian religion became systematized, ritualized, and modernized, the transcendental mysteries that Jesus came to earth to reveal, and which constituted the highest spiritual element in his teachings and practices, became lost to the outer circle of membership of the early Christian church, and finally unknown even to the most advanced and proficient creators and teachers of the Christian gospels.

THE SECRET DOCTRINES OF JESUS

It is a question today whether those individuals who constituted the founders of the Roman Catholic Church knew anything more of these sublime mysteries than the fact that Jesus had demonstrated them, had revealed them to his first disciples, and used them in the working of miracles and the performance of his obligations as a teacher and a missionary. It is probably true, however, that in the innermost secret archives of the Roman Catholic Church today are preserved the truths of these great mysteries and the laws that make it possible for the highly spiritualized individual to demonstrate them and make them manifest.

In fact, some of these mysteries, utilizing natural and divine laws for their manifestation, have been applied in the past centuries by the highest of the ecclesiastical dignitaries of the inner circle of the Roman Catholic Church and have been placed at the disposal of many of its cardinals and special workers. Certainly we have a right to assume that the inner circle of the church, known as the College of Cardinals, is in possession of the wisdom and knowledge relating to these great mysteries and its members can apply the laws and perform seeming miracles when they find it necessary to do so. If these eminent leaders of the Christian church are not familiar with these mysteries and the use of them, it is a greater criticism of them for their lack of such knowledge and their impotent stewardship.

It is clearly pointed out in the slightly veiled, but often plainly stated remarks of the apostles in the New Testament that the secret doctrines and mysteries, which Jesus came to earth to demonstrate, reveal, and teach, constituted a transcendental gift from God to the selected and appointed apostles who were to consider themselves as stewards of these things and not as the personal recipients of an individual blessing. They were to dispense these truths and these mysteries as stewards and not hold the secret knowledge and wisdom within their own consciousness as a rightful personal possession.

We see in this idea one of the earliest of the mystical principles, fully known and maintained as a fundamental law and practice by the devout followers of various mystical organizations today. The rare wisdom and divine knowledge that come to sincere mystics through revelations

or through the study of ancient manuscripts loaned to students from the archives of mystical organizations are not to be absorbed into the adepts' consciousness as intellectual power or gifts for the purpose of increasing their personal prowess or serving them selfishly in their mastership of life.

Students learn from the earliest stage of their mystical development that if they are found worthy to be the recipients of such knowledge and understanding of the mysteries, and develop any degree of capability in applying natural and divine law to the revelation, demonstration, manifestation, or use of the mysteries of life, they will do so only as channels, instruments, or servants laboring in the human vineyard and performing their demonstrations and applying their knowledge in behalf of God's and the divine universal consciousness. Any attempt, therefore, to hold such knowledge secretly within one's own consciousness and fail to dispense it to the worthy, even if it were not used selfishly, would constitute failure to meet the obligations and duties of stewardship; and this is a greater sin than to permit the too frequent use of the knowledge to such an extent that it may occasionally redound to the benefit of the individual acting as an instrument or servant.

We cannot conceive, therefore, of any claim rightly made that explains the absence of the practice and revelation of the mysteries in the Christian church today on the grounds that the church authorities are either ignorant of these mysteries or prefer to conceal them. The absence of these mysteries in the teachings and practices of the Christian church today constitutes the basis of the most serious criticism that is made against the church, both Protestant and Roman Catholic. While average devotees of the Christian religion do not know about the great mysteries that have been concealed or held in restraint, and may even doubt that there ever were such mysteries, they are becoming increasingly familiar with the fact that many organizations and sects outside of the orthodox Christian churches are using what they call divine laws and principles and Christian mysteries with which to perform these seeming miracles and to carry on practices on behalf of humanity that simulate the practices of the early Christian disciples.

That these cults can use a wisdom or knowledge that they call mystical or metaphysical, divine or Christian, and perform extraordinary demonstrations of healing and mastership in the affairs of life, has not only caused a heavy drain upon the membership of the orthodox Christian churches and weakened their ranks, but it has also led analytical minds to suspect that there was wisdom, knowledge, and power, known to Jesus and his disciples and probably to the early church leaders, that is not included in the Christian church of today nor used by Christian workers as a part of their Christian duties.

This unfortunate condition of affairs—which has caused many schisms in the Christian church and brought about a large membership in the combined mystical and metaphysical organizations and societies of today—has been considered as deplorable by many of the leading Christian theologians in the past century. Many of them have pointed out that the absence of the mystical features, the genuine mysteries and the divine practices in the Christian churches of today, constitutes the real reason for the slow growth and the increasing withdrawal of members in all of the Christian denominations.

While clergy of all denominations have expressed themselves quite frequently regarding the influence that these multitudinous sects, organizations, and secret schools have had in the growth and development of the Christian church, and have pointed out that these new movements constitute a serious form of rivalry to the Christian church, they fail to realize that the fault lies within their own church, and that if the Christian church of today would awaken and quicken the spirit of the Christian mysteries and practices that Jesus taught his disciples, and which they used in all of their missionary work, the rival movements and systems would have no excuse for their existence and would, in fact, cease to exist because of the immediate return to the Christian fold of millions who have become either indifferent or absolutely discouraged.

One of the greatest of modern theologians and spiritual analysts was the late Dr. Robert Norwood, one-time pastor of a rapidly growing church in Philadelphia and later chosen to be the great light of the Church of St. Bartholomew in New York. At one conclave

of Episcopal clergy assembled to discuss matters of the church and solve its more immediate problems, Dr. Norwood contended that “the greatest need of the Christian church today is to return to the mystical teachings and mystery revelations of the genuine Christian foundation.”

That the disciples of Jesus knew that they were dealing with the mysteries which were secret and doctrines which were new and therefore unrevealed is found in all of their utterances recorded in their writings in the New Testament. One needs only to note such statements on the part of Jesus and the disciples as these:

- “To you it has been given to know the mysteries . . .” (Matthew 13:11)
- “Now to God who is able to strengthen you according to my gospel and the proclamation of Jesus Christ, according to the revelation of the mystery that was kept secret for long ages . . .” (Romans 16:23)
- “But we speak of God’s wisdom, secret and hidden, which God decreed before the ages for our glory.” (1 Corinthians 2:7)
- “And if I have prophetic powers, and understand all mysteries and all knowledge, and if I have all faith, so as to remove mountains, but do not have love, I am nothing.” (1 Corinthians 13:2)
- “. . . the mystery that has been hidden throughout the ages and generations but has now been revealed . . .” (Colossians 1:26)
- “Without any doubt, the mystery of our religion is great . . .” (1 Timothy 3:16)

Phrases such as these will also be found in Mark 4:11; Luke 8:10; Romans 11:25; 1 Corinthians 4:1, 14:2, 15:51; Ephesians 1:9, 3:3-4, 3:9, 5:32; Colossians 1:27, 2:2, 4:3; 2 Thessalonians 2:7; 1 Timothy 3:9; Revelation 1:20, 10:7, 17:5, 17:7.

Now, in the very beginning of our discussion of this matter, let us have a correct understanding regarding what is meant by the words *mystery* and *mysteries* as used by Jesus and the apostles in the Gospels of the New Testament. It must not be believed that the word *mystery*

referred to any unusual or uncommon or extraordinary occurrence or principle which upon simple explanation ceased to be either a mystery or a law difficult to understand. One of the most eminent of authorities in the analysis of words and terms used by the writers of the books of the Bible was Robert Young whose analytical concordance to the Bible, originally published in 1893, remains an unequaled source of reliable information in these matters. He states that the word *mystery* as used in the New Testament by the writers of the Gospels meant “that which is known only to the initiated.”

Another source of reliable information on this point is that excellent commentary and book of critical and explanatory terms written and edited by Rev. Robert Jamison of St. Paul’s Church, Glasgow, Scotland; the Rev. A. R. Fausset of St. Cuthbert’s, York, England; and the Rev. David Brown, Professor of Theology of Aberdeen, Scotland. In their exhaustive comments regarding the use of the terms *mystery* and *mysteries* by Jesus and his disciples they tell us, “The word ‘mysteries’ in scripture is not used in its classical sense of religious secrets, nor yet of things incomprehensible or in their own nature difficult to be understood—but in the sense of things of purely divine revelation, and usually things darkly announced under the ancient economy, and during all that period darkly understood, but fully published under the gospel The ‘mysteries of the Kingdom of Heaven,’ then, mean those glorious gospel truths which at that time only the more advanced disciples could appreciate and that but partially.”

From the explanation given by the first authority, in which explanation the word *initiated* is used, and from the explanation given by the latter authorities, in which the term *more advanced disciples* is used, we find that these writers evidently discerned the great truth that was represented by the word *mystery*.

The mysteries that Jesus taught his disciples, and which they held in such great secrecy and studied diligently to make manifest and to demonstrate and to apply and use in their missionary work, constituted supernatural or transcendental revelations and operations of law that only the initiated or the more advanced disciples were permitted to understand or to apply. We shall see in later chapters that these

disciples of Jesus—the 120 of them constituting his secret school—were initiates, for they had an initiation ceremony and they had secret means of identifying themselves such as passwords, signs, and tokens. They were the more advanced of the thousands of Jesus' followers, representing those who had pledged their very lives in support of his work, and each of whom had been given a special mission—in contradistinction to the other followers who were merely casual listeners, most of them selfishly seeking relief from physical suffering or hoping to aggrandize themselves by their association with a new movement and a surprising and startling system of thought. In the ancient pagan schools and mystical or mythological systems of secret study it had become a general practice to refer to their secret mysteries by symbols or tokens and to speak of the secret teachings in parables lest the uninitiated populace might discover the secret truths.

When the child Jesus was taken into Egypt by his parents, he was too young to realize that he was entering a land where nearly all of the great truths of life were carved on stones or painted on walls in symbols or allegorical designs that revealed great principles in parables. But as his youthful education was developed to a point where he was able, in his thirteenth year, to astonish the elders of his country, he came to learn that the only safe way of preserving truths, and of conveying them to the worthy and withholding them from the selfish and unworthy, was to write them in symbols and to speak of them in parables and allegories. We should not be surprised to find, therefore, that with the greatest of all mysteries having been revealed to him, and with the greatest of divine wisdom conveyed to his consciousness by God that he might be a messenger to dispense these truths, he quickly adopted the system of speaking in parables and allegories, and he adopted signs and symbols in order to conceal from the uninitiated what only the initiated and duly qualified workers should understand in all details.

Some of the most ancient of the mystery symbols and secret signs used in allegorical and mystical writings and teachings were the triangle, the cross, the circle, the square, and their components—such as a straight vertical line, a straight horizontal line, a diagonal line, and a curved line. Jesus did not arbitrarily adopt these ancient symbols in connection with his system of secret communication of knowledge

or in the presentation of parables and allegories, nor did he adopt them merely because he found them conveniently at hand. He adopted them because each of them represented a fundamental sublime truth that had been revealed by God to the great lights of the past ages in their primitive and preliminary program of enlightening humanity, and Jesus knew that the great truths which they symbolized were still the great truths of life and meant something to the initiated mind, the inspired or attuned mind, but meant nothing at all to the unworthy, the unthinking, and the undeveloped.

And so we find Jesus using these ancient symbols in the same way in which they had been used for ages to represent a fundamental truth. But, in the light of the new revelations and the new mysteries he was to give to his disciples, these symbols—and allegories in which they were interwoven to make a seemingly understandable story—took on a new light, a new power of reaching the soul and the mind. That is why we find in the books of the New Testament so many references by the disciples to the fact that Jesus “told them many things in parables.”

Speaking of these parables, the same eminent authorities whom we have already quoted, state in their book that “these parables are seven in number; and it is not a little remarkable that while this is the sacred number, the first four of them were spoken to the mixed multitudes, while the remaining three were spoken to the Twelve in private—these divisions, four and three, being themselves notable in the *symbolic arithmetic of Scripture*.” Here we see reference to the fact that in the mysteries, as revealed by Jesus to his disciples, there was a continuation of the use of the seven sacred numbers that had been used in the ancient mysteries. Seven was thus considered by Jesus and his disciples as the sacred number, and not a sacred number, just as it is today among those mystical organizations that are attempting to preserve and perpetuate for all time the genuine mysteries and secret doctrines of Christianity. We see, furthermore, how easily these numbers of one to seven constitute the first section of the symbols already referred to, with 1 representing one of the straight lines, 2 representing two lines, 3 representing the triangle, and 4 the square. And we note that these authors used the term symbolic arithmetic of Scripture.

As we read in detail of the teachings and preaching of Jesus when surrounded by some of his disciples, or only a few, or in the midst of the multitudes, we find that he used parables except when he spoke alone in the secrecy and privacy of his school of 120 initiated and qualified students. As he went up and down the highways of Palestine and found a convenient mound or rock upon which he could stand and look over the assembly of individuals who would gradually gather together along the stony roads, or attract the attention of those who were passing rapidly by on their donkeys, he quite often found it necessary to deliver his message and to drive home his brief sermon in a story which instantly interested the passers-by because it dealt with their personal problems and with things that were familiar to them and not abstract and speculative.

He was always accompanied by one or two of his disciples—especially the twelve apostles who represented a sort of bodyguard and innermost circle or executive committee, as we might call it today—and in every community there were one or two of his secret school who would stand in the middle or on the outskirts of the increasing circle of listeners, ready to benefit by the demonstrations that Jesus would make of proper poise and attitude in preaching, the proper spiritual vibrations to send forth that the hearers might be impressed with his spiritual love and honest concern for their best interests. We can easily visualize motley crowds with their multicolored robes, sashes, and headdresses, many of them very, very poor, a few very wealthy, most of them of the middle working class. Nearly all of them were educated to some degree, especially in the doctrines of their religion, which made them familiar with certain theological terms and terminology, and many of them were ready to scoff and laugh and ridicule any idea or any thought that appeared to be contrary to their religious convictions, just as we find the multitude today.

And so Jesus would talk to this motley crowd in parables, first choosing for the very opening sentences a key word or two that would attract their vacillating attention and make his suggestions seem appealing and familiar to them. He did not talk over their heads nor did he talk down to them, for he created even in the minds of the great and learned the impression that he was unusually brilliant of mind. If he

had attempted to talk down to the intelligence of the average individual in the crowd before him, he would have created the impression of being loosely educated and poorly qualified to hold the attention of any group of individuals. But he had that magic ability, undoubtedly divinely inspired but very carefully trained and developed, of inventing parables which dealt with their immediate worldly problems.

Some of the parables dealt with the problems of those who lived in distant lands, and we can plainly see by these that some time during his youth—and prior to the beginning of his worldly ministry—he must have lived and studied in these other lands among the people to whom he referred and of whose problems he gave such detailed and accurate pictures. When he spoke at places where the men and women were mostly concerned with fishing, his parables dealt with stories and incidents of those who fished. When he spoke to those whose daily industry and labor was associated with the making of wine, he used a parable that involved the principles of wine making.

When we recall that the language Jesus used also fitted the quality and intellectual understanding and nationality of his people, such as the Hebrew language when talking to the Jews, and the Aramaic language when talking to the Gentiles and others, we see that he used every means which would aid him in symbolically and allegorically conveying the truths that would help them without placing in their hands the secret truths and doctrines which they would misuse, misapply, and probably never comprehend in the right manner. With his hands he would make certain signs, which would appear to the passers-by as mere gestures to accompany his oratory, but which would appear to his initiated students as signs revealing symbolical truths. In the parables were words and phrases which had dual meanings. The word wine meant a commercial product to the grape growers and wine makers, but to the initiated it had the meaning which it always had in the mysteries and in the sacred teachings. When he spoke of fishing people and referred to the nets, and the tears in them that had to be repaired, he conveyed two different ideas to the two classes of listeners—the initiated and the uninitiated.

Unfortunately, in the translation of the writings of the apostles, many mistakes have been made by the translators in modern times, they being unfamiliar with the current or possibly the vernacular meanings of some of the words used in this ancient period. For this reason there are certain secret and mystical references in his parables which are not readily discerned by even the most profound of the church leaders and clergy. Again, some of the words which he used in the Aramaic language had a slightly different meaning from a similar word in the Hebrew language. An excellent example of this is shown in his allegorical statement about it being more difficult for a rich person to enter the Kingdom of God than for a camel to pass through the eye of a needle. That symbolical or allegorical statement has always been a puzzle to students of allegory or metaphor. What relationship could there possibly be between a camel and the eye of a needle? Even a child would wonder at such a reference, since it did not relate to any problem or difficulty ever experienced by the ones to whom he was preaching.

When we stop to think of the fact that this allegorical statement was made to those in the fishing industry, and when we stop further to realize that one of their problems was the daily repair of torn nets, and that one of their great hopes was to find a strong cord that would yet be small enough to go through the eye of the needle which they used in repairing nets, we can understand that this particular metaphor was intended to make a great impression upon the fishing people who attended to the repair of the nets.

Nonetheless, the reference to a "camel" is inconsistent. In the Aramaic language which he used we find, through careful translation, that the Aramaic word could be interpreted in one form of conversation as "camel," while in the fishing community the word meant "rope." Therefore, what Jesus said to these people who were puzzled with the problem of finding a large strong *rope* that would pass through a needle in mending nets, was that it is more difficult for a rich person to enter the Kingdom of God than for a *rope* to pass through the eye of a needle. The word *rope* conveyed to them the idea of a large, heavy, twisted piece of hemp many times larger than the needle itself and, therefore, the metaphor was a personal one to be used safely, whereas

the reference to the “camel” going through the eye of the needle meant absolutely nothing to them.

All of the parables contained very pointed references and secret words and terms which made the allegory and the parable fraught with the most vital truths of the great mysteries; and if a hearer was one of those extraordinary persons whom Jesus hoped to find from time to time, and who with eyes could see and with ears could hear, then he would have won one more convert, or at least started one more thinking mind upon the right path. Even his allegory regarding the casting of the seeds to the ground, and the manner in which some fell by the wayside on stones while some fell into good ground and grew and took root, represented the problem he confronted in speaking to the populace.

But in future chapters we shall see that all of the principles developed in his church in connection with the rituals and the sacraments, and as the foundation of his Christian ideals and practices, were based upon secrets that still have a mystical meaning, secret interpretation, and a sublime, transcendental application little known or suspected by the average Christian follower and unincorporated in the system of Christian instruction adopted by the modern Christian churches.

Chapter 6

INDIVIDUAL SECRET MISSIONS

AS WE STUDY and carefully analyze the activities of the disciples and the apostles and the members of the great secret school formed by Jesus, we find that while they were pledged to give their lives in fulfilling a great mission, and each was given a special “authority and power,” the mission assigned was not the same in every case.

The mission of Jesus was unquestionably the most complex and the most burdensome that could be assigned to a human being, and at the very beginning Jesus must have foreseen and realized that the complexity of his mission, its diversity of action, its many responsibilities, and most of all the continued placing of himself in the center of the limelight, would bring the direst of punishments following the most severe criticisms. Never in the history of the development of civilization had one person so willingly assumed such a great mission in life. Jesus assumed it although it was preordained. He knew that he could not refuse; therefore, he did not, because it was his divine duty, and the only reason for the Word of God to be made flesh and for his soul and consciousness to be made incarnate on earth.

We cannot imagine—with all of our human capabilities of inventing and imagining every possible event of human action—what would have occurred in the process of earthly civilization and the advancement of human spiritual growth on earth if Jesus, upon reaching adulthood and realizing what was before him, had refused

to participate in that ceremony of baptism in the River Jordan when the Holy Ghost descended upon him and he became the Savior of Humanity, the Redeemer, and the one to bear all of our sins and to be sacrificed for our salvation.

But we find that in carrying out the work of his school he did not put upon the shoulders or into the consciousness of any one of his disciples or apostles all of the responsibilities, all of the details of the mission that he himself had assumed. He probably realized that no one human individual outside of himself, uniquely and divinely born for it, could assume such a position in life. But he also probably realized that the greatest efficiency, the greatest results, and the most perfect realization of the steps toward bringing about the Kingdom of Heaven on earth, would be fulfilled after his crucifixion by dividing his own responsibilities, his own features of missionary work, and his own efforts, among the 120 and making each disciple or worker a specialist in one or two particular requirements or necessities.

It appears, therefore, that he divided his own program of earthly activities into twelve sections and selected ten of the disciples and students for each of these twelve classifications. In other words, in each classification of specialized activities there would be precisely ten men or women. This would give him the round number of 120 workers. At the head of each classification he placed one of the apostles as chief advisor. This gave him the twelve special apostles who constituted also his immediate consultation board or group of advisors and intimates.

Some of these workers were sent afield and into foreign countries early in the great scheme, for the work they had to do did not require the same length of preparation and study in the secret school that was necessary for others. Some of these 120 workers were forever to remain unknown as special parts of his great plan. In fact, some of them were sworn to such absolute secrecy and to such a secrecy of detail that they were never to be seen close to him throughout his entire ministry, were never to be seen taking any particular interest in any discussions or demonstrations along the highways or in the byways, and never to be seen talking with the other disciples or workers concerning anything more than a very casual comment about business or daily affairs. None

of them was ever to wear any special robes, except robes that would indicate that they belonged perhaps to one or more of the very many sects existing in that day which had moral, ethical, spiritual, or cultural reform as their seeming purpose.

It was not uncommon for the average person in Palestine and Syria of that time to be known as a member of some class or sect or group—perhaps of a spiritual, social, or business nature—and that is not unusual even today. If we went carefully through one of the largest office buildings in any large American city today, and received complete answers to our questions, we would find that one professional belongs to the Rotarians, another to the Kiwanis Club, another to the Chamber of Commerce, another to the Junior Chamber of Commerce, and another to the High Twelve and another to the Low Twelve, and to this or that, including mystical organizations such as the Rosicrucians. In fact, one of the problems that confronted Jesus was the analysis of these various sects and organizations early in his years of preparation. He had to know, first of all, what each one of the sects represented or claimed to advocate. Then he had to become familiar with some of their secret ways of working, their secret means of identification, and any secret or ulterior motives or plans they might have in mind. We find Jesus making many references to this multiplicity of personal, private, secret interests and he had to pass this information on to his disciples.

On the other hand, many of his apostles, disciples, and workers were not sworn to such secrecy—except perhaps as to the real mission they had in mind. But they would meet with him or be seen talking with him or joining the ranks of his other followers in any great open-air meeting or any performance of a miracle.

Some of the secret details of these private missions are very interesting and we shall touch upon them in the chapters of this book dealing with the secret doctrines. Some of the disciples were sworn to labor solely among the despondent and hopeless. Others had to work among the so-called radicals or those who were ready to tear down and destroy the good institutions of the day along with the evil ones, fired solely with the desire of accomplishing something heroic.

Others had to work among the hypocrites of the synagogue, who were deliberately spreading false ideas about the devout with the hope of personally benefiting by any reactions that might result. There were others who had to spend much time making the acquaintance of Roman officials, and of the Jewish rulers or those in positions to serve the Roman officials, in order that these important personages might be kept properly informed in casual conversation of what was going on.

If we carefully read between the lines of the most crucial days and weeks in the life of Jesus, we find that always someone informed Roman officials of what was going on here, there, and elsewhere. One's first impression is that a number of spies within the group of apostles and disciples were deliberately informing Roman and Jewish officials about the work of Jesus in order that they might persecute him as well as prosecute him. But as one goes on in the study of these events, and notes the direct good that came from many of these situations, it appears to have been a systematic plan of informing the higher officials in a manner that made it unnecessary for them to send forth unreliable investigators or those who might have returned the wrong information.

The whole scheme was far more complex than as presented in today's Christian churches. But the complexity was due almost wholly to the fact that the secret doctrines which Jesus wanted to teach and demonstrate—and then establish in daily life—were so simple, so childlike in their fundamental nature and so easily applied if properly understood, that a more complex system of presenting the instruction was necessary than in a case where the reverse would have been true. In other words, one of the important things that Jesus had to establish in the minds of the people was faith. He tried to impress upon them on many occasions that faith was responsible for all that he accomplished and that if they had faith they could even move mountains. Such faith as this they had never known. It was a simple faith, like that of the child who believes that his or her parents are capable of any accomplishment because they are so great and so wonderful.

But, to establish such faith as this, it was necessary to establish a very complex system that would continually keep the simplicity of matters

before the public; otherwise analysis and discussion of the principles on the part of the ignorant would have led to dialectical dissertations and philosophical forums in which all the simplicity of the doctrines of Jesus would have been lost. When Jesus tried to tell those who were following him, and who stopped to watch the woman kiss his garment, that her faith alone was responsible for the reaction from this kiss, he was face to face with one of humanity's most difficult psychological problems.

An inherent basic tendency that is born in all of us is the proclivity to attribute the unusual to the supernatural, and this tendency is so strong that there are persons living today who would look upon the striking of a match on the side of a matchbox, thus producing a flame, not as a simple scientific demonstration, but a supernatural thing, a miracle of miracles. And the strange thing is that these persons would rather believe it was supernatural than scientific, and they would prefer and seek and demand the complex, hypothetical explanation that involved all of the supernatural beliefs of the past instead of accepting the simple facts. So in order to understand the secret doctrines as Jesus taught them to his disciples, and as they were truly put forth in the activities of the early Christian church, we shall proceed to analyze first his school and the manner in which the students met or came together, and then analyze the doctrines as they were taught and applied by the different apostles and disciples.

Chapter 7

STRANGE BIBLICAL PASSAGES

WE CAN FIND the whole story of the secret mission of Jesus, the secret school, his secret disciples and their secret activities, in the Gospels of the New Testament. Many innocent-looking verses and paragraphs in these books have been passed over very lightly and inconsiderately by thousands of biblical students. They have been read and quoted, and even partly analyzed, by Christian clergy of all denominations the world over. On the other hand, thousands of sincere Christians have been puzzled by the strange ideas expressed in some of those verses and have even suspected them of having a hidden meaning.

In all of my researches I have found about one or two outstanding theologians or experts of biblical interpretation who have attempted to unveil or separate the suspected double meanings or hidden meanings. I have heard some clergy say, in using some of these verses as texts and in attempting to explain them, that there was probably another meaning to be found, but it did not seem to be “God’s will at this time to make it plain to us.” But, it is from these very verses and paragraphs, sprinkled profusely, consistently, and deliberately throughout the books of the New Testament, that we derive a good picture of the origin, nature, and activities of the secret school of divine wisdom conducted by Jesus, and his secret methods of presenting his secret doctrines.

It is my intention to give to the reader at this moment a picture of one incident of the history and activities of this secret school. I have

chosen a very propitious time in the life of Jesus and the history of his school. I have selected the occasion of the most important of all of the secret school sessions, the one when he was to confer upon his graduates the divine diploma and certificate of authority as the culmination of his process of conferring upon them the knowledge and power to carry on their individual missions.

The occasion was just a day or two after Jesus had probably reached the very peak of his antagonism toward the hypocritical traditions and practices of some of the leaders of the Jewish faith. He had come into the temple and chased the money-changers from it and thereby purified it—and at the same time made an enemy of one of the leading lights of the synagogue who derived a personal income from the profits of the questionable practices involved in the changing of money. He had caused the Jews and the Romans alike to say, “It is high time we go after this fellow and break him and put him in his proper place!” And it was also just a few hours before the time set for his betrayal and the inevitable crucifixion.

Let no one think for a moment that Jesus was suddenly surprised or unexpectedly shocked by either the act of Judas in betraying him or the secret plans that were being made for his public disgrace after a manifestly illegal trial. For weeks and months the legal lights who could be induced or bribed into lending their assistance had been preparing the papers for such a trial as Rome had never heard of before, and such as the Jews never hoped to witness again. No doubt the cross was being made secretly and all the devices of torture were being prepared. The whole procedure that seemed to come as the sudden, stupendous climax of his life was a well-evolved drama, plotted weeks, months, years, and even centuries before in the evil consciousness of that portion of all human nature which abhors the presentation of truth, the coming of light, the dispelling of darkness, and the victory of spirituality. Jesus knew in his youth, during the earliest days of his preparation for the future ministry, that it would end just as it did end. But he also knew that in a certain number of years, months, weeks, days, and hours he must accomplish the great mission of his life and not permit the grand climax to come upon him before he was ready.

So, on this particular night, while he was living in Bethany and still thundering his message and his challenge during the day, he arranged to have the final and ultimate worldly assembly of the apostles who constituted the advisory council of his secret school. He had held forth as a promise to them certain rich rewards for their studies and their practices, for their faith and their loyalty, and as a fulfillment of their ambitions to carry on their missions. He had promised them, as the richest of rewards, the transference from on high to each of them individually of the necessary power and authority to carry on the work he had carried on, and do even greater things. Throughout the years in which his secret school functioned, he had consistently and perfectly adhered to a definite curriculum, a definite course of study which included private, secret lectures, private demonstrations in their secret meeting places and in carefully selected open spaces in the countryside, with personal demonstrations on his own part on various occasions when complex conditions surrounded him, so that they would be accustomed to meeting and overcoming the antagonistic attitudes and interferences of the multitudes in their own missionary activities.

He recalled the beginning of his campaign when he opened his first public announcements from a hilltop near the Sea of Galilee and just outside of Capernaum. Those first talks were properly designed to attract the attention of the thinking minds and of those adherents of the Galilean doctrines who were looking for something more than a mere figurehead of the church as a Messiah, but for one coming with great wisdom. While he wanted his truths to reach the poor and the ignorant and to do them much good, he sought at the same time to make another appeal to the intellectual, to the powerful, that they might be drawn unto him and thereby show the others that here was not merely a message of appeasement for the poor or a message of hope for the sick, or a message of consolation to the dying, nor even a bit of encouragement to the hypocritical of the faith.

As he journeyed around the Sea of Galilee, and down through the old familiar districts and then farther south toward Jerusalem, he studied and analyzed the crowds who gathered around him. After many weeks he was able to pick out a few here and there whom he recognized as constant followers. Some had started to follow him

at Capernaum, some had joined him at Tiberias; some appeared for the first time at his gatherings at the place now called Nazareth, and near Mary's well. He recognized a few who had come from Nabulus and who were of the Samaritans and who presented every sign and indication of intelligence and spiritual insight.

To these consistent followers, who were sacrificing much of their time and their comfort and even much of their material affairs to hear him speak often and to be close to him, he offered a special meeting on one occasion and secretly told them that he would like to talk to them more privately and make them personal students if they would take up a share of responsibility and a part of the burden of his mission. And gradually, without revealing all of the facts, he bound a number of them to himself in secrecy and with all of the devotion and love that he hoped to find. It was after his many visits to Jerusalem and to the places in the south that he finally completed his mystical number of 120, or twelve units of ten each, to form the universal circle of discipleship. And now—many years later—he was to give to the leaders of these faithful students and loyal friends the last words of instruction, and he was to witness their ordination and spiritual baptism, with the final command to go forth!

These students had learned by this time, as had the multitudes and as had the critical representatives of the Jewish faith who had listened to his teachings and carefully watched his demonstrations, that Jesus spoke with a power and an authority that no preacher had ever used before. John the Baptist had performed many wonderful manifestations of divine power, but he never convinced his witnesses of the source and nature of that power as had Jesus in a few years. Jesus did not implore; he did not beg of them that for their own sake they should follow his advice. He did not merely point out to them a path that would lead to the establishment of a new kingdom or take them on their journey through life to the highest goal of their spiritual ambitions. He came to change their ways and said it in a manner that convinced most of them that he might even go so far as to force them to obey and make it necessary for them to do so by the performance of greater miracles than the raising of the dead or the curing of the sick. He might even cause their temples to topple down upon them; he

might even cause the rivers to dry and the lakes to become shallow and the winds and rains to storm upon the land.

His students, as well as the multitudes, had come to believe the power which Jesus exercised was an unusually divine power from an unusual source beyond their comprehension. But his pupils also understood in their faith and in their devotion that miraculous, divine power and authority possessed by Jesus could be bestowed upon them. So the apostles looked forward to this one great, final session of their official activities as the advisory council in his secret school.

On this particular day, in the very hours of the Jewish Passover and while the whole officialdom was wildly discussing his brazen and bold acts—such as chasing the money-changers out of the temple and making strange prophecies about destroying the temple and building it again—his apostles contacted one another and went to the secret place where Jesus rested in the evening, and asked him where they were to go for this important meeting and what they were to do.

From week to week, evidently, they had met at different places or at least had changed their secret meeting place often enough to keep it from the knowledge of the officials and the enemies, and never proceeded to any one of their meetings without first learning just where they were to go and how to approach in order not to attract attention and make the place unsafe. And so on this occasion we find that Peter and John met Jesus, who told them to go and notify the others and to be prepared for the Passover which they would celebrate quite differently from that being held by the populace. The facts given here are taken from the 22nd chapter of the Book of Luke and from similar passages in the books of Mark, Matthew, and John.

When Peter and John asked Jesus how they should prepare for this unusual occasion and its unique Passover and where they would find the secret meeting place, Jesus told them to enter the city of Jerusalem, one or two at a time, and proceed down the main street as heretofore, watching for a man who would approach them bearing a pitcher of water. As he approached them and turned on his heel and moved off into another direction, they were to follow him.

It would seem from other citations that at times the secret students of the school would watch for a man whose left foot was unshod, presenting a strange appearance, or whose garment was so arranged that his left knee and lower limb were bare, or whose garment was so torn that his left breast appeared bare. In each instance the peculiar dress, condition, or action of the important guide was not only uncommon but significant in accordance with ancient symbology relating to characters of the old secret schools.

On this occasion they were to follow the man carrying the pitcher of water and observe to which doorway he went, pausing, before he returned to the main street. They were to go to this doorway and give a symbolical knock and when the door was opened to them each was to say to the keeper of the door, "The Teacher asks you, 'Where is the guest room where I may eat the Passover with my disciples?'" Jesus explained to them that this keeper of the door would allow them to enter, after hearing their question which would identify them, and he would take them to a large assembly room that was completely furnished and ready for this special ceremony.

The twelve apostles went in ones and twos in accordance with this secret method and were allowed to enter. If the keeper of the door had refused them entry, as must have occurred on one or two previous occasions, they would have known that some spy or inspector or representative of the enemy or of the Roman authorities had been prying around and had made the place unsafe for their meeting.

And so on this occasion the twelve apostles awaited the coming of Jesus, and finally he joined them and announced that he had been looking forward earnestly to this meeting, hoping that everything would work out well and allow them to come together and complete the culmination of his great secret work before his personal suffering and imprisonment and probable crucifixion occurred. Rising, he made the preliminary announcement that the occasion had much to do with the fulfillment of his plans for the establishment of the Kingdom of God on earth.

Then Jesus filled a large cup with wine and drank of it and passed it among the apostles and told them to divide it among themselves, each taking a drink. Then he explained the symbolism of his prayer and of the division of the wine by telling them that he would not drink of the fruit of the vine again among them or in any other manner until the Kingdom of God had become established. They recognized, in this drinking mutually from the one holy cup, a very old secret symbol of ordination and benediction, and also a symbol of equal power and position in whatever work or mission was signalized by the occasion.

And then Jesus took some of the bread and offered another prayer and invocation asking God's special blessing upon it and then broke it into small pieces and gave a piece to each of them, explaining, "This is my body, which is given for you. Do this in remembrance of me."

And finally he lifted the great holy cup to his lips again and explained this was the cup of the new covenant and that it contained symbolically his blood which was to be shed for them and through them for the salvation and redemption of the sinners of the world.

The drinking of the wine from the holy cup or grail is still a sacred, symbolical ceremony among the secret schools of the Orient and the Near East and even among some schools of spiritual and sacred wisdom in the Western world. This process of breaking bread and drinking wine was not an original idea with Jesus but a very old and sacred idea which he applied in a new manner because his whole mission on earth was a new mission based upon the ancient sacred symbols and ceremonies. To eat of the bread in this manner was to share the physical body of the Christ, and to drink of the wine was to drink of his blood and thus be not only in holy communion with him, but a part of him in whatever sacred work he assigned to them and transferred to them.

It was on this occasion of his last worldly supper with them that he revealed to them again why he had been anxious for many days to have this special ceremony occur. So he proceeded to explain to them that while the officials of the country were seeking him and trying to find his hiding place to arrest him and falsely condemn and crucify him, it

would not be until the morning or very late that evening that one of his own supposedly loyal apostles would betray him.

Most of his apostles knew also of the threats that had been made and the danger that surrounded him. So they were not surprised at his announcement, but they were startled when he told them that one of those sitting right at the very table with him now, and participating in this last great ceremony, would be the one to betray him. They were so startled that they began to question Jesus as to whom it could possibly be, and they grew excited and claimed that each of them was the greatest in sincerity and loyalty or that each of them was the chosen disciple to represent the great work in the future and therefore could not be guilty of such a crime as this. In their desire to establish their individual superiority, loyalty, and fidelity, they overlooked the significance of the fact that one of them would prove before morning that he was the least worthy to claim such a high degree of faithfulness. And Jesus argued with them and rebuked them for the manner in which they were analyzing the situation.

He finally told them that this was the occasion when he was to fulfill his former great promises to them, and that at this very moment he appointed to each of them a kingdom just as God in heaven had appointed a kingdom to him, and that by this appointment they were to eat and drink at his table in his kingdom—or, in other words, to be co-equal with him in this new Kingdom of Heaven on earth, in ruling it, directing it, and establishing it for all time in the future. They, as the twelve great lights and leaders of the secret school guiding the scores of other faithful pupils who had been trained daily under him, were to carry on his great mission in the future just as though he were present, speaking words of authority as he spoke them, and demonstrating powers that would be conferred upon them in the same manner that he had demonstrated in the past several years.

We all know from the various reports in the Gospels just what occurred after this great ceremony and secret meeting. He foretold how one of them would even deny him several times before sunrise or before the cock would crow at the rising of the sun. He pictured to them the dire consequences of the following day and explained

how this would be his day of agony, and that it would be followed by the greatest sacrifice he could make, that of giving up the Holy Ghost as the son of God and as the Christ on earth and being buried and entombed merely as a human being while his great power and authority would continue to rest on them and with them.

In some of the versions of this meeting, as presented to us by Matthew and Mark, there are slight modifications in the smaller details, but in general the story is the same with every bit of evidence that the apostles and Jesus came together as representatives of a secret school or of a divine secret system of preparation, and that they met in a specially selected secret place and that he looked upon this occasion as the culminating act of transference of the sacred power and authority from himself to the twelve apostles. This transference of power and authority is perhaps more beautifully expressed in Matthew 26:29, where it is recorded that Jesus said, “. . . until that day when I drink it new with you in my Fathers kingdom.” The cup of wine was to be their last as well as his last under the conditions which existed, and they would never drink together again until the Kingdom of God had been established.

There was a previous occasion when such a secret meeting had been held for the purpose of closing the systematic course of instruction and series of demonstrations which he had given to his pupils in private and this had ended with a special ceremony for the transference of power and authority. We have perhaps the best story of this in the 9th chapter of Luke, without resorting to other older records outside of the Christian Bible. Here we learn that Jesus called his disciples or students together and gave them power and authority over all the demons and the power to cure disease, and he sent them forth to proclaim the Kingdom of God and to heal the sick.

It is interesting to note here that the transference of power and authority constitute two separate transactions. In this case power does not mean authority or privilege. The power to heal and the power over unclean spirits refers to a definite, divine process applying divine principles and laws to material, physical, or spiritual conditions in and around humans. The students had to be prepared for the reception

of this power that they might understand it and use it intelligently. It was not a mere formula or incantation or a chant, or some process of necromancy, or black magic or white magic such as the pagans had used.

The power which Jesus possessed was unique with him and was the great gift of God who sent him. It consisted of knowledge that would prepare them through days, weeks, and months of prayer and meditation that would purge them, and cleanse them, and make them proper receptacles and proper channels for the influx and outpouring of a divine principle which manifested itself as a unique and holy power to do certain things. And the authority which he granted to them, along with the power, also came from God, for without the authority the power would not have been released unto them and would not continue to flow through them.

As to the secret instructions which they were to follow in using this authority and power, we find that on this occasion when he called them together for the transference of his activities, he really qualified them to heal the sick and cleanse the lepers, to raise the dead, and to cast out demons. All biblical authorities agree that this was truly an occasion when the transmission of a supernatural power was made for the first time in the history of civilization. Now note that one of the principal points of the authority given them as quoted by Luke was to have power over all demons or devils, and according to other authorities, to have dominion over “unclean spirits.”

Here we have reference to one of the secret doctrines, and it may be more logical to consider this truth here and now rather than place it among the other secret doctrines in the final chapters of this book.

It had been a common belief in ancient times among the uneducated and illiterate of the pagans and heathens that sickness of any kind, and especially that which seemed to break down the soundness of the inner parts of the body or the integrity and soundness of the mind and brain, was due to a form of obsession or to the presence in the body and in the brain of an evil spirit or demon that had deliberately or willfully entered the physical body and was seeking to destroy it. At first only those who suffered from what we might term epilepsy or fits,

or strange ravings and whirlings, and the throwing of themselves upon the ground were manifestations of “possession.” For many centuries those who were unsound of mind and who talked in a strange manner or whose memory failed them or who were imbeciles or verging upon loss of mental control, were suspected of being possessed by demons or controlled by devilish spirits. But eventually, every form of disease was attributed to some contact with unclean spirits.

The pagans had resorted to many very strange and superstitious practices in healing those who were in such conditions. A large majority were looked upon as hopeless and unworthy of being healed or cleansed, and were either buried alive or burned alive or tortured to death. It was even believed, at times in the past, that to come near one who was sick through being possessed, might cause a transference of the condition. For this reason it was difficult to find those who would even attempt to help them or to treat them. In some countries it was believed that if the shadow of a possessed one fell across your body you were contaminated.

It appears from ancient records also that certain types of men and women who seemed to understand that such beliefs were superstitious and who desired to commercialize their better understanding, classified themselves as magicians for the curing and healing of those who were suffering from possessions. They would offer—for large sums of material wealth—to take the unfortunate member of the family who was thus affected into their own homes and treat and cure that person, or at least look after the individual until he or she either became perfectly well or died.

Analyzing the forms of treatment that were given to most of these unfortunate ones, it would seem that these professional magicians and healers, extremely wise as some of them were, were also tricksters and charlatans. Whenever they found it necessary to give an example of their methods of magical treatment in a public place, they would place the unfortunate or sick victim upon a couch of grass in the center of a large circle of public witnesses, including relatives of the victim, and proceed to chant with weird and mystical incantations, all the while walking around the sick one and sprinkling so-called holy water and

other symbolical things upon the suffering body. Then they would take the patient to their home or hut and keep the patient in secret seclusion for a week or ten days—eventually bringing the patient out into the public and presenting him or her as perfectly cured.

The multitudes were always astonished by such procedures, and the more often the demonstration was performed, the more famous became the magician and the greater his or her income. It would appear, however, that these charlatans selected only those who had diseases that nature would greatly assist in the course of time, or who might be helped through simple herbal remedies, for this was the only kind of patients that they would exhibit to the public. Those that they were called upon to cure who seemed to have some incurable disease, or some condition which nature did not quickly correct in the course of its usual activities, they refused to treat in public and would take to their secluded homes and keep for a long time and either eventually release as cured or return to their relatives or to a funeral pyre as dead.

It was through the practices of these charlatans, however, that the use of certain herbs, the sprinkling of water, and the chanting of incantations became a standard procedure much as we have standard procedures today in the cure of certain diseases. These incantations, chanted very carefully and consistently with certain pagan rules and laws, utilized certain vowel sounds that were known to the ancients as being quieting to the nerves and conducive of sleep and relaxation. These formulas or chants of mystical vowel sounds composed mostly of the vowels of very sacred and holy names which the public was not privileged to use without dire punishment, became the foundation for certain formulas and prayers and certain methods of chanting adopted later by the more evolved theological systems and introduced into the synagogues just before the Christian era and later introduced to the Christian church and carried on today in the form of sacred chants and hymns.

How far wrong were the disciples of Jesus, and Jesus himself, in believing that demons and devils and unclean spirits could take possession of the physical body and of the brain and bring about disease and unsound mental and physical conditions? The church

of today ignores this question and Christianity today has wholly abandoned any consideration of the belief in evil spirits and demons taking possession of a healthy body and causing disease. Here is where we find great truths concealed under the cloak of ancient beliefs and thereby cast into oblivion.

Psychologists and psychiatrists today know that the human brain can become possessed or obsessed by certain beliefs and ideas which are gradually fixed in the human consciousness and dominate it. But it is generally conceded by them that such possessions and obsessions affect only the soundness of the mind and produce certain degrees or stages of insanity. Beyond that no modern physician or psychiatrist ventures to give an opinion. But those who are deep and profound students of mysticism and of the mystical laws of the universe, and who have made themselves especially acquainted with the mysteries of the human mind, know it is a fact that not only can the human mind become gradually possessed by fixed ideas, and therefore seemingly obsessed beyond external or internal control, but this obsession and possession can, and very often does, result in physical disturbances that later manifest as chronic diseases, the breaking down of tissue, the abnormal functioning of organs, and the eventual death of the body. It is a fact, therefore, that many forms of disease and abnormal conditions in the purely physical part of the body can be remedied or entirely eliminated by removing from the mind the evil “demon” or “devil” that possesses it or by removing the ideas of obsession that are fixed in the brain.

It is possible to remove these mental obsessions and possessions, these fixed ideas and beliefs in the brain and mind, in the twinkling of the eye—or in a few hours—if the right procedure is followed. It has been demonstrated, and can easily be demonstrated by the properly trained and experienced practitioner, that an evil thought, which we might call a demon or a “possessing idea” that is like a hallucination or a devil incarnate in the mind, can be removed in a few days or even in a few hours with a resulting immediate change in the physical condition of the individual.

When the Christian Science doctrines attempt to explain the cause of physical illness as a mortal thought made manifest in the body because of its fixed possession of the mind, they are presenting in a modified dress and in a new form, one of the ancient beliefs, and they are correct in maintaining the claim that as a Christian religious institution they are the only representatives of the Christian doctrines attempting to carry out the work of the early apostles. But it is not true that they are the only students of and practitioners of the ancient system of purging and cleansing the mind and the body of these evils and of casting out these devils and demons that are the cause of many forms of mental and physical illness. The Ancient Mystical Order Rosae Crucis (or the Rosicrucians) and other secret schools of real metaphysics and of mystical understanding in various parts of Europe and throughout the world, practice the ancient doctrines and teachings of Jesus and the disciples without becoming religious movements or calling themselves members of a new church or a new form of religion.

The secret power of this doctrine lies in the fact that if individuals who are ill have faith in prayer to God (or to Jesus the Christ or his apostles) to cleanse them of the demons and devils that are in possession of them, their attunement with God in sincere prayer, or their sympathetic cooperation with a physician, practitioner, or a mystic who is praying for them and with them, will bring about first a change in the mental condition which is the cause of the trouble, and immediately in the physical body where we see manifested the ultimate result of the demons in the mind and consciousness. Prayer and faith in these circumstances constitute a purging process and this great secret, which Jesus taught to his disciples and which they practiced, is one of the truly great secrets of Christian healing and of all pure metaphysical healing.

The disciples learned from Jesus that prayers in the form of a chant, utilizing the vowel sounds which have a sympathetic effect upon the consciousness and the nervous system of the patient, are valuable assistants. It is for this reason that in the mystical schools of today which are perpetuating the secret doctrines of Jesus—and in those churches which are attempting to perpetuate the ancient principles of the disciples—chanting, and prayers in the form of a chant, and

the use of vowel sounds remain as an important, a very important, curative process. Thus we see that Jesus secretly taught something to his disciples which he did not make plain to the populace and which has not been carried down to the present time by the Christian religion as a fundamental part of the Christian teachings.

Again we say it is a fact that many forms of mental and physical unsoundness and disease are truly the result of mental obsessions and hallucinations, truthfully coming within the category of obsessions and possessions. In such cases it is useless to try to treat the body and the brain with medicines or any other form of therapy without purging the mind and resorting to the application of those secret laws which Jesus knew so well and which he used so professionally and expertly in his mission and throughout the years of his great work.

But we must pass on now to other proofs of the existence of the secret school and the work done in it by a large number of disciples and pupils than merely the twelve who constituted his private assembly or his secret board of councilors.

Chapter 8

THE GREATEST OF MIRACLES

THERE WAS ONE miracle performed by Jesus that constitutes the greatest of all the miracles, regardless of the angle from which we view it. The power to perform this miracle was transferred from Jesus to his disciples with the understanding that the power to transfer it would pass to them also and that from master to student and from disciple to disciple throughout the ages this power to perform the greatest of miracles would be the divine inheritance of those who followed his teachings, developed his doctrines, and evolved to the status of Christian discipleship.

In the preachments of the Christian doctrines in modern times much is made of the assurance that the life of the redeemed and the life of the follower of Christian doctrines is immortal and that death will bring about merely a change in the place and condition of existence. There is nothing new in this doctrine of immortality, for we find reference to it and many extreme forms of faith in it among the oldest of mystical and spiritual teachings and rituals. But the manner in which Jesus revealed the law of immortality and then demonstrated it in his own life gave the doctrine a new form and a new interpretation.

It is not surprising, therefore, that the last great lesson that Jesus taught to his secret students, and demonstrated before his apostles, was closely associated with his teaching of the doctrine of immortality. In fact, Jesus constantly gave emphasis to the fact that people could and would live again, and continually, if they but followed him along the

path toward spiritual perfection. The crucifixion of Jesus gave him the glorious opportunity to prove his sincerity, worthiness, and absolute faith in the doctrines he taught. It permitted him to demonstrate to a large number of students, and particularly to the apostles, that he was willing to make the greatest of all sacrifices in behalf of the divine message and mission which it was his purpose to reveal to those who were ready to receive it.

While he was upon the cross suffering the utmost of physical torment, and at the same time a victim of the mental torture and humiliation which accompanied it, he gave expression to words and terms that were intended to revive and strengthen the faith his students had in his teachings and in the fulfillment of one of the great promises he had made to them. He had promised them the miracle of all miracles, the guarantee of a power like unto his own, and a similar divine authority by which and through which they would be able to do the same things that he had done, and even greater things.

Around him in that mortal throng of good and bad characters, wretched souls, doubting Thomases, scoffing witnesses, fearful officials, and awed believers, there were those who had reason to feel that this was the occasion of the closing of the last chapter of the life of Jesus and the cutting short of the glorious career each of them had anticipated. Truly, his sincere students and disciples had lived and had their being in him for months and years. Their faith in the future was a part of his faith. Their hope was based upon his hopes. Their ambitions, their desires, their determination to teach and demonstrate his doctrines in the future were contingent upon the success he made of his mission on earth.

But here, now, the person who had cast out devils, removed the demons from the suffering bodies, made it possible for the halt to walk upright, and the blind to see, and even for the dead to rise from their deathbeds and live again, was about to be annihilated and removed forever from the face of the earth by his enemies, against whom he seemed unable to protect himself or defend his faith and doctrines.

All was about to fall as his body became limp and lifeless. The spark of divine power which he held within his consciousness was about to

be extinguished. In a few moments one of them—one of the most loyal and devoted of the secret students, known as Joseph—would carry out his promise of secretly protecting the abused and mutilated body by placing it in his elaborately arranged tomb, and the closing of the tomb would be the closing of the book of the life and teachings, the doctrines and miracles, of this greatest of all secret schools. No wonder the skies darkened and the clouds gathered together heavily, the lightning flashed, and the thunder rolled! Tomorrow would begin a dark cycle in the unfoldment of human existence on earth. It would be the beginning of the end, and humanity would descend into hell as the Scriptures had prophesied.

But before the consciousness in the crucified body passed into sleep and the lips became silent, Jesus uttered again the assurance that he would enter the Kingdom of Heaven and continue to live and that his promise to his secret students would be fulfilled. In silence and profound mystical understanding his scores of students and apostles stepped out of the crowds and by devious routes reached the secret meeting place that they might come together in prayer and await that which they were sure would come on the morrow. And on the morrow the word came that Jesus had disappeared from the tomb!

We can understand the surprise of the scoffers and the officials who realized that the responsibility for this unexpected occurrence might rest upon them. We can understand the awe in the minds and hearts of those who had been tempted to believe but needed just this additional demonstration to convince them. And we can also understand the silence and the increased faith that came into the hearts and souls of the students assembled in prayer not far from the site of the crucifixion. They knew that if Jesus was no longer in the tomb, he was no longer unconscious, no longer “dead” in the sense that the officials had proclaimed and which the law considered sufficient. They knew that he still lived and that in due time, in accordance with an ancient ritual of resurrection which they had performed scores of times symbolically in their secret temple, Jesus would appear again in their midst.

His continued invisibility to the multitudes strengthened their belief. According to the ancient Book of the Dead, and all the ancient rituals which they had reviewed in their secret studies, a certain number of days and nights must pass before the living Christ would be visible again. And so it occurred that after the definite number of days Jesus became visible to human objective, material consciousness and was first seen by one who loved him, a woman. Her report fired again the faith and hope of the disciples and they hurriedly assembled once more to await his coming.

And so while they were together, the whole 100 or more of them, with the exception of Judas, with doors locked and windows and every portion of the premises under careful observation and protection, Jesus appeared in their midst. They questioned him whether this was to be the occasion of the fulfillment of the great promise, the demonstration of the miracle of miracles, and he answered in terms that only the student of the ancient mysteries could understand then and now. He replied, "It is not for you to know the times or periods that the Father has set by his own authority." (Acts 1:7) In other words, he told them that it was not for them to understand at the present time what time or what season, what hour or what moment, the great miracle would be performed, for they did not possess the power which his Father in heaven possessed and which he had possessed up to the time of his crucifixion, but which he had surrendered while on the cross. That power had returned to its divine source and was possessed by no one at that moment.

But Jesus spoke again to assure them that this did not mean the abandonment of his plans nor the crushing of their hope. His words were symbolical but definite: "But you will receive power when the Holy Spirit has come upon you; and you will be my witnesses in Jerusalem, in all Judea and Samaria, and to the ends of the earth." (Acts, 1:8) These words are similarly expressed in several records and contain the mystical keys to a great divine formula. He had greeted them with the mystical salutation of "Peace be with you!" typifying and illustrating what he meant at a previous mystical ceremony. He showed them the injured and mutilated parts of his body to prove that the body was in fact "broken" as he had broken the bread and given it to them, and he

showed them the blood flowing from his wounds as was symbolized by the wine that he had poured from the cup.

Then he performed the first part of the miracle of miracles. It was not the culminating act which they were looking for, but the first step in a ceremonial procedure that had its ritualism written in the consciousness of God and decreed by God. While they knelt in the form of two interlaced triangles within a circle in the same manner in which they had knelt on many occasions, he raised his hands while standing in the center of the mystical form and said again, "Peace be with you. As the Father has sent me, so I send you." These are the words which St. John gives in the 20th chapter of his book, but in other records we read that Jesus said, "Peace be with you! In the same manner in which my Father sent me and transferred unto me the power of the Holy Spirit, I now ordain you and prepare you to receive the power of the Holy Ghost that was mine."

According to the Books of the New Testament, Jesus then "breathed on them and said to them, 'Receive the Holy Spirit. If you forgive the sins of any, they are forgiven them; if you retain the sins of any, they are retained.'"

The breathing on them was a very sacred and divine procedure. It was the only occasion during the whole history of the life of Jesus and during his whole ministry that he had ever breathed upon another human being, and it was the only occasion upon which he had ever officially said in connection with such a ceremony or any mystical ceremony, "Receive the Holy Spirit!" Here was the first act of the miracle of miracles. It is to be noted that Jesus did not say, "I give unto you the power of the Spirit!" or, "I transfer to you from me the power of the Holy Spirit and it now abideth in thee." The Holy Ghost and the power of it were no longer possessed by Jesus for he had given it up while on the cross. But as the divine messenger of God he was the channel through which the Holy Ghost did move from God to the disciples. Breathing upon them was merely the preparation for the incoming or the downcoming of the Holy Ghost, and Jesus simply told them that they were to be immediately aware of receiving it.

The rest of the formula used by Jesus regarding the remission of sins was a part of the secret doctrines which they clearly understood. The key to the explanation of this formula will be found only in the doctrine of Karma as secretly taught by Jesus to his disciples and apostles and touched upon allegorically in some of the parables and injunctions given by Jesus to the multitudes.

It is to be noted that in all the strictly orthodox interpretations of this mystical formula as discussed and analyzed and commented upon in the most authentic and recognized of commentaries and biblical encyclopedias, the attitude is taken that this formula did not confer upon the disciples or the apostles the right to forgive or remit sin. It is claimed by the writers of such reverent books that the power to forgive sins was never exercised by one of the apostles and plainly was never understood by themselves as possessed by them or conveyed to them. Some ecclesiastical authorities go so far as to say that "the power to intrude upon the relation between the individual and God cannot have been given by Christ to his ministers in any but a ministerial or declarative sense."

But this is an error of opinion due to the fact that the mystical nature of the formula was concealed by the disciples themselves, and is but one of the many secret doctrines of Jesus which the Christian church of today has forgotten or misunderstood. The misinterpretation or misunderstanding of this formula is partly responsible for the opinion on the part of many thousands of Christians that priests of the Roman Catholic Church have the power in the name of Jesus the Christ to forgive or remit sins. Yet if this power had never been transferred to the disciples it could not have been transferred to the founders of the Roman Catholic Church and by them to the priesthood.

According to the law of Karma, as one of the secret doctrines, Jesus indicated to his disciples—in connection with the incoming of this power of the Holy Ghost which would enable them to perform miracles and to carry on his great mission—that if they forgave the sins of another, those sins would be forgiven them (the disciples) as a karmic debt for which they must make compensation; that while such sins would be forgiven, they would not be forgotten and could

not be completely forgiven until the sinners themselves had made compensation for each sin; and, on the other hand, if the disciples retained or refrained from forgiving another's sins, the disciples themselves would have to carry these sins as a karmic debt for which they would have to make compensation and adjustment.

In other words, if the disciples forgave the sins of an individual, that individual had to carry the responsibility for compensation as his or her cross, and until that person lightened the burden of the cross by complete compensation, the forgiven sins rested upon him or her. But if the disciple, in judging, refused to forgive the sins of an individual and decided that they were too great, too heavy, or that the individual was unworthy or undeserving of such forgiveness, the disciple, by thus acting as judge and sitting in judgment upon another, assumed the responsibility of the karmic debt along with the sinner.

In the secret doctrines taught by Jesus, and later transmitted to the mystery schools of today, this same formula is expressed in this manner: If the person having the power and the Holy Ghost to aid and assist sinners can point out to them the manner in which they can purge themselves of their sins by making compensation and thus removing the stain upon their soul and consciousness, then that person transfers the burden of the sin from the Divine Consciousness or divine records to the consciousness of the sinners with the understanding that if they purge themselves of their sins by making proper compensation, they will relieve themselves of the karmic cross or burden and thus become cleansed and prepared for redemption. But the person who dares to withhold such knowledge and such advice as will enable sinners to purge themselves by making compensation and cleansing their souls of sin, thereby sitting in final judgment upon them and deeming them unworthy of redemption, becomes the holder of the unremitted sins and the karmic debt is his or hers, and in time that person must make compensation for these sins or suffer the consequences along with the sinner.

With this formula is coupled the ancient and mystical injunction that the person who is on the path or walking in the light and in a position to give spiritual aid and guidance to another, and who dares to sit in

judgment upon another and decide that one sinner or another is too sinful for redemption or beyond the pale of the remittance of his or her sins, then becomes not only a sinner, but, daring to sit in judgment upon another person, assumes a responsibility and must carry with the sinner the burden of the Karma that he or she has thus assumed by this judgment. We are enjoined, therefore, not to attempt to judge (or deem) our brothers and sisters, not to attempt to say that any sinner is unworthy of the remission of his or her sins, for instantly we become partners in the sins and must share with the sinner the burden of his or her cross.

After this definite instruction, they moved silently with Jesus out into the stillness of the setting sun and assembled again in a cave beneath a great rock where the last rites of their mystical ceremony for this occasion were followed by prayer, chanting, and ceremonial action. Then the large assembly dispersed and Jesus and his eleven apostles, remaining alone, moved up to the top of the rock beneath which they had been assembled, formed themselves into a circle and Jesus stood in the center. While they folded their arms in a mystical salutation with the right hand over the left breast, and with their feet in the correct position, symbolical of their ritualism, a cloud formed in the center of the circle. This did not surprise them, for the forming of such a cloud had been witnessed by them on many occasions and they knew the law whereby it was formed, and anticipated that after the power to do this and other things had been conferred upon them, they too would form such clouds on occasions.

The ancient schools of mysticism and divine science have practiced the formation of this formula and process for many ages and its secret is still in practice in the mystical schools of today. When such clouds are formed, those who are in the midst of them become invisible, yet in this case Jesus became not only invisible but as the cloud arose he appeared to arise with it. At a certain height above them the cloud gradually dissolved and the spiritual form of Jesus, as well as the physical form disappeared.

As the apostles watched this strange demonstration of divine power there came upon them as an influx of the divine power the Holy

Ghost. It descended upon them as it had descended upon Jesus on the occasion of his baptism. This was the miracle of miracles, for with its descent the eleven apostles became the living inheritors of the divine power which Jesus had possessed, transferable by them in the same manner to the worthy, and used by them in the spread of their mission and the mission of Jesus for the redemption of humanity.

Chapter 9

MORE BIBLICAL VERIFICATION

UNDOUBTEDLY MANY OF my readers, and possibly a large number of very devout Christians, will question the authenticity of my statements regarding the number of actual disciples or students and intimate followers who were a part of the secret school organized and directed by Jesus. The common belief is that Jesus had twelve intimates who were not only the twelve apostles, but also the only personal, private students ever instructed by him, and therefore the only ones who could have been in possession of any secret teachings that he might have revealed. Therefore, my statement that there were 120 in his private school, including the twelve apostles, will demand biblical verification.

I trust I may be pardoned at this point for diverging for a moment from the general theme to take up a tangent one; namely, the demand for authenticity and verification exclusively from the Bible. Many eminent clergy—and hundreds of devout Bible students—who have read my previous book, *The Mystical Life of Jesus*, have written me long letters demanding that I furnish proof, or at least some form of substantiation, of many of the statements made in that book. But in each and every case they have demanded that the verification or authentication or partial supporting evidence be taken from the Christian Bible or from “the Holy Scriptures” as they prefer to classify that source of information.

It has seemed strange to me that anyone who is demanding truth should at the same time qualify its source and limit and classify the channel of its expression. After all, is there no other source of historical evidence, no other form of authentic knowledge pertaining to the Christian times and the Christian doctrines than that which is in the Christian Bible or Holy Scriptures? If that is true, why are Christian theologians and the worlds most eminent theological researchers combing every part of ancient history and every section of ancient lands for what they call cumulative evidence, historical evidence, or mute evidence to verify the statements made in the Bible?

If evidence can be found outside of the Christian Bible, why then limit all authentication or support of Christian historical statements solely and exclusively to the Christian Bible? And if nothing except that which is in black and white in the words of the Christian Bible is reliable or dependable, or acceptable in connection with anything pertaining to the life of Christ or his teachings and activities, then why all of this research and why this age-old hunt, these costly explorations, and this laborious study and analysis of ancient writings in the hope of finding more and more facts that throw light upon Christian history and doctrines? If everything pertaining to the life of Christ and the Christian institutions must be taken from the Christian Bible in order to be authentic and dependable, then nothing more than the Christian Bible need ever be written regarding the life of Christ and his teachings. Yet, thousands of books have been written interpreting, analyzing, and explaining the passages in the Christian Bible, and thousands of books have been written in all languages quoting from historical evidence, from mute evidence, from all forms of evidence found outside of the Christian Bible supporting or tending to support and casting new light upon the statements in the Christian Bible.

Much has been written by biblical authorities regarding the historical writings of Josephus, and the magnifying glass has been applied to every passage in his works, accompanied by arguments as to whether they do or do not confirm or verify statements in the Christian Bible about Jesus and his great work. Why look to the book by Josephus and why even quote anything he says, if, after all, the only reliable and dependable verification may be found in the New Testament?

But, of course, it is a mistaken idea on the part of those who have established a prejudicial and biased attitude toward the subject to claim that the only dependable evidence is that which is to be found in the Christian Bible. Much that is in the Christian Bible would not be understandable today if it were not for light thrown upon many of its passages by external evidence. Historical research, and in fact research in every branch of the sciences and arts has tended to cast new light upon parts of the Bible and has given verification or modification to some of the puzzling passages. Almost monthly, and certainly yearly, during the past few centuries, explorations—geological, geographical, astronomical, and historical—have given us much new knowledge or verified much old knowledge regarding Jesus and his time, his teachings, and his marvelous mission. But those who are biased, and yet believe themselves to be sincere and honest students of biblical research and Christian truths, refuse to accept any external evidence that does not minutely support and verify every word and every passage in the old versions and the modern versions of the Christian Bible.

Still, biblical research itself, carried on for centuries by groups and officially selected bodies of translators and interpreters, has constantly brought us new interpretations, new versions, new understandings of many of the passages of the Bible. The King James version, now so commonly accepted, was quite a modification in some important points of the former accepted interpretations and versions of the books of the Bible. And in very recent times many of the significant and important words or passages in the Synoptic Gospels have been greatly changed and modified, sometimes to an extreme degree. If such modifications and changes are permissible and acceptable, then we must admit that every period, every comma, and every word in many of the old or recent versions may be questioned some day and should not be accepted today as the unquestionable truth which must either be completely verified by any external evidence or such evidence completely rejected.

To demand that a book such as this, or such as *The Mystical Life of Jesus*, should have every statement conform to the statements in the Christian Bible means that the author should have merely rewritten the Christian Bible in precisely its same words or written nothing at

all! Such an attitude would exclude the possibility of any new light ever being cast upon the manifold mysteries which surround the life and the teachings of Jesus the Christ.

To return to our main theme, however, it is fortunate that in this particular case we find evidence in the generally accepted and adopted versions of the Christian Bible to support and verify my statements regarding the actual number of students and intimate coworkers in the secret school conducted by Jesus.

If we turn to the Book of the Acts of the apostles and read, beginning with the 12th verse of the first chapter, what the disciples and followers proceeded to do after the crucifixion, burial, and ascension of Jesus, we find that on a certain day they left the Mount of Olives and secretly went up again to their private meeting room or schoolroom and assembled in the usual manner. The 13th verse of this chapter plainly indicates that they returned to the meeting place in which they were accustomed to assemble at that period of time. In other words, they did not assemble in a new place or an unaccustomed place, but a place where they had been remaining for a time. Whether it was the identical meeting place in which the Last Supper had been held, or where previous ceremonies had been held in secrecy is not indicated, but they did not meet on this occasion in a new place. The 13th and 14th verses tell us who the principal ones were who assembled there. It says that there were: “. . . Peter, and John, and James, and Andrew, Philip and Thomas, Bartholomew and Matthew, James son of Alphaeus, and Simon Zelotes, and Judas son of James. All these were constantly devoting themselves to prayer, together with certain women, including Mary the mother of Jesus, as well as his brothers.”

We see in these two verses that not only were the apostles present but “certain women” and also Mary, the mother of Jesus, and his brothers—the actual blood and flesh relatives of Jesus. Perhaps many Christian students will be surprised at the foregoing words, for in the 14th verse—quoted above—there are three real surprises for a great many. The first is that among the apostles and disciples and students of Jesus who met secretly there were women. There are a number of passages in the Bible that intimate that women were not excluded from the secret discipleship of the original school established by Jesus.

Not long ago in discussing the life and activities of Jesus with a very eminent and elderly patriarch and priest of the Greek Catholic Church I asked him what, in his opinion, was one of the outstanding and unique features of the Christian church as compared with the ancient religions and the contemporary religions at the time of Jesus. After some minutes of deep thought, he said he believed it was the position that the Christian church gave to women, and the recognition of equal rights which the Christian church gave to women through the attitude that Jesus held toward them. The more one analyzes this thought, the more apparently true it becomes. Up to the time that Jesus accepted women on an equal basis with men under his cloak and took them into his consideration as human beings possessing souls, women held a very lowly, humble, and even unrecognized position in most religions and in the religious movements of Palestine.

It has often been said that Jesus was either never in love or else so deeply in love that he did not allow himself to refer to it as a human emotion. It has been claimed by blinded readers of Christian doctrines, or by those who read the Christian Bible through colored glasses, that Jesus never gave a single human thought to womankind. Others have claimed that Jesus looked upon them with total indifference. Still others have tried to make much of the fact that a woman bathed his feet on one occasion, and at the crucifixion women indicated their love and adoration for him. There are passages in the Christian Bible which would indicate that on occasions Jesus felt very friendly toward certain women, and talked with them in a manner to indicate that he held them in much higher esteem than they were held by the majority of men in his day. And it must be remembered that he permitted himself to be seen by a woman for the first time after his crucifixion and resurrection. Call that meeting "accidental" if you choose, but such a thought belittles all the powers of Jesus, for in the light of his other miracles and his hundreds of other acts we must be convinced that he could have avoided such an "accidental" meeting with a woman if he had preferred to have his first visible manifestation of resurrection made to one of his apostles.

Not only does his attitude toward the Scarlet Woman indicate that he had a sympathetic understanding of the challenges faced by

women, especially in those days and under such civil and moral codes, and that he had a tenderness and a kindness at heart for all women and especially the unfortunate, but many other passages indicate that women held a very distinct place of recognition in his life, though he realized very keenly their limitations under the existing codes. With all of the understanding and power, authority and instructions he might give them they still would have been unable to carry out his mission with the same freedom of movement and expression granted to his apostles.

So, to many, the surprise in this verse may be the statement that there were women among his many secret students. From all of the ancient records dealing with the organization and maintenance of secret schools we cannot doubt that there were an equal number of men and women among the students of this Christian school, and that, except for the degree of apostleship limited to the twelve by the codes and customs and regulations of the country, Jesus would have given to such women as were qualified, equal power and authority with the men.

The next surprising fact is that among these women in the secret school was Mary, his mother. This is the last mention in the Christian Bible of Mary, the mother of Jesus. That she was an apt student, qualified even from birth to become as great an apostle or disciple as any that he selected, is shown in my book, *The Mystical Life of Jesus*. We are often told by those who pretend to be, or claim to be, profound students of biblical history that not only was Jesus totally indifferent toward women and preferred to have none of them around him, but in support of this argument it is pointed out that he even rebuked his mother on one occasion and told her not to bother him about coming home but to go on her way and leave him alone because he had important business to attend to in connection with his Father's divine instructions. That seeming rebuke, given when he was a young man, is magnified and enlarged upon with a wholly erroneous interpretation.

If it were not for the particular verse in the first chapter of the Acts of the Apostles, it might be worthwhile to quote many other passages showing that Jesus was not unkindly and impatiently rebuking

his mother when he spoke in such a manner on the occasion of his visit to the synagogue. But the fact that Mary was one of his secret, private, trusted students and disciples on an equal basis with all the others plainly indicates that he was never impatient with her and did not look upon her as being unworthy of his companionship or lacking in understanding of his mission in life.

And the third surprise in that 14th verse is in the last five words—"as well as his brothers." In many places throughout the Christian Bible reference is made to the brothers of Jesus, and it has been common practice for many preachers and theologians and scriptural analysts to attempt to explain that all of humankind represented the "brothers" or "brethren" of Jesus, and that he was accustomed to refer to all who stood about him and who were of the male sex as his brothers, and that he particularly referred to his disciples and apostles as his brothers—never with the intention of meaning his brothers in flesh and blood. But in this case Jesus is not using the word, *brothers*; one of his followers is using it in a manner in which it is used in several other places in the Bible and which cannot be interpreted in any other but the correct manner. If we turn, for instance, to Matthew 13:55, we read: "Is not this the carpenter's son? Is not his mother called Mary? And are not his brothers James and Joseph and Simon and Judas?"

To those who may be surprised that Jesus had a number of brothers there will be another surprise when we refer to his sisters. Yet in the very next verse in this 13th chapter of Matthew, we read: "And are not all his sisters with us?"

Turning to the Book of John, 7:10, we read: "But after his brothers had gone to the festival, then he also went, not publicly, but as it were in secret." Here again we have an unquestionable reference to his brothers of the flesh. In proof of this let us recall the story that this 7th chapter of John is telling.

As in many families where there is a prophet or a genius, a wizard or a light among humanity, the other members of the household may look with doubt and skepticism upon the claims, or the pretensions, or even the manifest acts and wisdom of the other; so in the case of Jesus. Early in his career the members of his family, except his mother,

probably questioned the greatness and even the divinity of his mission. They may even have ridiculed or scoffed at his early preachings. This chapter of John is telling us how Jesus moved about in the open even after he had been warned that the Jews and others sought to kill him. So in the third verse of this chapter we are told that his brothers therefore said to him, “Leave here and go to Judea so that your disciples also may see the works you are doing.”

Then in the next verse we are told that “his brothers” said: “For no one who wants to be widely known acts in secret. If you do these things, show yourself to the world.” And in the next verse, the 5th, we read: “For not even his brothers believed in him.”

We see in these verses that a distinction is clearly made in verse 3 between his brothers and his disciples, and the reference to his brothers not believing in him could not refer to the disciples. And in verse 8, Jesus told his brothers to go on up to the festival and that he would appear later.

Taking all of the foregoing into consideration, we see that Acts 1:13-14 give us considerable evidence regarding what was going on in the very private periods of the life of Jesus when he was making his plans and carrying out his mission in secrecy with his school of students.

If my reader is surprised to find that his mother and many women and his brothers, and no doubt his sisters, were among his private students, the next great surprise will probably be in the following verse, the 15th, where we read: “In those days Peter stood up among the believers [disciples], (together the crowd numbered about one hundred twenty persons) and said” Before stating what Peter said to them, let us note the definiteness with which this verse presents the facts that the number of those assembled in this secret meeting, including his mother and his brothers and women generally, was about 120. Certainly this does not limit the number to the twelve, and we see in this 15th verse that Peter arose in the midst of the believers—the “disciples”—who included the “brothers” of Jesus as explained in the 14th verse. The distinction between these two terms is again very significant.

THE SECRET DOCTRINES OF JESUS

Now, the occasion for this meeting of all of the members of the secret school was an important matter. We notice that the 14th verse said that all of those thus assembled “were constantly devoting themselves to prayer.” We find in Acts 2:1 reference again to the fact that “they were all together in one place,” and in the 46th verse of the same chapter we read that “... they spent much time together in the *temple*.” In other places we find reference to this meeting “in the temple” as in Luke 24:53.

This meeting place in an upper room, as it is referred to in the Book of the Acts, this secret meeting place to which they were accustomed to go, was their “secret temple,” a term used in antiquity by the secret schools of all ages. In fact, the word temple to indicate a limited, secluded, sacred meeting place was first used by the early mystery schools, and the word used by them is most correctly interpreted into the modern word derived from the Latin—temple. That is why in most of the secret societies of the world today, and especially among those devoted to a study of the sacred philosophies and sacred mysteries, the holy of holies is still called the temple.

The occasion for this special meeting was the election of another apostle to take the place of Judas, who had betrayed Jesus and who had suffered the loss of his earthly life as a result of his attempt to escape from his own conscience. So we find that Peter arose in the midst of this meeting and addressed them after long prayers and supplications with the following thoughts: “It was necessary that the Holy Scripture of the past and the prophecies of our ancient days should be fulfilled as the Holy Spirit had revealed to us by the mouth of David concerning a Judas who was to guide the enemies to the correct place where they might find our great leader and Savior Jesus. This terrible manifestation of treason and treachery, or disloyalty and enmity, had to be fulfilled. It was decreed that Jesus should come to his timely end through the treachery of a Judas. He had been one with us, our companion, our trusted associate, but his part had been allotted to him in the service that we were to render individually and collectively.

“And so it came about that one of our companions performed the necessary but regrettable act, and then with the wages of his iniquity,

with the bag of gold that he received, he purchased a field. And in running through it to escape from those who might see him and recognize him, and to escape the mockery of his conscience, he ran across the field to hide, and in doing so he fell and injured himself and brought death to himself, and he bled profusely upon the field even to such an extent that all who heard of it at once nicknamed the field Hakeldama, which means 'a field of blood.'

"You will recall," said Peter to the assembly, "that it is written in the Book of Psalms, 'Let his homestead become desolate, and let there be no one to live in it; and let another take his position of overseer.'"

Then Peter explained to them that the vacancy in their midst must be filled by one who could be a witness to all of the acts of Jesus, even a witness of his crucifixion and his resurrection. Therefore they must choose as a successor to Judas one who had been a companion with them all the time that Jesus had been in and around and among them. So they selected two who could fill the position, the one being Joseph called Barsabas, and who was surnamed Justus, and another called Matthias. After more prayer, in which they petitioned God who knew the hearts of all of them to show them which of the two had been selected on high to take up the part of the ministry and apostleship which Judas had deserted, they finally voted with ballots and the selection fell to Matthias, and he was numbered with the other eleven apostles to make the number of twelve complete.

If we only knew all the names of those who were members of the secret school, many of the mysteries connected with the life of Jesus might be solved. We have found, for instance, that Joseph of Arimathea was a disciple of Jesus but a very secret one, according to the Book of John 19:38. According to other sources of information, this Joseph was a rich and pious Israelite who had the privilege of performing the last offices of duty and affection to the body of Jesus. He is clearly distinguished from any other Joseph by the addition of his birthplace to his name. In Mark 15:43, we learn that Joseph was a very honorable councilor, by which we are to understand that he was a member of the great Council of Sanhedrin. This makes evident the reason for the secrecy of his connection with the private school of

Jesus and why he was referred to as a secret disciple. In Luke 23:50, we learn that he was a good and just person and one of those who, bearing in their hearts the words of their old prophets, was waiting for the Kingdom of God.

We are told very clearly in the Bible that Joseph did not consent to the counsel and deed of his colleagues in conspiring to bring about the death of Jesus. But it does seem as though he lacked some courage that would have forced him to openly protest against their judgment. On the other hand, knowing the secret agreement and pledge taken by all of the disciples of the great school, we know that there were occasions when silence was enforced upon them, and when they were forbidden to protest, and especially to exercise any political power or influence to divert the cosmic course of events.

If the crucifixion, resurrection, and ascension of Jesus were preordained and even his betrayal preordained, there would have been little use in having Joseph reveal his relationship to Jesus and the secret school by futilely protesting against an event that was preordained. But we understand now why Joseph went boldly into the presence of Pilate and requested that the body of Jesus be turned over to him, and some day we may learn just why Pilate was so reluctant to carry on the great farce of a trial and the resulting crime, and also why he was so ready to consent to the request of Joseph.

Another important point in connection with the services rendered by Joseph will be of interest to all Rosicrucians and to all mystics of the ancient mystery schools. We are told that this rich man possessed a great tomb hewn in a great rock and that it was a tomb “where no human corpse had ever yet been laid” and that it was located in a garden that also belonged to Joseph and “close to the place of crucifixion.” However, the symbolism here will not be missed. The tomb—in which no one had ever been laid—in a great rock, in a garden, was more than just an ordinary tomb. In many centuries the mystery schools have used such tombs into which the bodies of their great leaders are placed only to be resurrected. The tomb in which Jesus was placed by Joseph was partially reserved for the secret school. It may have been in a garden owned by Joseph and it may be that being a rich and

pious member of the secret school he donated the tomb to the school, but a part of it never was intended for an ordinary person or for an ordinary burial, and it was known at the time that Joseph and his friend Nicodemus “infolded the body of Jesus in the linen shroud [knowing] that Jesus would rise from the tomb.”

In passing it may be interesting to note that this same Joseph was sent to Great Britain by the apostle St. Philip about the year 63 and settled there at Glastonbury with a few other disciples from the secret school. Here he continued with them their special missions assigned to them by Jesus and representing the Christian institutions and laying the foundation for the teachings and practices of the secret doctrines.

I trust that I have given in this chapter sufficient biblical evidence of the existence of a unique association or society to satisfy even the most analytical student of the Bible. But I have no hope of having satisfied the average Christian cleric or priest.

I find from very careful research that many theologians in the past have ventured to express the opinion, and often the positive statement, that the actual number of true followers or disciples of Jesus was 70. This number was derived from certain statements in the Bible wrongly interpreted or accepted without consideration of other facts. Moreover, it is contradictory to the statement quoted above regarding the presence of 120 disciples on the occasion of the election of a successor to Judas. Some theologians have admitted that they have found evidence in reading and rereading the early Jewish records and Greek records that Joseph of Arimathea was one of the 70 secret disciples. But it is very evident that in addition to the twelve apostles of whom so much is said in all modern Christian preachments, there was a large number of disciples who did not hold the official position of apostles. The fact, then, that the following of Jesus was divided into a large body of disciples with an inner body or circle of twelve apostles immediately presents to us a definite picture of the ancient system of a secret society and secret organization. Any argument that may be forthcoming from critics of this book to the effect that the only reason there were secret disciples was because Jesus was in hiding or attempting to hide from his enemies, and his disciples also

had to remain secret in order to protect their lives, is outbalanced by the fact that it was only in the latter period of Jesus' activities that he attempted any secrecy regarding his whereabouts or that he found it necessary for himself or his disciples to move and act in secret. Yet these 120 disciples were so well trained and so well qualified that they were authorized and empowered to continue his activities, to carry out his mission, and to do the miraculous things that he had done.

Are we to believe, therefore, that these 120 secret disciples became disciples secretly only in the last year of the life of Jesus? Are we to believe that they could have become well trained and well qualified in even less than a year? The only possible explanation for the power and authority given to them and the intimate relationship which they had with Jesus up to the very last day is that they had been well trained for a long period of time, and if this is so, why is it that no mention is made of the activities of these 120 disciples in the early years of the life of Jesus while they were his students and coworkers?

The only conclusion is that they were secret members from the very beginning and were not intended to be referred to in connection with the work of Jesus until such conditions arose in the last year that necessitated a revelation of their existence and of their activities and participation in the final events of his life. This being true, his group of disciples would constitute a typical secret society and a typical secret school; and the ritualism of their ceremonies, their methods of entering the secret meeting place, the strange signs which they used for identification and for greeting, all resemble, and, in fact, duplicate the mystical processes, ceremonies, signs, and greetings of several of the very ancient mystery schools that were unquestionably secret societies teaching and promulgating the ancient wisdom and secret doctrines.

This conclusion is further strengthened by the doctrines themselves—the doctrines which Jesus taught openly, and in which the parables and allegories contain recognizable symbols, and the doctrines which he taught his disciples and which they carried on and preserved as the foundation of the present Christian church. Therefore, our next duty is to examine these ancient doctrines and see in them the very definite relationship to the ancient secret teachings, the unquestionable

foundation of them in the mysteries of other schools, and the secret of the power that Christianity possessed in those doctrines which have not been inculcated and put into practice in the modern forms of the Christian religion.

Chapter 10

THE SECRET DOCTRINES

IT WOULD REQUIRE a very large volume, in size and form of an encyclopedia, to outline each and every one of the secret doctrines and principles expounded and demonstrated by Jesus in his secret school during the course of its existence. There is some evidence that a large number of minor principles were abandoned during the first few months of the school's existence while a large number of other minor principles were united into triunes or groups of three principles to form a fundamental doctrine. Also, a number of the ultimate doctrines were eventually modified and laid aside because they were not appropriate, propitious, and applicable to the unique conditions and times and would have little or no value in other countries in future years.

The best that can be done to cover this subject adequately, and give the reader and student a basic and comprehensive understanding of the essential secrets, is to select those which have come down to us through the ages in either their pristine or original form or slightly modified, or which have been withdrawn from public exposition since the second or third century and kept wholly within a certain inner circle of the Christian priesthood or hierarchy.

Perhaps the most fundamental, the most interesting, and the most revolutionary of all of the radical principles taught by Jesus, and which became the basis for a number of his doctrines, was that pertaining to his moral code. It is generally acknowledged that the moral element of the Christian code is more or less ideal, but unquestionably an outstanding feature, a workable one with hidden subtle qualities and

effects, and not comprehended by the average Christian and certainly incompletely and inadequately revealed by Christian preachers and teachers.

Very early in the missionary work of Jesus and throughout his entire career he gave great emphasis to the matter of morality. But his code of morals appeared to be astonishingly strange to the old philosophers and religionists. Perhaps only the mystics of the day saw in his moral code a very familiar principle. But it was by this moral code that Jesus measured the standard and quality of the character and nature of those individuals whom he admitted into the secret school. It was his yardstick by which he determined the fitness of those individuals who became interested in his teachings and expressed sufficient interest to warrant being invited to join with others in more personal and intimate contact with his society.

The thought has often been expressed by those who have analyzed the Christian doctrines, in comparison with ancient pagan religions, that the religion and teachings of Jesus constituted a morality that was higher than that established or acknowledged by the pagans or tribal peoples throughout the world. But this is a mistaken idea due to a misunderstanding of the real nature of the ancient moral code and the real mystery element in the moral code that Jesus established. We shall see that Jesus did not create this moral code, that it was not unique with him, having existed in the mystery schools for many ages, but it was something that was considered understandable and applicable only by those of spiritual development and mystical unfoldment. To preach it in some subtle form and gradually to establish it as a common code among the common people was indeed a profound and seemingly impossible task that Jesus set for himself—or which was preordained for him.

Among the ancient people and among the pagans, even in his own day, the moral code generally accepted and in application was a form of rules or regulations directing individuals to pay respect to the requirements and necessities and the more or less universal needs of the community. Such a moral code constituted a sort of civic duty toward one's neighbor or toward one's community. It was wholly an

impersonal thing. It was based upon the fact that the essential element of human existence insofar as personal conduct was concerned was the outer objective self.

It was the natural or unnatural, normal or abnormal, pleasures of the flesh that tempted humans into most of the sins they committed and led to the greatest degree, the greatest expressions, of immorality. In nearly all of the ancient scriptural writings can be found allegories of some kind, often almost identical with the story of the fall of humanity as expressed in the Old Testament. This temptation to partake of the fruits of the earth through the intriguing whisperings and urges of the serpent (which creature in symbolism always represented the subtle voice of earthly things and the subtle nature of worldly expression) typified the thought and idea that all sin and certainly all immorality was of the outer self through one's mortal, worldly senses. Even the "sin of all sins," and the greatest sin of all, and any so-called sin against a god were of the outer self.

It must be understood, however, that in the comprehension and understanding of the pagan, along with most of the intelligent and philosophically inclined of the period, there was no such term of distinction as the *outer* self. There was but one manifest, tangible, visible self. This was the body and brain and mortal senses of a human being. The existence of a soul within that body was, indeed, an ancient and generally accepted belief among those who had studied the ancient philosophies, ancient mysteries, and spiritual revelations. But this soul within the body did not constitute a "self" in the minds of the people in the same sense as the body did, and the soul was incapable of sin or immorality.

In all of the ancient mystery teachings it was held that the soul was so closely associated with the Holy Ghost and the Holy Spirit and the breath of life that it was a divine something, an immortal, perfect thing coming into the human body as a part of God, or of God's consciousness and kingdom, and imprisoned there with little or no opportunity to express itself except under great emotional stress or spiritual ecstasy on extreme occasions. That the spirit within, the soul within the human body, might be moved to expression at times

was acknowledged and believed; and because of the mysteries that surrounded the nature and purpose of the human soul, the non-mystical and untrained minds believed that when the soul did express itself, it would probably do so in manners in keeping with the very mystery surrounding it. Therefore, its expressions would be in strange jerkings of the body, in weird sounds expressed through the mouth, or in a babble of words representing unknown tongues or languages, or, on certain occasions, in rhythmic motions and swayings of the body, or in the power to heal the sick, raise the dead, and perform miracles.

It was also believed that the performance of miracles and the healing of the sick were expressions of the soul that would come only to those who had developed a high degree of spiritual attunement and were messengers of God in some extreme degree. But a great many believed that when groups of human beings were assembled in spiritual séances or under the spell of spiritual stress and strain, the ecstatic state that came upon them would most easily reveal itself through the mumblings and mutterings of the souls strange languages or the soul's peculiar control of the motions of the body. For this reason many private cults or sects grew and developed among pagan people, and even among the Jews, and we have many records of such meetings where these extreme expressions of the soul constituted the ritualism of the religious service. And, strange as it may seem, such sects and cults exist today.

But only the human objective, mortal self was qualified to be immoral or to commit sin. It was for this reason that we find in many countries unassociated systems of religious development or spiritual unfoldment in which the torture of the body constitutes the means and the method for spiritual growth. Until all the passions of the body—meaning the brain and natural senses—could be subdued, and until the inherited and acquired instincts of the flesh could be completely controlled, and until all of the unconscious reactions and stimuli of the physical system could be curtailed and the physical system made immune to the stimuli of nature's own worldly powers, human beings could not be moral beings.

As long as humans were capable of reacting to worldly stimulation or reacting to the desires and urges of the flesh, of yielding to the temptations of worldly things external to the body, they were not qualified to perform their civic duties to the community. The objectionable or forbidden acts of their mortal beings were looked upon as injurious to the community inasmuch as they constituted elements, problems, and factors that made the community unpleasant, unhappy, unhealthy, and weak in its power to fight its natural enemies and conserve its existence.

The only possible sin against the gods of the pagans and heathens was to deny the existence or the power or the possible wrath of the community god or the tribal god. Whatever else one did to a human individual was immoral because it was against the best interests of the community or contrary to one's civic duty toward the community. Lustfulness, adulterous actions, murder, theft, the practice of perversions, the appropriation of another individual's possessions or rights, the use of forbidden words, and hundreds of other acts were not classified as sins against the tribal or community god, nor as sins against the individuals concerned or involved, but against the community, the tribe, the nation.

Therefore, the code of morality was not based upon any divine commandments, divine conventions, omnipotent prohibitions, or godly proscriptions. It was a code gradually created and acknowledged and accepted by the lawmakers and rulers of the community and its dutiful citizens. Immoral behavior involved a challenge against the civic rules and regulations and brought upon the perpetrator punishment of the physical self in the hands of the citizens or those selected and authorized to fulfill the requirements of the code in that regard. Immoral and sinful acts, therefore, did not bring upon the perpetrator any divine condemnation or spiritual exclusion or critical distinction in a religious sense. If the body suffered sufficient torture and punishment for the violation of the civic code of morals, it was considered that just compensation had been made and that the sin was blotted out.

As stated above, the only exception to this was the sin against God or the gods, constituting blasphemy and a denial of the power and

existence of the god or gods, in which case the perpetrator had to suffer death in order to satisfy the special requirements of the spiritual code through which the wrath of the god was expressed. Such death immediately released the soul from the body and the individual ceased to exist on earth as an individual; and therefore, as a perpetrator of a sin against God, complete annihilation of the individuality was the supreme price.

Now if we look at the moral code that Jesus referred to in so many of his parables and allegories, we see at once that there was a very great difference between his moral code and that which had been in existence for so long a time. It is true that the moral code taught by Jesus had many elements in it that were duplicates of those found in the moral code of the Jews, but still the Jews did not teach even their most learned disciples the mystical element behind the code and by virtue of which the code became truly a spiritual, moral code. In the first place, Jesus distinguishes his code of morality by making it plain to his disciples and secret students that morality consisted of a duty to God and not a duty to the community. Jesus labored constantly in his public parables and allegories, preachments and actions, and in his private and secret teachings and demonstrations, to show that morality was a duty to God because it was a private matter between an individual's inner self and God, and that the true moral code was not a mere public matter or system, and that the chief inspiration in the moral code was not the principle of cooperation with ones neighbors or the helping of one's worldly brothers and sisters, but the saving of one's own soul.

This moral code, as expressed by Jesus, attempted in a very subtle manner to introduce the idea that humans are dual in a different sense than a mere body of earthly elements, and a spiritual soul imprisoned within it. He tried to establish the realization that just as one has an outer self with all of its urges, sensations, and susceptibility to the influence of reasoning and thinking and of worldly impulse and temptation, so one has another self, an inner self, distinct from the body and only partly associated with the soul.

Despite the fact that the Christian church of modern times has laid great emphasis upon the eventual resurrection of the body and its possible entrance into the Kingdom of God, and despite the fact that certain Christian sects and denominations have so elaborated upon a mistaken conception of the idea back of the resurrection that they hold the physical body to be holy and refuse to allow the body to be cremated—and in some cases refuse even to allow autopsies or any form of physical injury to the bones and tissue because of a belief that it would interfere with the eventual resurrection of the body and its entrance into the Kingdom of Heaven—Jesus did not teach or imply or even believe that the physical body was anything more than a mortal frame made of the dust of the earth and wholly unimportant in the scheme of things. This may seem shocking to many orthodox Christians, but any other viewpoint would be, and would have been, wholly inconsistent with the secret doctrines as taught and practiced by Jesus.

Nowhere in the teachings and practices of Jesus can we find the least intimation that his great system was intended to bring salvation to the human physical body. Even the salvation of the soul was not taught by Jesus, and all references in the Christian Bible to the salvation of the soul constitute a misinterpretation, a misunderstanding, of the secret principle that Jesus taught. He adhered strictly, as did all of the mystics of the day and all of the mystics of the centuries preceding him, to the fact that the human soul was an immortal, most perfect, divine thing, composed of the consciousness of God, and breathed into the physical body in order to make the human being “a living image of God.”

Wherever and whenever Jesus gave emphasis to the salvation of the spiritual, psychic part of the human being, it was to the third part, the inner self, distinct from the outer physical self and only associated temporarily with the soul while the soul was incarnate in the physical body. This inner self constituted the universal individuality, the distinct entity, the character, the perpetual self. Certainly, if the human soul had its origin and its source in the consciousness and mind of God, it was not only immortal but beyond contamination, beyond sinfulness, beyond condemnation. It could, therefore, be “saved” from nothing, and Jesus did not come to earth, nor preach and perform, suffer upon

the cross and offer his life, to “save” the human soul. It was because the public, the untrained and unprepared listeners, could not properly distinguish between the soul, the inner self, and the outer self that they were unable to discern the real secret message of his doctrines dealing with morals.

My reader is not to find in these words the idea that Jesus negated the idea of cooperation and the importance of each one helping his or her neighbor, for he taught and demonstrated the principle of each of us being our brother and sisters keeper and helper. But, more important than establishing and maintaining a civic code whose ultimate purpose and sole aim was to make a livable community, an idealistic nation, a cooperative establishment among all people, was the salvation of one’s inner self through a moral code that was based upon one’s duty to God, the Creator of one’s existence.

An important point in the working of this new moral code was the sacred obligation—to be taken by all who were accepted into the secret school—to renounce the world and to develop a purely spiritual love. These two principles would enable individuals to free themselves from the enslaving powers of the world and to make themselves immune to the temptations of the flesh.

The mystery schools for ages had taught that until humans learn to look upon the earth and all of its offerings as a footstool kingdom intended only to serve them and not master them, and until they learn to vibrate to and express a greater degree of spiritual love than worldly or physical love, they cannot save the inner self from inevitable destruction or annihilation. The inner self, unlike the soul, is not essentially immortal save by its virtues, its morality, and its spiritual attainment. The human soul is eternally immortal and divine. The inner self is free to choose and free to attain or be swallowed up in the fires of hell where it will be purged from association with the soul and forever separated from bodily expression.

It is the inner self as an entity that can rise in resurrection to an entrance into the Kingdom of Heaven while the physical body returns to the dust of the earth and loses its entity, its individuality, its character, and its nature.

Through the secret principles involved in the moral code proclaimed by Jesus, the human character and individuality constituting the inner self would be saved, and it was ones duty to God to bring into the Kingdom of Heaven, and into attunement with God's sublime presence, the inner self as an entity worthy of perpetual existence and continuous perfection.

Jesus taught secretly and tried to reveal subtly in his parables and allegories that it was the inner self, the character and personality within the body, that committed such sins as constituted violations of the true moral code. He taught his disciples very privately the strange secrets of the workings of the human mind, and of the urges and impulses of the physical body, and of the erroneous reasoning and thinking of the mortal brain whereby it offered the evolving outer self temptations to sin as well as impulses to do good; but these urges and impulses and temptations were passed on to the inner self for it to decide and choose. And, in accordance with its decisions and resulting actions it had to assume the responsibility not only for its acts but for its very thoughts. Jesus made this plain in one notable instance when he explained that even to look and think lustfully and immorally toward a woman was equal to committing an immoral act.

Jesus taught that the outer physical body, with all of its mortality, could not be held responsible for its sinful acts, since it did not possess any degree of divine consciousness or spiritual illumination by which it could determine and decide what was evil or wrong, or what was right. It could not be made to suffer punishment at any future time, for it had no future but only a brief present moment of existence.

This point touches upon another one of his secret doctrines wherein he revealed to his disciples that the physical part of a human being is continually changing, that the body we have today is not the body we possessed yesterday or a year ago; that every seven hours the blood within the body is so entirely different in chemical and physical nature that it might not even be identified as the same blood; that the outer tissues of the body slough off constantly; that these tissues are composed of cells which die and pass out of existence; that just as the hairs of the head are constantly growing anew, so does every part of

the physical body. He taught these facts in connection with his secret methods of healing disease and bringing about quick changes in the physical and material nature of the body and its functionings.

So the human physical body could not be held accountable for the sins that people committed, nor could it be held to account at some future date for the sins of today, inasmuch as the body of today would not be in existence next month or next year. And, since the soul could not commit sin and could not therefore be held accountable for sin, it was only this evolving inner self, that which distinguished a human from a beast, that which distinguished one individual from another in characteristics of nature and in personality, that could be held responsible and some day made accountable for the sins of humanity.

Another secret point in his doctrines often referred to with great emphasis by modern Christian preachers is the idea that Jesus was the *way* or the *path* to human salvation. There are two ways in which this idea is interpreted and accepted. One is the philosophical interpretation that Jesus meant that not he as an individual, but he as a messenger, represented the manner, the course, for right living; and that as a living example and demonstrator, he became the way to eternal joy and spiritual happiness. The orthodox interpretation implores us to understand that it means that we are to accept Jesus as our Savior, our God, our Lord, our only means of salvation through his crucifixion and through the blood he shed and through his body which suffered; that he died that we might be saved vicariously.

To the mystics of his school, however, and to those few mystics outside of his school who occasionally wandered into Palestine and listened to his parables and allegories and went back to their schools of learning to explain that a true messenger of God was on earth, the words quoted above had another meaning and one which mystics of today accept as being the true meaning without casting aside completely the other interpretations.

Jesus meant, by intimating that he was the way and the path, that the revelations he was making, the unveiling of the existence within his body of a highly evolved self that was neither the physical self nor the soul, constituted a path or a means for humans to discover

the mystery of their own existence and afforded the opportunity for humans to perfect themselves and assure themselves of entrance into that future Kingdom where they would be prepared and qualified to continue their spiritual evolution.

Almost every phrase uttered by Jesus, and every thought expressed by him in allegories, parables, or definite instruction, cast light on some great mystery. Jesus himself came among humanity as a mystery. To the multitudes he represented the mystery of mysteries. Even to his enemies who condemned him and called him a charlatan, a pretender, a false prophet, a scheming politician, and a hypocrite, he was still more than that—he was a person of mystery. In the bottom of their hearts they did not believe that his sole purpose in life was the charlatanism which they claimed to have found in his conduct. Neither did all of them thoroughly believe that he was only a pretender and without any power or authority. Nor did the politicians and the political rulers wholly believe that his mission in life centered exclusively around a political scheme.

There was too much mystery in his acts and in his public utterances. There was entirely too much mystery in his general behavior. Then, there was the mystery of his general followers who were so numerous that the politicians could not feel safe in trusting a secret message with even their most intimate companions and associates. Then, too, there was the mystery of his strange prophecies and predictions. What did he mean, for instance, when he said that if the temple were torn down, he could rebuild it again in three days? That was not a boastful claim made unthinkingly, for Jesus had never been found making shallow and boastful claims of that kind.

That a mystery surrounded him and surrounded his teachings and his practices is proved not only by the statements of his disciples and apostles and followers, and by unbiased or unprejudiced witnesses, but even by those who hated him and those who were ready to stone him to death or to hang him upon the cross. Even during his trial, when they stood ready with pointing fingers and attempted to charge him with every contemptible, mean, sordid, tricky plot that the human imagination could invent, they still trembled when he moved near

them and became fearful when his eyes rested on them, and whispered among themselves and in their complaints to Pilate to look out for any sudden, mysterious trick that he might perform. This is revealed to us in the manner in which Pilate called attention to Jesus standing before them near the great open window with the multitudes outside and said, "Behold, the man!" It was equivalent to saying, "Here he is, disrobed of his garments until you can see his flesh. He has no hidden arms or limbs. There he is before you, denuded of all physical, all worldly mystery. Look at him! He is just a human being like yourselves; yet you have attributed to him all the powers, all the acts, all the abilities of a superman or a monster, and then ask for his death!"

If we could have in accurate records somewhere a true and perfect picture of what his enemies thought of him and feared in him at the time of the trial, we would have a marvelously accurate picture of what Jesus really was, in his inner self. But all we have is what they said, or thought, or claimed about his outer self, and reverting once more, or adhering to, the ancient pagan ideas, they wanted that outer self destroyed, thinking that thereby the living entity, the living being, of this mysterious Jesus would be completely annihilated. What would become of his soul they cared nothing about. It was an immortal, divine thing like unto the souls of his enemies and his friends, and all who stood about him. In his soul he was no different from Jew or Gentile or even the Romans whom they hated. The soul could go to the source from which it came. It was incapable of sin or immorality or pretense, hypocrisy or political scheming or anything of which they feared, and this they wanted destroyed that it might never again preach or teach or demonstrate the strange laws and principles which rested in that physical brain of his outer, physical body.

This Person of Mysteries was to become no mystery at all by the mere suffering and death of the outer self. To understand this idea is to realize the inconsistency of their point of view, and the fact that there must have been some other secret idea in his teachings regarding the triune nature of human existence: the body, the individuality within, and the soul. Herein we find the ancient, yet truly Christian, secret idea of the trinity.

Chapter 11

THE GRAND MYSTERIES

UNDOUBTEDLY MANY OF my readers will still argue that there is no good reason to believe that Jesus did not conscientiously reveal to the public every law and principle that God had implanted in his consciousness. They probably will argue that God's son came to earth incarnated in human form and with human abilities to speak and demonstrate in order that the multitudes and all who could come within the hearing of his voice would receive all the knowledge and wisdom that the consciousness of God had stored up in the memory and understanding of Jesus. To argue that it was the sole purpose of the incarnation of Jesus on earth to *reveal* and not to *conceal*, is to forget that great truths can be destroyed by giving them common circulation and putting them in the category of everyday facts easily acquired and easily comprehended without effort or worthiness.

Casting pearls before swine has always been a sure method for not only causing many of the pearls to become lost, but for causing the swine and all other creatures to place little value upon what is offered them. It is a tendency of human nature—and probably has been since the time of Adam and Eve—to value a thing at what it costs us to obtain or attain. That which is offered freely is worth just what it costs us to secure. To think that Jesus was unaware of this fundamental principle of human thinking is to underestimate his marvelous knowledge of human psychology. Everything that Jesus offered the public and his disciples was held aloft and placed in a difficult position to obtain. Even salvation, the thing that people desired the most and which Jesus offered most freely, demanded its sacrifices and its efforts.

While many thought that the way to salvation as pointed out by Jesus seemed too simple, in the face of the elaborate ritualistic requirements and devotional services of the other contemporary religions, the rich and poor alike soon found that the Christian method was the most difficult of all, and those who really wanted the spiritual purging and unfoldment and elevation that was offered to them proceeded to strive for it simply because the seemingly insurmountable difficulties made the reward appear to be something extraordinarily good.

Jesus needed leaders to carry out his mission and he knew that these individuals would have to be enthusiastic, and those who placed a high value upon the trust he offered. This was why he used many methods, and especially the time-tested method of carefully selecting private, secret disciples who would become efficiently trained and who would go forth as true representatives of his divine scheme and purpose.

In answer to those who may still argue that there really were no mysteries involved in what Jesus taught and that it is an error of judgment to look upon any of his doctrines or demonstrations as real mysteries, let me say that we must remember that when the term *mysteries* is used in the New Testament and in all sacred scripture and writings of his time and thereafter, the word *mystery* does not refer to something that is weird and seemingly incomprehensible. It refers to a secret revelation, to something that is a great truth and yet has been concealed and is still possible of understanding only by those who have become initiated or prepared and qualified, and who perhaps have been purged and cleansed and touched with the Holy Spirit to receive the special gems of truth.

We must not confound the term *mystery* with the meaning of the word as it is used in modern times, nor must we compare it with the term *magick* of ancient times. Jesus could not have interested the multitudes, let alone the learned ones, in any new system of magical mysteries or tricks. Today the modern world looks with astonishment upon the professional performances of magic and legerdemain as not only something highly entertaining, but truly mysterious and almost supernatural. But even the greatest of the puzzling and mysterious tricks of the modern magician would have been smiled at, and even

scoffed at, by the learned ones and by the general public of the times of Jesus' mission on earth. Both Egypt and India and other lands in the Near East and Far East were accustomed to mysterious performances, to manifestations of so-called white magic, to such a degree that the adepts who still perpetuate those mysteries in modern times astonish and perplex the masterful scientific magicians of today.

With all of our so-called scientific miracles that we think would have astonished and even frightened the people of ancient times, we cannot duplicate, in a professional tricksters manner, the feats of natural law and divine law which were commonly demonstrated in the years immediately preceding the birth of Jesus. Even the raising of the dead was not an uncommon or surprising thing prior to the birth of Jesus, and if he had attempted to win the multitudes to his doctrines or his religious, divine system solely through the raising of the dead or the healing of the blind and the lame, he would have succeeded to no greater degree than did others before him.

The mysteries which Jesus dealt with were of a transcendental nature and revealed divine principles and a special power to perform, which the students of the ancient wisdoms and spiritual revelations had always understood as existing in some being somewhere, or as potential with God and probably transferable to an avatar or divine messenger of some unique qualifications, but undemonstrated and untaught to more than a secret few.

When Jesus said to those whom he trusted and was preparing, "I come to show you a mystery," he meant something far different than anything that they had seen or heard about in past years, and we, today, who are attempting to fathom these mysteries and to glimpse even a small portion of the power and transcendental magnificence of them, keenly realize that the mysteries which Jesus taught so secretly and demonstrated so guardedly are indeed worthy of continued protection from the profane eyes and minds of the curious public.

We not only believe that these great secrets have been carefully preserved and are susceptible of understanding and repeated performance, but we believe that even greater things can be accomplished through the same principles which he taught, but that

the student and practitioner must be found worthy and must be bound to secrecy and must attain true discipleship. This need for careful selection is emphasized in so many passages of the New Testament that it is absurd to assert that the analytical student of Christian doctrines or the careful reader of the Christian Bible can believe that the Christian church of today and all of its representatives are familiar with the real secret doctrines and real mysteries represented by the secret school of Jesus.

The Jews of his time recognized the fact that what Jesus was teaching and demonstrating was not the result of simple intellectual comprehension and attainment. We must continually bear in mind that he was carefully observed by the most learned of the Jews, and his doctrines were torn to shreds by the keen minds of those who wanted to discover in them some taint of common mystical philosophy. Not only did he surprise his elders with his profound knowledge of matters that were generally unknown to young people or even to learned people, but his discerning mind and very evident attunement with the Divine Consciousness made it possible for him to solve the most difficult of theological, philosophical, moral, and ethical problems.

Take the occasion, for instance, when he went up into the Temple and taught for a number of days. In the Book of John 7:15 we are told that the Jews wondered at his marvelous teachings, saying, "How does this man have such learning, when he has never been taught?" They referred to the fact that even the most superficially trained of their scholars had to spend half a lifetime not only in deep and profound meditation and analysis over the holy writings of the past, but in memorizing them and in examining each and every thought and idea from every possible angle and being able to answer hundreds of questions directed from every point of view on each and every principle. And we are told in that same chapter that Jesus answered them and said, "My teaching is not mine but his who sent me."

Over and over again Jesus frankly and modestly explained that the things he taught and the things he did were not the result of the prowess of his own intellect, but the result of divine inspiration and divine revelation and of a special preparedness that constituted a divine messiahship.

Let us take another example of his secret way of dealing with these matters. In the fourth chapter of the Book of Mark we have an interesting story of the public teachings of Jesus with parables and symbols, allegories, and veiled phrases, and then in the 10th verse we read that, "When he was alone, those who were around him along with the twelve asked him about the parables. And he said to them, "To you has been given the mystery of the kingdom of God, but for those outside, everything comes in parables"

A careful reading of the entire story shows us that the multitude stood about and listened to a large number of his parables, and when he apparently was through his period of teaching for the day, the multitude passed on, whispering among themselves and asking one another what it was all about, and whether he was to be relied upon, and whether some of his remarks were meant sarcastically for some of them or directed toward certain others in the country, and, perhaps, meant to be critical of their religious beliefs. The scoffers and the half-believers, along with the evil-minded ones and the self-satisfied ones passed on, gaining little or nothing from the parables they had heard. Today we find duplicates of that early picture!

We are told that when he finally found himself alone there were those about him, including the twelve, who began to ask him questions about the parables he had just used. These words of the 10th verse clearly indicate that there were two groups or two kinds of persons present when he considered himself as being "alone." There was the large circle of interested, believing listeners, and the smaller circle, constituting the twelve apostles. This gives another picture of the 120 disciples or students of the secret school with the twelve apostles as counselors and leaders. We understand now why Jesus answered them and said that to those in front of him and about him in this secret group of 120 it was written or decreed that eventually they should know "the mystery" of the kingdom of God, while to those without—to those who were without the pale of discipleship in his secret student body, those who represented the outer worldly circle of ordinary passers-by—all would be revealed only in parables.

His disciples had seen so many of the mysteries demonstrated that they never questioned his explanations even though many of these apparently contradicted the scientific thought of the day. Still, even some of the mystery schools of today are teaching and demonstrating laws and principles that prove themselves to be contrary to the theoretical postulations of science. The attempt to reduce all of the miracles of the Bible and all the mysteries of life to simple, natural, scientific theorems is rapidly proving unsatisfactory to thinking minds.

Let us take, for example, occurrences during World War I. Thousands of mothers in various parts of the world had experiences which proved to them beyond all scientific argument or learned protests that time and space do not exist in the world of spirit, and that the consciousness of a human being can project itself through space and make itself objectively sensed to those held in mind by the one who is thus extending the real self into the distance.

Recalling the fact that Jesus was secretly teaching the existence of an inner self that was independent of the outer physical self and strangely related to the soul, Jesus proved his contention in this regard by actual demonstrations. On more than one occasion he appeared in their midst while in every physical, material sense, his body and mind, as well as his soul, were at a distant point. His disciples were not surprised, therefore, but rather anticipated the experience when Jesus appeared in the closed room after his resurrection. The holy scriptures of the New Testament make it plain that they were assembled secretly in a closed room through which no physical body could have entered, yet Jesus appeared there not by stepping from one room into another, but gradually, in a visible form right in their very midst.

The thought conveyed in the record of this event is that the spiritual self that appeared in their very midst grew in substance or in visible quality before their very eyes as though a mystic cloud gradually became more dense and more definite in form and finally took on the objective aspect and conditions of a physical body. And to prove that this was no mere apparition, he showed to them that it was in fact a projection of the physical form, the spiritual consciousness, of his body, for there were the holes in the hands and the feet and the scars

upon the brow and the wound in the side. If this appearance had been solely a “soul projection” or a “spiritual projection of the soul” as modern spiritualists ask us to understand and accept, the wounds in his fleshly body would not have been apparent, for we cannot reverse all of our understanding of these fundamentals and believe that a wound in the flesh and tissue of the physical body creates or causes an accompanying injury to the soul.

And, there was the secret formula that was given so definitely to those who understood and which was interpreted merely as an allegorical statement by those who were outside of the secret circle. He had told them not only how the consciousness could be projected to a distant point and made visible, but how each of them could call upon the inner self of a distant being and bring it to their presence or so attune themselves with the distant self that gradually that distant self would become visible or tangible in the very room or presence of the one or more who called upon the self.

We know today that to understand this great mystery of projection of consciousness and projection of self—or to take the first step in this mystical process—necessitates the mastery of many carefully prepared lessons dealing with fundamental divine and natural laws. There are those today who practice this process with reverence as well as profound intellectual understanding, and who know that it is not the result of the violation of any natural law as many would suspect, but the application of natural law with divine understanding along with the application of truly divine principles.

In giving the formula to his disciples in an allegorical manner, Jesus associated it with praying because the formula by which a projection from a distant point is called forth, or the self prepares to extend its consciousness to a distant point, is like unto the utterance of a petition. So Jesus told them that when they prayed and wanted to sense attainment in their prayers and be one with him again in body and spirit as he explained at the Last Supper, they should pray in his name and that wherever two or more of them came together, in privacy and in isolation from the hubbub of worldly affairs, and prayed “in his name” or called upon him with the mystical formula, there he would be in their midst.

The doing of things and the saying of things, and the praying for things “in his name” did not mean what it is generally interpreted as meaning. Every student of ancient and Christian mystical principles understands very definitely what is meant in a formula by “in his name.” In the name of the Christus, in the name of the Christ, in the name of the Holy Ghost or the Holy Spirit, in the name of the Holy Trinity, in the name of the Logos, the great Amen, represents a very definite formula practiced by Jesus and his disciples and privately practiced today by the secret schools of the ancient wisdom. The explanation of all this and the practice of the principles whereby the secret students prepared and qualified themselves to go forth into the world and make themselves visible here and there, and to enter places through closed doors and closed windows, or through the walls of mud and stone, or through the bars of iron or steel, constitutes another one of the great secret doctrines.

The turning of water into wine, the feeding of the bread to the multitudes, the transmutation of grosser things into finer things, the alchemy of the spirit, the development of the power of faith, the increasing of the human aura whereby the spiritual and divine radiations of the God Consciousness within would heal and cure, were others of the secret doctrines which have been preserved, not only in the old and musty archives of the crypts of the early Christian churches, but in the practical and mystical teachings of the secret schools of today which represent the Great White Brotherhood.*

All of the secret schools today which are classified as initiatic (because the students within them must first be prepared and made ready, and then spiritually and esoterically initiated before receiving the Truth) are associated in one secret organization or federation for the exchange of helpful suggestions and ideas relating to the ways and means, not only of perpetuating the secret doctrines which Jesus taught, but the manner of selecting the final disciples and apostles who shall go forth, not to destroy the faith and religions of the world, but to carry out the great mission for which Jesus was preordained and predestined to become a Son of God incarnate.

Whether or not the Christian churches and Christian followers under their great leaders accept these ideas and perceive the truth concealed in this book is immaterial to the success of the Great Work that is being carried on by the perpetuators and conservators of the divine ordination. They carry no sword and brandish no flame of fire, but in peace and secret contentment devote their lives to the dissemination of knowledge to those who are worthy. Their outer form of propaganda is no more boastful, no more bombastic or radical, than the propaganda carried on by Jesus himself when he rose up on the heights of the rocks or mountains and, looking over the multitudes assembled, proclaimed the coming of a new kingdom, the coming of a heaven to earth, the self-condemnation of the sinful, the salvation of those who followed on the path and who accepted him as “the way” to eternal life.

These secret teachers and leaders constitute a hierarchy governing an enormous invisible empire whose existence is little suspected by the scoffers, the doubters, the self-satisfied. They claim no unique birth and no supernatural powers. They repeat only the old, old assertion that they are messengers of light bringing to earth the message of him who inspired them and carrying out in fact the work of the Holy Ghost that came upon their ancestors at the time that Jesus breathed upon them and asked God to ordain them.

They still speak in parables and allegories to the public and call attention to their great mission by every means available just as Jesus did. They suffer the rebukes and condemnation of the multitudes and the physical and material punishments of the enemies of light. Yet their followers increase in numbers, they abide in peace and happiness, they grow in wisdom and the Holy Spirit, and represent today the true community of humanity working for the establishment on earth of the Kingdom of God. Through books and pamphlets and the voice of the radio, through public assemblies and private discourses, they open the portals to those who are sincere; and between the lines of their messages in whatever form delivered, they reveal as through a veil the simple outline of truths which the seeker is invited to investigate. And when the student believes he or she is ready, or when ones inquiring attitude and open-mindedness reveal that one is ready, the master teacher will appear and the *way* will be made plain.

THE SECRET DOCTRINES OF JESUS

*In Rosicrucian terminology the Great White Brotherhood (referred to as the G.W.B. throughout this book) consists of all the enlightened soul personalities who, independent of religions and traditions, are commissioned to work in one of the twelve paths of the ancient mystical tradition. It is that invisible body of mystics, both men and women, composed of the most exalted and advanced spiritual leaders in various lands throughout the world. The word White in this phrase alludes to Light, the illumination of understanding, wisdom, and spirituality as expressed by enlightened soul personalities, and has nothing to do with race. Rosicrucians realize that these cosmic masters work in the service of humanity. The Rosicrucian Order, AMORC, is only one of the channels that has been used and is still being used by the G.W.B. for the development and progress of humanity's own spiritual and esoteric unfoldment and for the improvement of civilization.

Chapter 12

PROGRESSIVE MODIFICATION OF THE CHRISTIAN DOCTRINES

IN RECENT YEARS we have heard much about revisions, alterations, modifications, and eliminations in Christian church rituals, doctrines, and rules; but we may not realize that this process of alteration and modification has been in operation since the first century after the passing of the Keys to Saint Peter, and that the process has always extended itself to include the fundamental doctrines of Christs teachings and the teachings of his official disciples. In fact, very few of the essential, fundamental doctrines of the original Christian sect have come down to us in their pristine purity.

The so-called fundamentalists, who claim that they are endeavoring to retain the fundamentals of Christianity, and protect the religion against the intrusions of modern thought or the modifications of liberal thinkers, know little indeed as to what was fundamental and what is an invention of later centuries. That which most of them are striving to retain in its “pure form” is very far from being truly Christian in spirit or form.

In every century since the actual establishment of the Christian church, there have been so-called fundamentalists protesting against any modifications and insisting upon the rigid obedience to certain doctrines and principles which they claimed were “original” and pure. Yet, most of the principles and doctrines thus classified were of council

decree or arbitrary invention. For instance, what were being protected in the 8th century by the fundamentalists as the original dictums of Christ were, in many instances, inventions and arbitrary decrees of the church leaders and high councils of the preceding century.

The fundamentalists of today are striving to protect doctrines and principles which have been created, invented, or arbitrarily adopted in scores of ecclesiastical councils and “official decrees” in the past 800 years. Take, for instance, the doctrine of the Holy Trinity. It is looked upon by the fundamentalists as one of the original and most sacred of Christian essentials. Yet it was not until the 12th century that church authorities in a Lateran Council discussed the formation—the actual invention—of the Trinity in more or less its present form, adopted it, and proclaimed it as a fundamental!

It is true that in a mystical sense the sacred triangle was part of the secret symbolism of the original Christian sect, during the lifetime of Christ, and that it had been a sacred symbol for centuries before the birth of Christ, and is still a sacred symbol of a very great and essential doctrine of many mystical religions. It was a symbol of the “mysteries” to which Jesus often referred, and which were never revealed to the outer circle of Christian followers. But, the doctrine of the Trinity as we have it today (with many additions and modifications in spirit) was not known to or adopted by the Christian church until the 12th century, and it has little resemblance to the ancient mystical understanding of the symbolism of the sacred triangle.

The Christian religion of today—and for the past five centuries—is filled, in its doctrines, ritualism, rules, and conduct, with liberal extractions from paganism. This may seem like a shocking statement to most sincere Christians, and it should be illuminating to those fundamentalists who insist that there shall be no divergences from the pristine teachings of Jesus.

As an example or two, consider the very important, sacred, and “fundamentally pure” holy day known as Easter. If it were the anniversary of a historical event, as Christmas Day is supposed to be, it should fall on the same date each year. But its date is movable and is determined each year by astrological or astronomical occurrences, in

accordance with the very old pagan system. In fact Easter Day is so old a pagan holiday—of purely mystical and mythological meaning—that its origin is lost. As for Christmas Day—the day of the birth of Jesus the Christ—the early Christian church used many dates for this sacred celebration, and there was constant dispute during the first five centuries as to what date in December, January, and even February should be officially decreed as the actual date of birth of our Lord Jesus. Finally an old, very old, pagan holiday was adopted—that of a mythological and mystical nature—falling on December 25.

Nearly all of the dates of Christian holy days have been fixed upon ancient pagan holy days, with new, original, and purely arbitrary interpretations. Very few of them have any relation to, or foundation in, any of the doctrines, teachings or practices of Jesus during his lifetime, or during the lifetime of any of his original disciples.

In reading the carefully recorded discussions of the Christian councils of the third, fourth, fifth, and following centuries, one is continually impressed with the arbitrary stand taken by many of the councilors and the ingenuity of the councils vote. The admitted policy of “ecclesiastical necessity” seems to have been the sole rule and guide by which doctrines, principles of ritual and practice were rejected, modified, altered, and blandly invented.

Not the pure mystical or spiritual interpretation of the teachings of Jesus, not that which would unfold and unveil his sacred principles, determined what should or should not be added or eliminated from the mass of traditional matter under consideration, but what would build the Church as a physical organization to greater size and power, and what would most conveniently meet the needs of churchanity, were given sole consideration. A very definite distinction must be made between Christianity and churchanity, in considering the evolution of the Christian religion. Today, everything in and of the Christian religion is subservient to churchanity. Is it any wonder that the mystical spirit, the mystical doctrines and practices of the original Christian sect are almost wholly unknown to the general membership of the worldwide Christian church—either Roman Catholic or Protestant?

It is generally conceded by conscientious authorities within the Christian church that many of the present-day doctrines and teachings were invented or extracted from pagan religions solely because of “ecclesiastical necessity” or “expediency.” Take, for example, the fundamental doctrine of the original sin. For the Church to have held, simply, that all human beings must be saved or redeemed from the sins of their own commission, and of which they were guilty, would have eliminated the necessity of redeeming those who had lived a good and sinless life—and particularly millions of infants and little children who had never committed an actual sin or any act of which they were “guilty.”

To increase the membership of the Church, to build it greater and greater in a purely physical form, all humanity, of every religious belief, of every age—even infants and children—must find redemption and salvation exclusively in the Christian church! The most godly of beings, the most holy of little children, must be forced into the Church to be saved—from what? It was not enough that only those should be saved who had knowingly or unknowingly committed one or more of the increasing number of sins listed by the Church; every living creature, even those created and born in the image of God, and of goodly acts, must be saved and redeemed.

As an “ecclesiastical necessity” the doctrine of the original sin was created, invented out of whole cloth, and officially decreed as a very fundamental principle. No matter how short an earthly life one might have lived—even a brief hour—nor how perfectly and in what a godly manner might one have lived, one was still cursed with the sin by inheriting the original sin. From that inheritance none could escape—not even the little babe whose soul was just projected from the Divine Consciousness of God!

The doctrine was truly a “necessity”! It has proved to be the most objectionable of all to millions of thinking men and women, and especially to parents who hold in their arms, for the first time, a little babe in all its certain goodness. Yet, we are told that God is a God of Justice, Mercy, and Love! Still, the innocent must inherit, through the will of God, a sin that condemns the soul to everlasting punishment—

unless it is redeemed. Nowhere in the original teachings of Jesus do we find this doctrine represented as the Church represents it. It is the most conspicuous of the many inconsistent, contradictory doctrines of the Christian religion of today.

The Christian religion—the Christian form of churchanity—is one of the most complex systems of today, as compared with the extreme and magnificent simplicity of the system unfolded by Jesus. During his lifetime his followers—and bitter critics—made much of the fact that his system of salvation, his way, was so simple to comprehend, so direct and logical, and so easy for the sincere to adopt and follow, that it was either manifestly divine, or ridiculously childish, according to the mind of the commentator.

Before Jesus outlined his simple doctrines and revealed the straight and narrow path, the people to whom he preached had battled with complexities and involved procedures in religion, to a point where none but the high priests understood all of the principles, all of the laws, all of the rituals, and all of the prescribed and proscribed practices. In the so-called pagan religions there was a multiplicity of gods, an endless number of “symbolical indulgences,” and a continuous flow of new and arbitrary rulings, doctrines, and interpretations. In the religion of Israel, the ritualism, doctrines, and practices had become so involved that a lifetime of study was necessary to find the perfect code of life.

As a great flash of lightning dispels the darkness, so the astonishing, yet simple, statements of Jesus revealed the fundamentals of God’s laws. “Love thy neighbor; become as a child; do unto others as you would have them do unto you; abandon the vainglorious things of the world; seek the Kingdom of Heaven within; lift up your consciousness to God in prayer and communion,” and other easily understood rules, constituted the true path to Eternal Life.

Today we find in the Christian church a similar multiplicity of gods—called saints—with a constantly increasing number of new and modified doctrines, rules, and practices. In the matter of prayer and divine communion, instead of the simple instructions of Jesus to pray directly and privately to “Our Father who art in heaven,” we find the present-day system of prayer an involved ritualistic program,

with instructions to direct our prayers to a large number of saints as mediators. The injunction, “Thou shalt have no other gods before me!”, is lost sight of in the complexity of ritualism; and the sublime, mystical privilege of direct communion with God is discouraged by the ponderous system of churchanity.

At this very hour—and every hour of each passing year—somewhere in the numerous groups of Christian sectarian divisions, there are individuals or small committees and councils of Church leaders debating the addition to or modification of the Christian doctrines and laboriously struggling to give newer and more modern interpretations to the simple truths—unalterable truths—spoken by Jesus to his disciples.

The Christian religion in its present-day popular form is no longer the divinely inspired religion of Jesus, but a human-made system of pagan and modern ideas carefully fabricated to *conceal*, rather than *reveal*, the transcendental jewels in the diadem of pristine teachings of Jesus the Christ.

Chapter 13

THE PRESERVATION OF THE SECRET TEACHINGS

NOTHING SAID IN the preceding chapter should imply that in the passing of the centuries the original and pure teachings of Jesus have been lost to the world or that his secret doctrines, practices, and methods are no longer known to humanity. Nor should it be thought that the continuous modification, alteration, interpretation, and invention of so many new and inconsistent principles have obscured forever the truth he taught in his secret school.

Unquestionably the Roman Catholic Church has preserved in its secret archives in Rome—or elsewhere—many sacred manuscripts that contain the essential teachings of Jesus in their earliest and almost pure form. There is considerable evidence to indicate that within its sealed vaults, inaccessible to all but a very few, are certain original documents written and signed during the lifetime of Jesus. Some other rare documents preserved in the Vatican—or within the walls of Vatican City—are copies of original documents and records which are preserved in archives, outside of the control of the Roman Catholic Church.

In other places, fortified archives of great antiquity, are preserved other documents and records; and in the secret archives of several monastic orders of a nonsectarian nature are preserved, and open to occasional examination by competent authorities, the manuscripts of persons, mostly reliable witnesses, living during the years of the ministry of Jesus. From all of these it is possible to gather facts that

shed much light on the life and teachings of Jesus, and especially on the truths which Jesus taught in his secret school.

To believe that the creators of the Roman Catholic Church made no exhaustive study of the manuscripts and records in their possession, or which they had agents searching for in every land, is to ignore the fact that their own records of their council discussions and debates reveal how carefully they weighed every reference to the doctrines, teachings, demonstrations, and practices of Jesus and his disciples. For days at a time they tore to shreds every sacred principle, every precept, every quoted phrase, of the teachings of Jesus and every performance or application of his mystical power. Every thought and act was weighed in the balance. Unless each fitted, like a link in a chain, in the system of theology they were creating, it was either rejected or "officially interpreted." Where links were missing or "incompatible," new links were invented.

Year after year, century after century, these debates continued, and their records clearly show that the councilors had before them many rare records which they officially proclaimed as either "incompetent," dangerous, secret, or contradictory to the principles of Christian theology which they were gradually establishing.

Reference has already been made in *The Mystical Life of Jesus* to the many alterations that were made, during the course of many years, in the so-called Apostles' Creed. The discussions on this great subject reveal that the leaders of the slowly evolving Roman Church had before them many rare records of the true Christian teachings, as well as reliable records of what actually occurred during the crucifixion, "burial," and ascension of Jesus. But, the real facts were deliberately concealed.

The matter of the selection of the manuscripts constituting the "books of the Bible" offers an excellent picture of how these high councils arbitrarily chose and rejected authentic and reliable sources of information at their disposal. The reports of why certain admittedly genuine manuscripts were rejected, and others which are still shrouded in mystery and doubt were finally voted upon as being the only ones to constitute the *official* Bible, cast much light on the point as to whether the original teachings of Jesus and his disciples were preserved after the ascension of Jesus.

THE SECRET DOCTRINES OF JESUS

But it is not only in the sealed archives of the Vatican, nor in the archives of old monastic orders, that the secrets of the school of Jesus were preserved.

While the Christian Bible says much about the missionary work of the principal disciples—the leaders of the twelve groups of carefully trained students in the secret school of Jesus—little or nothing is said of the work of these 100 or more secret workers.

It is inconceivable that Jesus should have gone to such great lengths to establish and maintain, even at the cost of life and liberty, such an institution, and to have devoted hours of the days and nights, for years, to preparing the carefully selected and tried adepts, with no plan or program for the future.

Certainly, if there were a plan—a scheme for the Great Work—it must have been predicated upon the necessity of continuing his institution—call it a church, school, or order—after his retirement. (Even the Christian Bible, as well as many other sacred records, reports the many occasions when Jesus plainly intimated that his earthly efforts would be cut short while still in the prime of life. Therefore, he must have made some provision for the continuance of the work which he had established. Twelve persons—the apostles—alone could not have accomplished, after his “crucifixion,” what required over 120 men and women during his active leadership.)

It is absurd to think that the trial, crucifixion, burial, and ascension brought a complete end to his secret plans and elaborate institution. What became of the 100 or more tried, tested, and truly prepared adepts? Could Jesus have selected such weaklings, such insincere and easily discouraged members of his secret school as would have lost all interest, forgotten all their pledges, and abandoned all their power—divinely bestowed upon them on one momentous occasion—just because their leader had been persecuted? Men and women do not easily forsake a divine gift, a divine heritage, that enables them to shed Light, Life, and Love among the multitudes.

There is ample evidence to prove that his 100 or more adepts continued to meet, to hold secret sessions of the school, to initiate new

recruits, and to carry the work into lands far beyond the horizon of Palestine. Records in many countries bordering on the Mediterranean, and as far east as China, show that these original adepts and their successors visited these lands and established branches of the Great School, always carrying on the missionary work in the form of a larger outer circle of general students or seekers and an inner circle of initiated adepts.

Naturally the necessity for preserving the truths which Jesus taught, and especially of conserving in their pristine form the divine formula; which Jesus used and secretly demonstrated in his performance of miracles and the “mysteries,” caused them to be recorded in permanent form in symbols, ciphers, and signs. By word of mouth and by personal instruction only, behind closed and tiled doors, were these things transmitted from initiator to the initiated, year after year, and century after century.

Under various symbolical names, the branches of the Great School continued through the ages. The Great School was little concerned with the later establishment of a sectarian church claiming to be wholly and purely Christian and yet differing in its doctrines from those taught by Jesus. The Great School had no interest in the building of huge edifices for worship, the creation of elaborate ritualism for public assemblies, or the invention of theological systems constituting churchanity. The path which Jesus pointed out was to be followed by each individual in privacy and silence. Salvation, spiritual development, and divine attunement were personal, individual qualities, not collective or group attainments.

It was inevitable that a wide separation should come between the adepts and followers of the Great School, and the movement known as the Christian church. The latter was continuously adopting and developing features that made it a rival of the pagan and Jewish religions; the Great School ever remained the invisible Kingdom of Heaven on earth.

Down through the ages the work of the Great School continued. It took various forms such as secret assemblies, monastic orders, and

concealed organizations, adapting its operations to the necessities, limitations, and specific conditions of time and place.

Several outer forms of organizations were gradually established to conserve and propagate the secret teachings of Jesus. One of these was the Order of the Rose Cross (the Rosicrucian Order) in whose charge was placed the preservation and practice of the scientific, spiritual, and divine formulas of the Great School. Another was the semi-monastic order of Martinism (the Martinist Order) in whose charge was placed the preservation, practice, and teachings of some of the purely religious teachings of Jesus the Christ.

Today, throughout the world, these two organizations—operating under slightly different variations of name to conform to the linguistic and other distinctions of each country, but adhering to the ancient rules and dictums of the international council of the G.W.B.—are carrying on the unaltered purposes of the secret school established by Jesus. Neither of the organizations constitutes a church in the sense generally applied to that word in these modern times, nor do they seek to supplant the established churches of any creed or land. Their work is that of supplementing the work of all churches and religious movements by teaching and establishing those doctrines, truths, and eternal principles which have been eliminated from or modified in the arbitrarily created systems of religion existing throughout the universe.

In the inner circles of the Rosicrucian Order are to be found the Holy Assemblies that gave such spiritual strength and power to the original Great School. Those who seek to know the mysteries of humanity and human life here, heretofore, and hereafter, on earth, will find them—gradually and by being worthy—in the Order of the Rosicrucians. Those who seek to know the mysteries of the divine revelations of Jesus in his original and Christly way will find them through preparation and guidance in the circle of the Martinist Order. This organization has its central, world headquarters in Europe, with chartered branches and active organizations in various parts of the world. In the United States is located the Grand Regional Collegium and Council of the Martinist Order for North America. It can be approached only by being ready and being invited in due time.

THE ROSICRUCIAN ORDER, AMORC

Purpose and Work of the Order

The Rosicrucian Order, AMORC, is a philosophical and initiatic tradition. As students progress in their studies, they are initiated into the next level or degree.

Rosicrucians are men and women around the world who study the laws of nature in order to live in harmony with them. Individuals study the Rosicrucian lessons in the privacy of their own homes on subjects such as the nature of the soul, developing intuition, classical Greek philosophy, energy centers in the body, and self-healing techniques.

The Rosicrucian tradition encourages each student to discover the wisdom, compassion, strength, and peace that already reside within each of us.

Preface

THE STRANGE STORY OF THIS BOOK

THE ORIGINAL PREFACE and introduction to the matter in this book gives us the following strange and interesting story of the origin, discovery, and translation of this rare mystical work.

An English gentleman of high associations went to China in the years between 1740 and 1750. There are indications that he was commissioned by the Earl of Derby and others interested in historical and geographical explorations to gather special data and information not generally known at that time. The English gentleman, who was evidently a brilliant scholar, linguist, and scientist, succeeded in making the acquaintance of a number of high officials. He sent weekly letters of great length in the form of reports to the group of men in England who had commissioned him and, on a number of occasions, addressed some very long letters to the Earl of Derby personally. Many of these letters have become monuments of historical and geographical interest and some of these were published in book form in the year 1760, according to the records in London.

Most important of the letters sent to the Earl of Derby, however, was one which would have been sufficient preface for this work if the reader thereof had been familiar with all that preceded that letter. This particular letter addressed to the Earl of Derby is dated "Peking, May 12, 1749." In this letter the English gentleman says that he has just learned and come in contact with a most interesting incident. Part of the letter is as follows:

“To the Earl ____,
“(London, England.)

“Peking, May 12, 1749.

“My Lord,

“In the last letter which I had the honour of writing to your Lordship, dated December 23, 1748. I think I concluded all I had to say in regard to the topography and natural history of this great empire. I purposed in this, and some succeeding ones, to have set down such observations as I have been able to make on the laws, government, religion, and manners of the people. But a remarkable occurrence has happened lately, which engrosses the conversation of the literati here; and may hereafter afford matter of speculation to the learned in Europe.

...

“Adjoining China on the West, is the large country of Thibet, called by some Barantola. In a province of this country, named Lasa, resides the Grand Lama, or High Priest, who is revered, and even adored as a god, by most of the neighboring nations. The high opinion which is entertained of his sacred character induces prodigious numbers of religious people to resort to Lasa, to pay their homage to him, and to give him presents, in order to receive his blessing. His residence is in a most magnificent pagod, or temple, built on the top of the mountain Poutala. The foot of this mountain, and even the whole district of Lasa, is inhabited by an incredible number of Lamas, of different ranks and Orders; several of whom have very great pagods erected to their honor. . . . The whole country, like Italy, abounds with priests; and they entirely subsist on the great numbers of rich presents which are sent them from the utmost extent of Tartary, from the empire of the Indies. When the Grand Lama receives the adorations of the people, he is raised on a magnificent altar, and sits cross-legged upon a splendid cushion. His worshipers prostrate themselves before him in the humblest and most abject manner; but he returns not the least sign of respect, nor ever speaks, even to the greatest princes. He only lays his hand upon their heads, and they are fully persuaded that they receive from thence a full forgiveness of all their sins. They are likewise so extravagant as to believe that he knows all things, even the secrets of the heart; and his particular disciples being a *select number of about*

two hundred of the most eminent Lamas have the address to make the people believe he is immortal; and that whenever he appears to die, he only changes his abode, and animates a new body.

“The learned in China have long been of opinion that, *in the archives of this grand temple*, some very ancient books have for many ages been *concealed*: and the present Emperor, who is very curious in searching after the writings of antiquity, became at length so fully *convinced* of the probability of this opinion, that he determined to try whether any discovery of this sort could be made. To this end, his first care was to find out a person eminently skillful in the ancient languages and characters. He at length pitched upon one of the Hanlins, or Doctors of the first Order, whose name was Cao-Tsou, a man about fifty years of age, of a grave and noble aspect of great eloquence, and who, by an accidental friendship with a certain learned Lama, who had resided years at Peking, was become entirely master of the language which the Lamas of Thibet used among themselves.

“With these qualifications he set forward on his journey: and, to give his commission the greater weight, *the Emperor honoured him with the title of Cosao*, or Prime Minister. To which he added a most magnificent equipage and attendance, *with presents for the Grand Lama*, and the other principal Lamas, of an immense value! also a letter written with his own hand in the following terms:”

(Herewith follows the letter which the Emperor of China in 1747 sent to the Grand Lama in Thibet, now known as the Delai Lama, whose seat of government is still at Lasa, now spelled Lhasa. One can easily visualize the scene of the messenger or Prime Minister from the Emperor’s court arriving at Lhasa. One naturally recalls the visit of the Queen of Sheba to King Solomon with her many slaves carrying hundreds of precious gifts. Just what gifts the Emperor of China could send to the rich and mighty Grand Lama that would interest him, is hard to conceive, because the Grand Lama was surrounded with such wealth and such luxuries as all parts of the world could provide. However, the letter addressed to the Grand Lama is interesting and is published herewith as taken from the official records.)

“To the Great Representative of God.

“(The Grand Lama at Lasa.)

“Most High, Most Holy, “and

Worthy to be adored!

“We the emperor of China, Sovereign of all the Sovereigns of the earth, in the person of this our Most respected Prime Minister Cao-Tsou, with all reverence and humility, prostrate ourself beneath thy sacred feet, and implore for ourself, our friends, and our empire, thy most powerful and gracious benediction.

“Having a strong desire to search into the records of antiquity, to learn and retrieve the *wisdom of the ages* that are past; and being well informed, that, in the *sacred repositories* of thy most ancient and venerable hierarchy, there are some valuable books, which, from their great antiquity are become to the generality, even of the learned, almost wholly unintelligible; in order, as far as in us lies, to prevent their being totally lost, we have thought proper to *authorize and employ* our Most Learned and respected Minister Cao-Tsou in this our present embassy to thy Sublime Holiness. The business of which, is to desire, that he may be permitted to read and examine the said writings; we expecting from his great and uncommon skill in the ancient languages, that he will be able to *interpret whatever may be found*, though of the highest and *most obscure antiquity*. And we have commanded him to throw himself at thy feet, with such testimonies of our respect as we trust will procure him the admittance we desire.”

(Signed by the Emperor of China.)

“I will not detain your Lordship with any particulars of his journey, though he hath published a large account of it, abounding with many surprising relations. . . . Let it suffice at present, that when he arrived in these sacred territories, the magnificence of his appearance, and the richness of his presents, failed not to gain him a ready admission. *He had apartments appointed him in the sacred college, and was assisted* in his inquiries by one of the most learned Lamas. He continued there near *six months*: during which he had the satisfaction of finding *many valuable pieces of antiquity*: from some of which he hath made very curious extracts....

“But the most ancient piece he hath discovered and which none of the Lamas for” many ages had been able to interpret or understand, is a complete system of mystical instruction, written in the language and character of the ancient Gymnosophists or Bramins. This piece he wholly translated, though, as he himself confesses, with an utter incapacity of reaching, in the Chinese language, the strength and sublimity of the original. The judgments and opinions of the Bonzess, and the learned Doctors, are very much divided concerning it. Those who admire it the most highly, are very fond of *attributing it to Confucius*, their own great philosopher. . . . Some will have it to be the institute of Lao-Kiun, of the sect Tao-ssee.

. . . There are others who from some particular marks and sentiments which they find in it, suppose it to be written by the Bramin, Dandamis, whose famous letter to Alexander the Great is recorded by the European writers. With these Cao-Tsou himself seems most Inclined to agree; at least so far as to think, that it is really the work of some ancient Bramln; being fully persuaded from the spirit with which it is written, that it is no translation. . .

“But whoever was the writer of it, the great noise which it makes in this city, and all over the empire, the eagerness with which it is read by all kinds of people, and the *high encomiums* which are given to it by some, *at length determined me to attempt a translation of it into English*; especially as I was persuaded it would be an agreeable present to your Lordship. One thing, however, it may perhaps be necessary to apologize for, at least to give some account of; that is, the style and manner in which I have translated it. I can assure your Lordship that when I first sat down to their work, I had not the least intention of doing it this way: but the sublime manner of thinking which appeared in the introduction, the great energy of expression, and the shortness of the sentences, naturally led me into this kind of style. . . .

“Such as it is, if it affords your Lordship any instruction, I shall think myself extremely happy; and in my next will resume my account of this people and their empire.”

“I am, etc.”

(Signed by an eminent English scholar.)

The privilege of translating the ancient manuscript was granted by the Grand Lama to the Prime Minister, who spent his six months' time in the sacred college translating this and other manuscripts which will probably come to light within this year. Many of the learned teachers and High Initiates assisted the Prime Minister and when the task was finished the translated manuscript was brought to the Emperor of China by the Prime Minister. Here, the English gentleman and his associates on the commission examined it and with the privilege of the Emperor of China and the linguists of his court, another translation was made of it in English, solely for the purpose of delivering the English copy to the Earl of Derby, as explained in the letter to the Earl reproduced above.

So remarkable was this translation and so unusual the doctrines and teachings contained therein, that the Earl of Derby authorized or permitted a reproduction of the translation in English to a limited number. These copies were well-bound and preserved and were finally distributed to the chief officers or executives of the several secret, mystic organizations then existing in Europe.

One of these copies has been preserved in the archives of one of these Brotherhoods ever since and was used as the foundation for its high and profound teachings. The chief officer of this Brotherhood realized recently that the legibility of the copy could not be preserved for more than a few years, because the old hand-made paper was becoming very yellow and crumbling to dust. Believing that there were hundreds of sincere students of the true doctrines of Thibet who might wish to study this rare work, he finally granted official permission to the present publishers to reproduce the book in the modern form without any fee or royalty payment to himself as owner of the work, providing that it was reproduced in its entirety and without changes or modifications in spelling that would alter the true meaning of any sentence or thought.

This is how the rare work came into the hands of the present publishers and appears now in its modern form.

ITS AUTHORSHIP

The reader will note in the letter from the English gentleman to the Earl of Derby that there is some speculation as to the author of the original manuscript. The Grand Lama and his associates claimed that the manuscript had been in their possession and used by them as a foundation for their teachings since 732 A. D. They meant that records indicated its existence at that time, but it may have been in the possession of some of their Adepts and Masters outside of Thibet for many years before that date.

It was natural for those in Thibet to attribute the manuscript to one of their great writers such as Confucius or Lao Kiun, but in the light of modern research and especially in the light of revelations made by the excavations in Egypt and Jerusalem within the past hundred years, and since 1749 when the Thibetan copy was translated into English, we can plainly see that the original manuscript was not written by Confucius or any one of his time or nation or beliefs. There is every indication throughout the work as it appears on the following pages that it was written by Amenhotep IV, Pharaoh of Egypt, during the years 1360 to 1350 B. C, or thereafter, or by some one of his successors in the great school of mysticism which he founded in Egypt.

Reference to any encyclopedia will reveal the fact that this Pharaoh upset the priesthood teachings and idol worship of Egypt by the establishment of a monotheistic, mystical religion, and every authority on the history of religions points to him as the first man in the civilized world to proclaim the belief in one God; and he has been rightfully called "the greatest modernist of all times." He established a cult or Secret Brotherhood based upon this mystical religion in the city which he founded and named Akhnaton.

Recent translations of the writings discovered on the walls and columns in his mystical temple in Egypt show, for instance, that he was the author of those beautiful passages which are incorporated in the Christian Bible as the hundred and fourth Psalm, and many sacred writings of the East have been very definitely traced to his school and Brotherhood.

Copies of the teachings and doctrines used in Egypt at that time undoubtedly reached Jerusalem and other parts of the world through

the exodus of the Jews and many proofs have been found to show that the high mystical teachings of this Pharaoh of Egypt and his followers were the foundation of such cults and schools as the Essenes, to which the Master Jesus belonged, and which later evolved into a fraternity known as the “Brethren of the Rose Cross” or the *Rosicrucians*, referred to by Lord Bulwer-Lytton in his book “Zanoni” and many others who have given time to such research, including Sir Francis Bacon, who at one time was chief executive of the Order of the Rosicrucians throughout continental Europe.

The probability of this authorship of the following doctrines makes this work one of the most important contributions to sacred literature and one of the most interesting publications in the field of mystical teachings that has come to light in the past few centuries. Reproduced herewith, is the official warrant and privilege for the production of this book in modern form by the secret organization, whose chief executive possesses the only copy now known to exist.

The reader’s attention is called to the translator’s comments on the terms and phrases used in this work, appearing at the close of the last Chapter.

The publishers wish to permanently express their thanks and appreciation to Mr. and Mrs. J. B. C. of Vancouver, Canada, for their valuable help in the preparation of their book.

The Publishers.

San Francisco, California, U. S. A.

May twentieth, nineteen hundred and twenty-five.

Preliminary Instructions

BOW DOWN YOUR heads unto the dust, O ye inhabitants of earth! be silent and receive, with reverence these instructions from on high.

Wheresoever the sun doth shine, wheresoever the wind doth blow, wheresoever there is an ear to hear, and a mind to conceive; there let the precepts of life be made known, let the maxims of truth be honored and obeyed.

All things proceed from God. His power is unbounded. His wisdom is for eternity, and His goodness endureth forever.

He sitteth on His throne in the centre of the universe and the breath of His mouth giveth life to the world.

He toucheth the stars with His fingers, and they run their course rejoicing.

On the wings of the wind He walketh abroad, and performeth His will through all the regions of unlimited space.

Order and grace, and beauty, spring from His hand.

The voice of wisdom speaketh in all His works; but the mortal understanding comprehendeth it not.

The shadows of mortal knowledge passeth over the brain of man as a dream: he seeth as in the dark; he reasoneth, and is deceived.

But the wisdom of God is as the Light of Heaven: it requireth not reason; His mind is the fountain of truth.

Justice and mercy wait before His throne; benevolence and love enlighten His countenance for ever.

Who is like unto God in glory? Who in power shall contend with the Almighty? Hath He any equal in wisdom? Can any in goodness be compared unto Him? There is none other before Him!

He it is, O man, who hath created thee; thy present station on earth was fixed by His laws: the powers of thy mind are the gifts of His goodness, the wonders of thy frame are the work of His hand: thy soul is His soul: thy consciousness His consciousness.

Hear then His voice, for it is gracious; and he that obeyeth shall establish his mind in Peace Profound; and bring everlasting growth to the soul that resideth within his body, state after state, on this earth.

Therefore, with these instructions,

Unto Thee I grant

The Economy of Life.

Thy Master

Book One

THE OBLIGATIONS
THAT RELATE TO MAN,
CONSIDERED AS AN
INDIVIDUAL

CHAPTER I.

Consideration

COMMUNE WITH THYSELF, O man! and consider wherefore thou wert made.

Contemplate thy powers, contemplate thy wants and thy connections; so shalt thou discover the duties of life, and be directed in all thy ways.

Proceed not to speak or to act, before thou hast weighed thy words, and examined the tendency of every step thou shalt take; so shall disgrace fly far from thee, and in thy house shall shame be a stranger; repentance shall not visit thee, nor sorrow dwell upon thy cheek in this or many lives to come.

The thoughtless man bridleth not his tongue; he speaketh at random and is entangled in the foolishness of his own words. As one runneth in haste, and leapeth over a fence, may fall into a pit on the other side, which he doth not see; so is the man that plungeth suddenly into any action before he hath considered the consequences thereof, and the compensation which The Law will exact.

Hearken therefore unto the voice of Consideration; her words are the words of wisdom, and her paths shall lead thee to safety and truth.

CHAPTER II.

Modesty

Who art thou, O man! that presumes! on thine own wisdom? or why dost thou vaunt thyself on thine own acquirements?

The first step towards being wise, is to know that thou art born mortally ignorant; and if thou wouldst not be esteemed foolish in the judgment of others, cast off the folly of being wise in thine own mortality.

As a plain garment best adorneth a beautiful woman, so a decent behaviour is the greatest ornament of inner wisdom.

The speech of a modest man giveth lustre to truth, and the diffidence of his words absolveth his error.

He relieth not on his mortal wisdom; he weigheth the counsels of a friend, and receiveth the benefit thereof.

He turneth away his ear from his own praise, and believeth it not; he is the last in discovering his own perfections.

Yet, as a veil addeth to beauty, so are his virtues set off by the shade which his modesty casteth upon them.

But behold the vain man, and observe the arrogant: he clotheth himself in rich attire, he walketh in the public street, he casteth around his eyes, and courteth observation.

He tosseth up his head, and overlooketh the poor; he treateth his inferiors with insolence, his superiors in return look down on his pride and folly with laughter.

He despiseth the judgment of others; he relieth on his own opinion, and is confounded.

He is puffed up with the vanity of his imagination; his delight is to hear, and to speak of himself all the day long.

He swalloweth with greediness his own praise, and the flatterer in return eateth him up.

CHAPTER III.

Application

Since the days that are past are gone for ever, and those that are to come may not come to thee in thy present state of being, it behoveth thee, O man! to employ the present state, without regretting the loss of that which is past, or too much depending on that which is to come; for of thy next states thou can'st not know except as thy actions now ordain them.

This instant is thine; the next is in the womb of futurity, and thou knowest not what it may bring forth; maturity of the unborn is in the keeping of the Law. Each future state is that thou has created in the present.

Whatsoever thou resolvest to do, do it quickly. Defer not till the evening what the morning may accomplish.

Idleness is the parent of want and pain; but the labour of goodness bringeth forth pleasure.

The hand of diligence defeateth want; prosperity and success are the industrious man's attendants.

Who is he that hath acquired wealth, that hath risen to power, that hath clothed himself with honour, that is spoken of in the city with praise and that standeth before the king in his counsel? Even he that hath shut out idleness from his house; and hath said, "Sloth thou art mine enemy."

He riseth up early, and heth down late; he exerciseth his mind with contemplation, and his body with action, and preserveth the health of both.

The slothful man is a burden to himself, his hours hang heavy on his head; he loitereth about, and knoweth not what he would do.

His days pass away like the shadow of a cloud, and he leaveth behind him no sign for remembrance.

His body is diseased for want of exercise, he wisheth for action, but hath not power to move: his mind is in darkness; his thoughts are confused; he longeth for knowledge, but hath no application.

He would eat of the almond, but hateth the trouble of breaking its shell.

His house is in disorder, his servants are wasteful and riotous, and he runneth on toward ruin; he seeth it with his eyes, he heareth it with his ears, he shaketh his head, and wisheth, but hath no resolution; till ruin cometh upon him like a whirlwind, and shame and repentance descend with him to the grave. Yet shall come a day from the Heavens thy soul returneth and shall gather up the dust and animate it.

CHAPTER IV.

Emulation

If thy heart thirsteth for honor, if thy ear hath any pleasure in the voice of praise, raise thy mortal self from the dust whereof thou art made, and exalt thy aim to something that is praiseworthy.

The oak that now spreadeth its branches toward the heavens, was once but an acorn in the bowels of the earth. Endeavor to be first in thy calling, whatever it may be; neither let any one go before thee in well-doing; nevertheless, do not envy the merits of another, but improve thine own talents.

Scorn also to depress thy competitor by any dishonest or unworthy method; strive to raise thyself above him only by excelling him; so shall thy contest for superiority be crowned with honor, if not with success.

By a virtuous emulation the spirit of a man is exalted within him; he panteth after fame, and rejoiceth as a racer to run his course.

He riseth like the palm-tree in spite of oppression; and, as an eagle in the firmament of heaven, he soareth aloft, and fixeth his eye upon the glories of the sun.

The examples of eminent men are in his vision by night; and his delight is to follow them all the day long.

He formeth great designs, he rejoiceth in the execution thereof, and his name goeth forth to the ends of the world.

But the heart of the envious man is gall and bitterness; his tongue spitteth venom; the success of his neighbour breaketh his rest.

He sitteth in his cell repining; and the good that happeneth to another, is to him an evil.

Hatred and malice feed upon his heart, and there is no rest in him.

He feeleth in his own breast no love of goodness, and therefore believeth his neighbour is like unto himself.

He endeavors to depreciate those that excel him, and putteth an evil interpretation on all their doings.

He lieth on the watch and meditates mischief: but the detestation of man pursueth him, he is crushed as a spider in his own web.

CHAPTER V.

Prudence

Hear the words of prudence, give heed unto her counsels, and store them in thine heart: her maxims are universal, and all the virtues lean upon her; she is the guide and the mistress of human life.

Put a bridle on thy tongue; set a guard before thy lips, lest the words of thine own mouth destroy thy peace.

Let him that scoffeth at the lame, take care he halt not himself; whosoever speaketh of another's failings with pleasure, shall hear of his own with bitterness of heart.

Of much speaking cometh repentance, but in silence is safety.

A talkative man is a nuisance to society, the ear is sick of his babbling, the torrent of his words overwhelmeth conversation.

Boast not of thyself, for it shall bring contempt upon thee; neither deride another, for it is dangerous.

A bitter jest is the poison of friendship; and he that cannot restrain his tongue, shall have trouble.

Furnish thyself with the proper accommodations belonging to thy condition; yet spend not to the utmost of what thou canst afford, that the providence of thy youth, may be a comfort to thy old age.

Let thine own business engage thy attention; leave the care of the state to the governors thereof.

Let not thy recreations be expensive lest the pain of purchasing them exceed the pleasure thou hast in their enjoyment.

Neither let prosperity put out the eyes of circumspection, nor abundance cut off the hands of frugality: he that too much indulgeth in the superfluities of life, shall live to lament the want of its necessities.

From the experience of others do thou learn wisdom; and from their feelings correct thine own faults.

Trust no man before thou hast tried him; yet mistrust not without reason: it is uncharitable.

But when thou hast proved a man to be honest, lock him up in thine heart as a treasure; regard him as a jewel of inestimable price.

Refuse the favours of a mercenary man: they will be a snare unto thee; thou shalt never be quit of the obligation.

Use not today what tomorrow may want; neither leave that to hazard which foresight may provide for, or care prevent.

Yet expect not even from prudence infallible success: for the man knoweth not what the night may bring forth.

The fool is not always unfortunate, nor the wise man always successful; yet never had a fool a thorough enjoyment; never was a wise man wholly unhappy.

CHAPTER VI.

Fortitude

Perils, and misfortunes, and want, and pain, and injury, are more or less the certain lot of every man that cometh into the world.

It behoveth thee therefore, O child of calamity! early to fortify thy mind with courage and patience, that thou mayst support, with a becoming resolution, thy allotted portion of human evil.

As a camel beareth labor, and heat, and hunger, and thirst, through deserts of sand, and fainteth not; so the fortitude of man shall sustain him through all perils.

A noble spirit disdaineth the malice of fortune; his greatness of soul is not to be cast down.

He hath not suffered his happiness to depend on her smiles, and therefore with her frowns he shall not be dismayed.

As a rock on the sea shore he standeth firm, and the dashing of the waves disturbeth him not.

He raiseth his head like a tower on a hill, and the arrows of fortune drop at his feet.

In the instant of danger, the courage of his heart sustaineth him; and the steadiness of his mind beareth him out.

He meeteth the evils of life as a man that goeth forth unto battle and returneth with victory in his hand.

Under the pressure of misfortunes, his calmness alleviates their weight, and his constancy shall surmount them.

But the dastardly spirit of a timorous man betrayeth him to shame.

By shrinking under poverty, he stoopeth down to meanness; and by tamely bearing insults he inviteth insults.

As a reed is shaken with the breath of the air, so the shadow of evil maketh him tremble.

In the hour of danger, he is embarrassed and confounded; in the day of misfortune he sinketh and despair overwhelmeth his soul.

CHAPTER VII.

Contentment

Forget not, O man! that thy present station on earth is appointed by the wisdom of the Eternal; who knowest thy heart, who seeth the vanity of all thy wishes, and who often, in mercy, denieth thy requests.

Yet for all reasonable desires, for all honest endeavors, his benevolence hath established, in the nature of things, a probability of success.

The uneasiness thou feelest, the misfortunes thou bewailest, behold the root from whence they spring, even thine own folly, thine own pride, thine own distempered fancy.

Murmur not therefore at the dispensation of God, but correct thine own heart: neither say within thyself, If I had wealth, or power, or

leisure, I should be happy; for know, they all of them bring to their several possessors their peculiar inconveniences.

The poor man seeth not the vexations and anxieties of the rich, he feeleth not the difficulties and perplexities of power, neither knoweth he the wearisomeness of leisure; and therefore it is that he repineth at his own lot.

But envy not the appearance of happiness in any man, for thou knowest not his secret gifts.

To be satisfied with a little, is the greatest wisdom; and he that increaseth his riches, increaseth his cares; but a contented mind is a hidden treasure, and trouble findeth it not.

Yet if thou sufferest not the allurements of fortune to rob thee of justice, or temperance, or charity, or modesty, even riches themselves shall not make thee unhappy.

But hence shalt thou learn, that the cup of felicity, pure and unmixed, is by no means a draught for mortal man.

Goodness is the race which God hath set him to run, and happiness the goal; which none can arrive at till he hath finished his course, and receive his crown in the mansions of eternity.

CHAPTER VIII.

Temperance

The nearest approach thou canst make to happiness is to enjoy from Heaven understanding and health.

These blessings if thou possessest and wouldst preserve to old age, avoid the allurements of Voluptuouss, and fly from her temptations.

When she spreadeth her delicacies on the board, when her wine sparkleth in the cup, when she smileth upon thee, and persuadeth thee to be joyful and happy; then is the hour of danger, and let Reason stand firmly on her guard.

For if thou hearkenest unto the words of the Adversary, thou art deceived and betrayed.

The joy which she promiseth changeth to madness, and her enjoyments lead on to diseases and death.

Look round her board, cast thine eyes upon her guests and observe those who have been allured by her smiles, who have listened to her temptations.

Are they not meagre? Are they not sickly? Are they not spiritless?

Their short hours of jollity and riot are followed by tedious days of pain and dejection. She hath debauched and palled their appetites, that they have now no relish for her nicest dainties; her votaries are become her victims; the just and natural consequence which God hath ordained, in the constitution of things, for the punishment of those who abuse His gifts.

But who is she that with graceful steps, and with a lively air trips over yonder plain?

The rose blusheth on her cheeks, the sweetness of the morning breatheth from her lips; joy, tempered with innocence and modesty, sparkleth in her eyes and from the cheerfulness of her heart she singeth as she walks.

Her name is Health: she is the daughter of Exercise, who begot her on Temperance; their sons inhabit the mountains that stretch over the northern regions of San Ton Hoe.

They are brave, active, and lively, and partake of all the beauties and virtues of their sister,

Vigour stringeth their nerves, strength dwelleth in their bones, and labour is their delight all the day long.

The employments of their father excite their appetites, and the repasts of their mother refresh them.

To combat the passions is their delight; to conquer evil habits, their glory. Their pleasures are moderate, and therefore they endure; their repose is short, but sound and undisturbed.

Their blood is pure, their minds are serene, and the physicians findeth not the way to their habitations.

But safety dwelleth not with the sons of men, neither is security found within their gates.

Behold them exposed to new dangers from without, while a traitor within lurketh to betray them.

Their health, their strength, their beauty, and activity, have raised desire in the bosom of lascivious Love.

She standeth in her bower, she courteth their regard, she spreadeth her temptations.

Her limbs are soft and delicate, her attire is loose and inviting, wantonness speaketh in her eyes, and on her bosom sits Temptation. She beckoneth them with her finger, she wooeth them with her looks, and by the smoothness of her tongue she endeavoreth to deceive.

Ah! fly from her allurements, stop thy ears to her enchanting words. If thou meetest the languishing of her eyes, if thou hearest the softness of her voice, if she casteth her arms about thee, she bindeth thee in chains for ever.

Shame followeth, and disease, and want, and care, and repentance.

Enfeebled by dalliance, with luxury pampered, and softened by sloth, strength shall forsake thy limbs, and health thy constitution. Thy days shall be few and those inglorious; thy griefs shall be many, yet meet with no compassion.

Book Two

THE PASSIONS

CHAPTER I.

Hope and Fear

PROMISES OF HOPE are sweeter than the rose in the bud, and far more flattering to expectation, but the threatenings of Fear are a cross upon which the rose is crucified.

Nevertheless, let not Hope allure, nor Fear deter thee from doing that which is right; so shalt thou be prepared to meet all events with an equal mind.

The terrors even of death are no terrors to the good: he that committeth no evil, hath nothing to fear.

In all thy undertakings, let a reasonable assurance animate thy endeavours; if thou despairst of success, thou shalt not succeed.

Terrify not the soul with vain fears, neither let thy heart sink within thee from the phantoms of imagination.

From Fear proceedeth misfortune; but he that hopeth, helpeth himself.

As the ostrich when pursued hideth his head, but forgetteth his body; so the fears of a coward expose him to danger.

If thou believest a thing impossible, thy despondency shall make it so; but he that persevereth, shall overcome all difficulties.

A vain hope flattereth the heart of a fool; but he that is wise, pursueth it not.

In all thy desires, let reason go along with thee, and fix not thy hopes beyond the bounds of probability; so shall success attend thy undertakings, thy heart shall not be vexed with disappointments.

CHAPTER II.

Joy and Grief

Let not thy mirth be so extravagant as to intoxicate thy mind, nor thy sorrow so heavy as to depress thy heart. This world affordeth no good so transporting, nor inflicteth any evil so severe as should raise thee far above, or sink thee much beneath, the balance of moderation.

Lo! yonder standeth the house of Joy. It is painted on the outside, and looketh gay; thou mayest know it from the continual noise of mirth and exultation that issueth from it.

The mistress standeth at the door, and calleth aloud to all that pass by; she singeth and shouteth, and laugheth without ceasing.

She inviteth them to go in and taste the pleasures of life, which she telleth them are nowhere to be found but beneath her roof.

But enter not thou into her gate without care; neither associate thyself with those who frequent her house unduly and immorally.

They call themselves the sons of Joy, they laugh and seem delighted; but madness and folly are in all their doings.

They are linked with mischief hand in hand, and their steps lead down to evil. Dangers beset them round about, and the pit of destruction yawneeth beneath their feet.

Look now on the other side; and behold, in that vale overshadowed with trees, and hid from the sight of men, the habitation of Sorrow.

Her bosom heaved with sighs, her mouth is filled with lamentation, she delighteth to dwell on the subject of human misery.

She looketh on the common accidents of life, and weepeth, the weakness and wickedness of man is the theme of her lips.

All nature to her teemeth with evil, every object she seeth is tinged with the gloom of her own mind, and the voice of complaint saddeneth her dwelling day and night.

Come not near her cell; her breath is contagious; she will blast the fruits and wither the flowers that adorn and sweeten the garden of life.

In avoiding the house of Joy, let not thy feet betray thee to the borders of this dismal mansion; but pursue with care the middle path, which shall lead thee by a gentle ascent to the bower of Tranquility.

With her dwelleth peace, with her dwelleth safety and contentment. She is cheerful, but not gay; she is serious, but not grave; she vieweth the joys and the sorrows of life with an equal and steady eye.

From hence, as from an eminence, shalt thou behold the folly and the misery of those, who, led by the gaiety of their hearts, take up their abode with the companions of jollity and riotous mirth; or, infected by gloominess and melancholy, spend all their days in complaining of the woes and calamities of human life.

Thou shalt view them both with understanding, and the error of their ways shall keep thy feet from straying.

CHAPTER III.

Anger

As the whirlwind in its fury teareth up trees, and deformeth the face of nature, or as an earthquake in its convulsions overturneth whole cities; so the rage of an angry man throweth mischief around him.

Danger and destruction wait on his hand.

But consider, and forget not thine own weakness; so shalt thou pardon the failings of others.

Indulge not thyself in the passion of Anger; it is whetting a sword to wound thine own breast, or murder thy friend.

If thou bearest slight provocations with patience, it shall be imputed unto thee for wisdom; and if thou wipest them from thy remembrance, thy heart shall not reproach thee.

Seest thou not that the angry man loseth his understanding? Whilst thou art yet in thy senses, let the wrath of another be a lesson to thyself.

Do nothing in a passion. Why wilt thou put to sea in the violence of a storm?

If it be difficult to rule thine anger, it is wise to prevent it; avoid therefore all occasions of falling into wrath, or guard thyself against them whenever they occur.

A fool is provoked with insolent speeches, but a wise man laugheth them to scorn.

Harbour not revenge in thy breast; it will torment thy heart, and discolour its best inclinations.

Be always more ready to forgive, than to return an injury: he that watches for an opportunity of revenge, lieth in wait against himself, and draweth down mischief on his own head.

A mild answer to an angry man, like water cast upon the fire, abateth his heat; and from an enemy he shall become thy friend.

Consider how few things are worthy of anger, and thou wilt wonder that any but fools should be wroth.

In folly or weakness it always beginneth; but remember, and be well assured, it seldom concludeth without repentance.

On the heels of folly treadeth shame; at the back of anger standeth remorse.

CHAPTER IV.

Pity

As blossoms and flowers are strewed upon earth by the hand of spring, as the kindness of summer produceth in perfection the bounties of harvest; so the smiles of pity shed blessings on the children of misfortune.

He who pitieth another, recommendeth himself; but he who is without compassion, deserveth it not.

The butcher relenteth not at the bleating of the lamb; neither is the heart of the cruel moved with distress.

But the tears of the compassionate are sweeter than dew-drops, falling from roses on the bosom of the spring. Shut not thine ear therefore against the cries of the poor; neither harden thine heart against the calamities of the innocent.

When the fatherless call upon thee, when the widow's heart is sunk, and she imploreth thy assistance with tears of sorrow; O pity her affliction, and extend thy hand to those who have none to help them.

When thou seest the naked wanderer of the street, shivering with cold and destitute of habitation; let bounty open thine heart, let the wings of charity shelter him from death, that thine own soul may live.

Whilst the poor man groaneth on the bed of sickness, whilst the unfortunate languish in the horrors of a dungeon, or the hoary head of age lifts up a feeble eye to thee for pity; O how canst thou riot in superfluous enjoyments, regardless of their wants, unfeeling of their woes?

CHAPTER V

Desire and Love

Beware, young man, beware of the allurements of wantonness, and let not the harlot tempt thee to excess in her delights.

The madness of desire shall defeat its own pursuits; from the blindness of its rage thou shalt rush upon destruction.

Therefore give not up thy heart to her sweet enticements, neither suffer thy heart to be enslaved by her enchanting delusions.

The fountain of health, which must supply the stream of pleasure, shall quickly be dried up, and every spring of joy shall be exhausted.

In the prime of thy life, old age shall overtake thee; thy sun shall decline in the morning of thy days.

But when virtue and modesty enlighten her charms, the lustre of a beautiful woman is brighter than the stars of heaven, and the influence of her power it is in vain to resist.

The whiteness of her bosom transcendeth the lily; her smile is more delicious than a garden of roses.

The innocence of her eye is like that of the turtle, simplicity and truth dwell in her heart.

The kisses of her mouth are sweeter than honey; the perfumes of Arabia breathe from her lips.

Shut not thy bosom to the tenderness of love; the purity of its flame shall enoble thine heart, and soften it to receive the fairest impressions.

Book Three

WOMAN

GIVE EAR, FAIR daughter of love, to the instructions of prudence, and let the precepts of truth sink deep in thy heart; so shall the charms of thy mind add lustre to the elegance of thy form: and the beauty like the rose it resembleth, shall retain its sweetness when its bloom is withered.

In the spring of thy youth, in the morning of thy days, when the eyes of men gaze on thee with delight, and nature whispereth in thine ear the meaning of their looks; ah! hear with caution their seducing words, guard well thy heart, nor listen to their soft persuasions.

Remember thou art man's reasonable companion, not the slave of his passion; the end of thy being is not merely to gratify his loose desire, but to assist him in the toils of life, to sooth him with thy tenderness, I and recompense his care with soft endearments.

Who is she that winneth the heart of man, that subdueth him to love and reigneth in his breast?

Lo! yonder she walketh in maiden sweetness, with innocence in her mind, and modesty on her cheek.

Her hand seeketh employment, her foot delighteth not in gadding abroad.

She is clothed in neatness, she is fed with temperance; humility and meekness are as a crown of glory circling her head.

On her tongue dwelleth music, the sweetness of honey floweth from her lips.

Decency is in all her words, in her answers are mildness and truth.

Submission and obedience are the lessons of her life, and peace and happiness are her reward.

Before her steps walketh prudence, and virtue attendeth at her right hand.

Her eye speaketh softness and love; but discretion with a sceptre sitteth on her brow.

The tongue of the licentious is dumb in her presence, the awe of her virtue keepeth him silent.

When scandal is busy, and the fame of her neighbor is tossed from tongue to tongue; if charity and good-nature open not her mouth, the finger of silence resteth on her hp.

Her breast is the mansion of goodness, and therefore she suspecteth no evil in others.

Happy were the man that should make her his wife; happy the child that shall call her mother.

She presideth in the house, and there is peace; she commandeth with judgment, and is obeyed.

She riseth in the morning, she considers her affairs, and appointeth to every one their proper business.

The care of her family is her whole delight, to that alone she applieth her study; and elegance with frugality is seen in her mansions.

The prudence of her management is an honor to her husband, and he heareth her praise with a secret delight.

She informeth the minds of her children with wisdom, she fashioneth their manners from the example of her own goodness.

The word of her mouth is the law of their youth, the motion of her eye commandeth their obedience.

She speaketh and her servants fly: she pointeth and the thing is done; for the law of love is in their hearts, and her kindness addeth wings to their feet.

In prosperity she is not puffed up, in adversity she healeth the wounds of fortune with patience.

The troubles of her husband are alleviated by her counsels and sweetened by her endearments: he putteth his heart in her bosom and receiveth comfort.

Happy is the man that hath made her his wife; happy the child that calleth her mother.

Book Four

CONSANGUINITY; OR NATURAL RELATIONS

CHAPTER I

Husband

ACCCEPT UNTO THYSELF a wife, and obey the ordinance of God; take unto thyself a wife, and become a faithful member of society.

But examine with care and fix not suddenly. On thy present choice depends thy future happiness.

If much of her time is destroyed in dress and adornments; if she is enamoured with her own beauty, and delighted with her own praise; if she laugheth much, and talketh loud; if her foot abideth not in her father's house, and her eyes with boldness rove on the faces of men: though her beauty were as the sun in the firmament of heaven, turn thy face from her charms, turn thy feet from her paths, and suffer not thy mind to be ensnared by the allurements of imagination.

But when thou findest sensibility of heart, joined with softness of manners, an accomplished mind, with a form agreeable to thy fancy: take her home to thy house; she is worthy to be thy friend, thy companion in life, the wife of thy bosom.

O cherish her, as a blessing sent thee from Heaven; let the kindness of thy behaviour endear thee to her heart.

She is the mistress of thy house; treat her therefore with respect, that thy servants may obey her.

Oppose not her inclination without cause; she is the partner of thy cares, make her also the companion of thy pleasures.

Reprove her faults with gentleness, exact not her obedience with rigour. Trust thy secrets in her breast; her counsels are sincere, thou shalt not be deceived.

Be faithful to her bed; for she is the mother of thy children.

When pain and sickness assault her, let thy tenderness sooth her affliction; a look from thee of pity and love, shall alleviate her grief, or mitigate her pain and be of more avail than ten physicians.

Consider the tenderness of her sex, the delicacy of her frame; and be not severe to her weakness, but remember thine own imperfections.

CHAPTER II.

Father

Consider, thou who art a parent, the importance of thy trust; the being thou hast produced it is thy duty to support.

Upon thee also it dependeth, whether the child of thy bosom shall be a blessing, or a curse to thyself; an useful or worthless member to the community.

Prepare him early with instruction, and reason his mind with maxims of truth.

Watch the bent of his inclination, set him right in his youth, and let no evil habit gain strength with his years.

So shall he rise like a cedar on the mountains; his head shall be seen above the trees of the forest.

A wicked son is a reproach to his father; but he that doeth right, is an honor to his gray hairs.

The soil is thine own, let it not want cultivation, the seed which thou sowest, that also shalt thou reap.

Teach him obedience, and he shall bless thee; teach him modesty, and he shall not be ashamed.

Teach him gratitude, and he shall receive benefits; teach him charity, and he shall gain love.

UNTO THEE I GRANT

Teach him temperance, and he shall have health; teach him prudence, and fortune shall attend him.

Teach him justice and he shall be honored by the world; teach him sincerity, and his own heart shall not reproach him.

Teach him diligence, and his wealth shall increase; teach him benevolence and his mind shall be exalted. Teach him science, and his life shall be useful; teach him religion, and his death shall be happy.

CHAPTER III.

Son

From the creatures of God let man learn wisdom, and apply to himself the instruction they give.

Go to the desert, my son; observe the young stork of the wilderness, let him speak of thy heart; he bareth on his wings his aged sire, he lodgeth him in safety, and supplieth him with food.

The piety of a child is sweeter than the incense of Persia offered to the sun; yea, more delicious than odours wafted from a field of Arabian spices by the western gales.

Be grateful then to thy father, for he gave thee life; and to thy mother for she sustained thee.

Hear the words from his mouth, for they are spoken for thy good; give ear to his admonition, for it proceedeth from love.

He hath watched for thy welfare, he hath toiled for thy ease; do honour therefore to his age, and let not his gray hairs be treated with irreverence.

Forget not thy helpless infancy, nor the forwardness of thy youth, and indulge the infirmities of thy aged parents; assist and support them in the decline of life.

So shall their hoary heads go down to the grave in peace; and thine own children, in reverence of thy example, shall repay thy piety with filial love.

CHAPTER IV.

Brothers

Ye are the children of one father, provided for by his care; and the breast of one mother hath given you suck.

Let the bonds of affection, therefore, unite thee with thy brothers, that peace and happiness may dwell in thy father's house.

And when ye separate in the world, remember the relation that bindeth you to love and unity; and prefer not a stranger before thy own blood.

If thy brother is in adversity, assist him; if thy sister is in trouble forsake her not.

So shall the fortunes of thy father contribute to the support of his whole race; and his care be continued to you all, in your love to each other.

Book Five

PROVIDENCE; OR, THE ACCIDENTAL DIFFERENCES OF MEN

CHAPTER I.

Wise and Ignorant

JOYS OF THE understanding are the treasures of God; and he wisdom? hath He enlightened thy mind with the knowledge of truth? Communicate it to the ignorant, for their instruction; communicate it to the wise, for thine own improvement.

True wisdom is less presuming than folly. The wise man doubteth often, and changeth his mind: the fool is obstinate, and doubteth not; he knoweth all things, but his own ignorance.

The pride of emptiness is an abomination; and talk much is the foolishness of folly: nevertheless, it is the part of wisdom, to bear with patience their Wise and Ignorant appointeth to every one his portion in what measure seemeth good unto Himself. Hath He endued thee with impertinence, and to pity their absurdity.

Yet be not puffed up in thine own conceit, neither boast of superior understanding; the clearest human knowledge is but blindness and folly.

The wise man feeleth his imperfections and is humble; he laboureth in vain for his own approbation; but the fool peepeth in the shallow stream of his own mind, and is pleased with the pebbles which he seeth at the bottom: he bringeth them up, and sheweth them as pearls; and, with the applause of his brethren, delighteth he himself.

He boasteth of attainments in things that are of no worth; but where it is a shame to be ignorant, there he hath no understanding.

Even in the paths of wisdom, he toileth after folly; and shame and disappointment are rewards of his labour.

But the wise man cultivates his mind with knowledge; the improvements of arts is his delight; and their utility to the public crowneth him with honour.

Nevertheless, the attainment of virtue he accounteth as the highest learning; and the science of happiness is the study of his life.

CHAPTER II.

Rich and Poor

The man, to whom God hath given riches, and blessed with a mind to employ them aright, is peculiarly favoured and highly distinguished.

He looketh on his wealth with pleasure, because it affordeth him the means to do good.

He protecteth the poor that are injured, he suffereth not the mighty to oppress the weak.

He seeketh out objects of compassion, he enquireth into their wants, he relieveth them with judgment and ostentation.

He assigneth and rewardeth merit; he encourageth ingenuity and liberally promoteth every useful design.

He carrieth on great works, his country is enriched, and the labourer is employed; he formeth new schemes, and the arts receive improvement.

He considereth the superfluities of his table, as belonging to the poor of his neighbourhood, and he defraudeth them not.

The benevolence of his mind is not checked by his fortune; he rejoiceth therefore in riches, and his joy is blameless.

But woe unto him that heapeth up wealth in abundance, and rejoiceth alone in the possession thereof.

That grindeth the face of the poor, and considereth not the sweat of their brows.

He thriveth on oppression without feeling; the ruin of his brother disturbeth him not.

The tears of the orphan he drinketh as milk, the cries of the widow are music to his ear.

His heart is hardened with the love of wealth; no grief nor distress can make impression upon it.

But the curse of iniquity pursueth him; he liveth in continual fear; the anxiety of his mind, and the rapacious desires of his own soul, take vengeance upon him, for the calamities he hath brought upon others.

O what are the miseries of poverty, in comparison with the gnawing of this man's heart! Let the poor man comfort himself, yea, rejoice; for he hath many reasons.

He sitteth down to his morsel in peace, his table is not crowded with flatterers and devourers.

He is not embarrassed with a train of dependents, nor teased with the clamours of solicitation.

Debarred from the dainties of the rich he escapeth also their diseases.

The bread that he eateth, is it not sweet to his taste? The water he drinketh, is it not pleasant to his thirst? yea, far more delicious than the richest draughts of the luxurious.

His labour preserveth his health, and procureth him a repose, to which the downy bed of sloth is a stranger.

He limiteth his desires with humility, and the calm of contentment is sweeter to his soul, than all the acquirements of wealth and grandeur.

Let not the rich therefore presume on his riches, nor the poor in his poverty yield to despondence; for the providence of God dispenseth happiness to them both.

CHAPTER III.

Masters and Servants

Repine not, O man, at the state of servitude: it is the appointment of God, and hath many advantages; it removeth thee from the cares and solitudes of life.

The honour of a servant is his fidelity; his highest virtues are submission and obedience.

Be patient therefore under the reproofs of thy master; and when he rebuketh thee, answer not again: the silence of thy resignation shall not be forgotten.

Be studious in his interests, be diligent in his affairs, and faithful to the trust which he repositeth in thee.

Thy time and thy labour belong unto him; defraud him not thereof, for he payeth thee for them.

And thou, who art a master, be just to thy servant, if thou expectest from him fidelity; and reasonable in thy commands, if thou expectest a ready obedience.

The spirit of a man is in him; severity and rigour may create fear, but can never command his love.

Mix kindness with reproof, and reason with authority; so shall thy admonitions take place in his heart, and his duty shall become his pleasure.

He shall serve thee faithfully from the motive of gratitude; he shall obey thee cheerfully from the principle of love; and fail not thou, in return to give diligence and fidelity their proper reward.

CHAPTER IV.

Magistrates and Subjects

O Thou! the favourite of Heaven, whom the sons of men, thy equals, have agreed to raise to sovereign power, and set as a ruler over themselves; consider the ends and importance of their trust, far more than the dignity and height of thy station.

Thou art clothed in purple, and seated on a throne; the crown of majesty investeth thy temples, the sceptre of power is placed in thy hand: but not for thyself were these ensigns given; nor meant for thine own, but the good of thy kingdom.

The glory of a king is the welfare of his people; his power and dominion resteth on the hearts of his subjects.

The mind of a great prince is exalted with the grandeur of his situation; he revolveth high things, and searcheth for business worthy of his power.

He calleth together the wise men of his kingdom, he consulteth among them with freedom, and heareth the opinions of them all.

He looketh among his people with discernment, he discovereth the abilities of men, and employeth them according to their merits.

His magistrates are just, his ministers are wise and the favourite of his bosom deceiveth him not.

He smileth on the arts, and they flourish; the sciences improve beneath the culture of his hand.

With the learned and ingenious he delighteth himself, he kindleth in their breasts emulation, and the glory of his kingdom is exalted by their labours.

The spirit of the merchant who extendeth his commerce, the skill of the farmer who enricheth his lands, the ingenuity of the artist, the improvements of the scholar; all these he honoureth with his favour, or rewardeth with his bounty.

He planteth new colonies, he buildeth strong ships, he openeth rivers for convenience, he formeth harbours for safety; his people abound in riches, and the strength of his kingdom increaseth.

He frameth his statutes with equity and wisdom; his subjects enjoy the fruits of their labour in security; and their happiness consists in their observance of the law.

He foundeth his judgments on the principles of mercy; but, in the punishment of offenders, he is strict and impartial.

His ears are open to the complaints of his subjects; he restraineth the hand of their oppressors, and delivereth them from their tyranny.

His people therefore look up to him as a father, with reverence and love; they consider him as the guardian of all they enjoy.

Their affection unto him begetteth in his breast a love of the public; the security of their happiness is the object of his care.

No murmurs against him arise in their heart; the machinations of his enemies endanger not his state.

UNTO THEE I GRANT

His subjects are faithful, and firm in his cause; they stand in his defence as a wall of brass; the army of a tyrant flieth before them as chaff before the wind.

Security and peace bless the dwellings of his people; and glory and strength encircle his throne for ever.

Book Six

THE SOCIAL DUTIES

CHAPTER I.

Benevolence

WHEN THOU CONSIDEREST thy wants, when thou beholdest thy imperfections, acknowledge his goodness, O son of humanity! who honoured thee with reason, endued thee with speech, and placed thee in society, to receive and confer reciprocal helps and mutual obligations.

Thy food, thy clothing, thy convenience of habitation; thy protection from the injuries, thy enjoyment of the comforts and the pleasures of life: all these thou owest to the assistance of others, and couldst not enjoy but in the bands of society.

It is thy duty therefore to be a friend to mankind, as it is thy interest that man should be friendly to thee.

As the rose breatheth sweetness from its own nature, so the heart of a benevolent man produceth good works.

He enjoyeth the ease and tranquility of his own breast, and rejoiceth in the happiness and prosperity of his neighbour.

He openeth not his ear unto slander; the faults and the failings of men give a pain to his heart.

His desire is to do good, and he searcheth out the occasions thereof; in removing the oppression of another, he relieveth himself.

From the largeness of his mind he comprehendeth in his wishes the happiness of all men; and from the generosity of his heart he endeavoureth to promote it.

CHAPTER II.

Justice

The peace of society dependeth on justice; the happiness of individuals on the safe enjoyment of all their possessions.

Keep the desires of thy heart, therefore, within the bounds of moderation; let the hand of justice lead them aright.

Cast not an evil eye on the goods of thy neighbour; let whatever is his property be sacred from thy touch.

Let no temptation allure thee, nor any provocation excite thee, to lift up thy hand to the hazard of his life.

Defame him not in his character; bear no false witness against him.

Corrupt not his servant to cheat or forsake him; and the wife of his bosom, O tempt not to sin!

It will be a grief to his heart, which thou canst not relieve; an injury to his life, which no reparation can atone.

In thy dealings with men, be impartial and just, and do unto them as thou wouldst they should do unto thee.

Be faithful to thy trust, and deceive not the man who relieth upon thee; be assured it is less evil in the sight of God to steal, than to betray.

Oppress not the poor, and defraud not of his hire and labouring man.

When thou sellest for gain, hear the whisperings of conscience, and be satisfied with moderation; nor from the ignorance of the buyer make any advantage.

Pay the debts which thou owest; for he who gave thee credit, relied upon thy honour; and to withhold from him his due, is both mean and unjust.

Finally, O son of society! examine thy heart, call remembrance to thy aid; and if in any of these things thou findest thou hast transgressed, take sorrow and shame to thyself, and make speedy reparation to the utmost of thy power.

CHAPTER III.

Charity

Happy is the man who hath sown in his breast the seeds of benevolence; the prudence thereof shall be charity and love.

From the fountain of his heart shall rise rivers of goodness; and the streams shall overflow for the benefit of mankind.

He assisteth the poor in their trouble; he rejoiceth in furthering the prosperity of all men.

He censureth not his neighbour, he believeth not the tales of envy and malevolence; neither repeateth he their slanders.

He forgiveth the injuries of men, he wipeth them from his remembrance; revenge and malice have no place in his heart.

For evil he returneth not evil; he hateth not even his enemies, but requiteth their injustice with friendly admonition.

The griefs and anxieties of men excite his compassions; he endeavoureth to alleviate the weight of this misfortunes, and the pleasure of success rewardeth his labour.

He calmeth the fury, he healeth the quarrels of angry men, and preventeth the mischiefs of strife and animosity.

He promoteth in his neighbourhood peace and good-will, and his name is repeated with praise and benedictions.

CHAPTER IV.

Gratitude

As the branches of a tree return their sap to the root, from whence it arose; as a river poureth his streams to the sea, whence his spring was supplied; so the heart of a grateful man delighteth in returning a benefit received.

He acknowledgeth his obligation with cheerfulness; he looketh on his benefactor with love and esteem.

And if to return it be not in his power, he nourisheth the memory of it in his breast with kindness, he forgetteth it not all the days of his life.

The hand of the generous man is like the clouds of heaven, which drop upon the earth, fruits, herbage and flowers; but the heart of the ungrateful is like a desert of sand, which swalloweth with greediness the flowers that fall, and burieth them in its bosom and produceth nothing.

Envy not the benefactor, neither strive to conceal the benefit he hath conferred; for though to oblige is better than to be obligated, though the act of generosity commandeth admiration; yet the humility of gratitude toucheth the heart, and is amiable in the sight both of God and man.

But receive not a favour from the hand of the proud; to the selfish and avaricious have no obligation; the vanity of pride shall expose thee to shame, the greediness of avarice shall never be satisfied.

CHAPTER V.

Sincerity

O Thou who are enamoured with the beauties of Truth, and hast fixed thy heart on the simplicity of her charms, hold fast thy fidelity unto her, and forsake her not; the constancy of thy virtue shall crown thee with honour.

The tongue of the sincere is rooted in his heart; hypocrisy and deceit have no place in his words.

He blusheth at falsehood, and is confounded; but in speaking the truth he hath a steady eye.

He supporteth as a man the dignity of his character; to the arts of hypocrisy he scorneth to stoop.

He is confident with himself; he is never embarrassed; he hath courage enough for truth, but to lie he is afraid.

He is far above the meannes of dissimulation; the words of his mouth are the thoughts of his heart.

Yet with prudence and caution he openeth his lips; he studieth what is right, and speaketh with discretion.

He adviseth with friendship; he reproveth with freedom; and whatsoever he promiseth, shall surely be performed.

But the heart of the hypocrite is hid in his breast; he masketh his words in the semblence of truth, while the business of his life is only to deceive.

He laugheth in sorrow, he weepeth in joy; and the words of his mouth have no interpretation.

He worketh in the dark as a mole, and fancieth he is safe; but he blundereth into light, and is betrayed and exposed, with his dirt on his head.

He passeth his days in perpetual constraint; his tongue and his heart are for ever at variance.

He laboureth for the character of a righteous man; and huggeth himself in the thoughts of his cunning.

O fool, fool! the pains which thou takest to hide what thou art, are more than would make thee what thou wouldst seem, and the children of wisdom shall mock at thy cunning, when, in the midst of security, thy disguise is stripped off, and the finger of derision shall point thee to scorn.

Book Seven

RELIGION

K NOW THERE IS but one God, the author, the creator, the governor of the world; almighty, eternal, and incomprehensible.

The sun is not God, though His noblest image; he enlighteneth the world with his brightness, his warmth giveth life to the products of the earth; admire him as the creature, the instrument of God; but worship him not.

To the One who is supreme, most wise and beneficent, and to Him alone, belong worship, adoration, thanksgiving, and praise.

Who hath stretched forth the heavens with His hand, who hath described with His finger the course of the stars.

Who setteth bounds of the oceans, that it cannot pass; and faith unto the stormy winds, Be still.

Who shaketh the earth, and the nations tremble; Who darteth His lightnings, and the wicked are dismayed.

Who calleth forth worlds by the word of His mouth.

The providence of God is over all His works, he rueth and directeth with infinite wisdom.

He hath instituted laws for the government of the world; He hath wonderfully varied them in all things, and each by his nature conformeth to His will.

In the depths of His mind He revolveth all knowledge; the secrets of futurity lie open before Him.

The thoughts of thy heart are naked to His view; he knoweth thy determinations before they are made.

With respect to His prescience, there is nothing contingent; with respect to His providence, there is nothing accidental.

Wonderful He is in all His ways; His counsels are inscrutable; the manner of His knowledge transcendeth thy conception.

Pay therefore to His wisdom all honour and veneration; and bow down thyself in humble and submissive obedience to His supreme direction.

God is gracious and beneficent; He hath created the world in mercy and love.

His goodness is conspicuous in all His works; He is the fountain of excellence, the center of perfection.

The creatures of His hand declare His goodness, and all their enjoyments speak His praise; He clotheth them with beauty, He supporteth them with food, He preserveth them with pleasure from generation to generation.

If we lift up our eyes to the heavens. His glory shineth forth; if we cast them down upon the earth, it is full of His goodness; the hills and the valleys rejoice and sing; fields, rivers, and woods, resound His praise.

But thee, O man! He hath distinguished with peculiar favour; and exalted thy station above all creatures.

He hath endued thee with reason, to maintain thy dominance; He hath fitted thee with language, to improve by society; and exalted thy mind with the powers of meditation, to contemplate and adore His inimitable perfections.

And in the laws He hath ordained as the rule of thy life, so kindly hath He suited thy duty to thy nature, that obedience to His precepts is happiness to thyself.

O praise His goodness with songs of thanksgiving, and meditate in silence on the wonders of His love; let thy heart overflow with gratitude and acknowledgement, let the language of thy lips speak praise and adoration, let the actions of thy life show thy love to His law.

God is just and righteous, and will judge the earth with equity and truth.

Hath He established His laws in goodness and mercy, and shall He not punish the transgressors thereof?

O think not, bold man because thy punishment is delayed, that the arm of God is weakened; neither flatter thyself with hopes that He winketh at thy doings.

His eye pierceth the secrets of every heart, and He remembereth them for ever; He respecteth not the persons or the stations of men.

The high and the low, the rich and the poor, the wise and the ignorant, when the soul hath shaken off the cumbrous shackles of this mortal life, shall quickly receive from the Great Law of God, a just and everlasting compensation, according to their works.

Then shall the wicked learn and make compensation in course of time; but the heart of the righteous shall rejoice in His rewards.

O respect God, therefore, all the days of thy life, and walk in the paths which He hath opened before thee. Let prudence admonish thee, let temperance restrain, let justice guide thy hand, benevolence warm thy heart, and gratitude to heaven aspire thee with devotion. These shall give thee happiness in thy present state and future one and bring thee to the mansions of eternal felicity in the paradise of God.

This is the true Economy of Human Life.

Book Eight

MAN CONSIDERED IN THE GENERAL

CHAPTER I.

Of the Human Frame and Structure

LOWLY AND IGNORANT as thou art, O man! humble as thou oughtest to be, O child of the dust! wouldst thou raise thy thoughts to infinite wisdom? wouldst thou see omnipotence displayed before thee? Contemplate thine own frame.

Fearfully and wonderfully art thou made; praise therefore thy Creator with awe and rejoice before Him with reverence.

Wherefore of all creatures art thou only erect, but that thou shouldst behold His works! wherefore art thou to behold, but that thou mayst admire them! wherefore to admire them, but that thou mayst adore their and thy Creator!

Wherefore is consciousness reposed in thee! and whence is it derived in thee!

It is not in flesh to think; it is not in bones to reason. The lion knoweth not that worms shall eat him; the ox perceiveth not that he is fed for slaughter.

Something is added to thee unlike to what thou seest; something animates thy clay higher than all that is the object of thy senses. Behold what is it?

Thy body remaineth perfect matter after IT is fled, therefore IT is no part of it; IT is immaterial, therefore IT is eternal; IT is free to act, therefore IT is accountable for its actions.

Knoweth the ass the use of food, because his teeth mow down the herbage? or standeth the crocodile erect, although his backbone is straight as thine?

God formed thee as He had formed these; after them all wert thou created; superiority and command were given thee over all, and of His own breath did He communicate to thee thy essence of consciousness.

Know thyself then the pride of His creation, the link uniting divinity and matter; behold a part of God Himself within thee: remember thine own dignity nor dare descend to evil or to meanness.

Who planted terror in the tail of the serpent? who clothed the neck of the horse with thunder? even He who hath instructed thee to crush the one under thy feet, and to tame the other to thy purposes.

CHAPTER II.

On the Use of the Senses

Vaunt not thy body, because it was first formed; nor thy mind because therein thy soul resideth. Is not the master of the house more honourable than its walls?

The ground must be prepared before corn be planted: the potter must build his furnace before he can make his porcelain.

As the breath of Heaven sayeth unto the water of the deep: "This way shall thy billows roll, and no other; thus high and no higher, shall they raise their fury" so let soul, O man, actuate and direct thy flesh; so let it repress thy wildness.

Thy soul is the monarch of thy frame; suffer not its subjects to rebel against it. Thy body is as the globe of the earth, thy bones the pillars that sustain it on its basis.

As the oceans giveth rise to springs, whose waters return again into its bosom through the rivers, so runneth thy life force from the heart outwards, and so returneth into its place again.

Do not both retain their course for ever? Behold, the same God ordained them.

Is not thy nose the channel to perfume? thy mouth the path to delicacies? Yet know thou, that perfumes long smelt become offensive, that delicacies destroy the appetite they flatter.

Are not thine eyes the outer sentinels that watch for thee? yet how often are they unable to distinguish truth from error?

Keep thy soul in domination, teach thy spirit to be attentive to its work: so shall these ministers be always to thee conveyances of life.

Thine hand is not a miracle, is there in the creation ought like unto it? Wherefore was it given thee, but that thou mightest stretch it out to the assistance of thy brother?

Why of all things living art thou alone made capable of blushing? the world shall read thy shame upon thy face; therefore do nothing shameful.

Fear and dismay, why rob they thy countenance of its ruddy splendour? avoid guilt, and thou shalt know that fear is beneath thee; that dismay is unmanly.

Wherefore to thee alone speak shadows in the visions of thy mind? Reverence them; for know that these are from on high.

Thou, man, alone can speak. Wonder at thy glorious prerogative; and pay to Him who gave it thee a rational and welcome praise, teaching thy children wisdom, instructing the offspring of thy loins in piety.

CHAPTER III.

The Soul of Man, Its Origin and Affections

The blessings, O man! of thy external part, are health, vigour, and proportion.

The greatest of these is health. What health is to the body, even that is honesty to the soul.

That thou hast soul, is of all knowledge the most certain, of all truths the most plain unto thee. Be meek, be grateful for it. Seek not to sense it perfectly, but commune with it.

Thinking, understanding, reasoning, willing, call not these soul. They are its actions, but they are not its essence.

Search the soul by its faculties, know it by its virtues. They are more in number than the hairs of thy head; the stars of Heaven are not to be counted with them.

Doth not the sun harden the clay? doth it not also soften the wax? as it is one sun that worketh both, even so it is one soul that willet contrarities.

As the moon retaineth her nature, though darkness spread itself before her face as a curtain, so the soul remaineth perfect even in the bosom of the fool.

She is immortal; she is unchangable; she is one in all. Health calleth her forth to show her loveliness, and application anointeth her with the oil of wisdom.

She shall live after thee; think not she was born within thee. She was concreated for thy flesh, and formed with thy mind.

Justice could not give her to thee exalted by virtues, nor mercy deliver her to thee, deformed by vices. These must be thine, and thou must answer them with thy outer consciousness.

Suppose not death can shield thee from compensation; think not corruption can hide thee from inquiry. He who formed thee of thou knowest not what, can He not raise thee from thou knowest not what again?

Perceiveth not the cock the hour of midnight? exalteth he not his voice, to tell thee it is morning? Knowest not the dog the footsteps of his master? and flieth not the wounded goat unto the herb that healeth him? Yet, when these die, their soul knoweth it not; thine alone surviveth with mind and consciousness.

Envy not to these their senses, because quicker than thine own; learn that the advantage lieth not in possessing good things, but in the knowing the use of them.

Hadst thou the ear of the stag, or were thine eyes as strong and piercing as the eagle's; didst thou equal the hound in smell, or could the ape resign to thee his taste, or the tortoise her feelings; yet, without reason, what would they avail thee? Perish not all these like their kindred?

Hath any one of them the gift of speech? Can any say unto thee therefore did I so?

The lips of the wise are as the doors of a cabinet; no sooner are they opened, but treasures are poured out before thee.

Like unto trees of gold arranged in beds of silver, are wise sentences uttered in due season.

Canst thou think too greatly of thy soul? or can too much be said in its praise? it is the essence of Him who gave it.

Remember thou its dignity forever; forget not how great a talent is committed to thy charge.

Whatsoever may do good, may also do harm: Beware that thou direct its course to virtue.

Think not that thou canst lose her in the crowd; suppose not thou canst bury her in thy closet. Action is her delight, and she will not be withheld from it.

Her motion is perpetual; her attempts are universal; her agility is not to be suppressed. Is it at the uttermost part of the earth she will have it: is it beyond the region of the stars? yet will her eye discover it.

Inquiry is her delight. As one who traverseth the burning sands in search of water, so is the soul that thirsteth after knowledge.

As a sword in the hand of a madman, even so is the soul of him who wanteth discretion.

The end of her search is truth; her means to discover it are reason and experience. But are not these weak, uncertain and fallacious? How then shall she attain unto it?

General opinion is no proof of truth; for the generality of men are ignorant.

Perception of thyself, the knowledge of Him who created thee, the sense of the worship thou owest unto Him, are not these plain before thy face? And, behold! what is there more that man needeth to know?

CHAPTER IV.

Of the Period and Uses of Human Life

As the eye of morning to the lark, as the shade of evening to the owl, as the honey to the bee, or as the carcase to the vulture; even such is life unto the heart of man.

Though bright, it dazzleth not; though obscure it displeaseth not; though sweet it cloyeth not; though corrupt, it forbiddeth not: yet who is he that knoweth its true value?

Learn to esteem life as it ought; then art thou near the pinnacle of wisdom. Think not with the fool, that nothing is more valuable; nor believe with the pretended wise, that thou oughtest to condemn it. Love it not for itself, but for the good it may be of to others.

Gold cannot buy it for thee, neither can mines of diamonds purchase back the moment thou hast now lost of it. Employ the succeeding one in virtue.

Say not, that it were best not to have been born; or, if born, that it had been best to die early: neither dare thou to ask of th> Creator, Where had been the evil had I not existed? Good is in thy power; the want of good is evil; and, if thy question be just, lo! it condemneth thee.

Would the fish swallow the bait if he knew the hook was hid therein? would the lion enter the toils if he saw they were prepared for him? so neither were the soul to perish with this clay, would man wish to live; neither would a merciful God have created him; know hence thou shalt live again and again.

As the bird inclosed in the cage before he seeth it, yet teareth not his flesh against its sides; so neither labour thou vainly to run from the state thou art in; but know it as allotted thee, and be content with it.

Though its ways are uneven, yet are they not at all painful. Accomodate thyself to all; and where there is least appearance of evil, suspect the greatest danger.

When thy bed is of straw, thou sleepest in security; but when thou stretchest thyself on roses, beware of the thorns!

A noble death is better than an evil life: strive to live therefore as long as thou oughtest, not as long as thou canst. While thy life is to others worth more than thy death, it is thy duty to preserve it.

Complain not with the fool of the shortness of thy time: remember that with thy days thy cares are shortened.

Take from the period of thy life the useless parts of it, and what remaineth? Take off the time of thine infancy, the second infancy of age, thy sleep, thy thoughtless hours, thy days of sickness; and, even at the fullness of years, how few seasons hast thou truly numbered?

He who gave thee life as a blessing, shortened it to make it more so. To what end would longer life have served thee? Wishest thou to have had an opportunity of more vices? As to the good, will not He who limited thy span, be satisfied with the fruits of it?

To what end, O child of sorrow! wouldst thou live longer? to breathe, to eat, to see the world? All this thou hast done already. Too frequent repetition is it not tiresome? or is it not superfluous,

Wouldst thou improve thy wisdom and thy virtue? Alas! what art thou to know? or who is it that shall teach thee? Badly thou employest the little thou hast, dare not therefore to complain that more is not given thee.

Repine not at the lack of knowledge; opportunity does not perish with thee in death. Be honest here, thou shalt be wise hereafter.

Say not unto the crow. Why number thou seven times the age of thy lord? or to the fawn, Why are thine eyes to see my offspring to an hundred generations? Are these to be compared with thee in the abuse of life? are they riotous? are they cruel? are they ungrateful? Learn from them rather, that innocence of life and simplicity of manners, are the paths to a good old age.

Knowest thou to employ life better than these? then less of it may suffice thee.

Man who dares enslave the world, when he knows he can enjoy his tyranny but a moment, what would he not aim at, if he were immortal?

Enough hast thou of life, but thou regardest not; thou art not in want of it, O man! but thou art prodigal; thou throwest it lightly away, as if thou hadst more than enough!

Know that it is not abundance which maketh rich, but economy.

The wise continueth to live from his first period; the fool is always beginning.

Labour not after riches first, and think thou afterwards wilt enjoy them. He who neglecteth the present moment, throweth away all that he hath. As the arrow passeth through the heart, while the warrior knew not that it was coming; so shall his life be taken away before he knoweth that he hath it.

What then is life, that man should desire it? what breathing, that he should covet it?

Is it not a scene of delusion, a series of misadventures, a pursuit of evils linked on all sides together? In the beginning it is ignorance, pain is in its middle, and its end is sorrow.

As one wave pusheth on another, till both are involved in that behind them, even so succeedeth evil to evil in the life of man; the greater and the present swallow up the lesser and the past. Our terrors are real evils; our expectations look forward into improbabilities.

Fools dread as mortals, and desire as if immortal!

What part of life is it that we would wish to remain with us? Is it youth? can we be in love with outrage, licentiousness, and temerity? Is it age? then are we fond of infirmities.

It is said grey hairs are revered, and in length of days is honour. Virtue can add reverence to the bloom of youth; and without it, age plants more wrinkles in the soul than on the forehead.

Is age respected because it hateth riot? What justice is in this, when it is not age despiseth pleasure, but pleasure despiseth age!

Be virtuous while thou art young, so shall thine age be honoured.

Book Nine

MAN CONSIDERED IN REGARD TO HIS INFIRMITIES, AND THEIR EFFECTS

CHAPTER I.

Vanity

VANITY IS POWERFUL in the heart of man; intemperance swayeth it whither it will; despair ingrosseth much of it; and fear proclaimeth, “Behold, I sit unrivaled therein!” But vanity is beyond them all.

Weep not therefore at the calamities of the human state; rather laugh at its follies. In the hands of the man addicted to vanity, life is but the shadow of a dream.

The hero, the most renowned of human characters, what is he but the bubble of this weakness? The public is unstable and ungrateful; why should the man of wisdom endanger himself for fools?

The man who neglecteth his present concerns, to revolve how he will behave when greater, feedeth himself with wind, while his bread is eaten by another.

Act as becometh thee in thy present station and in more exalted ones thy face shall not be ashamed.

What blindeth the eye, or what hideth the heart of a man from himself, like vanity? Lo! when thou seest not thyself, then others discover thee most plainly.

As the tulip is gaudy without smell, conspicuous with use; so is the man who setteth himself up on high, and hath not merit.

The heart of the vain is troubled while it seemeth content; his cares are greater than his pleasures.

His solitudes cannot rest with his bones; the grave is not deep enough to hide it; he extendeth his thoughts beyond this being; he bespeaketh praise to be paid when he is gone; but whoso promiseth it, deceiveth him.

As the man who engageth his wife to remain in widowhood, that she disturb not his soul; so is he who expecteth that praise shall reach his ears beneath the earth, or cherish his heart in its shroud.

Do well while thou livest, but regard not what is said of it. Content thyself with deserving praise, and thy posterity shall rejoice in hearing it.

As the butterfly who seeth not her own colours, as the jessamine which feeleth not the scent it casteth around it; so is the man who appeareth gay, and biddeth others to take notice of it.

To what purpose, saith he, is my vesture of gold? to what end are my tables filled with dainties, if no eye gaze upon them? if the world know it not? Give thy raiment to the naked, and thy food unto the hungry; so shalt thou be praised, and feel that thou deserveth it.

Why bestowest thou on every man the flattery of unmeaning words? Thou knowest when returned thee, thou regardest it not. He knoweth he lieth unto thee? yet he knoweth thou wilt thank him for it. Speak in sincerity, and thou shalt hear with instruction.

The vain delighteth to speak of himself; but he seeth not that others like not to hear him.

If he has done anything worthy praise, if he possess that which is worthy admiration, his joy is to proclaim it, his pride is to hear it reported. The desire of such a man defeateth itself. Men say not, "Behold, he hath done it"; or, "See he possesseth it"; but, "Mark how proud he is of it!"

The heart of man cannot attend at once to many things. He who fixeth his soul on show, loseth reality. He pursueth bubbles which break in their flight, while he treads to earth what would do him honour.

CHAPTER II.

Inconstancy

Nature urgeth thee to inconstancy, O man! therefore guard thy self at all times against it.

Thou art from the womb of thy mother various and wavering; from the loins of thy father inherited thou instability: how then shalt thou be firm?

Those who gave thee a body, furnished it with weakness; but he who gave thee soul, armed thee with resolution. Employ it, and thou are wise; be wise and thou art happy.

Let him who doth well, beware how he boasteth of it; for rarely is it of his own will.

Is it not the event of an impulse from without, born of uncertainty, enforced by accident, dependent on somewhat else? To these then, and to accident, is due the praise.

Beware of irresolution in the intent of thy actions, beware of instability in the execution; so shalt thou triumph over two great failings of thy nature.

What reproacheth reason more than to act contrarities? What can suppress the tendencies to these, but firmness of mind?

The inconstant feeleth that he changeth, but he knoweth not why; he seeth that he escapeth from himself but he perceiveth not how. Be thou incapable of change in that which is right, and men will rely upon thee.

Establish unto thyself principles of action; and see that thou ever act according to them. First know that thy principles are just, and then be thou inflexible in the path of them.

So shall thy passions have no rule over thee; so shall thy constancy ensure unto thee the good thou possessest, and drive from thy door misfortune. Anxiety and disappointment shall be strangers to thy gates.

Suspect not evil in any one, until thou seest it; when thou seest it, forget not to forgive.

How should his actions be right who hath no rule in life? Nothing can be just which proceedeth not from within.

The inconstant hath no peace in his soul; neither can any be at ease whom he concerneth himself with.

His life is unequal; his motions are irregular; his reason changeth with the weather.

To-day he loveth thee, to-morrow thou art detested by him; and why? himself knoweth not wherefore he loved, or wherefore he now hateth.

To-day he is the tyrant, to-morrow thy servant is less humble; and why? he who is arrogant without power, will be servile where there is no subjection.

To-day he is profuse, to-morrow he grudgeth unto his mouth that which it should eat. Thus it is with him who knoweth not moderation.

Who shall say of the camelion, He is black, when the moment after, the verdure of the grass overspreadeth him?

Who shall say of the innocent, He is joyful, when his next breath shall be spent in sighing?

What is life of such a man, but the phantom of a dream? In the morning he riseth happy, at noon he is on the rack; this hour he is a god, the next below a worm; one moment he laugheth, the next he weepeth; he now willeth, in an instant he willeth not, and in another he knoweth not whether he willeth or no.

Yet neither ease nor pain have fixed themselves on him; neither is he waxed greater, or become less; neither hath he had cause for laughter, nor reason for his sorrow: therefore shall none of them abide with him.

The happiness of the inconstant is as a palace built on the surface of the land; the blowing of the wind carrieth away its foundation; what wonder then that it falleth?

But what exalted form is this, that hitherward directs its even, its uninterrupted course? whose foot is on the earth, whose head above the clouds? He is the constant being!

On His brow sitteth majesty: steadiness is in his port; and in his heart reigneth tranquility.

Though obstacles appear in the way, he deigneth not to look down upon them; though heaven and earth oppose his passage, he proceedeth.

The mountains sink beneath his tread; the waters of the ocean are dried up under the sole of his foot.

The tiger throweth herself across his way in vain; the spots of the leopard glow against him unregarded.

He marcheth through the imbattled legions; with his hand he putteth aside the terrors of death.

Storms roar against his shoulders, but are not able to shake them; the thunder bursteth over his head in vain; the lightning serveth but to show the glories of his countenance.

His name is resolution!

He cometh from the utmost part of the earth; he seeth happiness afar off before him; his eye discovereth her temple beyond the limits of the pole.

He walketh up to it, he entereth boldly, and he remaineth there for ever.

Establish thine heart, O man! in that which is right; and then know the greatest of human praise is to be immutable.

CHAPTER III

Weakness

Vain and inconstant if thou art, how canst thou but be weak? Is not inconstancy connected with frailty? can there be vanity without infirmity? Avoid the danger of the one, and thou shalt escape the mischiefs of the other.

Wherein art thou most weak? In that wherein thou seemest most strong; in that wherein most thou gloriest; even in possessing the things which thou hast; in using the good that is about thee.

Are not thy wishes also frail? or knowest thou even what it is thou wouldst wish? When thou hast obtained what most thou soughtest after, behold it contenteth thee not.

Wherefore loseth the pleasure that is before thee its relish? and why appeareth that which is yet to come the sweeter? because thou art wearied with the good of this, because thou knowest not the evil of that which is not with thee. Know that to be content, is to be happy.

Couldst thou choose for thyself; would thy Creator lay before thee all that thine heart could ask for: would happiness then remain with thee? or would joy dwell always in thy gates?

Alas! thy weakness forbiddeth it; thy infirmity declareth against it. Variety is to thee in the place of pleasure; but that which permanently delighteth, must be permanent.

When it is gone, thou repentest the loss of it; though, while it was with thee, thou despisedest it.

That which succeedeth it, hath no more pleasure for thee; and thou afterwards quarrellest with thyself for preferring it; behold the only circumstance in which thou erreth not!

Is there any thing in which thy weakness appeareth more than in desiring things? it is in the possessing, and in the using them.

Good things cease to be good in our wrong enjoyment of them. What nature meant pure sweets, are then sources of bitterness to us; from such delights arise pain, from such joys sorrow.

Be right in enjoyment, and it shall remain in thy possession; let thy joy be founded on reason, and to its end shall sorrow be a stranger.

The delights of love are ushered in by sighs, and they terminate in languishment and dejection, if the object thou burnedst for nauseates with satiety; and no sooner hadst thou possessed it, but thou art weary of its presence.

Join esteem to thy admiration, unite friendship with thy love; so shalt thou find in the end content so absolute, that it surpasseth raptures, tranquility more worth than ecstasy.

God hath given thee no good without its admixture of evil; but he hath given thee also the means of throwing off the evil from it.

As joy is not without its alloy of pain, so neither is sorrow without its portion of pleasure. Joy and grief though unlike, are united. Our own choice only can give them to us uniquely.

Melancholy itself often giveth delight, and the extremity of joy is mingled with tears.

The best things in the hands of a fool may be turned to his destruction; and out of the worst the wise will find the means of good.

So blended is strength and weakness in thy soul and body, O man! that thou hast not strength either to be good or to be evil entirely. Rejoice that thou canst not excel in evil, and let the good that is within thy soul content thee.

The virtues are allotted to various stations. Seek not after impossibilities, nor grieve that thou canst not possess them all.

Wouldst thou at once have the liberality of the rich, and the contentment of the poor? or shall the wife of thy bosom be despised because she showeth not the learning of the widow?

If thy father sink before thee in the divisions of the country, can at once thy justice destroy him, and thy duty save his life?

If thou behold thy brother in the agonies of a slow death, is it not mercy to put a period to his life? and is it not also death to thus commit murder?

Truth is but one; thy doubts are of thine own raising. He who made virtues what they are, planted also in thee a knowledge of their pre-eminence. Act as soul dictates to thee, and the end shall be always right.

CHAPTER IV.

On the Insufficiency of Knowledge

If there is anything lovely, if there is anything desirable, if there is anything within the reach of man that is worthy of praise, is it not knowledge? and yet who is he that truly attaineth unto it?

The statesman proclaimeth that he hath it; the ruler of the people claimeth the praise of it; but findeth the subject that he posseth it.

Evil is not requisite to man; neither can vice be necessary to be tolerated: yet how many evils are permitted by the connivance of the laws? how many crimes committed by the decrees of the council?

But be wise, O ruler! and learn, O thou that are to command the nations! One crime authorized by thee, is worse than the escape of ten from punishment.

When thy people are numerous, when thy sons increase about thy table; sendest thou them not out to slay the innocent, and to fall before the sword of him whom they have not offended?

If the object of thy desires demandeth the lives of a thousand, sayest thou not, I will have it? Surely thou forgettest that He who created thee, created also these! and their blood is as rich as thine, their soul thine also.

Sayest thou, that justice cannot be executed without wrong? Surely thine own words condemn thee.

Thou who flatterest with false hopes the criminal, that he may confess his guilt; art not thou unto him a criminal? or is thy guilt the less, because he cannot punish it?

When thou commandest to the torment him who is but suspected of ill, darest thou to remember, that thou mayest wrack the innocent?

Is thy purpose answered by the event? is the soul in thee satisfied with his confession. Pain will enforce him to say what is not, as easy as what is; and anguish hath caused innocence to accuse herself.

That thou mayst not kill him without cause, thou dost worse than kill him: that thou mayst prove if he be guilty, thou destroyest him innocent.

O blindness to all truth! O insufficiency of the wisdom of the wise! Know when thy judge shall bid thee account for this, thou shalt wish ten thousand guilty to have gone free, rather than one innocent then to stand forth against thee.

Insufficient as thou art to the maintenance of justice, how shalt thou arrive at the knowledge of truth? how shalt thou ascend to the footstep of her throne?

As the owl is blinded by the radiance of the sun, so shall the brightness of her countenance dazzle thee in thy approach.

If thou wouldst mount up into her throne; first bow thyself at her footstool; if thou wouldst arrive at the knowledge of her, first inform thyself of thine own ignorance.

More worth is she than pearls, therefore seek her carefully: the emerald, and the sapphire, and the ruby, are as dirt beneath her feet; therefore pursue her manfully.

The way to her is labour; attention is the pilot that must conduct thee into her ports. But weary not in the way; for when thou art arrived at her, the toil shall be to thee for pleasure.

Say not unto thyself, Behold, truth breedeth hatred, and I will avoid it; dissimulation raiseth friends, and I will follow it. Are not the enemies made by truth, better than the friends obtained by flattery?

Naturally doth man desire the truth; yet when it is before him he will not apprehend it; and if it force itself upon him, is he not offended at it?

The fault is not in truth, for that is amiable, but the weakness of man beareth not its splendour.

Wouldst thou see thine insufficiency more plainly? view thyself as thy devotions! To what end was religion instituted, but to teach thee thine infirmities, to remind thee of thy weakness, to show thee that from heaven alone thou art to hope for good?

Doth it not remind thee that thy body is dust? doth it not tell it like unto ashes? And behold repentance; is it not built on frailty?

The shorter follies are the better: say not therefore to thyself, I will not play the fool by halves.

He that heareth his own faults with patience, shall reprove another with boldness.

He that giveth a denial with reason, shall suffer a repulse with moderation.

If thou art suspected, answer with freedom: whom should suspicion affright except the guilty?

The tender of heart is turned from his purpose by supplications, the proud is rendered more obstinate by entreaty, the sense of thine insufficiency commandeth thee to hear; but to be just, thou must hear without thy passions.

CHAPTER V.

Misery

Feeble and insufficient as thou art, O man! in good; frail and inconsistent as thou art in pleasure: yet there is a thing in which thou art strong and unshaken. Its name is Misery.

It is the character of thy body, the prerogative of thy flesh: in thy thoughts alone it resideth; without these there is nothing of it. And behold, what is its source, but thine own physical passions?

He who gave thee these, gave thee also soul to subdue them; exert it, and thou shalt trample them under thy feet.

Thine entrance into the world, is it not sorrowful? thy destruction, is it not glorious! Lo! men adorn the instruments of death with gold and gems, and wear them above their garments.

She who begetteth man, hideth her face; but she who killed a thousand, is honoured.

Know thou, notwithstanding, that in this is error: Custom cannot alter the nature of truth; neither can the opinion of man destroy justice; the glory and shame are misplaced.

There is but one way for man to be created: there are a thousand by which he may be destroyed.

There is no praise, or honour, to him who giveth being to another; but triumphs and empire are the rewards of murder.

Yet he who hath many children, hath as many blessings; and he who hath taken away the life of another, shall not enjoy his own.

While the savage curseth the birth of his son, and blesseth the death of his father; doth he not call himself a monster?

Enough of evil is allotted unto man; but he maketh it more while he lamenteth it.

The greatest of all human ills is sorrow: too much of this thou art born unto; add not unto it by thine own perverseness.

Grief is natural to the mortal world, and is always about thee; pleasure is a guest, and visiteth thee but by thy invitation; use well thy

mind, and sorrow shall be passed behind thee; be prudent, and the visits of joy shall remain long with thee.

Every part of thy body is capable of sorrow; but few and narrow are the paths that lead to delight that equal the joy of the soul.

Pleasures can be admitted only simply; but pains rush in a thousand at a time.

As the blaze of straw fadeth as soon as it is kindled, so passeth away the brightness of joy, and thou knowest not what is become of it.

Sorrow is invited frequent, pleasure rarely; pain cometh of itself; delight must be purchased: grief is unmixed; but joy wanteth not its allay of bitterness.

As the soundest health is less perceived than the lightest malady, so the highest joy toucheth us less deep than the smallest sorrow.

We are enslaved by anguish; we often fly from pleasure: when we purchase it, costeth it not more than it is worth?

Reflection is the business of man; a sense of his state is his first duty: but who remembereth himself in joy? Is it not in mercy then that sorrow is allotted unto us?

Man forseeth the evil that is to come; he remembereth it when it is past; he considereth not that the thought of affliction woundeth deeper than the affliction itself. Think not of thy pain except when it is upon thee, and thou shalt avoid what most would hurt thee.

He who weepeth before he needeth weeoeth more than he needeth: and why? but that he loveth weeping.

The stag weepeth not till the spear is lifted up against him; nor do the tears of the beaver fall, till the hounds are ready to seize him: man anticipateth death, by the apprehension of it; and the fear is greater misery, than the event itself.

CHAPTER VI.

Of Judgment

The greatest bounties given to man are, judgment and will; happy is he who misapplieth them not.

As the torrent that rolleth down the mountains, destroyeth all that is borne away by it; so doth common opinion overwhelm reason in him who submitteth to it, without saying. What is thy foundation?

See that what thou receivest as truth, be not the shadow of it! What thou acknowledgest as convincing, is often but plausible. Be firm, be constant, determine for thyself; so shalt thou be answerable only for thine own weakness.

Say not that the event proveth the wisdom of the action; remember man is not above the reach of accidents created by his will.

Condemn not the judgment of another, because it differeth from thine own; may not even both be in an error?

When thou esteemest a man for his titles, and contemneth the stranger because he wanteth them; judgest thou not of the camel by his bridle? Think not thou art revenged of thine enemy when thou slayest him: thou putteth him beyond thy reach, thou givest him quiet, and thou takest from thyself all means of hurting him.

Was thy mother incontinent, and grieveth it thee to be told of it? is frailty in thy wife, and art thou pained at the reproach of it? He who despiseth thee for it, condemneth himself. Art thou answerable for the vices of another?

Disregard not a jewel because thou possesseth it; neither enhance thou the value a thing, because it is another's: possession to the wise addeth to the price of it.

Honour not thy wife the less, because she is in thy power; and despise him that hath said, "Wouldst thou love her less? marry her!" What hath put her into thy power, but her confidence in thy virtue? Shouldst thou love her less, for being more obliged to her?

If thou wert just of thy courtship of her; though thou neglected her while thou hast her, yet shall her loss be bitter to the soul in thee.

He who thinketh another best, only because he possesseth her; if he be not wiser than thee, at least he is more happy.

Weigh not the loss thy friend hath suffered, by the tears he sheddeth for it; the greater griefs are above these expressions of them.

Esteem not an action, because it is done with noise and pomp; the noblest being is he that doth great things and is not moved in the doing them.

Fame astonisheth the ear of him who heareth it; but tranquility rejoiceth the heart that is possessed of it.

Attribute not the good actions of another to bad causes: thou canst not know his heart; but the world will know by this that thine is full of envy.

There is not in hypocrisy more vice than folly; to be honest is as easy as to seem so.

Be more ready to acknowledge a benefit than to revenge an injury; so shalt thou be loved by more than hate thee.

Be willing to commend, and be slow to censure; so shall praise be upon thy virtues, and the eye of enmity shall be blind to thy imperfections.

When thou dost good, do it because it is good; not because men esteem it: when thou avoidest evil, fly because it is evil; not because men speak against it: be honest for love of honesty, and thou shalt be uniformly so: he that doth it without principle is wavering.

Wish rather to be reprov'd by the wise, than to be applauded by him who hath no understanding: when they tell thee of a fault, they suppost thou canst improve; the other, when he praiseth thee, thinketh thee like unto himself.

Accept not an offer for which thou are not qualified, lest he who knoweth more of it despise thee.

Instruct not another in that wherein thyself art ignorant; when he seeth it, he will upbraid thee.

Expect not a friendship with him who hath injured thee: he who suffereth the wrong, may forgive it; but he who doth it, never will be well with him.

Nevertheless, ingratitude is not in the soul of man; neither is his anger irreconcilable; he hateth to be put in mind of a debt he cannot pay; he is ashamed in the presence of him whom he hath injured.

Repine not at the good of a stranger; neither rejoice thou in the evil that befalleth thine enemy: wishest thou that others should do thus by thee?

Wouldst thou enjoy the good-will of all men? let thine own benevolence be universal.

If thou obtainest it not by this, no other means could give it thee: and know, though thou hast it not, thou hast the greater pleasure of having merited it; and in thy future states and beings shalt thou witness the marvels of thine acts in this state.

CHAPTER VII.

Presumption

Pride and meanness seem incompatible; but man reconcileth contrarities: he is at once the most miserable and the most arrogant of all creatures.

Presumption is the bane of reason; it is the nurse of error; yet it is congenial with reason in us.

Who is there that judgeth not either too highly of himself, or thinketh too meanly of others?

Our Creator escapeth not our presumption: how then shall we be safe from one another?

What is the origin of superstition? and whence ariseth false worship? From our presuming to analyse about what is above our reach, to comprehend what is incomprehensible but to the self within.

Limited and weak as our mortal understandings are, we employ not even their little forces as we ought. We soar not high enough in our approaches to God's greatness; we give not wing enough to our ideas, when we enter into the adoration of divinity.

Man who fears to breathe a whisper against any earthly sovereign, trembles not to arraign the dispensation of God; he forgetteth His majesty, and rejudgeth His judgments.

He who dareth not repeat the name of his prince without honour, yet blusheth not to call that of his Creator to be witness to a lie.

He who would hear the sentence of the magistrate with silence, yet dareth to plead with the Eternal; he attempteth to sooth him with entreaties, to flatter him with promises, to agree with him upon conditions; nay, to brave and murmur at him if his request is not granted.

Why art thou unpunished, O man! in thy impiety, but that this is not thy day of retribution.

Be not like unto those who fight with the thunder; nor dare thou to deny thy Creator thy prayers because he chastiseth thee. Thy madness is on thine own head in this; thy impiety hurteth no one but thyself.

Why boasteth man, that he is a favourite of his Maker; yet neglecteth to pay his thanks, his adoration for it?

How suiteth such a life with a belief so haughty?

Man, who is truly but a mote in the wide expanse, believeth the whole earth and heaven created for him: he thinketh the whole frame of nature hath interest in his well-being.

As the fool, while the images tremble on the bosom of the water, thinketh that trees, towns, and the wide horizon, are dancing to do him pleasure; so man, while nature performs her destined course, believes that all her motions are but to entertain his eye.

While he courts the rays of the sun to warm him, he supposeth it made only to be of use to him; while he traceth the moon in her nightly path, he believeth she was created to do him pleasure.

Fool to thine own pride! be humble! know thou art not the cause why the world holdeth its course; for thee are not made the vicissitudes of summer and winter.

No change would follow if thy whole race existed not; thou art but one among millions that are blessed in it.

Exalt not thyself to the heavens; for, lo, the masters are above thee: nor disdain thy fellow-inhabitants of the earth, for that they are beneath thee. Are they not the work of the same hand? and breathe the same soul?

Thou who art happy by the goodness of thy Creator, how darest thou in wantonness put others of his creatures to torture? Beware that it return not upon thee in compensation.

Serve they not all the same Universal Master with thee? Hath He not appointed unto each its laws? Hath He not the care of their preservation? and darest thou to infringe it?

Set not thy judgment above that of all the earth; neither condemn as falsehood what agreeth not with thine own apprehension. Who gave thee the power of determining for others? or who took from the world the right of choice?

How many things have been rejected, which are now received as truths? how many now received as truths, shall in their turn be despised? Of what then can man be certain?

Do the good that thou knowest, and happiness shall be unto thee. Labour is more thy business here than speculative thought.

Truth and falsehood, have they not the same appearance in what we understand not? what then but our soul can determine between them?

We easily believe what is above our comprehension; or we are proud to pretend it, that it may appear we understand it. Is not this folly and arrogance?

Who is it that affirms most boldly? who is it that holds his opinion most obstinately? Even he who hath most ignorance; for he also hath most pride.

Every man, when layeth hold of an opinion, desireth to remain in it; but most of all he who hath most presumption. He contenteth not himself to betray his soul into it; but he will impose it on others to believe in it also.

Say not that truth is established by years, or that in a multitude of believers there is certainty.

One human proposition has as much authority as another, if reason maketh not the difference.

Book Ten

OF THE AFFECTIONS OF MAN, WHICH ARE HURTFUL TO HIMSELF AND OTHERS

CHAPTER I.

Covetousness

RICHES ARE NOT worthy exclusive attention; therefore selfish care of obtaining them is unjustifiable.

The desire of what man calleth good, the joy he taketh in possessing it, is grounded only in opinion. Take not up that from the vulgar; examine the worth of things thyself, and thou shalt not be covetous.

An immoderate desire of riches is a poison lodged in the mind. It contaminates and destroys everything that was good in it. It is no sooner rooted there, than all virtue, all honesty, all natural affection, fly before the face of it.

The covetous would sell his children for gold; his parent might die ere he would open his coffer; nay, he considereth not himself in respect of it. In the search of happiness he maketh himself unhappy.

As the man who selleth his house to purchase ornaments for the embellishment of it, even so is he who giveth up peace in search of riches, in hope he may be happy in enjoying them.

Where covetousness reigneth, know that the mind is poor. Whoso accounteth not riches the principal good of man, will not throw away all other goods in the pursuit of them.

Who so feareth not poverty as the greatest evil of his nature, will not purchase to himself all other evils in the avoiding of it.

Thou fool, is not virtue more worth than riches? is not guilt more base than poverty? Enough for his necessities is in the power of every man; be content with it, and thy happiness shall smile at the sorrows of him who heapeth up more.

Nature hath hid gold beneath the earth, as unworthy to be seen; silver hath she placed where thou tramplest it under thy feet. Meanest she not by this to inform thee, that gold is not worthy thy regard, and that silver is beneath thy notice?

Covetousness burieth under the ground millions of wretches; these dig for their hard masters what returneth the injury; what maketh them more miserable than their slaves.

The earth is barren of good things where she hoardeth up treasure; where gold is in her bowels, there no herb groweth.

As the horse findeth not there his grass, nor the mule his provender; as the fields of corn laugh not on the sides of the hills; as the olive holdeth not forth there her fruits, nor the vine her clusters; even so no good dwelleth in the breast of him whose heart broodeth over his treasure.

Riches are servants to the wise; but they are tyrants over the mind of the fool.

The covetous serveth his gold; it serveth not him. He possesseth his wealth as the sick doth a fever; it burneth and tormenteth him, and will not quit him unto death.

Hath not gold destroyed the virtue of millions? did it ever add to the goodness of any?

Is it not most abundant with the worst of men? wherefore then shouldst thou desire to be distinguished by possessing it?

Have not the wisest been those who have had least of it? and is not wisdom happiness?

Have not the worst of thy species possessed the greatest portions of it? and hath not their end been miserable?

Poverty wanteth many things; but covetousness denieth itself all.

The covetous can be good to no man; but he is to none so cruel as to himself.

If thou be industrious to procure gold, be generous in the disposal of it. Man never is so happy as when he giveth happiness unto another.

CHAPTER II.

Profusion

If there be a vice greater than the hoarding up of riches, it is the employing them to useless purposes.

He that prodigally lavisheth that which he hath to spare, robbeth the poor of what nature giveth him a right unto.

He who squandereth away his treasure, refuseth the means to do good; he denieth himself the practice of virtues whose reward is in their hands, whose end is no other than his own happiness.

It is more difficult to be well with riches, than to be at ease under the want of them.

Man governeth himself much easier in poverty than in abundance.

Poverty requireth but one virtue, patience, to support it; the rich if he hath not charity, temperance, prudence, and many more, is guilty.

The poor hath only the good of his own state committed unto him; the rich is entrusted with the welfare of thousands.

He that giveth away his treasure wisely, giveth away his plagues: he that retaineth their increase, heapeth up sorrows.

Refuse not unto the stranger that which he wanteth; deny not unto thy brother that which thou wantest thyself.

Know there is more delight in being without what thou hast given, than in possessing millions which thou knowest not the use of.

CHAPTER III.

Revenge

The root of revenge, is in the weakness of the soul: the most abject and timorous are the most addicted to it.

Who tortures those they hate, but cowards? who murder those they rob but vile creatures?

The feeling and injury, must be previous to the revenging it: but the noble mind disdaineth to say, "It hurts me!"

If the injury is not below thy notice, he that doth it unto thee, in that, maketh himself so: wouldst thou enter the lists with thine inferior?

Disdain the man who attempteth to wrong thee; condemn him who would give thee disquiet.

In this thou not only preservest thine own peace, but thou inflictest all the punishment of revenge, without stopping to employ it against him.

As the tempest and the thunder affect not the sun or the stars, but spend their fury on stones and trees below; so injuries ascend not to the soul of the great, but waste themselves on such as are those who offer them.

Poorness of spirit will actuate revenge; greatness of soul despiseth the offence: nay, it doth good unto him who intended to have disturbed it.

Why seekest thou vengeance, O man! with what purpose is it that thou pursuest it? Thinkest thou pain thine adversary by it? Know that thyself feellest its greatest torments.

Revenge gnaweth the heart of him who is infected with it, while he against whom it is intended, remaineth easy.

It is unjust in the anguish it inflicts; therefore nature intended it not for thee; needeth he who has injured more pain? or ought he to add force to the affliction which another hath cast upon him?

The man who meditated revenge is not content with the mischief he hath received; he added to his anguish the punishment due unto another; while he whom he seeketh to hurt, goeth his way laughing; he

maketh himself merry at this addition to his misery.

Revenge is painful in the intent, and it is dangerous in the execution; seldom doth the axe fall where he who lifted it up intended; and, lo, he remembereth not that it must recoil against him.

Whilst the revengeful seeketh his enemy's hurt, he oftentimes procureth his own destruction: while he aimeth at one of the eyes of his adversary, lo, he putteth out both his own.

If he attain not his end, he lamenteth it; if he succeed, he repenteth of it: the fear of justice taketh away the peace of his own mind; the care to hide him from it destroyeth that of his friend.

Can the death of thine adversary, satiate thy hatred? can the setting him at rest, restore thy peace?

Wouldst thou make him sorry for his offence, conquer him, and spare him: in death he owneth not thy superiority; nor feeleth he more the power of thy wrath.

In revenge there shall be a triumph of the avenger; and he who hath injured him, should feel his displeasure; he should suffer pain from it, and should repent him of the cause.

This is the revenge inspired from anger; but that which makes thee greatest, is contempt.

Murder from an injury ariseth only from cowardice: he who, inflicteth it feareth that the enemy may live, and avenge himself.

Death endeth the quarrel; but it restoreth not the reputation: killing is an act of caution, not of courage; it is safe, but it is not honourable.

There is nothing so easy as to revenge an offence; but nothing is so honourable as to pardon it.

The greatest victory man can obtain, is over himself; he that disdaineth to feel an injury, restoreth it upon him who offereth it.

When thou meditatest revenge, thou confessest that thou feelest the wrong: when thou complainest, thou acknowledgest thyself hurt by it; meanest thou to add this triumph to the pride of thine enemy?

That cannot be an injury which is not felt; how then can he who despiseth it revenge it?

If thou think it dishonourable to bear an offence, more is in thy power; thou mayest conquer it.

Good offices will make a man ashamed to be thine enemy: greatness of mind will terrify him from the thought of hurting thee.

The greater the wrong the more glory is in pardoning it; and by how much more justifiable would be revenge, by so much the more honour is in clemency.

Hast thou a right to be a judge in thine own cause; to be a party in the act and yet to pronounce sentence on it? Before thou condemnest, let another say it is just.

The revengeful is feared, and therefore is hated; but he that is endued with clemency, is adored; the praise of his actions remaineth forever; and the love of the world attendeth him.

CHAPTER IV.

Cruelty, Hatred, and Envy

Revenge is detestable: what then is cruelty? Lo, it possesseth the mischiefs of the other; but it wanteth even the pretence of its provocations.

Men disown it as not of their nature; they are ashamed of it as a stranger to their hearts: do they not call it inhumanity?

Whence then is her origin? unto what that is human oweth she her existence? Her father is Fear; and behold Dismay, is it not her mother?

The hero lifteth his sword against the enemy that resisteth; but no sooner doth he submit, than he is satisfied.

It is not in honour to trample on the object that feareth; it is not in virtue to insult what is beneath it: instruct the insolent, and spare the humble; and thou art at the height of victory.

He who wanted virtue to arrive at this end, he who hath not courage to ascend thus into it; lo, he supplieth the place of conquest by murder, of sovereignty by slaughter.

He who feareth all, striketh at all: why are tyrants cruel, but because they live in terror?

The cur will tear the carcase, though he dared not look it in the face while living: the hound that hunteth it to the death, mangleth it not afterwards.

Civil wars are the most bloody, because those who fight them are cowards: conspirators and murderers, because in death there is silence: is it not fear that telleth them they may be betrayed?

That thy mayst not be cruel, set thyself too high for hatred; that thou mayst not be inhuman, place thyself above the reach of envy.

Every man may be viewed in two lights; in the one he will be troublesome, in the other less offensive: choose to see him in that in which he least hurteth thee; then shalt thou not do hurt unto him.

What is there that a man may not turn unto his good? In that which offendeth us most, there is more ground for complaint than hatred. Man would be reconciled to him of whom he complaineth: what murdereth he, but what he hateth?

If thou art prevented of a benefit, fly not into rage: the loss of thy reason, is the want of a greater.

Because thou art robbed of thy cloak, wouldst thou strip thyself of thy undergarments also?

When thou enviest the man who possesseth honours; when his titles and his greatness raise thy indignation; seek to know whence they came unto him; inquire by what means he was possessed of them; and thine envy will be turned into pity.

If the same fortune were offered unto thee at the same price, be assured; if thou wert wise, thou wouldst refuse it.

What is the pay for titles, but flattery? how doth man purchase power but by being a slave of him who giveth it?

Wouldst thou lose thine own liberty, . to be able to take away that of another? or canst thou envy him who doth so?

Man purchaseth nothing of his superiors but for a price; and that price, is it not more than the value? Wouldst thou pervert the customs of the world? wouldst thou have the purchase and the price also?

As thou canst not envy what thou wouldst not accept, disdain this cause of hatred; and drive from thy soul this occasion of the parent of cruelty.

If thou possessest honour, canst thou envy that which is obtained at the expense of it? if thou knowest the value of virtue, pitieth thou not those who have bartered it so meanly?

When thou hast taught thyself to bear the seeming good of man without repining, thou wilt hear of their real happiness with pleasure.

If thou seest good things fall to one who deservest them, thou wilt rejoice in it: for virtue is happy in the prosperity of the virtuous.

He who rejoiceth in the happiness of another, increaseth by it his own.

CHAPTER V.

Heaviness of Heart

The soul of the cheerful forceth a smile upon the face of affliction; but the despondence of the sad deadeneth even the brightness of joy.

What is the source of sadness, but feebleness of the mind? what giveth it power but the want of reason? Rouse thyself to the combat, and she quitteth the field before thou strikest.

She is an enemy to thy race, therefore drive her from thy heart; she poisoneth the sweets of thy life, therefore suffer her not to enter thy dwelling.

She raiseth the loss of a straw to the destruction of thy fortune. While she vexeth thy mind about trifles, she robbeth thee of thine attention to the things of consequence: behold, she but prophesieth what she seemeth to relate unto thee.

She spreadeth drowsiness as a veil over thy virtues; she hideth them from those who would honour thee on beholding them, she entangleth and keepeth them down while she maketh it most necessary for thee to exert them.

Lo, she oppresseth thee with evil; and she tieth down thine hands, when they would throw the load from off thee.

If thou would avoid what is base, if thou wouldst disdain what is cowardly, if thou wouldst drive from thy heart what is unjust, suffer not sadness to lay hold upon it.

Suffer it not to cover itself with the face of piety; let it not deceive thee with a show of wisdom. Religion payeth honour to thy Maker; let it not be clouded with melancholy. Wisdom maketh thee happy; know then, that sorrow is to her looks a stranger.

For what should man be sorrowful; but for afflictions? Why should his heart give up joy, when the causes of it are not removed from him? Is not this being miserable for the sake of misery?

As the mourner who looketh sad because he is hired to do so, who weepeth because his tears are paid for; such is the man who suffereth his heart to be sad, not because he suffereth ought, but because he is gloomy.

It is not the occasion that produceth the sorrow; for, behold, the same thing shall be to another rejoicing.

Ask men if their sadness maketh things the better, and themselves will confess to thee it is folly; nay, they will praise him who beareth his ills with patience, who maketh head against misfortune with courage. Applause should be followed by imitation.

Sadness is against nature, for it troubleth her motions: lo, it rendereth distasteful whatsoever she hath made amiable.

As the oak falleth before the tempest, and raiseth not its head again; so boweth the heart of man to the force of sadness, and so returneth it unto its strength no more.

As the snow melteth upon the mountains, from the rain that trickleth down their sides, even so is beauty washed from off the cheeks by tears; and neither the one nor the other restoreth itself again for ever.

As the pearl is dissolved by the vinegar, which seemeth at first only to obscure its surface; so is thy happiness, O man! swallowed up by the heaviness of heart, though at first it seemeth only to cover its shadow.

Behold sadness in the public streets; cast thine eye upon her; avoideth she not every one? and doth not every one fly from her presence?

See how she droopeth her head, like the flower whose root is cut asunder! see how she fixeth her eyes upon the earth! see how they serve her to no purpose but for weeping!

Is there in her mouth discourse? is there in her heart the love of society? is there in her mind, reason? Ask her the cause, and she knoweth it not; inquire the occasion, and behold there is none.

Yet doth her strength fail her: lo, at length she sinketh into the grave; and no one saith, What is become of her?

Hast thou understanding, and seest thou not this? hast thou piety, and perceivest thou not thine error?

God created thee in mercy: had he not intended thee not to be happy, his beneficence would not have called thee into existence; how darest thou then to fly in the face of His Majesty?

While thou art most happy with innocense, thou dost him most honour; and what is thy discontent but murmuring against him?

Created he not all things liable to changes? and darest thou to weep at their changing? It is the law!

If we know the law of nature, wherefore do we complain of it? if we are ignorant of it, what should we accuse but our blindness to what every moment giveth us proof of?

Know that it is not thou that are to give laws to the world; thy part is to harmonize with them as thou findest them.

If they distress thee, thy lamenting it but addeth to thy torment.

Be not deceived with fair pretences, nor suppose that sorrow healeth misfortune. It is a poison under the colour of a remedy: while it pretendeth to draw the arrow from thy breast, lo, it plungeth it into thine heart.

While sadness separateth thee from friends, doth it not say, "Thou art unfit for conversation?" while it driveth thee into corners, doth it not proclaim that it is ashamed of thyself?

It is not in thy nature to meet the arrows of ill fortune unhurt: nor doth reason require it of thee: it is thy duty to bear misfortune like a man; but thou must first also feel it like one.

Tears may drop from thine eyes though virtue falleth not from thine heart: be thou careful only that there is cause, and that they flow not too abundantly.

The greatness of the evil is not to be reckoned from the number of tears shed for it. The greatest griefs are above these testimonials, as the greatest joys are beyond utterance.

What is there that weakeneth the mind like grief? what depresseth it like sadness?

Is the sorrowful prepared for noble enterprises? or armeth he himself in the cause of virtue?

Subject not thyself to ills, where there are in turn no advantages; neither sacrifice thou the means of good unto that which is in itself an evil.

Book Eleven

OF THE ADVANTAGES MAN MAY ACQUIRE OVER HIS FELLOW-CREATURES

CHAPTER I.

Nobility and Honour

FINE NOBILITY RESIDETH not but in the soul; nor is there true honour except in goodness.

Crimes cannot exalt the man who commits them, to real glory; neither can gold make men noble.

When titles are the reward of virtue, when he is set on high who hath served his country; he who bestoweth the honours hath glory, like as he who receiveth them; and the world is benefited by it.

Wouldst thou wish to be raised for men know not what? or wouldst thou that they should say, Why is this?

When the virtues of the hero descend to his children, his titles accompany them well; but when he who possesseth them is unlike unto him who deserveth them, lo, do they not call him degenerate?

Hereditary honour is accounted the most noble; but reason speaketh in the cause of him who hath acquired it.

He who, meritless himself, appealeth to the actions of his ancestors for his greatness, is like the thief who claimeth protection by flying to the pagod.

What good is it to the blind, that his parents could see? what benefit is it to the dumb, that his grandfather was eloquent? even so, what is it to the mean that their predecessors were noble?

A mind disposed to virtue, maketh great the possessor of it; and without titles it will raise him above the vulgar.

He will acquire honour while others receive it; and will he not say unto them, "Such were the men whom you glory in being derived from?"

As the shadow waiteth on the substance, even so true honour attendeth upon goodness.

Say not that honour is the child of boldness, nor believe thou that the hazard of life alone can pay the price of it: is it not to the action that it is due, but to the manner of performing it.

All are not called to the guiding the helm of state; neither are their armies to be commanded by every one: do well in that which is committed to thy charge, and praise shall remain upon thee.

Say not that difficulties are necessary /to be conquered? or that labour and danger must be in the way to renown. The woman who is chaste, is she not praised? the man who is honest, deserveth he not to be honoured?

The thirst of fame is violent; the desire of honour is powerful; and he who gave them to us, gave them for great purposes.

When desperate actions are necessary to the public, when our lives are to be exposed for the good of our country, what can add force to virtue, but ambition?

It is not the receiving honour that delighteth the noble mind; its pride is the deserving it.

Is it not better men should say, "Why hath not this man a statue?" than that they should ask, why he hath one?

The ambitious will always be first in the crowd; he presseth forward, he looketh not behind him. More anguish is it to his mind to see one before him, than joy to leave thousands at a distance.

The root of ambition is in every man; but it riseth not in all; fear keepeth it down in some; in many it is suppressed by modesty.

Honour is the inner garment of the soul; the first thing put on by it with the flesh, and the last it layeth down as its separation from it.

It is an honour to thy nature when worthily employed; when thou directest it to wrong purposes, it shameth and destroyeth thee.

In the breast of the traitor ambition is covered: hypocrisy hideth its face under her mantle; and cool dissimulation furnished it with smooth words; but in the end men shall see what it is.

The serpent loseth not his sting though benumbed with the frost; the tooth of the viper is not broken though the cold closeth his mouth: take pity on his state and he will show thee his spirit; warm him in thy bosom, and he will requite thee with death.

He that is truly goodness, loveth virtue for herself; he disdaineth the applause for which ambition aimeth after.

How pitiable were the state of goodness, if she could not be happy but from another's praise? she is too noble to seek recompense, and no more will, than can be rewarded.

The higher the sun ariseth, the less shadow doth he cast; even so the greater is the goodness, the less doth it covet praise; yet cannot avoid its rewards in honours.

Glory, like a shadow, flieth him who pursueth it; but it followeth at the heels of him who would fly from it: if thou courtest it without merit, thou shalt never attain unto it; if thou deservest it, though thou hidest thyself, it will never forsake thee.

Pursue that which is honourable, do that which is right; and the applause of thine own conscience will be more joy to thee, than the shouts of millions who know not that thou deservest them.

CHAPTER II.

Science and Learning

The noblest employment of the mind of man, is the study of the works of his Creator.

To him whom the science of nature delighteth, every object bringeth a proof of God; every thing that proveth it, giveth cause of adoration.

His mind is lifted up to heaven every moment; his life is one continued act of devotion.

Casteth he his eye toward the clouds, findeth he not the heavens full of his wonders? looketh he down to the earth, doth not the worm proclaim “Less than omnipotence could not have formed me!”

While the planets perform their courses; while the sun remaineth in his place; while the comet wandereth through the liquid air, and returneth to its destined road again; who but thy God, O man! could have formed them? what but infinite wisdom could have appointed them their laws?

Behold how awful their splendor? yet do they not diminish: lo, how rapid their motions! yet one runneth not in the way of another.

Look down upon the earth, and see her produce; examine her bowels, and behold what they contain: hath not wisdom and power ordained the whole?

Who biddeth the grass to spring up? who watereth it at its due seasons? Behold the ox croppeth it; the horse and the sheep, feed they not upon it? who is he that provideth it for them?

Who giveth increase to the corn which thou sowest? who returneth it to thee thousand fold?

Who ripeneth for thee the olive in its time? and the grape, though thou knowest not the cause of it?

Can the meanest fly create itself? or wert thou ought less than God, couldst thou have fashioned it?

The beasts feel that they exist, but they wonder not at it; they rejoice in their life, but they know not how it shall end: each performeth its course in succession; nor is there a loss of one species in a thousand generations.

Thou who seest the whole as admirable as its parts, canst thou better employ thine eye, than in tracing out thy Creator’s greatness in them; thy mind, than in examining their wonders?

Power and mercy are displayed in their formation; justice and goodness shine forth in the provision that is made for them; all are happy in their several ways; nor envieth one the other.

What is the study of words compared with this? In what science is knowledge; but in the study of nature?

When thou hast adored the fabric, inquire into its use; for know the earth produceth nothing but may be of good to thee. Are not food and raiment, and the remedies for thy diseases, all derived from this source alone?

Who is wise then, but he that knoweth it? who hath understanding, but he that contemplateth it? For the rest, whatever science hath most utility, whatever knowledge hath least vanity, prefers these unto the others; and profit of them for the sake of thy neighbour.

To live, and to die; to command, and to obey; to do, and to suffer; are not these all that thou has farther to care about?

Morality shall teach thee these; the economy of life shall lay them before thee.

Behold they are written in thine heart, and thou needest only to be reminded of them: they are easy of conception; be attentive, and thou shalt retain them.

All other sciences are vain, all other knowledge is boast: lo, it is not necessary or beneficial to man; nor doth it make him more good, or more honest.

Piety to thy God, and benevolence to thy fellow creatures, are they not thy great duties? What shall teach thee the one, like the study of his works? what shall inform thee of the other, like understanding thy dependencies?

Book Twelve

MANIFESTATIONS OF KARMA

CHAPTER I.

Prosperity and Adversity

SEE THAT PROSPERITY elate not thine heart above measure; neither depress thy mind unto the depths, because fortune beareth hard against thee.

Her smiles are not stable, therefore build not thy confidence upon them; her frowns endure not for ever, therefore let hope teach thee patience.

To bear adversity well, is difficult; but to be temperate in prosperity, is the height of wisdom.

Good and ill are the tests by which thou art to know thy constancy; nor is there ought else that can tell thee the powers of thine own soul: be therefore upon the watch when they are upon thee.

Behold prosperity, how sweetly she flattereth thee; how insensibly she robbeth thee of thy strength and thy vigour?

Though thou hast been constant in ill fortune, though thou hast been invincible in distress; yet by her thou art conquered: not knowing that thy strength returneth not again; and yet that thou again mayst need it.

Affliction moveth our enemies to pity; success and happiness cause even our friends to envy.

Adversity is the seed of well-doing: it is the nurse of heroism and boldness; who that hath enough, will endanger himself to have more? who that is at ease, will set his life on the hazard?

True virtue will act under all circumstances; but men see most of its effects when accidents concur with it.

In adversity man seeth himself abandoned by others; he findeth that all his hopes are centred within himself; he rouseth his soul, he encountereth his difficulties, and they yield before him.

In prosperity he fancieth himself safe; he thinketh he is beloved of all that smile about his table; he groweth careless and remiss; he seeth not the danger that is before him; he trusteth to others, and in the end they deceive him.

The soul can advise man in distress; but prosperity blindeth the truth.

Better is the sorrow that leadeth to contentment, than the joy that rendereth man unable to endure distress, and later plungeth himself into it.

Our passions dictate to us in all our extremes; moderation is the effect of wisdom.

Be upright in thy whole life; be content in all its changes: so shalt thou make thy profit out of all occurrences; so shall everything that happeneth unto thee be the source of praise.

The wise maketh everything the means of advantage; and with the same countenance beholdeth he all the faces of fortune: he governeth the good, he conquereth the evil; he is unmoved in all.

Presume not in prosperity, neither despair in adversity: court not dangers, nor meanly fly from before them: dare to despise whatever will not remain with thee.

Let not adversity tear off the wings of hope; neither let prosperity obscure the light of prudence.

He who despaireth of the end, shall never attain unto it; and he who seeth not the pit, shall perish therein.

He who calleth prosperity his good; who hath said unto her, "With thee I will establish my happiness"; lo! he anchoreth his vessel in a bed of sand, which the return of the tide washeth away.

As the water that passeth from the mountains, kisseth, in its way to the ocean, every field that bordereth the rivers; as it tarrieth not

in any place; even so fortune visiteth the sons of men; her motion is incessant, she will not stay; she is unstable as the winds, how then wilt thou hold her? when she kisseth thee, thou art blessed; behold, as thou turnest to thank her she is gone unto another.

CHAPTER II.

Pain and Sickness

The sickness of the body affecteth even the spirit; the one cannot be in health without the other.

Pain is of all ills that which is most felt; and it is that which from nature hath the fewest remedies.

When thy constancy faileth thee, call to thy reason; when thy patience quitteth thee call in thy hope.

To suffer, is a necessity entailed upon thy nature; wouldst thou that miracles should protect thee from its lessons? or shalt thou repine, because it happeneth unto thee, when lo! it happeneth unto all? Suffering is the golden cross upon which the rose of the soul unfoldeth.

It is injustice to expect exemption from that thou wert born to learn; submit with modesty to the laws of thy condition.

Wouldst thou say to the seasons, "Pass not on, lest I grow old?" is it not better to suffer well that which thou canst not avoid?

Pain that endureth long, is moderate; blush therefore to complain of it: that which is violent, is short: behold thou seest the end of it.

The body was created to be subservient to the soul; while thou afflictest the soul for the body's pains, behold thou settest the body above it.

As the wise afflicteth not himself, because a thorn teareth his garment; so the patient grieveth not his soul, because that which covereth it is injured.

SOME NOTES ON THE TERMS USED IN THIS MANUSCRIPT

AS AN AID to the reader the translator of the present modern copy of this book calls attention to the following distinctive terms and phrases used in the various chapters.

At the close of the preliminary instructions, the ancient form of authority is used: "Unto thee I grant the economy of life." This indicates that the original manuscript was used not only for individual and personal instruction, but was the official system used by the Masters of a school, and the giving of the instruction by the teacher was accompanied by a grant of power to apply the laws and principles on the part of the pupil.

In Chapter I, of Book I, we find reference to the "many lives" and "the compensation which The Law will exact." Here, we have reference to reincarnation and that law which is now more popularly known as the law of Karma.

In Chapter II, of Book I, we note in the second paragraph the term "mortally ignorant." In modern mysticism that term would probably read ofc/'ectively ignorant, in contra-distinction to the inherited subjective wisdom or natural wisdom of the soul or inner-self.

In Chapter III, Book I, and many places throughout the manuscript we find reference to "thy present state of being." Wherever this term is used, we may easily interpret the word state as meaning the present incarnation and, if this is kept in mind, it will make the statements much more instructive.

Also in the first paragraph of Chapter III, Book I, we find the principles of reincarnation illuminated by the statement that our action in the present incarnation will ordain or create or establish what we will be in the next incarnation. In the paragraph following that, is reference again to The Law, meaning once again the law of compensation or Karma. At the close of Chapter IV in Book I the last words indicate

that when the soul of man is ready to reincarnate, it will attract to itself from the physical body which it desires to animate. This is one of the fundamental principles of the teachings of the ancient Rosicrucians—that, just as we establish or attract for ourselves in this life what nature of incarnation we will have for our next “state”; so the soul, just prior to rebirth on this plane, hovers about the earth plane and selects from among the many physical bodies being created by Nature, that one in such environment or in such physical state of nationality, locality, and other conditions, as will give the soul the opportunity to carry on the work it has to do, or the lessons and experiences it has to learn. This is indeed a profound and interesting principle that modern mysticism has overlooked.

In Chapter I, of Book II, we find an excellent example of the ancient form of symbolism and mystical analogy. Here, hope is compared to the rose in the bud, and the threatenings of fear are likened unto a cross, upon which the rose is crucified. Aside from the excellency of the idea thus expressed, we find in it a veiled reference to the Rosicrucian symbol, which is a budding rose in the center of a golden cross.

In the fifth paragraph of that same chapter, we find reference made to the soul, and throughout the manuscript we are constantly impressed with another ancient idea that is rapidly becoming established as a very profound mystical principle, as well as a sound ecclesiastical law; namely that there is but one soul in the universe, that which is of or from the consciousness of God and animates all mankind. That there is no separation of souls or individual souls in the physical individualities of mankind, but all have one soul, a universal soul, an undivided segment of which is in each living being. This is further presented in a beautiful way in the sixth and seventh paragraphs of Chapter I, in Book IX, wherein we are told that after death the body remains as “perfect matter” or, in other words, a true state of material expression, although the soul has left the body; which indicates that the soul is not a part of the body, or even necessary to it, to make the body a material thing.

In Chapter II, of the same book, we have reference to mind and soul, and their relation one to the other. In the first paragraph of this Chapter, the statement is made that the mind resides in the soul. In various places we find the mind is distinguished from the brain, and

spirit is also given a very distinct meaning in the same chapter.

In Chapter III, of Book IV, more light is thrown on the nature of the soul with instruction as to how we can come to know the soul. The statement in this Chapter that the soul was not born within us, but was "concreated" for the body, and formed with the mind, indicates another profound belief that a soul awaiting reincarnation leaves its spiritual realm and hovers close to the earth plane at a moment when it is ready to select a physical body that is just entering the first embryonic stages of development and growth.

In this same Chapter we have an interesting fact regarding animals, and are told that the souls of other animals than man are not conscious of death or transition; that man alone possesses a soul of such mind and consciousness as enables him to be conscious of such a state.

In Chapter IV, of Book VIII. we find in the seventeenth paragraph the interesting fact that death does not rob us of the opportunity to acquire knowledge; and indicates that we may continue acquiring knowledge after transition and, presumably, while awaiting reincarnation. This illustrates the ancient belief that during the intervals between incarnations man is capable of sensing and communicating with other minds. However, this is not to be taken as a belief in those principles now presented by the spiritualistic doctrines, for the ancients and their successors today, especially the Rosicrucians, hold fast to the belief that such minds or personalities as are awaiting reincarnation do not put their spirit forms upon this earth plane. And that, while they may be able to make advanced mystics sense them, they do not clothe themselves with visible incarnate bodies until they reincarnate again.

Toward the close of Chapter III, in Book IX, we find the interesting statement that strength and weakness are Mended in our soul and body. In other words, that strength is an essential element of the soul, and weakness an element of the body, because of its constant changing and mortality; and that, therefore, while the soul is in the body strength and weakness are blended, and this prevents us from being entirely evil or entirely good. It is another form of the ancient statement that not until man has ceased to learn all the necessary lessons of life, and has learned how to resist all temptation, will he become completely

good, though no longer having a body to clothe his soul, and will live a spiritual life above this plane. In Chapter V, of the same book, the first few paragraphs acquaint us with the further weaknesses of the physical body, and verify what has been previously said. This whole Chapter is interesting from this point of view. The close of Chapter VI, in this same book, reminds us again of the fact that as we build for ourselves in this incarnation, so shall we live in the next. In the last Chapter in the book we find in the first paragraph reference to the fact that disease of the physical affects the spirit of the body, or, in other words, that the essence called spirit is a material form of energy that is a part of the physical body, or,—a lower form of the universal essence; and that the spirit of the body is not the soul-essence, which is immortal and cannot suffer or be affected by disease. Further on in that Chapter we find again reference to the golden cross and the rose of the soul and toward the last of this Chapter is a fitting closing to the whole book. We read that the body was created to be a servant to the soul and that at no time should we permit the body or its faculties or mortal claims to rise above the *Mastership of the Soul*. This is sound mysticism and the keynote of the Rosicrucian teachings.

THE ROSICRUCIAN ORDER, AMORC

Purpose and Work of the Order

The Rosicrucian Order, AMORC, is a philosophical and initiatic tradition. As students progress in their studies, they are initiated into the next level or degree.

Rosicrucians are men and women around the world who study the laws of nature in order to live in harmony with them. Individuals study the Rosicrucian lessons in the privacy of their own homes on subjects such as the nature of the soul, developing intuition, classical Greek philosophy, energy centers in the body, and self-healing techniques.

The Rosicrucian tradition encourages each student to discover the wisdom, compassion, strength, and peace that already reside within each of us.

PREFACE

ONE MAY OR may not believe in the strange theories of continuous existence of personality, and one may reject the more or less unscientific theories regarding the probability of *reincarnation*, but one cannot reject with the same absoluteness the apparent completeness of memory's records. Almost every one has experienced the sudden conscious realization of facts released from the storehouse of the memory involving incidents long forgotten in the conscious recollection; and coupled with the release of such *facts* as one knows were stored away within the present span of earthy life, there comes an array of incidents, associated and unassociated, which could not have been stored in the memory through any experience in this life.

Psychology offers as an explanation for the possession of such seemingly *inexperienced* facts, the theory that in our dreams we charge our minds with experiences which are not consciously realized at the time or possibly forgotten in our waking state, but which return to consciousness by association of ideas. Another theory offered attempts to explain the mass of inexperienced incidents and ideas as come from the subconscious mind, as being the result of the processes of imagination.

Shakespeare wrote:

And as imagination bodies forth
The Form of things unknown—the poet's pen
Turns them to shapes, and gives to airy nothing
A local habitation and a name.

But, such theories leave the cause and nature of *dreams* and *imagination* unexplained. To conceive of the mind mechanically creating from *nothing* those wondrous things which the imagination of man has given us in the past and present, is more difficult than to conceive of unconscious experiences—or experiences of the mind, stored away in the memory, resulting from forgotten realizations.

Leaving aside the prophetic nature of some dreams and likewise the prophetic nature of many things seemingly drawn from the imagination, we still have a great mass of facts and incidents resulting from dreams and imagination, which coincide with experiences, facts and incidents which have had *actuality in the past*, outside of our conscious knowledge. And very often these actualities were in the remote past, in a period beyond one's present span of life. How came these facts and incidents to be stored away in the memory to be recalled, reviewed, analyzed, in the present span of life? This is the question which confronts the scientist today. The present story attempts to throw some light on this question and its possible answer. That the matter is presented in story form rather than in heavy, scientific arguments, does not argue that the principles involved are without scientific foundation, or that the process whereby the "Yesterdays" are revealed is an unnatural, uncommon, or unscientific process. It is, in fact, typical of the experiences of many individuals and may find its similitude in some experiences of the reader.

With the sole idea that, in a pleasant, or at least fascinatingly strange story, some will be brought to the threshold of realization that the partially explored activities and functions of the mind contain many profound mysteries and principles of considerable import, and that those so illumined may be tempted to seek for more light in the Chamber of the Unknown—this book is offered to those constantly asking for the unusual in fiction and the mystical in romance.

INTRODUCTION

YESTERDAY THE IDEA commonly prevailed that Religion and Science were antagonistic. Today they are thought to be essentially dissociated. Tomorrow they will be known to be one.

The basal reason for present-day dissociation is found in the fact that religion in its inception is understood to be revelation, and in its individual experience, subjective. While on the other hand science is considered as a matter of research with a minimum of inspiration or revelation and as objective in its realm. Psychology being the one effort at reconciliation of the two.

It is not generally known that for thousands of years there are those who have taught the unity of truth. This body of students reveals in the present volume that which may be accepted as a more popular expression of their teachings, and as the pioneer of others which will be forthcoming. It is presented as evidence that science is a matter of *inspiration* and *revelation*, as is religion.

Granted then, that science is to be deductively realized and then found to be true by an inductive process of investigation, the consummate skill revealed in the story of dealing with the science of psychology in the laws of consciousness will be recognized in their presentation as experience in the form of a story. The understanding student may discover very many laws and principles other than psychological hidden in the text which are also contributory to the clearness and force of its message.

As a Priest of the Church, remembering that whenever the Church was able to foresee any fact of science, or science anticipated the Church, it has been necessary to reconcile the one to the other, I rejoice in the

possibility of a better understanding here presented as an occasion for readjustment, answering to the demand of the present-day growing insistence upon the unity of Truth.

Among the many points for readjustment which constitute the problem of today, both Theological and Psychological, are the following:

(1) That which is known as Meta-psychosis or Reincarnation. Theologically unnecessary *today*, it must be reckoned with *tomorrow*. For, reincarnation is demonstrable. It may be discovered in the teachings of the early Church and is found in the scriptures of the Old and New Testaments by those who will read the words in the light of their most apparent meaning rather than by the dimness of individual precedent and prejudice.

(2) To read and understand scripture just as it is, is not the least of the problems of today as is understood by the reference in the present story to "And God breathed into his nostrils the breath of life, and man became a living Soul." Together with this may be mentioned the problem of bringing into popular appreciation the complete Bible including the so-called Apocrypha. And the full recognition of other Sacred Writings as subsidiary.

(3) The problem of apprehending Immortality as a present consciousness and not necessarily as a dogmatic statement or the conclusion of a rational process.

(4) The problem of bringing into popular acceptance the unencumbered mystical appreciation of prayer as the story in this book makes clear. This understanding has been within the consciousness of many an earnest and devout thinker in a theology of experience which, however, has fallen short of expression by pen or speech.

(5) The problem of duly recognizing the holiness of birth apart from any glaring unconventionalities.

And there are many others. Most of them are beautifully set forth in the following pages.

A THOUSAND YEARS OF YESTERDAYS

I cannot refrain from calling attention to St. John, 1:9 (Revised Version) as a most remarkable corroboration of the author's elucidation of Light in connection with birth: "There was the true Light, even the Light which lighteth every man coming into the world."

Interesting as is the story, it is not intended for light reading. It is to stir the depths of most profound thought, and urge to the most thorough investigation. Let the merely curious beware of disappointment. Here the sincere soul will rejoice.

Chapter 1

THE STRANGE DIARY

TO THE MAN of iron nerve, steel business sharpness and intense concentration to business—like William Howard Rollins—the ending of a business year is like the ending of a segment of life.

The closing of a fiscal year brings with the closing hours the summary, the review, of acts done and undone, profits made and lost, prestige and power gained or decreased, greater success attained or unattained. The closing of the fiscal year marks a milestone in the cycle of the business; it is an entity, a thing unto itself, and must be considered as an independent lifetime in the evolution of the business.

To William Howard Rollins, it meant all this, and more. The fiscal years of his business began and ended at midnight of the calendar years. To him January first was the day of rebirth, personally and in every business sense. To his associates, his closest friends, this meant, *socially* also, for Rollins was reputed to be *all business*, with nothing but business to interest him. It was his whole world; with it the day began and ended, life's activities came and went. There was no other world for him, they said.

There was reason to believe this. Rollins was not only a mighty power in the commercial world, an attractive figure in the business circles of the largest American cities, but he had no club life but with business clubs, he attended no social dinners except those given by the Rotary and other commercial clubs, he had no pleasures except those which afforded, through relaxation, increased power for business—and he

was not married. He lived in an unpretentious home with his mother, and avoided all attempts on the part of his social equals to interest him in the charms of their daughters.

His bachelor home, presided over by an adoring mother, was ideal to this man of peculiar ideas. Naturally he had but few visitors and never entertained in his home, if he entertained at all. But those who knew his home life, or those little phases of it snatched from short visits, said that neither luxury nor indifference manifested itself in any of the rooms except the private study. Here there were many paintings and one would judge that Rollins was especially fond of landscapes and etchings of rural scenery. Yet no one could recall having found Rollins even motoring into the open country to admire nature in all its unpainted splendor. Books were not his hobby, for there was but one small bookcase in his study, and this had frosted glass doors which were always locked. What books were thus hidden and what their natures might be, not one of his intimate friends knew. A large safe, enclosed in a mahogany cabinet, and a large wooden chest bound with ornamented brass bands and corner-pieces, were the only other interesting or odd furnishings of the room. The large easy chair, the broad reading table, the standing reading light, the standing ash-tray, the pillowed footstool—these merely suggested that at times Rollins relaxed and read. But what he read in addition to the *New York Times* and the *Literary Digest*, none, except possibly his mother, knew.

But on this evening, the last hours of the closing fiscal year, the hours just before midnight when the New Year, 1917, would be ushered in, Rollins was reading in his study and he was reading his *diary*.

His mother had retired, the house was still and Rollins was in a world alone. The gas logs in the open fire-place of the study were entwined by the blue and yellow flames that dimly lighted the shadows surrounding the end of the room, while near by, seated in his large chair, dressed in his very plain smoking jacket, Rollins was reading by the direct rays of the movable reading lamp, which cast but little light about the room.

The *Diary* seemed to be his book-of-all-books. With the same regularity that he conducted each affair of his daily business routine,

he made his notations in this book nightly before retiring. For years, in fact, since his college days, he had kept these daily records of the day's activities. Naturally, the twenty or more books, covering over twenty years' business career, contained notes and comments almost exclusively of business affairs. Each of these books had become, in its turn, his daily guide, his bible, his record of thoughts, of things to do and of things done—with occasionally a thing left undone.

And tonight he was to close the 1916 diary! As was his custom, he must pass over the pages one by one and see, by the check marks opposite each notation, what important things had been accomplished and especially what others had been left unaccomplished, that the might enter them in the new diary and plan to accomplish them in the next year. This was the task he had set for himself this New Year Eve, while outside the city was celebrating as only New York City can, the last hours of the old year.

As page after page was turned backward from December to the previous month, and from that to October, and on back to September, lie fell into reveries. In retrospection he was living over again each day of each month. Once in a while a smile would pass over his tense expression and at other times a stern look would come, as though he were about to issue some serious command, or make some weighty decision.

Then came the date of September 12th. But one notation appeared on the page. Like many others, it was a command unto himself. It read, briefly: "Find out who painted the Spring landscape signed Raymond— Immediately the entire tense attitude of Rollins changed. He was plunged by this short notation into another world, a world of speculation, curiosity, pleasantness and—challenge. The smile passed from his face and there came the look of defiance. Why has it been impossible to learn the painter's last name? Why is it so obliterated when the picture is otherwise so well preserved? These were the questions that passed through his mind.

The painting referred to hung upon the walls of his study. It was an old masterpiece, a very old and costly painting. Its age and its masterful work were testified to by its technique, by all the signs and earmarks

that constitute a real old master-work, despite the fact that the dealer who sold it to him could not name the creator of it. The dealer had promised to find out; other experts in the valuation of paintings had examined it and had agreed that it was the work of a master *unknown*, for there was not known to be any other large landscape signed by a similar name. Not even the first initial of the last name could be deciphered, though apparently it had been signed there. The first name of *Raymond*, however, gave no clue. No such name was known among those of the old Masters in connection with landscapes of such rare work. It could not have been the first or only work produced by the painter; such skill as was shown in it is not attained except by long experience and much work in evolving a personality of technique.

For five years the diaries contained on the pages dated September 12th—the date on which the painting was purchased—the command: “Find out who painted the Spring landscape.” Yet, with the money to pay for research work, with dealers ready to please Rollins with every favor that might lead to other sales, with a friend in Paris who connived with artists of repute, with all his sincere interest, unrelenting desire, and intense curiosity, he could not learn the painter’s name. To him it was no longer a mystery, it was a challenge; the secret name defied him, and defiance annoyed Rollins was known as a man who cherished a challenge and laughed at defiance in the business world. But in this world of art, to which he seemed a stranger, he was defied by a simple little things which even a student of art might wipe out of existence through a casual investigation.

“How many more years will I carry this notation in my diaries?” asked Rollins of the spectres of dealers who loomed up before him in his reverie. “Five years have passed since I sought this knowledge first, and each year adds only to the age of the picture and possibly to the occultness of the answer to my question. If all trace of the painter is lost now, why hope that future years will bring him to light? Time only cloaks mystery and makes it more profoundly obscure. Years enhance the arcane and thicken the veil that hangs between the known and the unknown. If the painting was a *thousand* years old when I purchased it, it is now a *thousand and five* years old, and next September it will be a thousand and six ! Before my life is ended and that painting passes

on to others, it may be—why even a thousand and forty years old—for I hope to live at least forty years more. And then, what? Will the question, *who is the painter*, be any nearer answering than it is now? The dealer who sold the painting to me and many of his associates will be gone then, and, even now the man who sold him the painting may be beyond the veil and can no longer assist in learning the painter's name. No, the future holds no encouragement in my search. I must go back to the past, to the days when the painting was new, when it hung upon the wall of some old castle, when the name was still readable, when—*the painter was still living!*

Such were the thoughts that passed through Rollins' mind as his eyes wandered from the page of the diary to the blue and yellow flames of the gas logs, and he relaxed into speculation as to where the painting may have been made and when. The name suggested a Frenchman and France, and France suggested a world of life and living so alluring! "Why does France appeal so and why have I never taken the time to wander through its peaceful old towns and quaint old provinces?" The words were almost audible in the stillness of the room. And then Rollins' mind speculated again. "The war makes it impossible to visit France now even though the escape from business were possible. But there were days when neither business or other affairs would have prevented a summer-time vacation trip to France, when all the strange longing for the environment, atmosphere and life of the southern provinces would have been wonder fully appeased by such a trip, and yet France remains but a dream of the mind."

Rollins did not know that his thoughts were identical with those of many others who have a strange longing for an unseen place which seems to be so familiar, so much a part of themselves and yet remains but a dream, a picture or condition of the mind.

The lateness of the night, the sudden consciousness that he was slipping off into wild and unfruitful dreaming, brought Rollins back to the diary in his hand, and to where his forefinger still held the place at the page dated September 12th, 1916. He would check that to be reentered in the next diary, as usual! There was nothing else to do but turn it over to the future, to place his question on a future page.

And then, as he turned back a page in the diary to that dated September 11th, the strangest thought of all occurred to him: why not turn backward and backward the pages of the *yesterdays* to the past and find the great answer there? "If I could only turn backward the pages one by one of a *thousand years of yesterdays* as easily as I turn backward the pages of a year of yesterdays in this book, I could easily learn about that painting." The possibilities astounded him ; and as he thought, he fell into a light sleep in which he was fully conscious of his position before the warm fire of the gas logs, and that he was just dreaming a day dream; but the diary in his hand now seemed to be an index to pages of the past, to consecutive yesterdays of many years, and as he dreamed the scenes that came into life-like existence in the fireplace, he felt the pages turning one by one in the great book in his hands.

And then came the hour of midnight; the old grandfather's clock in the hall outside the room struck its twelve bold strokes and before the last had sounded, the city was stirred with the bells and chimes, the horns and shrill whistles, announcing the birth of another year; and though the sounds did not disturb Rollins or arouse him from his dream world, he was conscious of the fact that another period of life's cycle was at hand, and he turned backward to the first *yesterday* of the past, in the world that lies *beyond the veil*.

Chapter II

THROUGH THE FIRST VEIL

AS HIS CONCENTRATION centered upon the open, black space above the flames of the fire, his consciousness also entered the vacuum of that space as though it were a world to dwell in and be a part of its limitless possibilities. And, as the strange sensation of entering that miniature world passed over his realization, he felt that he had just passed through a great veil which separated the past from the present. Thus, the turning of a page in the great book brought with it a peculiar lightness of spirit and an awakened state of subconscious reality. Physically, his body was still in the chair of the present, but mentally, self-ly, he was in the *yesterday* that was now being created in the little world beyond the veil.

Slowly he realized the story unfolded around him. What a strange room there was, yet seemingly familiar. The mahogany! bed—ah, yes, the little woman, so young and—suffering! There are others there—the man with the little satchel, a nurse, and another woman. There is sobbing, excitement, expectation. What does it mean? Now there come the agonizing cries of the young woman, the pleading for relief, the quiet gentle assurances of the man with the satchel—yes, a physician—tender and considerate. The nurse goes to the door and opens it—and there enters a tall, fine-looking young man, excited, questioning, hurriedly dropping his hat on a table and rushing toward the bedside, but gently stayed by the physician who warns him to move slowly and carefully. Tears come to his eyes—his darling is suffering—

the words so softly said are words of tender love. The wife suffers, the pain is agonizing, it lifts her body from the bed in paralyzing spasms. The physician holds his watch and waits. Can't something be done? The question, inaudibly spoken, comes from the mind of the lover, the husband. The nurse says kindly: "Time alone will end it All!" The wife is frantic now, the pain intense, the suffering beyond reason or human endurance; and now she falls back upon her pillow, exhausted. She is quiet. The physician is again concerned and lifts her left hand; he times her pulse. She moves again. She is assisted to her feet; she tries to walk, but she is so weak. She cries: "Harold, Harold, if I had only known, if I had only known—now I want to die...it would be better...better than this! Please, Harold, can't you help me? I am so weak, I cannot stand the pain again!"

And then Rollins discovers himself in this scene. He feels that he wants to help this poor woman, and he looks to find where and what *he* is in this incident of some past day, some *yesterday* of his life. But he is *not* there, yet he sees, he hears, he knows. How is this? He is in every part of that room, yet the others do not see him and he is conscious of the fact that his mind, his inner self, his *soul*—that is it—his soul, IS THERE WITHOUT A BODY. What, then, is he? and where is this incident or where *was* it? He lifts his soul-eyes about to see more of his environment. Above him space and—other souls like unto himself, without bodies. Each is busily moving in some direction, but *he* is hovering *here*. Where? *Over* and *in* the little house in the country. It is early morning, the winds are swaying the trees and whistling a continued murmur. The fields are cold and the flowers have been touched by frost; fog veils the distant hills and the rising sun just tints the heavens above and all is quiet and still without, while within the humble home pain and suffering, fear and hope, anxiety and expectation intermingle with intensity, while casting its shadows across the threshold of life stands the big black figure of death.

And Rollins is but a Soul, waiting and watching! Why waiting? Cannot the records of yesterday answer the whys and hows of this sad scene? And then there comes a light! It forms a doorway and beyond it a channel. The Channel of Life! The words were written in blood over its archway. Through that passageway enters the Light of a little Soul.

The little woman is again stricken. Once more she falls to her knees and cries for relief and drops over exhausted. Gently she is lifted to the bed while the physician and nurse tenderly soothe her hands and brow.

Spasm after spasm, agonizing screams, heart-rending suffering, hour after hour until the sun is high and the day is half spent. Through all this the little Soul waited and watched, knowing and realizing, hoping, and wanting to ease the hours and minutes—but the law! The LAW MUST BE FULFILLED!

Then the little Soul, bathed in Light, hovered more closely and contacted the Soul of the suffering woman. The Souls communed and their inner minds spoke what words could not express. The Soul of the woman, the young wife, longed for the home of love, the giving of great happiness to the man she loved, the Harold who had always been a tender lover, a considerate husband. Together they hoped to spend their lives sharing each other's joys and sorrows, and now, perhaps, the end had come. The body was slowly losing its strength, the brain was terrified with the intensity of the suffering of the flesh, the spirit walked in the valley of death while the Soul within longed to soothe the aching heart. Bravely had the little woman looked forward to the hour when greater joy should come into their lives, when their home should be blessed with the cries and laughter of the little child. Thoughtfully had the husband eased her mind and allayed all fears by his assurances that the would be near when the hour came to walk through the land of unknown grief and pain. Yet, now he was helpless to do more than touch her lips with a kiss and smooth back her loosened hair. What if death were to end all their hopes? Even in her minutes of intense suffering she could think of him; and the thoughts of how he would suffer if death should end it all and if the hopes they had should prove futile, made her strive to bear the tests and trials and gave her strength to fortify the weakened constitution for each periodic spell. The hour must surely come when weakness and ease from pain would let her rest and perhaps dream and then—the long cherished sound of a babe's little cry would be joyous music to lull the senses of the new mother into the forgetfulness of mother hood's first long sleep.

And then the little Soul blended into the Soul of the expectant mother and quickened it with its divine life, and the little woman knew that God was near and that the moment was here for the supreme trial of her life.

Communing, consoling, trusting in the faith of each other, knowing full well the infallibility of the law, the weakness of human flesh, the temptations of earthly desires—these two Souls clung intimately throughout the minutes of closing travail. The little Soul looked to the woman in her joyous sorrow to bring to the world the body in all its perfect completeness, which would serve as the material cloak for *its* welcome visit to this loving home. The little woman, on the other hand, clung with outstretched arms to the little Soul and, with the instinct of motherhood already born, tried to warm the little Soul into staying *there* that her child might have soul and life, even if she should pass on into the mists of the heavens in her supreme sacrifice.

What a relationship! Nowhere in all the wondrous processes of nature, nowhere in all the principles of creation, was the law of God, the marvels of His ways, so beautifully, sacredly and *simply* exemplified.

Then came the crucial moment. Life in the little woman's body seemed to be at its lowest ebb. The suffering was pitiful. Husband, physician, nurse, the woman friend and the little Soul in waiting, all felt the sadness, the terrible sorrow that pervaded the room. Eyes were wet and hearts were heavy as, helplessly, the little woman tried bravely to co-operate with nature and fulfill the decree of God that *in sorrow and in pain shall woman bear the fruit of love!*

Then a gasp! The little woman was lifted high upon the mountain-top adjoining the valley of death, and for one moment she saw a glimpse of the Heaven of God—and even God and the Angels appeared to her and she knew—that—the baby's cry—it lived!—and she was back again in the valley, *asleep*. But where the shadows had been there now sported the little spots of sunbeams that forced their way through the foliage of the green trees, and they danced upon the green lawns of the valley like fairies in the spring-time dance, all jubilant with the joy of living.

The little Soul no longer rested in the aura of the woman's Soul. As the little cherub lips of the precious babe opened for their first breath of vitalizing air, they caused the lungs to exhale the air which held back the Soul, and with an immediate inhalation through the nostrils, another divine decree was fulfilled: *God breathed into man the breath of life and man became a living soul!* The little Soul felt itself irresistibly drawn down toward the infant body, and found itself in the Chamber of the Soul, the Kingdom of the Inner Man.

The body pulsed; it was warm; life was vigorous. The little Soul was enthroned on earth within its own palace, to direct and to suggest, to dictate and to impel, to urge and to tempt; to be the conscience of man, the mind of God, the Master Within the Holy Temple.

And it listened. The mother slept peacefully, the nurse tiptoed gently about her duties, the physician watched carefully after the matters of concern. Nearby, in a little cradle, rocked the infant body while the Soul within observed and rejoiced. At the side of the cradle knelt the husband with tears in his eyes and a quickening of his spirit, for fatherhood was *new* and *so wonderful*. Carefully he arose, tenderly, humbly, he leaned over the babe and covered it with the little hand-crocheted blanket the little mother had made in her hours of hopeful waiting. Lifting one of the chubby hands he reverently kissed it as the representative of all that was divine, all that was sacred, all that embodied the love he had for the little woman in the corner. Then, placing the little hand down and covering it with a blanket, he whispered softly: "Baby man, *we* will bless you as God has done, and your name will be—William Howard Rollins!"

Startled, Rollins came back to consciousness of self and place. The picture in the fireplace was rapidly fading and Rollins found himself withdrawing from the scene. He was no longer a part of that *yesterday*, the incidents of which had been so strangely enacted for him. He was now the man of *today*, the restless, modern, matter-of-fact today. *But he knew*. He had turned back the pages of life's diary to the yesterday of his birth and it was his soul that had entered the body of the babe. But—what a price motherhood paid! His little mother, who even now

slept peacefully upstairs. Could man ever repay the suffering woman bravely bears that the unborn child might have the very essence of her life—even its very existence if necessary? What supreme love! Love divine! The love of God alone equaled it—yes, and it is the love of God.

Thus pondered Rollins until, as tears came fast and the heart beat rapidly, the love in his heart for the little woman upstairs was about to take him to her bedside to kneel in reverent adoration, when the door of his study suddenly opened and there stood the little gray-haired woman with pink shawl thrown about her and the sweetest smile on her lips. Surprised at finding him awake, she said in the kindest tones of loving motherliness:

“Come, William, *my little man*, it is very late and I was worried that you might have fallen asleep; *for tomorrow is your birthday* and I was just thinking of the day God gave you to us. Will you come now? I have your bed all prepared for you. Let us go up together. That’s a good boy.”

And together the strong, tall, masterful man and the little, old, gray, woman, weak and trembling at times, walked side by side, arm in arm, out of the room, lighted now only by the pale light of the moon, past the window of the hall to the wide stairway. Ascending together, it seemed, as they entered the deeper shadows and disappeared from sight beyond, that angels hovered over them—the little mother and her baby man.

Chapter III

BEYOND THE FIRST VEIL

NERVOUSLY AND RESTLESSLY, lacking real fatigue, Rollins turned from side to side in his bed. Sleep seemed impossible. His mind was haunted with the story and the picture he had just lived through.

The curtains at the windows simply turned the beams of moonlight into filigree designs upon the darkly carpeted floor, and in the far corner of the room the large, old-fashioned mirror of great size reflected the one shaft of moonlight which hit the white lamp shade upon the small reading table. As Rollins gazed at this reflected sphere of white in the mirror, it seemed to turn into a pale, beautiful face that smiled at him at times, and at other times, wrinkled with pain, became moist with tears of suffering.

Motherhood and the coming of a little soul! These were the entities, the wonderfully ordained things that occupied the threshold of his consciousness to such an extent that dormancy of thought, so necessary to sleep, was impossible. And he had witnessed the birth of his own body and the entrance into it of his own soul! What an important *yesterday* that had been; far more so than any other occupying a place in the last twenty years of his business career. Yet, this fact astounded the matter-of-fact Rollins. It controverted what had been his belief for so many years. There could be nothing more important in his life than these yesterdays and todays of business, each of which was so carefully chronicled in his sacred diaries! To him, the day of birth, like the day of death, had seemed to be just the beginning and the end of things; it was the period of life between these two points

that was essential—nothing else.

Tonight, however, as he lay in the increasingly nervous condition, there loomed upon the horizon of his measure of essentials, something more or different from the material affairs of life. The beginning of life was intensely interesting and most certainly important. And, perhaps the end of life was equally interesting and important. Much of life's success and power depended upon the first hour of life, the hour when the soul entered the infant body. Suppose the soul had failed to enter the little body—then what? Well could he recall the anxiety experienced by the mother lying in travail, fearful lest the soul hovering near might fail to enter and vitalize the little body struggling for birth. All the hopes and aspirations, plans and ideals stored in the mother's breast were dependent upon that one mysterious manifestation of an unknown law—whereby the soul in space would be transferred, transplanted, so to speak, into the body prepared for it; and the body, lifeless except for being infused with the borrowed blood and vitality of the mother, would become transmuted into a perfect creation, a living soul, a vitalized body. What a wonderful transmutation! Could this be the transmutation that the mystics of old symbolized and compared with the alchemical process of infusing a grosser material with a finer or refined spirit until the blending of the two made manifest a third and different thing—the refined, perfected creation, the pure gold of the universe?

Yes, what if the soul had not entered the body? Was not the soul at such time concerned too, lest it might not fulfill the law? In such an event as failure to unite—terrible contemplation!—he, the great Rollins of the business world, would not now be here. "Born lifeless" would have been the curt and sole dictum of the physician—and the soul now within would have returned to—where?

Rollins was wide awake now. Here was a question or two quite as important as any in his business, quite as mysterious in its nature as "Who was the painter?"

He sat upright in his bed. He ran his fingers through his hair and slowly breathed a deep breath—it was almost a sad sigh. He was impressed with the importance of his question and at the same time

was stirred by the very intensity of his curiosity. Down stairs the great clock struck one long sonorous chime. Rollins could not tell whether it indicated twelve-thirty, one, or one-thirty in the morning. It was late and he ought to sleep, this he realized; but the question, the all-important question was not answered.

He turned his gaze toward the corner of the room and there the face peered at him again in the mirror. It seemed to be the face of the mother who prayed for the coming of the little soul, and almost unconsciously he stared at it with that same questioning gaze known so well in commercial circles when Rollins was after the concealed truth. "Tell me," he demanded in stern tones, "tell me, where would that little soul of mine have gone if it and not come into my baby body at birth?"

"He waited for an answer, and after a pause that seemed like the stillness of death in the room, there came to his consciousness like the whispering of a voice within his soul: "Who knoweth not in all these that the hand of the Lord hath wrought this? In whose hand is the soul of every living thing and the breath of all mankind." The words were those of the Holy Bible, the twelfth chapter of Job. But to Rollins they revealed the Law. "In the presence of the Lord shall all souls tarry and rest and await the coming of their day."

The soul would return to its own realm, to the presence of God, to the world of other souls, and—wait! Rollins, the man of now, would not be here, but the soul would not be lost. There seemed to be consolation in that for Rollins, yet, *why*, he could not have explained then: for until the hour of the penetration of the veil of yesterday, the personality of Rollins rather than the divinity of the inner man, was all important; and now—why it seemed that Rollins could have felt contented with the knowledge that if the personality of himself had been unborn, the soul that would have been his own would have lived—and waited.

Rollins fell back upon his pillow and closed his eyes in contemplation. There were two of him there in unison—his personal self, Rollins, with the baby body grown into adulthood, and the little soul residing within. The one came from the blood, the thoughts, the hopes, the

desires, the love of his mother, the other from—God.

Thus contemplating, Rollins reviewed again the minutes when his little soul, a shapeless, formless, thinking, feeling entity, hovered in space awaiting the moment of passage through the great Channel. Hovering in space? Where? Again the question that came to him then: “How came I there? And *from where*? If I was there within the presence of that little home and that little woman that day, where was I the day before the birth—the *yesterday*? Oh ! if I could turn back another page of life’s yesterdays and see the day before this day of birth—to see and live again the last day of the *yesterlife*.”

Whether Rollins fell asleep with that desire in his mind or not he could not tell when the night had passed and day had come again. All he knew was that a page had been turned in the diary of life’s cycle and that, as he lay there in bed he was startled by the presence of a great light near the ceiling. He gazed. The ceiling seemed to be gone, limitless space was beyond the room, and even the walls of the room now seemed to be blank-less, colorless space. Turning from side to side he found upon his body the weight and bulk of the great book whose pages indexed and recorded his life—the book he had seen but a few hours before in his study. Sitting upright again he gazed at its pages and found his hand slowly opening to a page marked, *Yesterday, December 31st*. That was the day before his birthday. It was the last yesterday of his yesterlife.

Looking again toward the space above and around him he found that the great light which had aroused him was, in fact, a mass of smaller, blending lights, each distinctly individual and yet so united that the thousands and thousands within range of his sight were as an undivided mass.

Each light moved, moving in a motion that was rhythmical and harmonious. There! one separated from the mass and moved in a circular motion toward the East and passed out of sight; and toward it followed for a long distance a shaft of light that illumined it, strengthened it on its way. Another moved outward, this time toward

the South. It, too, carried with it the projecting light from the mass, as though it required a stream of power to mark its path of motion. Another moved! Many were now moving in different directions, each followed by a scintillating, transparent but luminous, beam.

One was approaching him! As it came nearer to him, it grew larger, more brilliant and more intimate in some peculiar sense. Its light cast a shade of violet white upon his body and seemed to blind his eyes. It came closer and closer; it was just above him now. His body tingled, but the active pulsations of the heart seemed to stop. A peculiar etherealness pervaded his body and it became lighter in weight. Finally his whole consciousness was outside of his body, vibrating with an attunement most difficult to interpret.

The great mass of light before him elongated until it was a large oval-shaped mass. It fairly trembled with vitality of some kind and radiated toward the consciousness of Rollins a peaceful, soothing, familiar warmth.

Then from its very substance a voice spoke. To Rollins the words were those of a gentle masculine nature, but he realized at once that he was not hearing the voice through the ordinary channel of the ears of his body. In fact, he felt that he had no body. What there was of him, the him that he knew as self, was in front of him, was a part of the great light now—was even the Great Light itself! It was his own soul voice to which he was listening. It was his soul talking to him. This—this was *his soul, his soul in space*. It was the yesterday of—.

“In thy Light shall we see Light! In the beginning God said, Let there be Light. The Light is the Life of men. I am the Light of Him who sent me; of the greater Light am I a part. Within me there shineth the Light of divinity. The Soul of man is the Light. Ye are all Children of the Light. Thy Kingdom is the Kingdom of Light. Into darkness comes the Light but the darkness comprehends it not. When the Light goeth it returneth unto Light and leaveth darkness unto itself. Light is Life, Truth, Freedom. Darkness is Death, Sin, Bondage.

“This is my world, the limitless world of God. Of God’s Light am I. Beyond are my kin, all Children of the Light, all of the Fatherhood of

God, the Motherhood of Love. In the beginning God said: Let there be Light and there was Light, and the Light was divided into mansions of the Heavens, and there were twelve into which the Children of Light were received that they might be prepared to serve in their time as souls for the races of man on earth. And one by one, each was ordained by the Mind of God to go forth and let the Light shine on earth through the body God made of the dust of the earth. And when the hour came and it was good that a soul should bring the Light to earth, God breathed into the nostrils of man and each man became a living soul on earth. And there was a time and a place for each Light to shine, and a day and an hour for each Light to dispel the darkness and give Life, radiant and abundant. The law is immutable, the ordination infallible in its manifestation.

“And when the Light could no longer shine through the sinful bodies the Light was absorbed into the halo of the Heavens and there communed with its kin in the mansions prepared for them. For man on earth is ever sinful, decreeing unto himself the power of free-doing in violation of the voice within which speaks in Truth; for it is of the Light which is Truth. And man destroys the body that God has made and weakens its structure and defiles the dust of which it is made and it can no longer contain the spirit which animates it. And it succumbs, it falls like the walls of a Temple rotted with the worms of filth and decay from neglect. And it crumbles into dust again. For the Light leaveth and darkness reigns within. Light is Life and—darkness is Death.

“The Light that returneth seeth all that is and that will be. Of the Mind of God, its Father, it is attuned with all minds. It heareth the secret prayers and cries of the Lights of men, it knoweth the hopes and desires of the souls of earth, it seeth the despairs and the dangers, the temptations and the pitfalls of those whose Lights are denied the power to speak, the right to guide. Unto the Lights in the mansions beyond is given the power to help, the freedom to act, the inspiration to direct. They cast the beams of their Lights into the shadows of the hearts of man and speak with him and strengthen the Light that is held powerless within. This is their work, the work of the Children of Light waiting the hour to come into man with the breath of Life.

“And when the hour comes that the Light within the mother on earth shines forth and an infant body is prepared for the coming of a Soul, the decrees of God send forth *that* Light which is ready for the *time* and the *place*, the *work* and the *service* that shall be the mission of the Light of some mansion. And into the body of the babe goes forth *that* Light to be a Light among men. It takes with it unto the brain of the babe the personality and the mind, the soul and the memory of its former periods of life on earth; and there shines forth through the body of the child and the man the Light that is within. But man hearkens unto the words of the unwise, the thoughts of the temptors, the schemes of the men whose hearts are steeled against the radiations of their Lights within, in preference for the mortal earthly realities of their own physical senses; and some men are therefore lost. But to him who hearkens unto the voice of the Light within and finds pleasure in communion with the Soul within, there, and unto him, comes God and Truth and Life.

“But I must hasten on. I have come unto thee to speak as we would speak unto all men who seek Light, that the mind and the brain may be illumined. My time has come to leave the Kingdom of Light and stand near the little woman who, within a few hours, shall walk through the valley of travail praying unselfishly for the Light to come to the infant body she has nourished unto creation. It is so decreed that infant body shall be mine, for it will come into places and meet with those who will need my Light; and it will pass from association to association, city to city, peoples to peoples, wherein and whereby shall be many experiences needful to my evolving personality, and needing the knowledge that I have attained in the past. In the home of that child will I wait. I will give ease to the new mother consistent with the laws in operation. I will stand guard over the threshold the Channel to Life and be prepared. And, when I enter with the Breath of Life I will look out of the windows of the Soul, the pure eyes of the babe, and I will see—your mother, your father, your home! Come, consciousness and understanding, you must accompany me and pass with me into the being now ready for Life ‘s supreme miracle! Through space we shall pass, followed by the loving beams of radiating Light which unite us with the Greater Light, and tomorrow will be thy birthday on earth.”

Slowly the Light passed on into the night's darkness and with it passed from the aura of Rollins that sublime consciousness, that strange ethereal self, that was outside of his body, yet belonged to him. And he fell into oblivion, and slept. Awakened by the usual call of his mother, he was startled into consciousness of self and self's environment. The morning sun light cast its warm yellow beams across the floor and bespoke of life and the glory of living. Downstairs a door closed. There was the sound of wagon-wheels on the gravel of the path around the house. The world was astir! It was *today* again and the yesterday had passed. The *yesterday* of a yesterlife—the day before his birth, when his own Soul was preparing to pass through the experience he had seen earlier last evening.

Once more he had turned backward a page in the diary of Life's cycle to a yesterday *beyond the veil*.

Chapter IV

IN THE SHADOWS OF THE PAST

THE DAY BEING a holiday which even the tireless business man must recognize and keep, Rollins decided to spend *this* New Year's day at home. He had partially planned to slightly deviate from his rule of many years and have dinner at some fashionable down-town restaurant, where he and his mother might enjoy the music and the change of environment more than the food. But, learning that his mother was fully prepared to serve lunch at home, and with the experiences of the night weighing heavily upon his mind, Rollins was quick to take advantage of any logical excuse for *not* dining away from home at this hour of the day, postponing the restaurant dinner to the customary evening hour for holiday dining.

With a light breakfast served in his study, he begged to be excused until afternoon that he might complete his analysis of the diary. He had fallen asleep the night before without finishing what he had started. This was the excuse he gave to his mother—the only person to whom he ever gave any explanation and perhaps the only one to ever ask why he did some of the things that appeared so erratic. But mother seemed to understand, and so mother had some special privileges.

As soon as he could hurriedly digest the important news in the morning *Times*—a practice that nothing could break—and as hurriedly sort a few letters that had come by the only delivery of the day, he pulled down the shades and closed the inner shutters of the two windows of the room and lighted the gas logs again that the might sit

once more in the quiet, darkened room and be alone with the dreams, the visions, the *something* that now seemed to be a part of his real being.

If Rollins had been asked just at this time to give as keen an analysis of himself and his mental attitude as he gave of those he scrutinized before employing them or dealing with them in any manner, he would have said that the was a man possessed of a hallucination tending, to become a fixed idea, and would have added that such a man was useless in business and a nuisance as a friend. He would have said of his mental attitude, generally, that it was being warped by imagination, swayed by passing emotions, fixed by a tentative goal, obsessed by a single passion, and made impractical by ideals too vague to describe. Secretly, however, he would have reluctantly admitted to himself that the was being mentally, and, somehow inwardly, revolutionized. His processes of thinking were being changed by newer premises of reasoning. He was unlearning the old lessons and learning new ones. He was discarding old faiths and beliefs and slowly, analytically, absorbing from some sort of secondary personality new and more worthy, noble and spiritual beliefs. By another, his *change* in thinking and believing would be called *development of religious mind*. But, with Rollins, religion would have to come from within, for he was not in sympathy with churches and religious ceremonies; and he would hardly believe that a religious change could come to any man who did not come under the hypnotic spell of master sermon preachers. Naturally, Rollins would hesitate long before admitting that through his recent experiences God had spoken to him and he was, in fact, developing that religious mind and attitude which constitutes the real conversion from sinful indifference to sacred appreciation.

Relaxing easily in the big chair, turned purposefully so that the could conveniently gaze into the flames of the logs again, he fell into that same mind of speculation as controlled him the evening before. He had not taken the 1916 diary from his desk, for despite the statement to his mother, it was not his intention to continue its study until later in the day. He wanted to be free, mentally, and not distracted by even the holding of a paper or pencil in his hand. He seemed to feel that the fireplace would again serve him with another manifestation of some weird process of the imagination, or possibly, memory.

Could these things be the result of the imagination? If so, he, his outer objective self, the brain's creative faculties and reasoning abilities, had created, manufactured all he had seen and realized. Some men are born with an unusual ability to create in this manner. The faculty of imagination—granting that it is a distinct process or faculty separated from the ordinary process of inductive, deductive and syllogistical reasoning—simply requires a premise of probability upon which the wildest thoughts of possibilities and impossibilities are placed in some schematic manner suiting the fancy of the dreamer.

Usually, accompanying the foundation stone or premise of such a structure, the builder has in mind the last stone, perhaps the key-stone, that is to be conspicuous in the completed creation. And the builder builds to suit the needs lying between the foundation and the very pinnacle of the structure. With the goal clearly defined in mind, it is possible to select from the memory of facts and ideas just such elements of fabrication as are needed to reach such a goal. This applies to the average imagery of man's mind.

But such an explanation of the process of imagination, so-called, eliminates all appreciation of the following facts: First, all the deductive and inductive reasoning of man's brain must result from a careful analysis of those experiences which he has consciously realized through participation in them, through reading of them or through hearing or seeing them. Secondly, facts drawn from the memory of man must be facts or ideas which entered the memory during a period of realization of them *or otherwise*.

How, then, thought Rollins, can all that has occurred since last evening be attributed to my *imagination*? There is, truly enough, but *one limitation* to the activities and products of imagination; all must be centered around and within the limits of my knowledge. I cannot imagine a fact that I do not other wise know or that is not a part of or related to some other fact or facts which I know. Nor, in the process of adding to my structure of imagination, can I take from the memory such elements as are not there. Each point, each element, each feature, in even the wildest and most weird fabrication of imagination, must be the result of deductive or inductive reasoning, based on a premise within my conscious knowledge.

Whence came, then, the facts contained in what I have seen and experienced within the past twenty-four hours? Whether the facts of my experiences last night are actualities of life or not, they are, nevertheless, *facts* in my mind now—and where did they come from? I never knew before, never heard or read before, that the soul of the unborn child hovered near the expectant mother and passed into the body of the' child with its first breath. Not only did I never hear, nor read, nor understand that before, but it is contrary to what I have hitherto believed, contrary to what I should have argued, contrary to what I have been taught, and what I know so many believe and teach. Twenty-four hours ago, I should have said emphatically and without tolerance for debate, that the Soul of an *unborn child* enters its body some time prior to its birth—perhaps months before. Our civil, criminal and moral laws are based upon that belief. Great fortunes have been granted to heirs on the basis of that principle. Learned judges, eminent jurists, undoubted authorities have argued in courts, claiming that after a certain period of gestation, the unborn child has a Soul, and is therefore an entity, a personality, separate and distinct from the mother, and could, therefore, be a potential heir to a fortune, even before birth. Men have gone to the gallows in the past for having destroyed or caused to be destroyed the Soul, or rather its functioning, by the destruction of 'the body of an unborn child. Yet, from what I have learned, and what I must confess seems to be the most logical and correct statement of the matter, the unborn child up to the moment of the first breath of life, is living on the vitality, the soul-essence of the "borrowed blood" of the mother, as the words of the Soul-voice explained to me. The severance of the umbilical cord is the establishment of the child's independent existence and the taking of the first breath of life is the establishment of the independent and separate vitalizing of its blood; and this must necessarily precede the severance of the two bodies. It is most logical, reasonable, and natural from a scientific point of view. It explains the statement made by the Soul-voice and which I have often read in the Bible without realizing its import: *God breathed into man the breath of life and man became a living soul.*

But, how could such a startling, revolutionary, illuminating fact come to my brain, my memory or my consciousness through imagination?

If but one illuminating fact can thus come through imagination, then a complete education, a veritable encyclopedia of facts, a mine of exact knowledge, might be possessed by any one through simply day-dreaming and imagining.

And, there was the scene of my birth! The little room, the suffering woman, the physician, the nurse, the kind and gentle husband, the cradle, the voice of my father saying: "Baby man, *we* will bless you as God has done, and your name will be—William Howard Rollins!" I do not recall, in fact, I am sure of this, quite positive, that my mother has never told me a word about that day, for it is a sad event in her life; for on that day she lost the man who loved her, and I lost the only person whose absence has been my one great regret. How could such facts as constitute the picture of that room and the incidents of that day, come from either imagination or my memory, if I had never known them? But—were they facts in actuality? A h! here was a test. Mother—she could verify them! She alone could prove, now, whether I have created something from imagination, fancy or hope, or whether I have been informed in some strange way, of what occurred when I could not have realized it myself.

Forgetting the request that the wished to be alone, and never realizing how peculiar his inquiry might seem to the little gray woman, he rushed from his study, and calling to the sewing room at the head of the stairway, said:

"Mother, mother, oh, mother! Can you come down to the study for a little while, *now*?"

"There is something I would like to talk about." There was a tenseness in his voice, an excited vibration, that plainly told of a new-found interest, an important subject of immediate attention. His mother knew well that tenseness and she knew it would brook no delay, and so she came at once. He met her at the door, and fondly, more kindly it seemed than ever, put his strong arm around her waist and together they passed into the study. He placed her in the chair he had just occupied so that she might look right into the dancing flames of the gas logs, while he squatted down easily, like a big boy, on the stool in front of her.

"Mother," he began slowly, "I want to ask a few, eh, rather personal questions. You see, that is you know, it is—it is my birthday today. Yes, it is my forty-second birthday. I was born January 1st, 1875. That's right, isn't it?"

"Why yes, William," she replied, glancing at his big, questioning eyes with a peculiar query forming in her own mind. "But why talk of it now? Why not forget—that is, forget how *old* you are, and think only of the many, man)' more years that are to come. Why—I believe I have forgotten to congratulate you today! You were so anxious to be alone this morning, I hardly had an opportunity to say even *good morning*. My boy has grown so big these last twenty or thirty years I realize more and more what a great man has come from the But come, *little man* that God once gave me when—. William, let us talk about the future. Are you ever going to take a nice long vacation? Would it not be wonderful at this time of the year to spend a few weeks at Palm Beach? We, that is, you, certainly need a little change and rest, and some times, sometimes I feel so tired, too. You know I am getting old, William, very old and—But there, I did not want to ask favors of you on your birthday. It is you who should ask them *today*."

"That's just it, mother, I am asking a favor now. I want just a little talk with you about my birthday—my *first* birthday. You say I should not talk about how old I am, and you, with all the pretty color of a young girl in your cheeks, with the twinkle in your eyes of a twenty-year-old sweetheart—you talk of being old. But, to come back to my question—tell me, mother, at what hour was I born if you can remember?—No, I did not mean that—of course you can remember, that is not so long ago—and who was there? Where was the room? Or rather, in which room of the house was I born? You know what I mean, tell me all about that day, from the hour of *sunrise* to the hour of—the hour when father gave me my name!"

"Your father!" The little woman gave a startled gasp. For a second she looked sharply into the eyes of the big boy—and then into the flames of the fire. A sigh escaped her lips, her hands twitched and slowly she let her right hand slip into the big firm left hand of the man-boy she idolized. Tears came into her eyes and she did not try to stay them.

Rollins looked for a moment and then dropped his eyes to the floor. Motherhood, suffering, the valley of death—and now *recollection!* That was all that passed through his mind, and he was deeply, sympathetically affected. What cruelty to have the sweet little woman live through it again!

After a pause of several minutes, wherein the inner sobs of a bleeding heart gave pulsations even to the vibrations of the room—a pause in which mother and son were again wrapped in the soul-auras of each other through divine attunement, he spoke.

“Pardon me, mother, I did not mean to bring back to your mind the sorrows and pains of that day. I know what it means—that is, I believe I understand what a supreme sacrifice of life’s forces you must have made. Come, tell me only of the happiness of that day!”

“My boy, my boy,” sobbed the little woman, now turning in her chair so that she could look down on the head and shoulders of the man who slowly buried his head in her lap, and finding work for her nervous fingers in the smoothing of his hair. “There was no sorrow that day, all was joy, all was happiness. The next day brought its sadness—and widow hood, for I did not know of his—his going—until the next day—I was too weak to be told at once. But your birthday was the most wonderful day to me, and my tears, boy-man of mine, are tears of joy—just the duplicate of the tears that I shed so silently and quietly as I fell asleep when I heard your first cries and knew that you *lived*. I was so fearful that you might not be—that you might not live—and that you might not be a big, strong boy to become a big, big man, like—*your* father. But your cries, your cries of life, and the words of the nurse—‘it is a boy’—these gave me unbounded joy. My prayers were answered and oh! how I prayed that day, from sunrise to the hour of peace in the arms of sleep—that my baby might live, that *the Soul of God might be in his little body*.

“There is not much to tell of the events of that day, but there is so much to tell in one other regard, that I feel I must tell you now. Long have I tried to say nothing; long have I wanted to keep this little day holy to myself—the day of your birth. But you would know some day—some day when I close my eyes in sleep eternal, and it may be

better to speak now. There—keep your head in my lap, my man, and—let me look off into space as I speak. I cannot now *look into your eyes* and tell you—with shame—the story I must tell; but you shall know, and God help me to tell you in some way, in some words, that will beg, as I cannot beg, for your forgiveness.

“Your father and I knew each other as playmates at school. We lived in the little town of Alberta, Minnesota, not far from Morris, which was the county seat of Stevens County. Our parents were typical farmers of that day, fair-to-do, and each of us was the only child. We attended school only three days each week, sharing our teacher with the school at Donnelly, many miles north, the other three days. This gave us much opportunity to romp the fields, enter into the games and pastimes of the other children and—become sweethearts. When I became sixteen I went to the town of Morris, which always seemed like going to a big city, and there I attended what would be called a high school today. But your father, a robust boy of eighteen, went to Benson, in Swift County, adjoining, to study law with an uncle who had a large practice there, it also being a county seat. Letters passed between us that grew more fervent, perhaps because of the separation, and it was not long before I was considered as engaged to the young law student. His future seemed bright, as it was considered in those days when good lawyers with connections with established practices were few, and I remember that our school-day friends spoke of the happy lot I was to have. It was not just a school-boy and school-girl love affair, for, you see, we had grown up together and we seemed to be so much a part of each other.

“Then his father died. The boy had to return to the farm and look after his mother and the big lands left uncared for. Once again, we were together for several weeks, and his possible return to the town of Benson made me unhappy. I had left Morris, having completed a two years’ course of study, and he had only reached the point where he could go into court and take care of some minor cases. I was then eighteen and he was twenty. We made our plans—that some day we would be married and live in the house his father had left to him, and his dear, sweet mother should live with us. My father had always wanted to go to Duluth and there associate with a brother who was

in the produce business—'food stocks' it was called then—and I knew that it was just little me that kept him from selling the farm and going on East with mother. And so, when he learned that there was a possibility of my marriage with the son of his old neighbor and that We would live in that house, that I would be well cared for, even if the boy never "*mounted to much as a lawyer*," he began his preparations for selling and moving.

"I remember how strange I felt when men came to estimate the value of the old farm and homestead, and then when buyers came, one by one making their offers. Father would explain to them—sometimes in my hearing—how the 'little gal' was going to be married soon and would live over 'yonder' in the home of old Walt Rollins. It seemed day by day that, as things were packed up and certain things were set aside for me, I was being forced out of my home and literally given away to the boy who had not even then *asked me to marry him*. That we would marry, some day, seemed so well understood between us, we never made any reference to it. But this indefinite understanding on our parts was translated into a very definite matter by our parents and friends.

"My boy, my sweetheart, seemed to realize that it was near time to take the matter into his own hands, and I recall the day that the big *mahogany bed-set* was moved from mother's room over to the Rollins' home to be *our set*; I was embarrassed to find how intimately we were being placed in the arrangement of the new room and with never a word from my boy as to when we were to be married.

"Finally my father and mother moved away—went on their long planned journey—and bid me good-by. I was well established in the Rollins home, had the big room with the mahogany bed-set all to myself, and dear old Mrs. Rollins acting as mother to me.

"My sweetheart was still anxious to return to his study of law, and when he learned that his cousin Harold, who lived in the East somewhere, was to come West, he wrote for him to visit *our* home. Harold, much to my disappointment, proved to be a fine, manly fellow of twenty-two, far from the weak, characterless type we had been led to believe lived in the big Eastern cities. He was well educated, polished, athletic in action, religiously inclined, and always gentlemanly. I did not

know it then—for he would have never told—but he took a fancy to me and it was that which made him prolong his visit and never reach farther West as he had planned.

“As soon as Harold had been with us several weeks and indicated that for *some reason* he thought he would stay perhaps a year, my sweetheart decided that, since Harold could look after the farm, he might Well return to Benson and continue his studies at law. I protested in a way, for many weeks before he left, but he had been going ahead with some studies at home, preparing for several months to take up a definite work when he reached there. All this time he said nothing more about our marriage and you know, in those days, we were taught that it was not proper for a girl to appear even anxious to marry. Therefore, the anxiety that came to me at times never expressed itself.

“We grew more and more intimate, my sweetheart boy and I, as the days passed. Harold, the cousin, could not help seeing that we were deeply in love. To me, my boy personified all that love meant to a woman. He was an idol, a hero, a master, in my heart and mind. And then came the last week. Often we sat in the twilight, his arms about me, my head resting against his shoulder. He would tell me of his love and how happy we would be in the future. Oh ! it was the old sweet story over and over that every girl loves to hear. It was the first week in May, the spring-time sun, the blossoming of the flowers, the green trees and lawns so fresh with new life, the singing of the birds, the exotic perfume, the setting sun, then the moon—all this seemed to add to the joy, and the alluring power that my boy sweetheart held over me.

“And—just the night before he left—thrilled with the warmth of his kisses, saddened by the sorrow of the morrow’s separation, overpowered by the protestations of his love and the beauty of the tie that binds, we cast our souls into the flames of sin—and I was his bride. It was not the way I understood, but it made him *mine*, and for one brief hour he was mine—all *mine*, united to me by a marriage of all the passions and emotions, all the forces of the universe. I had looked forward to another kind of marriage, but this—this must suffice for the present. He would return soon, and then—then the other marriage. We agreed to keep our secret. He would return in the summer vacation

days when even the country courts were closed for a while—then the day of our marriage. Oh! how well I remember those plans, for I lived over them hour after hour during his absence.

“One week later he wrote me that an uncle in Duluth wanted him to go there, as there was an excellent opportunity for his law practice after he should have completed his studies; and he could just as easily complete them there, easier in fact than he could in Benson. I remember feeling that fact alone atoned for the greater separation that would come between us—he would more quickly and with greater efficiency complete his studies *there*.

“A few days later there came another letter, hurriedly written, saying he was leaving Benson that very hour. He would write to me from Duluth. I should not forget him, and he would not forget me for a single moment; and some day soon he would come back. Come back to old Alberta, the town of his boyhood, *the home of his bride*. And—that was the last that was ever heard of him. Weeks passed and I wrote to him in care of his uncle. His uncle wrote to me that they were still waiting his coming. Harold went to Benson and found that he had gone the day he wrote his last letter to me. There was no trace of him. Telephones and telegraphs were not available in those days as they are now, yet even such things might not have located him. Remember this was in 1874. Many things could have happened to him, the most logical being the one we all agreed upon. He had probably changed cars at some station and listening to the pleadings or the enticing expectations of those moving westward where fortunes were to be made, joined with them. Harold agreed in this, for it was the allurements of the *Golden West*, the promise of fortune and the hope of great, quick wealth, that had started him westward.

“The day came when I discovered that not long could I keep from some the knowledge that something more than wife hood was to be my lot. I had never thought of this—sublime innocence and *ignorance* was a girl’s charm in those days, *and likewise her ruin in many cases*. Old Mrs. Rollins, heartbroken, but brave and sympathetic, answered my many questions and revealed the law to me. Never did girl need—and have—

so wonderful a friend as that dear, sweet mother. My own parents were never told; and only this kind mother and myself knew, at first. Then Harold knew! I was startled when I discovered that the knew. I realized at once that his many kind attentions, his extreme consideration, had been for the purpose of letting me know, intuitively, that the knew. And, as the days and weeks passed, and the warm months of July and August passed, he and I spent many hours together walking and talking and reading the most sublime and inspiring literature from the pen of man and the mind of God. I knew he loved me—intuition had told me that when it would not tell me what else he knew. And, knowing, he loved me; knowing my sin, my error, my failing, he loved and respected me. I remember that one Sunday, when modesty kept me from going to church with him as I had been doing, he read to me from the Bible, and he read so slowly, so impressively, the verses: ‘Learn to do well, seek judgment, relieve the oppressed, judge the fatherless, plead for the widow. Come now, let us reason together, saith the Lord: though your sins be as scarlet, they shall be as white as snow; though they be red like crimson, they shall be as wool.’

“As Fall came, and then Winter, Harold pleaded with me to marry him. He knew I loved the one who was gone, still idolized him and forgave him for the error of his life; for I wanted to believe that the would have come back to me had not something terrible happened to prevent. But, my child must have a name! Oh, how those words rang in my ears! How often, as a child, I had heard the stinging rebuke of men and women, commenting on the life of some unfortunate child—’ it has no name; it was born in shame and sin!’ I wanted my child to be great and good and wonderful, like his father. And so it came about that I married Harold.

“We were married just before Christmas and only the pastor of the little church knew our secret and he prayed with us and spoke of the noble love Harold had. As the honor of his act, the sacrifice he was making, dawned on me after that day, I came to love him for the soul that shone through his body. It was like a *light that shines in the valley of shadows*.

“At last came the day—really unexpected—when the greatest lesson of life was to be learned. January 1st, 1875! Early in the morning I called to dear old Mrs. Rollins for advice. She called Harold and he drove through the cold of the bitter morning to get the doctor and a nurse. They returned at nearly six. It was still dark and I was—well, I have forgotten the suffering now. I only know that as the hours came—and I counted the minutes in suspense—I thought of but one thing: *will my baby live?* I wanted it to be a little man and look like his father. I prayed for this, I cried and sobbed, in fear that it might not be so. Some are born dead. I had been warned not to worry’ about the absent one, lest it affect the soul of the unborn child; but the fear came now, in the hours, the last hours, of waiting.

“As the sun rose in the sky and penetrated through the fogs and the winter clouds, I felt that the last hours of my life had come. I became exhausted and depressed. I remember lying upon the bed in the corner of the room and looking at the empty cradle near by and wondering if it would ever be other wise. I closed my eyes and prayed, prayed as Harold had taught me to pray. And as I prayed there seemed to be the voice of an angel whispering comfort and encouragement to me. I keenly felt the very *Soul of God* in my presence and knew then that God was standing guardian over the birth of my little baby. Ateach cry to heaven for—I knew not what—I felt the magnetic, soothing, inspiring presence of something around me that appeared several times to be bathed in radiant white light. It was as though the Light of Heaven opened at times and shone upon me to strengthen me, to tell me that all would be well, that my baby would be born alive—that *life was there*, waiting, waiting, waiting with me.”

Rollins felt his mother sobbing. Her hands trembled now on his head, her whole body vibrating with the emotion that was overwhelming her. The last words she spoke were said slowly and softly, tears and sobs breaking the even rhythm of her voice. Yet, he would not look up into her eyes—the time had not yet come for that. There was a minute coming, he felt sure, when she would need his help—need what, even now, he was ready to give.

“And then Harold came to me. He had attended to some things at the barn and in the kitchen. He was as anxious over my safety and my desires as though it—was—the—coming—of—*his* child. With a tenderness that only a woman can appreciate at such times, and with a love that was holy and good, abundant and so self-sacrificing, he did all he could. He kissed me, smoothed my disarranged hair, held my hand and told me in every way possible that he was with me in spirit and soul as well as body.

“I do not remember much more. Nervously I awaited the words of the nurse. ‘It is a boy—a fine boy.’ Mrs. Rollins, too, was relieved at these words, for she stood by and was so sympathetic. Then I heard Harold talking to the baby in the cradle. They say he kissed the little hands, and then said—oh! I recall easily the words—’Baby man, we will bless you as God has done, and your name will be, William Howard Rollins.’ That was your father’s name, my boy; and Harold meant that we, he and I, would always bless you and reverence you, even though the world might some day learn your mother’s shame and dishonor you. And, in giving you your father’s name, Harold meant to make me happy—to give back to me again my William—my lost William. And—I have had you, boy-man, ever since, for God was good to me and gave me the soul of my love. Can *you* forgive me, my boy? Can you ever, ever look at me again and say that you understand, you know, you forgive, and that you love your dear old mother?”

Slowly Rollins rose to his feet. His mother was slipping toward the floor in exhaustion. Quickly he took her into his arms and kissed the tear-stained cheeks, then the sobbing lips.

“Mother—I—why I—I am not the one to forgive or refuse to forgive. God made mothers like you, God gave you the Soul you have, and God gave me the Soul I have, and God united us that day in a way that not even you understand. Your love was good, your faith, your trust—all *that* was as pure as snow. There are no crimson spots to wipe away—nothing to forgive. God bless you, and let us forget that any man ever thought your love a sin or your act a shame. You have proven both to have been God’s own decree. But, tell me, mother, where did Harold go?”

The mother sat down again, reassured, comforted, but still unable to look at her boy, her man, in the eyes. "That day he was hurt and then died,, through a runaway of the horses that had earlier taken him to get the physician. As I said, I never knew until the next day what had happened on the *yesterday*. Sometimes the delaying of sad news of a *yesterday* until tomorrow is a blessing. It was so in my case; I hope it will be so in this case."

"And, mother, just one more point to complete the picture of that memorable day. Was I covered in that cradle with a hand-crocheted blanket that *you* had made?"

Startled, the little trembling woman arose. Glancing at him inquiringly, she said:

"William, have you found *even* the one little secret that I wanted to keep? Oh, I suppose it was futile, but I have tried all these years to keep that a way—and preserve it. Yet, somehow, you must have found it and have discovered it. Yes, during those days of waiting I had made a little blanket, knowing that winter was coming and the little baby would need every bit of warm th possible in the old house. And with each stitch I worked into that blanket thoughts of love for my missing William. Harold knew this too, and never said anything but tender references to how my little baby would be wrapped in thoughts of purest love. I have kept that blanket all these years, have often kissed it and hugged it while the tears came to my eyes. It is all—all that I have saved from those days—those days—of saddest love. And now you know all, William. Take me to my room and let me sleep—the sleep of peace at last; for I need no longer hide my secret in my heart—or hide the blanket of love froMyour eyes."

Chapter V

TRANSITION

A GAIN ROLLINS RETURNED to his study. It was near noon. In another hour lunch would be served, yet he was sure that he would not eat, could not eat, in the mental attitude he was in just now. Seating himself in the easy chair again, he was ready to speculate once more on the things that were rapidly filling his life with new interest.

“So William Rollins was my father,” he mused half aloud, “and Harold Rollins was his cousin, my *stepfather*. My mother married this Harold Rollins, I was born a Rollins—I am a Rollins by blood and by birth. The world can say nothing of that. It is a perfect title, a perfect chain. It is only the material side of the whole affair, after all, and I am more interested in the other. Poor little woman, how she *did* suffer! And she does not know the *facts* as I know them. Facts? Yes, the actual facts, for has not the story of my mother verified the story, the vision, I heard and saw—there—last night? Imagination? A fabric of the mind? Then, I, the self within me, the Soul of that little woman, the experiences of her life, the suffering she bore—the tears she shed—all imagination then, too? Impossible!”

And Rollins was right. The mother’s story, even in the minute details that might easily have been forgotten or even misunderstood by the man were identical. No imagining of the mind could create so correct a reflection of the actual events of the past, and no child’s memory could remember the events of its early life, or even the stories that it might have heard. Yet, was *that* impossible? Was the child-memory locked against the storing and preserving of tales it might acquire in babyhood, and release again as a fantasm, in adulthood?

How could he be sure that at no time in his childhood—in years when he was a boy of ten or even fifteen—he had not overheard his mother telling someone about the events of that day? While forgotten now so far as objective recollection was concerned, still the story may have recorded itself for preservation. It may have been entered on—Why the pages of the Diary of the Past! The DIARY! He had forgotten about it. Since last evening, he had turned backward to two adjoining days of the past in the diary of—memory perhaps? That was a simple answer.

He remembered reading somewhere—or perhaps he had been told by some one—that when a person is in the deeper stages of hypnosis, or a similar subjective condition, susceptible to suggestion—one can be made easily to remember—or recall from the archives of the memory—the events and incidents of certain days of the past. Such experiments often and scientifically made, proved the existence of a perfect storehouse of memories, impressions. Only the necessary condition, the appropriate causation, the unhampered opportunity, were needed to permit this storehouse, this perfect and indelible record of all realizations, to marshal themselves out to the borderline of consciousness and be realized again. Concentration of all the active faculties, incentive, suggestion, relaxation, hypersensitiveness to impressions—these conditions were necessary and—they were controlling Rollins' mind and physical condition at the time he had had his experiences. Scientifically, his experiences were psychological ones, hallucinations, illusions, fantasm of the memory, almost anything. But to Rollins, they were realities that required no actualities to make them of value to him. No, the scientific analysis and explanations of them would not suffice. There was something more than mere *mentalism* in all this.

It has been said that there is a key to the past, a link that unites the present with the past, and that with this key one might easily lift the veil to enter the forbidden chamber and read the records there. Delving, then, into the past would be like delving into the recesses of the memory for a forgotten fact; all one needs is the associated fact, as a key, and with this the forgotten fact is brought to light. If all that came to Rollins in the past twenty-four hours came as an insight into

the past, what was the link? What was the key? He asked the questions over and over, and then, mentally analyzed how it all began. At once he thought of the diary, turning the pages of yesterdays in the yesteryears of long ago. The Diary! Again its very sound, its entity as a *thing*, impressed him. It seemed like a thing alive! And did not Casaubon, the great French theologian of the 16th century, make his diary, the famed *Ephemerides*, a thing that lived for centuries?

To the diary must Rollins return. He felt it—it was impelling. Once in his hand, it seemed to vibrate life, animation, exhilaration, *creative powers*. Truly it was *attuned* with the unknown, yet it was a mere book; and on not one page was there a word which could be interpreted as referring, in the remotest sense, to what had been aroused in the atmosphere of that room.

With the closed book in his hand, merely to satisfy the idea that there was some key required, he leaned back again into relaxation in the chair of contemplation, and waited. But one thought occupied his mind. "I will turn back the pages of the diary of the past, to the yesterday of the yesterlife!" He re-expressed the thought audibly—as a command unto himself.

How many minutes passed while Rollins sat there with his eyes closed is not known, but he was drawn from the silence of his concentration by hearing a peculiar humming sound through out the room. Opening his eyes he saw nothing at first, but slowly there formed a great violet haze in the corner of his room where but a single chair stood in darkness. Gradually the haze formed itself into a mass near the floor, and then elongated into a form that eventually—perhaps after five minutes of time—formed itself into a couch or couch-bed. It was covered with blankets and sheets and there was an old man lying under the covers with just the head and one arm showing.

More of the picture—for picture it seemed—began to form now, as Rollins stared in deep concentration, even breathing slowly lest the spell be broken. At the side of the couch-bed sat another old man. His hand was holding the hand of the other—the man who was lying there—ill. It was another scene of sorrow. The very atmosphere of the picture breathed again pain and sadness. The arm of the sick man

was pale and thin. It hung almost lifeless. The man who sat at the side of the bed was intent in his study of the older man's face. A crucial moment seemed to be at hand.

The violet aura or haze surrounded the whole picture, and divided the picture from the rest of Rollins' study in which it was being enacted. The wall behind the couch seemed to be of a different color and nature than that of the study, and seemed to be farther away.

Rollins watched and waited for developments, but again he experienced the peculiar sensation of his consciousness leaving his body and being over there, somewhere in the picture itself. Now he was completely there. He could feel the difference of the atmosphere; the room he was now in was cold. He seemed to be at the side—no, just over and alongside—of the man on the couch. He was there unseen.

With the new position of his consciousness there came a clearer consciousness of what was transpiring. The old man was ill—was, in fact, *dying*. It was merely a matter of time, perhaps minutes, when he would breathe his last breath. But how? Why? Where? These questions must be answered first. And as each question came to mind there came the answer, not in words, but in that inner understanding that was so strange to him—to his ordinary understanding; but it did not perplex him now.

So far as Rollins could see, there were many odd things in the corner of the room in which the couch and the men were located. But most prominent were the many paintings framed and unframed, and some even unfinished. The room seemed to be empty of those things so familiar when a woman shares the home. The untidiness, the signs of dust and neglect indicated that the impressions that the old man had been ill very long, and alone, were correct. The other man was—a physician. He was in a hopeless attitude, but had just administered a potion which would prolong life. The old man was struggling, inwardly; for at times he gasped and after each gasp a little color would come to the cheeks.

Desiring to know more of the story, Rollins, or rather the consciousness of Rollins, leaned over the body of the sick man, and hovered there a few minutes. The old man gasped again, and opening his eyes said falteringly:

“See—see! There—just above me—my Soul. It is leaving me—it wants to go, it is hovering there waiting, waiting, waiting.” The words died out in weakness. But they were not the words of an American, they were not English—they were French. But the consciousness of Rollins understood.

As the import of the man’s exclamation dawned upon Rollins he was startled. Did it mean that the, Rollins, was witnessing his own Soul in transition from another body? What else could these words mean?

The thought seemed to be the result of the fact, for at once the consciousness of Rollins—the mind, the intellect—answered, “I am that Soul!”

Then came the sensation of attunement, a peculiar connection of some kind, with the man’s body. Rollins felt the weakness the old man was feeling. He felt a dry parched mouth, a desire for water, and as he realized this, the old man lifted his hand and said: “Water, water, please—some water.” The physician turned and picked up a wooden cup and lifted the old man partially upright while he put the cup to his lips. Rollins could feel the cooling drink go down his throat. Then, the ease of temperature manifested itself and Rollins noticed for the first time that the was warm. The old man closed his eyes and sank into relaxation and as he did so, the consciousness of Rollins seemed to become lighter and to almost float in space above the couch.

Suddenly the cry came again for more water. This time the physician put some powder into the water and gave it to the man to drink. Immediately Rollins tasted the element in the water, but it was cooling and soothing.

In a moment or two a peculiar sensation came over the consciousness of both, the old man and Rollins. The old man began to quiver and cried: “No, no more, I want to go on, I do not want to stay. Why did

you give me that again? I was eased, I saw that I was going and was happy.” To Rollins the effect of the powder was that of making his consciousness heavy, thickening it, it seemed, and drawing it down, and down, and down into the body of the old man. It pulled, it strained, it stressed.

The consciousness did not want to go, the body of the man did not want to hold it—but something, fiery, strong, gross, *unnatural*, was pulling the two together. It was uncomfortable. The old man wept in pain. The physician held his hand and watched. The consciousness of Rollins could stand the situation no longer. It would free itself from this bondage. It grew stronger, it grew lighter, it rose slightly from its close position to the body. Its sense became more keen, it could feel its own entity. It seemed to be a living personality now, almost independent of the body there—but connected by a mere haze—a violet aura. Then it spoke, the voice coming from the very density of the consciousness:

“I will be free! I am the Master of my destiny while here, and the decree shall be fulfilled and the hand of man shall not alter or modify that which is written in the Great Book. It is my time to pass on to the Kingdom of Light and be illumined by the Greater Light. Long has this body served me well for the work I came to do—the work decreed for me when into it I came. But now that body can no longer stand the power of the Light within, it can no longer serve without hindrance, work without breaking down, assist with efficiency, the mission of my time. Your poisons and your drugs are of the stuff the body is made of—the dust of the ground; and they cannot do more than strangle the mind, paralyze the senses and hold fast to that which is better gone. Peace should come to the old body there which knows only what I know, which suffers only what I suffer, which rejoices when I rejoice. For, it has no consciousness of its own. Its mind is my mind, its Light is my Light, its Life is my life. It is nothing of itself. It wants nothing, can have nothing. Away with it, for I want it not, and I AM ALL THERE IS TO MAN, and I have *life eternal!*”

From the old man there came a gasp—a sudden jerking of the body, a tenseness that made the body rigid, and then a slow relaxation which left the body limp. And, as the relaxation came, there was a slow exhalation of all the air in the cells of the lungs—and the Soul that hovered above, united to the body by only the aura, slowly floated off into space and illumined the darkened walls as it passed by. Reaching the upper part of the room the soul-consciousness spoke gently and sweetly: “Peace, peace unto all, for I am risen! From the tomb I have come, resurrected. Long did I suffer and try to make my escape that I might be free to give greater Light unto the world, but man in his ignorance and vanity held me fast, crucified upon the Cross of false realities. Man’s body is the Cross upon which all Souls are crucified because man makes it so. *On that cross have I been like a rose held fast by the entwining stems and the thorns.* The tears were the dew drops that came from the petals and left the perfume of immortality to radiate into the aura of the Soul. But I am free, free to return to the Kingdom of Light, where Souls unite in sacred communion and abide in the mansions of the Mind of God.”

As the violet haze passed on and faded from view, the couch and the man sank into darkness as behind a veil, and Rollins, the man, came slowly back to self-consciousness again. Rubbing his eyes, tired from the long strain of concentration, he straightened his tall body, stretched out his arms horizontally at each side to take a deep breath, when again the words rang in his ears: “On that cross have I been like a rose.” Quickly he dropped his arms as he realized that his posture was that of a cross—The CROSS. He dropped back into his chair, and for the first time since childhood this great, strong man wept. He had witnessed the passing of his Soul from the body in its previous life—the yesterlife of another century.

Chapter VI

RESURRECTION

AS TIME, PLACE and circumstances dawned upon Rollins' consciousness he found himself staring at the old painting, the mysterious landscape with the incomplete name of *Raymond*. It seemed older now, and it breathed an atmosphere of some incident of life. Did his memory recall the scene? He was not sure. And, as he studied the details of the picture, each growing more vibrant with life until it was as though he were gazing through a window out upon some foreign valley with its purple-tinted hills, his eyes wandered to the corner where the large R of Raymond was plainly visible, even at the distance he was from it and in the soft light of his lamp. Then he was startled. He had seen that R, with its peculiar, bold formation, before. Truly ; and he had seen similar pictures. The old room! The finished and unfinished paintings on the walls and standing about. Some were signed—and the name on them was RAYMOND. There was no other name after it, but there had been a mark. *Raymond* and a *symbol*. The symbol was faint on the painting now upon his wall, but its faintness had led him, and others, to believe that it was the beginning of another name and they had sought in vain for that other name.

Jumping from the chair like one suddenly possessed of a key to a great secret, he removed the painting from the wall, and with the aid of a magnifying glass, one that had been So used many times, he studied the signature again. There was just a little space after the *d* of Raymond and then there was a mark, or possibly two marks, that suggested the letter V, the beginning of the letter W, or possibly the upper part of the letter Y, or, perhaps, the last part of the letter N or the center of the

letter M. Having always believed that these indistinct marks were the beginning of a second name, he traced out certain other faint brush strokes as being part of the faded name. But now he saw that this was the work of the imagination, for the brush strokes just as easily formed a part of the shrubbery in the foreground as imagination made them a part of the name. No, there was nothing truly definite except the first name and the two additional marks which now suggested a symbol.

Closing his eyes, lie tried to recall the paintings he had seen on the wall of the room behind the old man that had just passed to the beyond in his last strange scene. Distinctly he saw the name of Raymond on a number of them, and just as distinctly a mark of some kind following the name, but the nature of the mark he could not recall, could not clearly visualize. Why had he not paid more attention to these pictures? And, how came those pictures there? Was it an artist's studio he had seen? And was the old man an artist? Was he, this old man, Raymond? Was he? Then—.

One can easily appreciate the nervous tension, the holding of the breath, the rapid heart beat, the joy that overcame his emotions as he realized the fact that the, Rollins, in one incarnation of his Soul, had been *Raymond the artist*, whose one great painting now hung upon the wall, whose identity he and others had sought in vain. That was why Rollins had such a strange liking for nature's scenery, while out-door life otherwise did not appeal to him. That was why he loved landscape paintings. He was carrying over, *from a past life*, from the yesterdays of old, the likes and desires, the ideals and the standards of previous experiences.

Here was a subject for deep study. Could there be such a thing as heredity of *mind* as well as *blood*? Is the man of today the result physically of the blood of his forebears, and, mentally, of his own evolution? Is the body, after all, but a material cloak made of the blending of substances of many bodies, while the mind, the Soul, is of one continuous strain of divine essence?

Hanging the picture on the wall almost unconsciously, lost in the wonder of the abstract problem that now occupied his reasoning, he walked to the secluded bookcases and after unlocking one section, he

took from it a book entitled "Heredity and Its Laws." Sitting down again he turned page after page seeking for some chapter heading, some caption, some phrase which might throw light upon this new idea of soul-rebirth. But he was disappointed. He was about to look, almost hopelessly, in the Encyclopedia, when the chimes in the hallway announced that lunch was ready.

It was a holiday and courtesy demanded that this day he should show consideration to his mother and not deprive her of his company all day. Surely after *all this* his mother and he ought to find greater joy in their companionship. So, to the dining room Rollins wended his way, determined to submit to her his newest problem.

After lunch had been partially served the discussion began. It would help to make their time of sitting together that much longer.

"Little mother, did you ever read or hear anything about the rebirth or shall I say, the reincarnation, of souls?" he began.

"Not a great deal, William !" she replied, plainly surprised at the question and more surprised at the trend of his thoughts. "You know the Bible speaks of several instances where the prophets were, seemingly, wise men who came back to earth to live again. But I presume that you refer to the teachings of some new school of philosophy. I have not studied them nor even read more than that there is some theory of reincarnation, as they call it."

"But, mother, from what you have read or heard, can you tell me *what* it is that reincarnates or is reborn? I realize that it is not the body, nor the blood, nor . . ."

"But you are mistaken, William, right at the start, or rather, information which you have in that regard is erroneous. From the little that I have heard, I believe it is claimed, and quite logically, that the Soul, being divine and immortal, is the part of man which is reborn in man. Upon this is the doctrine of reincarnation based. Of its principles I can say but little, but I stopped you in your statement because you were touching upon a subject in which I have interested myself very considerably. You remember giving me a book on heredity to read? In

it I found many interesting facts regarding eugenics and child-hygiene. That, you know, has always interested me, and I believe you can now associate my interest in that subject with—*your own birth*. I remember reading one time a book called ‘Being Well Born.’ It opened again the sad event of your birth and the chapters of my life in the past. But I found much satisfaction in some of the principles set forth and from that time on, I devoted my study hours to that subject and gave my spare time to helping the Civic Hygiene Board of this city. Do you know, William, that it has been found that the blood of one’s body is essentially reincarnated from generation to generation, as is claimed for the Soul? It was your statement that it is not the body, nor the blood, that reincarnates which made me interrupt you. I am quite sure you were in error.”

“This is intensely interesting, and I want to hear more about it. In fact, mother, it seems to me, I am in a new world these last twenty-four hours. How greatly I have neglected my reading, and how I have locked myself up in the business world and ignored the greater world of science, or at least, philosophy; for I do not suppose that the principles you are speaking of, or those which interest me in the Soul, are even honored by any attention on the part of cold science. You see, a business man gets into the habit of thinking the whole world consists of business. Every man and woman one meets must be in some business or else they belong to the other class—consumers, customers, or clients. A man is always a potential power in dollars and cents, or else he is nothing. A woman is always—well a mother, or a wife, or a sweetheart, or a plaything, with no place in *big* business and incompetent to assume such a place. The face of the earth is covered with either oil wells, mineral mines, coal mines and timber, rail roads or steamship lines. The sun shines to help salesmen make more calls, the rain falls to help the crops and prevent market losses. A day consists of one-sixth of a business week and time is governed by time-clocks and production-costs and payrolls. Sunday is a day for going over books and making a few personal calls at homes when it is difficult to meet men at business. Plays, theaters and places of amusement are for salesmen to take their prospective customers that they may bribe orders and win favors—and they help keep money in circulation. Churches are to ease the dissatisfaction of the laboring classes, make them feel joyous

with spiritual things when they have nothing of the material world, and promise them everything in the future if they remain good with nothing here. Marriage is sentimental foolishness with the young, and a *business deal*, a financial alliance, with the old. Children are elements of a big field of business—hats, shoes, clothes, books, toys and insurance policies. Life is a bridge of possibilities between the follies of youth and the imbecilities of old age. Love is a condition of the mind that helps business—watches, rings, more jewelry, clothes, fine stationery, books, candy and hundreds of other things which would not be made or sold otherwise. Death is a cheater or an easy way out, according to one's predicament at the time. Home is a business asset, counting more in a business man's rating on the market than in any other way. Mothers are a necessity and a dependable help in time of personal emergency. The past belongs to the failures in life, the present belongs to the successes and the future belongs to the dreamers; A newspaper is a press-agent of business and a tattle-teller of personal things. Bah! you know how many of my associates, and even myself, have looked upon life and all there is to it. You seem surprised at what I say, and yet, mother, you must have felt many times that that was how I looked upon all things. But I realize now that there is something even more interesting than the problems of production and selling, manufacturing and marketing, cost and profit, profit and loss. Maybe I have crossed the bridge between the follies of youth and the imbecilities of old age; perhaps I am on the brink of that last span of life. But this I know, I am more enthusiastic about the past and the future today than I have ever been.

"Men are always so self-centered. The average business man cares more about his personal ego, the self within and around him, than about the rest of the world. Yet, I see now, where I and others have been cheating ourselves in ignoring some of the facts of life in our desire to put the sun of the universe in our own individual solar plexuses.

"The average business man seeks power—dominating, increasing, unflinching power. But he has overlooked the one great source of power—knowledge of the real self and its possibilities. Every great or prominent man in the world today boasts of his ancestry, is proud of

the forebears who achieved, and he looks to their strength to help him dominate the world today. But he misses the greatest prop, the strongest foundation, in overlooking the ancestry of the mind that rules him—the mind which is his own and yet not his own. Every mighty factor in the big-business world today seeks to be well informed regarding every law of city, county, state and land that the may take advantage of any potent power therein. He seeks, through his hired advisors, to utilize every power that the courts and constitutions of business give him. He engages experts to keep him posted on the advances of scientific achievement, that the may utilize the power or privileges which science reveals. He looks for opportunities everywhere to make himself great, mighty, controlling, dominating, feared and—wealthy. But he overlooks the laws of nature and the wonderful possibilities of power that must be hidden in her processes and in her ways. I see the great mistake now. I am going to change my life—and before it is too late, I am going to make myself mighty with some knowledge that courts of law in man's land, bankruptcy proceedings, business failures and market quotations cannot take from me. That's my determination, and so now I want to hear more about the reincarnation of the blood."

"I am afraid," she began timidly, "that you are not using a term that science would accept, for science really has taken up this subject in a way that will be hard for me to explain. But the term *reincarnation* would be rejected by science. In its place the term *continuity of the germplasm* should be substituted.

"You see, William, for years many forms of insanity, such as *dementia praecox*, for instance, have been considered as traceable to hereditary traits or taints. Then, again, many mental habits, physical habits and general tendencies are also traced to the result of heredity and they are called *inherited characteristics*. Up to a few years ago, the principles of heredity were considered as theoretical, and science smiled at many of them. Now, recent discoveries or rather observations, reveal that the principles so long advanced are true and other principles not even suspected are also true.

"Man as a species of animal life is just the result of inheritance. Every trait of character, of mind and body, like the specie of his physical

being, come to him as an inheritance or because of his environment and education. The doctrine that ‘as man thinketh so is he’ applies only to those few traits classified as *acquired characteristics*; otherwise man is what his forbears have made him through their thinking, their living, their environment and their education. Every man is the sum total of his direct line of parentage and is himself adding to that sum for the next generation.

“It was believed at one time that the germplasm of both male and female parents were creations of the organism of the individual parent, and that each germplasm contained only the characteristics of the parent. Now it is known that the germplasm that enters into the formation of an embryo contains not only the characteristics of the parent, but also of the grand parents for many, many generations.”

“Why, mother, do you mean to say that the germplasm entering into each embryo was not a distinct and individualistic creation in the body of the parent? In other words, is the germplasm a continuous element or essence never losing its entity and individualistic nature from generation to generation?”

“Precisely, William. That is what is termed the *continuity of the germplasm*. This germplasm contains the elements of character and specie. It passes from generation to generation and gives from itself the necessary elements to reproduce its nature and characteristics but is never wholly lost in the process. Each generation of specie adds to it of its *acquired characteristics*, so that from generation to generation, it is always the sum of all that has passed before it. All this was made so plain and clear with diagrams and illustrations the other evening—Thursday evening—at the monthly meeting of the Civic Hygiene Board. The professor has been giving us a series of talks on the subject of heredity and we understand now the meaning of the admonition ‘unto the fourth and fifth generations’, and so on.

“You see, each cell of living matter utilized in the process of fertilization and development into the embryo first passes through a series of divisions so that the final cell of the female, called the ovum, and the final cell of the male, called the spermatozoon, is composed of certain portions of the original germplasm. In the nucleus of

the cell there are the hereditary elements called Chromosomes and these according to a definite law are numbered in each cell for specie, nature and condition. The remainder of the cell has its bearing upon the character of the embryo, of course, but it has to do more with the modifications that are to be made by each generation and are accumulated by each and passed along.”

“Does that mean?” he inquired after some thought, “that in my body, in my blood, tissue and bones, there is some of the identical elements that composed the blood, tissue and bones of my ancestors, my remotest ancestors?”

“Yes, in a direct line. And all your brothers, all your cousins, every one in this generation of your family, would have the same elements plus the modification resulting from marriage in the previous generation. Within your body, William, in the cells that will reproduce themselves and fertilize the ovum, there is chromatin substance, which becomes the essential Chromosomes, and this chromatin within the cells of your body is some of the identical chromatin that existed in the cells of your most remote grandfather and grandmother.”

“Then that means that instead of new Chromosomes being created by each generation, the Chromosomes simply duplicate themselves and continue to divide and divide until in the last generation, perhaps after a hundred generations, there is still some of the same Chromosomes?”

“Precisely. Yet, in dividing, these Chromosomes do not weaken in characteristics or essential nature. In each generation they divide many times and each divided segment grows to full size again, retaining its precise nature, ready to fertilize an ovum and within that ovum reproduce its nature again. This is what science has recently discovered and proven to be true. Remember, William, these Chromosomes of the cells, microscopically small as they are, contain the elements of every other cell that form the many kinds of cells in a matured body, plus characteristics of species, plus characteristics of appearance, even family resemblance, plus nature, plus mind, plus tendencies, plus everything that makes personality and individuality. That which makes you distinctly different from all other men, as well as that which makes you precisely like every other man, and that which makes you a child of

a certain line of ancestry—all this is contained in the Chromosomes of every one of the hundreds of cells that mature in the body for the purpose of reproduction.”

“That is astounding, Mother! Why, then, the blood in my body, the bones, the tissues and membranes of every organ and muscle and vessel, the cells of the hair, of the brain—all within and of me, is that of my fore-parents, *reborn*. I am not I, but all of my forefathers and fore-mothers united. They did not die, for, I am all of them reborn! What they cast off were dying cells while other cells of their bodies were perpetuated and lived and now are in me!”

“But that is merely an exaggerated and bombastic way to look at it. But you can safely say that you *are* what they *were*, plus what you have added by education and environment.”

“And,” he said rather slowly, “if all that is true—and I can not doubt it if science has found the law—I am—well, with a reincarnated soul.... a sort of dual person, after all, for, the flesh and bones and blood of my body are of the family of Rollins.... but the Soul and mind within me are.... that of Raymond.... and possibly others.”

“Why, what do you mean?” the mother asked, surprised.

“I cannot fully explain, not at this time. I must have a little more time to work it out, but a great light is dawning upon me and I think I see the scheme of the universe revealing itself to me as few have ever dreamed of it. I must learn more.... but how?”

“I cannot help you in your strange thinking, William. I am quite satisfied with what the Professor told us. We are nothing more or less than what our fore-parents made us—plus environment and education.”

“No, no, mother. You are wrong. All that you have said may be true, and I believe every word of it. It cannot be otherwise. I see that plainly. But, all you have referred to, all that science has discovered, relates to the physical and worldly man, the material and brain part of man. There is—the Soul—the memory—the inner personality. That cannot be transmitted by chemical or physical substance, and that is

what I am interested in now. Pardon me, mother. I must return to my study. I must finish my little researches today. Tomorrow the business world begins again and I am going to enter it with a different spirit. This earth—this world is now *my home*, and men and women are now my kin—my brethren. I will deal with them as such—even to the most humble in my employ. I have a work to do—a message to bring to the cold world of business. Perhaps I have found my *mission*, the Light that must shine through me.”

And off he went to his study, moved inwardly by the gradual realization of the touch of divine inspiration. He was no longer William Howard Rollins, the business man, but a Light on earth, an incarnated Soul, an earthly segment of the Divine with an earthly mission. His mother watched him leave her presence in thought and knew that it was a changed man who dwelt in her house; and somehow, strange though it seemed, she looked upon his moving figure with reverence as though through the room and out into the halls there moved silently the figure of the Master Jesus who had come to break bread with her and go on to the work that must be done.

God’s presence Was there; she felt it, knew it. But how? How came this through a man who had never before indicated even the slightest interest in Church, the Bible, or God? A miracle had been wrought since yesterday. Today was the anniversary of his birth ; it was more than this—it was the day of his rebirth, she thought. It was the day of awakening, the holy day of illumination—*resurrection*.

Chapter VII

THE THRESHOLD

RETURNING TO HIS study, Rollins put away the book on Heredity with a smile. He had saved it as being the last word on that subject, but, evidently, it had become antiquated by the recent discoveries in that field; and he pondered over the rapid changes that were being made in scientific principles and more especially in the knowledge of man and nature.

“Truly, he said to himself, ‘little that one knows is of a nature to remain permanently. Change, change, change! That is all there is, even to knowledge. The great Greek philosopher who said that ‘matter is always *becoming*’ was certainly right and it applies to our knowledge as well. Matter is always changing, becoming something and never really is something for any length of time. Knowledge is also becoming more and more accurate, more nearly true, and the facts or theories of yesterday may be fallacies or superstitions tomorrow.”

The word *yesterday* brought to mind the Diary. He had not completed his analysis of it, and tomorrow business began again for the new fiscal year. He must complete his review of the *yesterdays* in that book.

Closing the bookcase, he took his Diary from the desk again, seated himself in an easy chair, adjusted the reading light and with a sigh, leaned back comfortably to think. That book! The Diary! Was it alive? Did it have between its pages people, places, conditions, all animated with a vibrating life? Could he not feel a vibrant essence fairly pushing itself through the covers and from the edges of the leaves? His arm trembled from the pulsations it gave to his hand. More than a year of

life and action was represented in that book's notations. A life time—a generation, many generations, all time past, a thousand years, perhaps a million of yesterdays, were recorded there. It was not a book, it was a *key* to the past—the key that unlocked the chambers of the past.

Again his mind reverted to the scenes he had witnessed and he wished they would come again, or others—more *yesterdays*. The wish ! It started a stream of tingling throughout his body. He closed his eyes, he relaxed. He was entranced. The wish ! It was a command ! It was as though a great gong had sounded. He could *feel* and *hear* the vibrations of the gong's note in the air. Was this what occurred when Aladdin rubbed the lamp and wished ? Was there something psychological in a sincere wish expressed or realized at the right moment ? He was lost in the mystery of this sudden experience.

Psychology has often said, as an axiom, that *suggestion* results in the realization of anticipation in those cases where the suggestion is given by oneself—or given as auto-suggestion. In other words, when the process or formula of auto-suggestion is indulged in, it presupposes on the part of the person certain *anticipation* of results. Psychology claims that such anticipation is necessary, is a prerequisite to realization. That fact is, however, that if there was no anticipation there would be no suggestion given. It is the hope, the faith, the belief, that there will be a result that induces, encourages, the person to give the mind a suggestion. Without such faith, hope or belief, no matter how mild or weak it may be, no one would purposely give an auto-suggestion. Therefore, not only must anticipation precede the realization but it must precede the suggestion. That *unconscious* suggestions—auto-suggestions even—do produce results in the absence of any anticipations, does not affect the law or principle. In those cases where it has been demonstrated that an unconscious suggestion given to oneself has resulted in keen realization, it has been found, after careful analysis, that preceding the suggestion there was *fear of realization* or its antithesis. In substance then, the same condition existed.

The psychology of prayer reveals that certain psychological or psychomental conditions are existing and certain laws operating. Prayer is not, therefore, the shallow tenet of religion, but the concrete

manifestation of a subconscious process of mind. In every sincere wish, in every lingering hope, in every sincere desire, in every conscious longing, there is the essence of prayer. Prayer is but the deliberate expression of an inner desire—a hope of mind. It is deified when it is expressed to God, and this adds to the faith, the hope, the belief in its potency. For, who would pray to God did he not first believe that God would hear and answer?

And the realizations to such prayers. What of them? Are they even more than realities of the mind, a condition of the Soul? We pray for the speedy recovery of a sick one. Health comes; we are made happy at the change. We recall our prayers, our petitions to God. Our faith makes us believe that the change that has come is a direct result of our prayers. God has wrought another miracle. With reverence and humility we gladly credit God with direct intervention. In that belief, in that faith, in that purely mental realization, we find happiness, joy and firmer trust in the efficacy of prayer. When the prayer brings not the desired result, if death comes to the sick one, we ease our minds, we excuse the disappointment, with the expression of faith in the better judgment of God. Our belief in the value of prayer is not lessened. In either case, the results of prayer remain, to each individual, a psychopathic, mental, condition.

Naturally, metaphysics and mysticism ascribe other powers to prayer. It teaches us that in prayer to God the essential element is a sincere desire, a cherished hope, a clean thought, with all the elements of goodness and, usually, unselfishness; and that in the process of prayer, in the very attitude of prayer, we attune ourselves, our minds with the Infinite, the Cosmic, the Divine Mind that pervades all things and is everywhere. That in mental or audible prayer, we formulate the desire in a definite phrase, we visualize the anticipated results and then, release that desire into the Cosmic where it naturally vibrates with the constructive forces, the love and goodness of Divine plans; and the thought, with its mystic potency, brings results. This does not eliminate the intervention of God, but it reduces it from direct to indirect, from personal to impersonal, from specific to general. Such philosophy is the basis of much wonderful teaching and it reveals laws and principles but little realized by man.

But to Rollins there was no mistaking the fact that the desire, almost definitely and audibly expressed, produced an immediate effect. The desire to have the Diary reveal another yesterday! Was there not reason for anticipation? Was there not warrant for faith in the power of that book to open the doorway to the past and show there a scene of activity?

Minutes or hours may have passed, while Rollins held the Diary in his hand. He did not know, he was not conscious of time. But he watched with concentrated interest the slow development of a great haze of light that gathered in the corner of his room again. He did not know whether his eyes were open or closed—he would not even try to discover. What he saw was as real to his senses as anything that the objective eye could cast upon the retina for absorption by the nerves for translation into consciousness. What difference, then, did it make whether he *saw* objectively, or—how?

The mist became a light purple at its outer edge and a neutral gray in the center. The center then darkened until various colors spotting the space like first blocking-in of colors on a canvas. Gradually they took form and some blended until the whole made a picture. As it developed its life-like atmospheric qualities, and became alive with feeling, the consciousness of Rollins passed from his body like a wraith toward the scene, stretching along with it, from his body to the scene itself, a misty light which radiated a *coolness* around him. Then—perhaps after a minute or two—Rollins saw, not from where his body was, but from the scene. His senses were with his consciousness, not with his body. From the scene in which he was now a part, he looked back at his body on the chair, and that view impressed him as being but' a picture whereas his new' environment in the strange scene was real, actual. It was tempting to analyze such a condition, yet something urged him to think no more of it, to center his thoughts on where he was and what he was doing there.

He looked about him. He was in a large room, the room that had begun to form as a misty picture and became life-like. It was stranger than any room he had ever been in before. The ceiling, crossed at

various parts with heavy wooden beams, was very high above the floor, perhaps sixty feet. The walls were of stone—large stones evenly placed but not tightly united by cement. The three windows, set deeply in the thick walls, were arched at the top and screened with rough wiring, but contained bars instead of glass panes. Opposite the three windows there was an open fireplace the recess of which was unusually deep and wide. In it large logs were burning and before it a number of odd irons and racks were set. In the center of the room was a carved table, the workmanship suggesting great labor and skill, but the wood was unstained and unvarnished. It was fully twenty feet long and four feet wide. Chairs, with high backs, carved and finished much like the table, were in various parts of the room, and at one end a large combination closet and table upon which sat many large pieces of beautiful silver. In the closet could be seen silver and gold dishes and some few pieces of porcelain and china.

There was a stately doorway at the opposite end of the room, the frame work of which was massive and wonderfully carved, and in the center of its top there was a shield in which were carved two heraldic devices. The doorway suggested an entrance to a cathedral, and the two doors which hung therein were of iron, partially rusted and ornamented. They were closed and therefore what room was beyond, Rollins could not see.

The most interesting features of the room were the many pieces of armor, shields and spears, and the magnificent oriental rug that covered nearly the whole rough floor. To judge from the marks and symbols on the various shields, many different persons or families were represented by them, and while most of the articles of battle were strange and old, they showed signs of having been used.

The room was comfortably warm and very quiet. Nothing but the occasional crackling of the burning logs disturbed the stillness that was like the stillness of a tomb. Rollins decided to investigate and moved toward the great door. His feet seemed heavy and unnatural, though the movement of his body was light and almost without weight. He glanced at his feet. They were covered with heavy leather boots with metal pieces over the toes. When the heels touched upon the uncovered

portion of the rough stone floor, they made a noise that suggested metal on the heels. He looked at his costume. It was like those he had seen worn on the stage in Shakespearean plays. Knee breeches of a dark, heavy material, a tight fitting coat of a lighter material, a soft collarless shirt, light blue in color, and a heavy plush or velour band of dark red about his abdomen. Surprised at his appearance, he could not reason about it, for the mind seemed to refuse to reason, to argue that it was useless and of no immediate need.

At the side of the door there hung a heavy silken rope. Its position and nature suggested its use and Rollins, with the most natural air, stepped forward and pulled it twice. He waited. He heard a metallic clanging at the door and slowly the two parts of the door separated and there stood before him, against the dark background of an unlighted hallway, a tall heavily built man in a robe of gray tied about the waist with a gray cord. He bowed very courteously and said in a soft voice and with pure French which Rollins' mind easily and immediately interpreted into English:

"Your *wish*, my lord? And...pardon the privilege that bespeaks my lord's generosity.... I hope.... I pray.... that all your wishes may be granted.... this day."

The feeling of surprise that came to Rollins was not nearly so great as must have been the surprise in the mind of the servant at his own boldness in thus speaking; for Rollins could not feel otherwise than that this strange incident was truly a part of his life—new and yet familiar—unexpected and yet anticipated. Many questions arose in the mind of Rollins, but something again told him that it was unnecessary, that, in fact, his questions would be illogical and he could easily answer them by *thinking*.

But—he had called the servant—he must say something. Could he answer in French? He dared not try. He was thinking in English, or rather in good American. Perhaps he could simply gesticulate. What idea then should he express? Ah! He would ask for his hat, by simply making....

"I will have my hat!" The words came forth with a vim, before Rollins could control his tongue. His mind had formulated the idea and it expressed itself in words immediately. They were in French, too; and although Rollins knew but the rudiments of the language, he was not surprised—could not be surprised—at his ability to speak French.

The servant seemed to understand, but replied with a quizzical tone : "Oc—le *causia*?"

Rollins nodded consent before he could realize what the question meant. Then the words translated themselves. "Yes—the *causia*?" What was a *causia*? He had nodded approval and.... why it was a style of hat, a particular design. The answer came inwardly, instantly. And then—why *oc* for yes? He had expected *oui*—but *oui* was modern French, the French Rollins had learned at College, and *oc* was.... the language of... the old Provinces. Was he now in Languedoc, the ancient Province of the south of France? Again the answer came and—it seemed so natural!

The servant soon returned bearing a large felt hat that had a very high crown, a broad brim slightly rolled and a small feather sticking from a cord in the back of the crown. Without betraying any surprise at the hat he placed it on his head and moved toward the center of the hall as though to pass somewhere. He must go out of the building as an excuse for asking for the hat. The servant preceded him in turning toward the left and then, after ringing a bell by pulling another rope, unfastened some heavy cross pieces of metal and slowly, with great exertion, opened wide the two massive metal doors that let in a great burst of sunlight flooding the hallway. Through this Rollins walked and out on to a balcony or porch of marble and .peculiar white rock, while the doors slowly closed behind him.

Before him there was spread the strangest and yet the most enticing and alluring landscape he had ever seen. It was indeed, like the land of fairies. The intense blueness of the sky, spotted with only an occasional small gray cloud, the vivid greens of more shades than nature provided in America, the distant hills toppled with walls that surrounded old castles or châteaux; the trees as the sides of the winding roads that led from the fore ground to the distance, covered with a *white* that

looked as pure as snow, and, as the wind blew, lifted up into the air and tinted the trees with white until the sides of them nearest the roads looked like Christmas trees decorated for the day; the unusually bright sunlight, the invigorating air, the faint and pleasing fragrance of the flowers and plants—all held Rollins in a trance, and he thought only of how wonderful a picture it would make, if he were only an artist. If he could but paint! The thought seemed to find some response in his mind—but immediately came the answer—*but you cannot paint*. With a sigh of regret, he turned again to the left and stepped down the wide stairway to the garden at the side of the building, where in sunken sections between stony pathways there were many flowers blooming, and in the center of all a beautiful fountain playing, permitting the light winds to waft to his face the most delicate sprays of refreshing dew.

He would examine the building and see its size. Instinctively he knew that the was at the rear of the building and walked along the widest path to another corner of the building. He noticed without any considerable interest that the windows were well protected with iron bars and others were exceedingly narrow—too narrow for the passage of a human body. On one side of the building there was another doorway, smaller than the one through which he had passed but closed with massive iron doors. At the next corner there was a large turret in which there were narrow windows at various levels. A casual interest in them caused him to glance upward at the other parts of the building and he noted, again without surprise, that the second story of the building was much smaller than the lower floor and that there was a small wall around the edge of the roof, the wall being penetrated at places by the projecting bodies of.... *gargoyles*. The word came almost immediately from.... memory!

After circuiting the house he walked down the slightly descending path toward the open field on the other side of which there seemed to be a public road—the one which was painted with the pure white powder of some kind. Approaching this, he was delighted to find his surmise correct. The road was made of broken pieces of white chalk stone and had been powdered by continued use. He stopped and picked up a small piece of the unpowdered stone and found that, he could break it with his hands. As he walked he came to a small stone

bridge over a dry creek and these stones of the bridge w all were large pieces of the white chalk. In them initials and symbols had been cut or scratched. He could dig into the surface of the stone with his finger nail! What wonderful stone, so white, so soft.

Walking for perhaps two miles he came to a small building of very old appearance, situated in the very center of the intersection of four roads which crossed at this point. Reaching the building, which he noticed now was in ruin in some parts, he saw that some horses, perhaps fifteen, in ancient coverings, were standing at one side of the building. Within there was chanting. The rhythmic intonations, the pauses, the very response that his Soul gave to the sounds, indicated that some sacred chant was being expressed by a number of voices. He approached the door. There was but one step, and this he took, bringing himself on the very threshold of an unknown temple. But, stranger though he knew himself to be, it seemed not only familiar, but the right thing to do—*he must enter!*

Once within, he noted that there was no roof to this old building, nor had there ever been. There was no provision for one. It was an open-air temple—of Roman design. At the four sides of the square room there were separate altars upon a slightly raised platform. Before each altar a fire was burning, and fronting each of these were two rows of rough wooden benches. Upon these benches sat men and women, with heads bowed down, chanting this sacred, soul-stirring incantation. The walls were of stone, but decorated with symbols which seemed familiar but *nameless*. Back of each altar but one, stood a man in just such costume as he wore, *without the hat*, apparently leading the chant, while occasionally a girl of youthful age, dressed in flowing white, would pass from altar-fire to altar-fire and drop into the fire from the metal prongs she used, a piece of black—charcoal. The word came instantly; he need never hesitate for the right word, he found. She took these pieces of *charcoal* from a bright brass or gold vessel—hammered or decorated metal—*again* the right description came from within and said a few words which Rollins could not hear.

His entrance into the temple did not surprise any of those present, and with an urge that came from the inner consciousness, he slowly

walked to the vacant altar place and, taking off his hat, faced those on the benches before him—and began to chant in this strange tongue:

“Deus, in adjuto...rium meum intend...de. Domine...ad
adjuvandum me festina. Gloria...Patri,...et Filio,...et...Spiritu
sancto. Sicut erat in principio,...et nunc, et sem...pre, et in
saecula, saeculorum...A...MEN...Al—le—lu—ja .”

As he chanted he marveled at the beauty of cadence, the maintained antiphon, the unison of diction and the perfect melodic phrasing. He listened to his own voice with interest, and now began to wonder why he persistently asked, how is this? and Why? Was this not his custom, his usual life? And while the outer man's mind wanted to cry, *no, no!* the inner voice said, *be patient, calm!*

The service being finished all arose and slowly filed from the temple after making some salutation to the altar-fire. Not wishing to speak to the other three men who remained in the stations at the altars, he stepped down from the platform and slowly left the building without being approached by any one of the others when they prepared to walk or to ride their horses.

Returning to the great door of the château, he saw no means of signaling for entrance and was about to question his mind in this regard when the doors began to open and he found his servant greeting him again with the same polite bow. Entering the hall he faced its rear for the first time and saw that it led to other rooms and to an old stone stairway.

Motioning to the servant to come with him into the large chamber with the open fireplace, he was pleased to see that the servant seemed to anticipate his desire and was even now preparing to open those two heavy doors in the center of the carved doorway.

Suddenly the doors opened wide and as Rollins was about to step lightly across the threshold into what he thought would be solitude with an opportunity to question the servant, he found himself facing a throng of men and women in gay costume who lifted high their voices in great exclamations of some kind. One by one the men approached

him and shook his hand, kissed him on both cheeks and otherwise indicated their greetings. The women bowed with courtly bow and made many dainty, softly spoken wishes in French to him, not one of which could he completely realize.

Approaching the center of the room he saw that the great carved table was covered with woven linens and embroidered satins, all in white. Silver and gold dishes were placed as for a banquet. There was fruit and—at each place some flowers. Large silver goblets were set at various parts of the table and there were other articles which seemed familiar, but likewise nameless at just this time.

Almost automatically he walked to the end of the table and took a place before a larger chair. The others stepped to their places about the table and stood waiting. He made a motion for all to be seated and in the most matter-of-fact manner sat down in his chair with a sigh. He must not stop to think; he was being scrutinized. They were waiting for him to do something, but what? His mind was sluggish; again and again in the silence of their waiting, he tried to reason, but reason was inhibited. His thinking ability seemed paralyzed. Why couldn't he think this thing all out? Why were so many here and why were they waiting for him? He must...but the answer came now, as he paused, and rising in his place he raised both arms and fairly shouted with excitement:

“A bras ouverts—suaviter en modo!”

And almost in unison, each arose and lifting their right hands high and with surprise on their faces—too evident to be concealed or mistaken by Rollins—they cried: “Pax vobiscum!” Seated again, many fell into conversation while Rollins simply waited for developments. There was mental stupor that permitted him simply to realize and act automatically as the inspiration came. He was an actor in an unknown play that was *so very familiar*.

Many servants now waited upon them. Great dishes of vegetables were served and then at just the right moment a large wooden platter was carried in by two men servants containing a huge lamb, roasted and steaming hot, decorated with greens and spices. Its aroma was

alluring to the senses and its picturesqueness suggested a great feast in Babylon.

The roast was set before Rollins and a servant handed him a great knife, an ungainly thing of iron or steel, with sharp edge, and with it a one-prong fork. He cut and carved with more understanding and success than he had expected and hurriedly finished for the last plate that the servants passed to him. An idea had come to him. He would hurry through the banquet and through dexterous means secure some information from one of the servants as to what this all meant and *who he was*.

Sitting down again to eat, for he had had to stand to carve so large a roast, he found the servant ready to hand him the plate filled with meat and vegetables. Looking for knife, he saw no forks and glancing around saw that all were using their fingers to pick apart the meat and vegetables and to pass the food to their mouths. He was handed a very large *serviet* or cloth which he saw others were using to dry or clean their fingers after every few minutes, and, without further analysis, he too, ate in this manner.

After an hour of eating to an extent that seemed almost animal-like in its persistence, wine was poured from large silver and porcelain vessels into the gold goblets. With the wine a broken cake was served, and fruit.

As another hour passed and the sun turned into a beautiful gold and sent its beams across the table to tinge the heightened color of the faces of the guests, one by one they began to rise, and with unsteady hand to hold aloft a goblet of wine and to make toasts in uncertain words. The toasts were directed to him—Rollins! To each in turn he nodded appreciation, but each toast simply added to his determination to hold a very serious interview with some one, quickly.

The servants were now bringing in small silver dishes containing water and placed them before each guest. Each in turn dipped the soiled and greasy hands into the water and washed them. Then, drying their hands upon the large *serviet* in their laps, they passed them on to the servants and arose from the table. In a few minutes all were

standing again and the servants were hurriedly removing all the dishes. A small doorway or opening in one part of the wall adjoining the dish-closet served as a means for the passage of the dishes out of the room. The large table was now being moved farther from the great fireplace and—over at one part of the room a servant was lighting a number of candles in silver candlesticks. He was placing them in parts of the room. More logs were placed upon the fire—something was being prepared for and much interest was being shown by the men in the preparations, for they were directing the servants.

Another servant entered the room and motioned to some of the ladies that something was prepared outside and they smiled and with great expectancy left the room through the great doorway. Now another servant entered and carried in his arms a number of cages, in some of which were large black birds with strong curved bills and sharp claws, and in others there were what seemed to be small white pigeons.

The men gathered around these cages, selecting some of them with great enthusiasm. Each seemed to want some particular black bird, and the birds were examined as analytically as one would examine a well-bred horse. Rollins stood motionless in the corner of the room and watched this proceeding as though he had seen it many times before but still knew not the mystery of it.

Finally the men closed all doors and saw that the windows were well screened, and then released the white birds which proved to be wild pigeons. They flew to the top of the room and tried to find resting place on the beams of the ceiling, fully sixty feet above the floor and where it was almost too dark to see them. They were crying and making a horrifying sound, when the other cages were opened one by one and the legs of each black bird were marked for identification. Then, simultaneously, all the black birds were released from the hands of the men and they flew with wildness to the ceiling.

The scene then became distressing, cruel, *terrible*. The black birds seized the white pigeons and plunged their awful bills around the necks of the pigeons. They fought, they cried; the men cheered. It was a *battle royal* between each pigeon and each black bird, with the pigeon hopelessly beaten. The black birds would drop down, soar down, to

the men, with their prey in their bills dripping with blood, the gory spots on the white feathers standing like blotches on the shield of man's honor.

Rollins could not stand it. Whether the strong wine the men drank, or the custom of the times or both, were responsible for such cruel pastimes, he could not witness it and hold back the disdain, the disgust that was about to overwhelm him and make him stop the whole proceedings. *But he must not do that.* He was only a witness. He would not dare to interfere. But he could leave. Ah! the opportunity to speak to the servant was at hand. He walked rapidly toward the door; as he did so a big black bird passed before his face with one of its prey, and the dripping blood fell on his forehead and down to his hand. The blood of innocence! The cries of anguish! The sport of cruel hearts! Man's lowest instincts freely expressing! What a scene, what a shame! He would have none of it! He pushed open the door and stepped out into the hall and closed the doors behind him. As he did so there rang out a heart-rending, piercing scream from some soul in torture, while the men jeered and laughed, and other weak cries told of the last sobs of life in some white breast. That last cry—the cry of the lost life, the conquered existence, the torn body, the bleeding wound—the similarity! The symbol! The dove of peace! Slain! By man's cruel thinking, by man's earthly ways. The words came back again:

“On *that* cross—the body of man—are many things crucified!”

Rollins rushed to the stairway. There was no servant in sight. In a room nearby he could hear the laughs and remarks of the women, the *ladies*, who, in all compliance, left the men to enjoy their murderous habits and lust for blood. Was that womanhood? Had women not improved since the days of—that? Where was the boasted modern refinement, culture, and . . .? But this was *not* modern times. The answer was distinct. This was the day of...

Up the stairs he rushed and into the first open doorway. It was a bed-chamber. The bed, high from the floor, approached by two steps, was heavily and beautifully canopied. He closed the door behind him and dropped across it the iron bar. Then, in weariness and disgust, he flung himself upon the feathered bed, unmindful of the satins and

laces, and buried his head in his hands and cried, sobbed, as his whole body shook emotion:

“God, good God, what a world and what a time! Have all men forgotten their greatest gift, the chivalry of manhood, the protecting power of their might over the weaker? Can men come from chanting of Thy goodness and enter into the destruction of the littlest beings? Then make me weak, God, make me weak, that I may not hurt, or see hurt—or permit the destruction of the smallest flower of the fields or the most minute animal of Thy world. Make me humble, make me simple, make me—kind—good—loving, all—and never too strong to destroy that which Thou hast made!”

And as he prayed, his prayer was answered, for he felt the weakness come, and with it a simpleness of heart and mind, until, like the tired-out baby, sobbing its cry for the resting arms of mother, he lay on his side, and slept.

Chapter VIII

ILLUMINATION

A PECULIAR METALLIC noise awakened the consciousness of Rollins, and he gradually realized that there was some disturbance at the door of the room in which he slept. He rose from the bed in a dazed mind and finding the room very dark, walked slowly about until he reached the iron door. As he neared the saw that it became illuminated with a faint light that emanated from his body in all directions; and by its light he was able to find and lift the bar that held the door closed.

As the door opened the same servant that had greeted him earlier in the day bowed again and said in French, softly and kindly:

“I was concerned, my lord, for it is late and you sleep without the light and thy guests have departed without bidding adieu.”

“Come in and sit with me for I would ask you some questions.” The words came easily, in French, and with a solicitation that seemed to surprise the servant who was more accustomed to brief commands. He entered slowly and Rollins closed the door. The servant lighted two candles which stood on an old carved dressing-table, over which hung a large piece of highly polished silver, evidently used as a mirror.

Seated opposite each other in heavily cushioned chairs, Rollins thought for a moment or two before he spoke. How should he begin his questions without surprising the servant or arousing his suspicions? It was quite evident to the servant and to all who were there that day, that Rollins *belonged* there. Perhaps they thought it was his home? The term “my lord” used by the servant suggested that Rollins might even be the master of the household. If this was true, how could he consistently ask the questions which were uppermost in his mind? He must continue to act the part of the *master of the castle* until he had all

the information he could secure in a diplomatic manner. And then—why then, What? Could he leave this place? How came he here? Again he tried to reason it out and again he found his mind refusing to place facts in their proper and logical order for mental review. Again he found that deep in his consciousness, as though recalling a dream, he had a vague recollection that the was an American of the twentieth century, but uppermost in his consciousness was the dominating realization that the was *here in this* place at this time, and that the was equally at home and in the right environment.

Yes, diplomacy must be used and some excuse must be given for asking the questions which would sound strange to the servant. Suddenly an idea came. He revolved it, tested it, and it seemed to be just the method to use. He would try it.

“My man, I have something important to tell you. You see, I am not like myself today. I am strange.” He waited to see how the servant would understand that. He noted with satisfaction that the man opposite him looked quizzically at him and then nodded in agreement.

“I had an accident yesterday and when I awoke this morning my mind seemed to be dazed and I could not recall where I was and now I find I am puzzled as to who I am. I am sure I am not mistaken about some things, but I want to check the facts and be very sure before I talk with anyone of our,—that is any of *my* friends. Now, tell me first or all,—or rather, suppose you get the pen and ink and some paper, and we will write down the facts. Go!”

Pen and ink and paper! The words were in French, as was all that the had said to the servant, but Rollins wondered if he knew what was meant by such words in *these* days. But the servant was off to some other room,—he must have understood. After a few minutes he returned bearing a tray upon which Rollins saw a beautifully carved vessel which he instantly knew must be an ink-well, a long feather or quill, and a roll of skin, as it seemed, and another silver vessel with perforated top. The servant placed the tray on his lap and moved close to Rollins so that their knees touched. Then he shoved the tray forward so that it rested on the laps of both. Rollins looked at the roll of skin first. It was nearly twelve inches square and wrinkled in places, with a

shiny, almost greasy surface. He laid it down and at once the servant picked it up, flattened it out and sprinkled from the tall silver vessel some white powder on the surface of the skin and with the palm of his left hand rubbed the powder into its surface, and then blew off the surplus. Then he picked up the quill and dipped it into the smaller vessel and when he extracted it, it was covered with a thick, gummy black substance. He handed the quill to Rollins and held the skin flat for him to write. Rollins looked at the end of the quill and said: "What is that—on the quill?"

"The carbon, my lord, 'tis very thick, but the parchment requires it and the gum will hold the carbon there very Well."

Rollins realized that this form of ink was different than what he seemed to recall, but it was too trivial a point to look into *now*. Then he passed the quill back to the servant and said:

"I want you to write the answers to the questions. I will hold the,—the *parchment*. My hand is too nervous to write to day."

Arranging matters in this way, Rollins began his questioning again: "Now, then, tell me, what is my name? What? Guillaume, Viscount of Anduze? Write it! That's right! Now, eh,—Why am I Viscount of Anduze?—How came it to be so?—Oh, so I am the son of Count Raymond, Lord of Anduze, Lord of Rodex and Millau and Viscount of Toulouse! Write it all down, carefully.

"And where is my father? Indeed! Write that down, too,—be sure you put it completely,—'advisor in Roman Law at Charlemagne's School of the Palace!'

"Where is my mother? Oh,—I did not know,—but write it! 'Buried in the left nave of the Cathedral of St. Sernin in Toulouse.'

"I wish now that you would write down there my exact date of birth. That's right. Now tell me, what was I doing this morning at the little Temple or Church at the cross ways?"

"Why, my lord, you were performing your usual festive duty this day. This, you know, is the day of the *Compitalia*, the annual festival

held each year at this time, in honor of the Lares, the deities of the cross roads. You went, as was your duty as master of this villa, to the *compita*, the chapel of the Lares, the ancient Roman divinities, situated on the cross roads, but now it is a temple to God. There are four altars there with four Sacred Fires, representing the four adjoining villas, an altar and a sacred fire for each castle and hearth of the four villas. The Master of each conducts the sacred festival while the subjects of the estate or province, represented by their principal chiefs, worship there. So, today, the first of January, you conducted the chanting for the representatives of your subjects as the other masters did for their subjects. For years your father performed this rite, and now, for the past three years, it has fallen to your lot. That is all.”

“Write it all down!” commanded Rollins and while the servant wrote he leaned back in his chair, and closed his eyes to review again the morning festival.

“Who was the young girl who attended the fire?” he started again. “She was the Vestal Virgin, whose sole duty is to keep the sacred fire always burning in the chapel. It is a memorial of the ceremony at Rome when the Vestal Virgins kept burning day and night the sacred fire—a community fire—from which others might obtain hot coals for their home fires. It is now a symbol of community interest and therefore sacred trust and neighborly love. She is a virgin and must remain obedient to her duty as a virgin until of legal age. She lives not far away in the castle of your cousin who went to battle with the legions of the legates of the Roman Church, and—and he—”

“He never came back—I can quite understand that. Go on !” said Rollins, as memory served him in some peculiar way.

“No, he never came back and no one ever learned of his end. But his young bride was cared for by you, just—.”

“Just as though she were my own wife. I understand *that*, too. My cousin’s wife!” How strange and yet how familiar it seemed.

“And now tell me just one more fact—and be sure to write down the answer. What was the cause, the reason, for the great celebration in

the—the—*great hall*, downstairs this morning?”

Surprised, the servant looked squarely into the eyes of the master before him. “Why, that feast, followed by the sport of Falconry, was at your command, your own request, planned *yesterday*—you recall *yesterday*? You asked for the lords and ladies, the nobility of these provinces, and you sent forth your herald to request their presence, for today is *your birthday*. Surely you have not forgotten *that*. The day you were to become Lord of Bellcastle—of this villa and the Province of Avervon.”

“Put that down there, my man, and I guess that is all. No, stop a moment. Tell me this. Am I married and if so, where is my wife?”

“No, my lord, with the care of *Lady Rollins*, your cousin’s wife, you have devoted yourself exclusively to her well being—but you are still young, and there is yet time to marry and carry forward the *blood* and *name* of your ancestors who have always been noble men.”

Writing this, the servant arose and left the parchment on the dresser, taking away with him the materials on the tray.

Rollins closed the door tightly, folded the parchment in his hands and claspings them threw himself back into the chair, closed his eyes and began to review the facts just revealed. There was much in the story that was just beyond the spoken words. This, the untold story, he must now comprehend, somehow.

For an hour Rollins sat in the chair thinking and dreaming. Gradually a sense of warmth came over him while a changing condition in the brain and nervous system indicated that he was modifying his consciousness in some manner. The first definite sensation was that there was a light on his eyes, then a weariness in his limbs with an accompanying desire to move them into a different position. In making this change his feet fell to the floor with a jarring of the body that caused him to open his eyes. His feet had slipped from the stool. There was an electric light at the side of his head. His reading lamp! The fire

in the fireplace! He was in another room—the study at home! He was the modern, American Rollins again—at home!

Rising from the chair he noted that the still held in his hands the Diary. That key to the *yesterdays*! He walked about the room with the book in his hands behind him, nervously pacing and thinking, muttering such unconscious comments as seemed to come from a mind still in a maze. And as he reviewed his last experience he came to the last incidents—the servant writing the answers on the parchment, which he had determined to preserve. Oh! if it were only possible to preserve so concrete and material a thing from the past and have it now in the present! To *actualize* a reality; to materialize into the gross of the present the ethereal fabrication of a dream. The ancient alchemists claimed to be able to do this; and Rollins knew that their present-day successors, the modern Brotherhood of Rosicrucians exist today with their Lodges of active members, scientists and adepts located in so many cities, pursuing their studies in secret and claiming to know the laws whereby this is done. They alone would be able to explain all that Rollins had experienced within the past twenty-four hours, and while they are difficult to find, still, thought Rollins, now that he realized his mission, he would not rest until he had located one who would introduce him to their nearest group.

Again he sat down in the easy chair and almost mechanically and unconsciously opened the Diary. He had not turned more than three or four pages when he was startled to see some bold, black writing covering the two open pages before him. Instantly he knew. Here were the written answers of the servant—and the servant's strange writing.

As each answer was analyzed the whole conversation came back to him. He was again in the old bed-chamber of the castle. Then came the first written answer that had not been spoken.

“Birthdate—January 1, 896.”

Rereading the statement several times, he passed to the last notation, the last written answer but one.

“Today, your twenty-first birthday, you became Lord of Bellcastle

and heir to the estates of Rollins.”

Born in 896! Twenty-one today! That means that today—the today’ of that experience, the today of my birthday celebration in that old provincial villa—was the year—917!

January 1st, 917!

Rollins fairly shouted it. He jumped to his feet. On that day I became Lord Rollins. Today I am William Rollins. My name then, that day was Guillaume—William . What a remarkable coincidence! Unmarried, caring for my mother, my father caring for his cousin’s wife, *just as in recent years*, the name Rollins, the name Raymond—. What of the mark after the name Raymond on the painting? I have seen nothing of that, the mystery which started this piercing of the Veil.

Again he glanced at the written pages before him. The page was signed, “Jordain, Secretaire to the house of Raymond IV.” Raymond IV! The Fourth! Ah! The mark after the name on the painting was—V! Raymond V—the fifth of that name. The mystery was solved! But above the signature of the secretary stood boldly’ forth the last statement to the last answer: “There is yet time to marry and carry forward the blood and name of your noble ancestors.”

Was that a command? It seemed to be a challenge of nature, a decree from the past. Heredity, ancestry, reincarnation, evolution of nature and Soul—all depended upon it. It *was* a decree, and it should be fulfilled, before it was too late.

And then—a knock at the door. It startled Rollins again. It seemed so like the banging on the iron door of the bed chamber in the old villa. With nerves highly excited and the mind in a stressed attitude, little would startle now.

Opening the door quickly, he found his mother, smiling and bowing slightly.

“William, my boy, have you forgotten that we were to go out today? You have been in here so long! Ruth has called and will accompany us to dinner—and you know she does *so enjoy* these occasional—very

few—opportunities to be in your company. Please do not keep us waiting long or we may not be able to find chairs at any table in the ‘Chateau Bellcastle’ downtown. You know they have such wonderful holiday dinners with the most alluring music, like the songs of the old Troubadours of Languedoc. Come—where have you been in your dreams again? You look so tired or nervous—and so surprised at what I say. What has it been now? Have you solved your problem about the rebirth of the body and the reincarnation of the Soul?”

“Yes, little mother, I have,” he said as he put his arms about her waist and accompanied her out into the hall, to where Ruth was sitting in the golden sunlight of the bay window. “I have just found that it takes *two* to bring about the perfect rebirth of both body and Soul—and I was just going back over the past—over the *yesterdays*—back, back to the year—917! In fact, I was thinking of the *yesterdays* between today and January 1st, 917.”

“Why, William,” she replied, in a smiling, teasing mood. “That would have made a *thousand years of yesterdays!*”

The Rosicrucians

PUBLISHER'S NOTE

The manuscript of "A Thousand Years of Yesterdays" was submitted by the publishers to a number of professional and business-men and women for the purpose of determining the value of so strange a story before publication. This is common practice in cases where the publishers are anxious to know whether a manuscript in hand deserves publication of a general nature or not; and it must be admitted that the nature of this story, with its seeming revelations of unpublished principles, warranted our careful investigation.

In addition to the many favorable comments made, there were two remarks made by each who read the story, and it was apparent that practically every reader would have the same points in mind when completing the story. Therefore, to avoid a very considerable future correspondence and to anticipate the questions which our readers would send to us, we made an investigation bringing to light the following information. The questions asked were these:

(1) Was not this story written by some man who has taken this means of giving to the world a system of philosophy or an oriental teaching which hitherto has been withheld from the uninitiated?

(2) Where and how can the reader learn more regarding the secret bodies of Rosicrucians described or referred to in the story? Perhaps the philosophy or mystical principles taught by the story are a part of the Rosicrucian secret work.

The publishers urged the author of the story to give them in writing whatever he cared to have published regarding the Rosicrucians, and of himself; but the author was reluctant to write anything, because, as he said: "No officer or member of the Rosicrucian brotherhood

will publicly proclaim his identity with the ancient Order of Mystics unless he must do so by force of circumstances or for some unselfish purpose.”

However, the publishers have secured the following facts and feel that they are not violating any obligation, moral or otherwise, in setting them forth here where perhaps only the serious minded will find them.

The complete name of the Rosicrucian brotherhood is: “The Ancient and Mystical Order Rosae Crucis,” a name which is seldom publicly used, held very sacred and often abbreviated into its initials to read AMORC. Its time honored symbols, used since the days of the old philosophers, are: in all esoteric work a gold Cross with a Red Rose at its center; in all exoteric work, or for public identification, a Triangle with a Cross within it. Its history is traced back to the days of the Egyptian secret sects and the early alchemists and mystics. In modern times the Order has established and maintained Lodges in various countries, including the United States, Canada, Mexico, Puerto Rico and South America. There are other Rosicrucian groups in America also, we learn, consisting of those who study together, using various Rosicrucian names, but having no official connection with the AMORC and receiving no instructions in the peculiar secrets and teachings of the Ancient and Mystical Order Rosae Crucis.

We find that the Lodges of the Order which are duly established and chartered as branches of the parent body, hold secret sessions weekly in all the principal cities of the United States and in many small cities and towns. They use the ancient rites and rituals, have the complete system of instruction in all the sciences including Psychology, Ontology, Alchemy, Physics, Biology, Transcendental Mysticism and modern scientific achievement.

Further, we find that the Order is non-sectarian, occupies a high position in both the scientific and educational movements of America and is esteemed by the many professional men and women, physicians, clergymen, teachers, scientists and others who are actively associated with it as officers or members.

In regard to Mr. Lewis, the author, we were referred to the fact that

the New International Encyclopedia, Second Edition, published by Dodd, Mead & Co., of New York, uses his name in their works as an authority on the history and existence of the Rosicrucians.

More information cannot be easily acquired without one's indication of desiring to unite with this great school of philosophy. Therefore, if any of our readers sincerely desires to drink freely from the fountain head of occult and scientific knowledge, he or she will learn how easily this may become possible, by writing a frank and sincere letter, expressing the fullest desires, signing it in full and then mailing it confidentially to Mr. Thoth Amen Ra, 1297 Market Street, San Francisco, California. He will place such letters into the hands of such secretaries or others as live nearest to the inquirer, and through them will come the strange and secret information which all seekers wait for patiently.

Believing that the author's purpose in writing this story was to reach a great number of sincere seekers, rather than to put upon the market a story which would pay him any royalty, we have decided to co-operate with such purpose and publish the book in as economical form as possible so that the sale price might be within the reach of all. This is our apology for not dressing the story in as fine and luxurious a binding as the story really merits.

THE PUBLISHERS.

THE ROSICRUCIAN ORDER, AMORC

Purpose and Work of the Order

The Rosicrucian Order, AMORC, is a philosophical and initiatic tradition. As students progress in their studies, they are initiated into the next level or degree.

Rosicrucians are men and women around the world who study the laws of nature in order to live in harmony with them. Individuals study the Rosicrucian lessons in the privacy of their own homes on subjects such as the nature of the soul, developing intuition, classical Greek philosophy, energy centers in the body, and self-healing techniques.

The Rosicrucian tradition encourages each student to discover the wisdom, compassion, strength, and peace that already reside within each of us.

“There is a tide in the affairs of men, which, taken at the flood, leads on to fortune.”

—Shakespeare

“To every thing there is a season, and a time to every purpose under the heaven: A time to be born, and a time to die; a time to plant, and a time to pluck up that which is planted.”

—King Solomon

INTRODUCTION

It is a pleasure to say a few words to the readers of this book and perhaps prepare them for the great treat that is in store for them.

The system presented in the following pages is so unique, so startling, and yet so surprisingly useful in a very dependable way that I feel that each reader will want to know a little about the origin of the system and its past use.

Those who have read the author's helpful book entitled *Rosicrucian Principles for the Home and Business* will recall that practically every page of that book identified Dr. Lewis with the intimate, inner activities of many large corporations and business organizations. In fact, that book revealed the secret of the former lifework of Dr. Lewis before he left the business field and devoted himself almost exclusively to the direction of the affairs of the Rosicrucian Order in North America. Those of us who were acquainted with him and who are familiar with his past life readily understand what was meant when Arthur Stillwell, the former president of many financial institutions and one of the foremost builders of railroads in America, said: "H. Spencer Lewis has been the real 'silent partner' and secret adviser in more big business propositions in America than any other living man."

Even to this very day [1929] with his many activities in connection with the Rosicrucian Order, he is consulted by long-distance telephone from all parts of America, and by

telegrams and letters from boards of directors and presidents of corporations, asking for one of his strange and always dependable decisions in regard to some contemplated action or some problem that presents two phases, two solutions, or two possible lines of action.

For over twenty years the question has been asked thousands of times by as many business men, "What peculiar system or method does this man use which enables him to tell us what we should do or what we should not do, and *when* and *how* we should proceed in our business affairs?" It was not a purely selfish motive that caused Dr. Lewis to keep to himself, in this country, the secret of his system, and use it to help those who consulted him. While large fees have been paid to him for his services—and even today he is the recipient of shares of interests unanimously voted to him by corporations, boards of directors, and individuals as a result of his definite assistance in crucial times—I have known of hundreds of instances wherein he had gladly and wholeheartedly given his advice and help without fee, and without any prospect of remuneration of any kind. But the use of this system was his business and he had neither the time nor the inclination to establish a school or private class for the teaching and impartation of his system to others.

The time has come, however, when he feels that his services to the organization should occupy most of his time, and that his interests in other big business propositions are sufficiently varied and successful to require no additions thereto. Therefore, he has decided to relinquish his system and give it to the world in such form that every man and every woman, young or old, in business or out of business, may use some

part of it to bring greater success, prosperity, and happiness into their lives.

And so the system has been reduced to words, charts, and diagrams. I marveled at the fundamental explanations contained in the first few chapters of his manuscript. What a world of simplicity is revealed in the cosmic laws manifesting through the strange cycles of vibrations! The first few chapters are worthy of a book printed in gold and bound in rarest metals. These alone would bring to any business man or woman the necessary *key* for the understanding of the peculiar fluctuations, changes, and unexpected occurrences that arise in all personal and business affairs, and that bring problems, trials, and tribulations of grave concern. To know why these things occur, and that there is a periodicity to them and that they are not by mere chance or coincidence, is to remove them from the category of the *unknowable* which torments the life and soul of every business man and woman.

The chapters which follow, and which reveal the fact that man as a free agent can become the master of his fate and the director of his destiny, are chapters that will become a monument to the many marvelous contributions this author has made to human welfare. The words in these chapters will become the agency for the breaking of the chains and fetters which have enslaved thousands of persons and held them in the bondage of miscomprehension regarding the events of their lives and the possibilities that lie dormant within their own beings.

To have all of this followed by the many chapters that explain in detail the various cycles and periods of conditions

which affect our personal and business affairs, our health, our pleasures, our hopes, and ambitions, is to have added to the priceless treasury of the early chapters a veritable casket of rare jewels. As I tested the cycles and the periodical effects in a review of my own life for the past ten years, I saw before me a map of all that I had passed through and a well-charted survey of what I *might* have accomplished, what I *might* have attained, and what I *might* have brought into my own life if I had used this system years ago. I saw, too, in the charts that I had made roughly, with no difficulty and with intense pleasure, a complete outline of what I can accomplish next month, next year, and for many years in the future; and I saw my course through life charted now as clearly as a ship charts its course across the sea when it proceeds from the shores and heads its bow toward the seemingly unknown space beyond.

One word of warning would I give to every reader of this book: Read carefully every word of the first chapters of this book, digesting every thought and principle, and become well acquainted with each idea that is successively presented in the paragraphs that fill its chapters. It is only through understanding the principles before applying the cycles to our own intimate affairs that anyone can reap the greatest good out of this remarkable manuscript.

The years will come and go, and many more unusual, fascinating, and helpful contributions will be made to the mystical, metaphysical, and psychological literature of America, but there never will be another book or another manuscript that will prove as revolutionary, as astounding, and as unique in its practical information as this book now before you. It will do more to rob superstitious beliefs regarding cosmic influences

of their enslaving hold on the minds of many and to bring to man a realization of his greatest assets and powers than anything that has been published since the dawn of civilization. It will become a high testimonial to the rare knowledge possessed by a Rosicrucian and to the high character, motives and ideals, and activities of those who are devoting their lives unselfishly through the Rosicrucian Order to the benefit of all mankind.

E. V. R.—1929

SELF-MASTERY AND FATE

CHAPTER 1

THE PROBLEM OF MASTERSHIP

MAN is either a victim of fate or the master of his destiny! There are no two ways about it, and no neutral position. I am speaking, of course, of mankind and not of the individual. There are individuals who are masters and creators of their destinies part of their lives, and innocent or despondent victims of fate at other times. The lives of such persons simply prove the fact that man can be master or slave as he chooses.

The system set forth in this book for the attainment and application of self-mastership, or the mastership over so-called fatalistic conditions, is based upon the premise that man is essentially a creator of his environment and his circumstances, and not the result of these things. Usually a premise is an assumption or a supposition, but I trust that my readers will see before they have completed the reading of this book that the premise in this case is a fact, and that the other facts in the system built upon this premise substantiate and demonstrate the fundamental fact.

Therefore, if you are one of the many who have been led to believe that environment has gradually molded civilization, and that it has specifically made of man what he is and still controls him, I implore you for your own sake and your own best interests to lay aside that belief and, for the time of the reading of this book and the testing of its principles, to assume the premise upon which this system

is founded to be true and thereby give it every opportunity to serve you.

The fundamental principle involved in this system of self-mastery is that which was observed centuries ago by those untutored and nonacademic minds which had to depend upon the casual and multifarious manifestations of man's existence and nature's operations to determine the natural laws in both the spiritual and material kingdoms. That principle, evolved through observation and perfected through test and application, reveals that all life and all existence within the universe has its expression in cycles, the periodicity of which is equivalent to the rhythm of certain measured and harmonious recurrences of stresses or impulses of a cosmic nature.

Modern science in its laboratory examination of the microscopical manifestations of natural law has discovered that all cells of living matter, and all crystals of nonliving matter, have varying periods of rhythmic motion beginning with their birth and controlling the process of development to maturity, and guiding the evolutionary steps preceding the process of breaking down or reproducing others of their own species. And it has been found that the periodicity which distinguishes the rhythm of each of these species or classifications of matter is harmoniously related to the periodicity observable in the movements of the planets and the effects of rhythm on the tides of the waters of the Earth, and the growth of plant life as well as animal life.

Even in the functioning of the organs of animal bodies—such as the breathing processes, the heart action, and similar movements contributing to the maintenance of life—

there is a definite rhythm closely resembling, and having a harmonic relation to, the larger and more pronounced rhythms of the cosmic energy.

It is not my intention to be highly technical nor even academic in my explanation of the laws and principles pertaining to the cause of the universal rhythm which constitutes the motion of life. Such facts are contained in the Rosicrucian teachings for those who are devoting their lives to the profound research work in which Rosicrucian scientists have been eminent for many centuries. Suffice it to say that there are certain self-evident facts, and others easily demonstrable, which supply the basis for further study in this direction.

It is my intention to speak specifically in this book of the rhythm of life as it affects man and his interests. Even a casual study of the system represented in this book will open the doorway to such mastership of the practical affairs of our daily lives that there will be no room left, in the minds of any who test the system, for doubt as to the universality of the law involved and its universal effect upon all life and all things seemingly without life.

The question has often been discussed as to whether man is a free agent or not, and a test of the system contained in this book will reveal to anyone that, insofar as having the right and privilege to choose is concerned, man is absolutely a free agent. But, he will also find that not a personal God but an impersonal cosmic law holds him responsible for his choice in each and every instance.

We see throughout our lives the success of those men and women who seem to have been fortunate in their choice

of professions, occupations, or applications of time, or who were “lucky” in their selection of property, material, place, or time for the attainment of wealth and happiness, or who followed continuously some intuitive urges which actuated them in their affairs at most propitious times. We see, on the other hand, those who seem to be most unfortunate in all of these things; and, in ignorance of the laws involved, we may be apt to attribute the fortunes and misfortunes to chance or to fate.

It is the purpose of the system set forth in this book to enable every man, woman, and child to take advantage of certain natural laws and work in harmony with them to the end that each may be master of his fate, and, through harmonious cooperation with the cycles of life, reap the richest rewards offered by the bountiful disposition of the cosmic plan.

Without resort, therefore, to superstitious beliefs or practices, and without invoking the questionable influence of hypothetical and theoretical powers of an invisible nature, and with all the saneness and rationalism of a scientific method of living, the practical men and women of this modern time—even those who may be prejudiced against that which is unique or metaphysical—may bring large and important changes into their lives and redirect the courses of their careers toward a certain and assured goal.

With such a desire in mind, let the reader analyze carefully the brief explanations of the laws and principles which follow in the succeeding chapters, without slighting one of them and without minimizing their importance because of their simplicity.

CHAPTER 2

MAN A FREE AGENT

IN considering man's actions as free or controlled, or as controllable or destined, the important point to be examined is this: Are our acts the result of antecedent causes, or are we directed in all of our affairs by external influences, such as the so-called cosmic vibrations, mental impulses from without, or tendencies in and around us? In other words, are our lives as we live them generally an effect of our environment and invisible impulses and urges over which we have no control, and by which certain opportunities and temptations are brought before us and which we either accept and utilize or deny and cast aside?

Those who argue that man is a free agent, and is not governed by any external influences, are begging the question and reaching no conclusion whatsoever. Man is a free agent in every sense that the most enthusiastic of the exponents of that doctrine would have us believe; but that means that man is ever free to choose, to select, elect, and determine what he wills to do in each and every circumstance. It implies that man is never forced against his will to do anything or even think anything.

Of course, the real intent of the doctrine of free agency as promulgated by many schools of philosophical thought is to decry the fact that man is affected in any way by the wishes of God, the autocracy of natural and spiritual law, and the inevitable workings of heredity. These things, however,

do not affect man in the sense usually presented by these philosophical schools, or by the fanatics who misunderstand the real principles.

The wishes of God may truly be the dictates of an omnipotent being, and man is unquestionably affected by the will of God. The method whereby the will and desires of God are expressed and brought to the consciousness of man, however, is little understood even by those who devote their lives to the propounding of God's laws and His direction of the universe. The belief in a personal God who has destined and decreed for each individual before birth a course and a career which will inevitably become manifest in the life of each individual after birth, regardless of the will of man and his application of the divine power within him, which is his birthright, is a pagan belief, unsupported by the testimonies of life itself and by the revelations of spiritual and natural law when applied understandingly.

Students may learn, through the present system, that the will and wishes of God are expressed to man in the form of inspirations, and these inspirations may be carried to man through tendencies, impulses, urges, and propitious presentations in the form of opportunities and temptations. And, man is as often *tempted* to do good as to do evil. The same may be said of any of the true principles of planetary or other cosmic influences. In each case their effect upon man is in the form of these tendencies, without the power to enforce their acceptance by man. Therefore, we find that man is continuously and constantly affected by the opportune temptations to act or to think. Merciful indeed, and just, was God in giving to man the power and the privilege to choose and to decide for himself when he finds himself

tempted by opportunities, urged by inspiration, or led by impulses. And—as a free agent to choose between one impulse and another, one inspiration and another, or one temptation and another—he must abide by his decision and assume the responsibility.

Agreeing, therefore, that man is a free agent and has the privilege and power to choose in all of his acts and in all of his thinking, we still have to consider the nature and the source of these impulses, urges, and inspirations that come before him, and which call for a choice or a choosing. If there were not diverse opportunities presenting themselves, and if there were not varying impulses, urges, and inspirations occurring momentarily, hourly, daily throughout the life of man, there would be no reason for man to have the ability and the power to choose, and man would not have been given the ability to reason, to think, and to use his will power.

The unconscious machinery of the factory has neither the ability to analyze nor the power to act as a free agent. Of all living things, man is unique in that he possesses to the highest degree the ability to act freely and to choose of his own volition. And it may be no tribute to mankind in general to say that the majority has chosen most often unwisely, and that to the minority has been left the salvation and advancement of the race through the proper exercise of its great prerogative.

In the year 1918 I wrote a monograph on this subject, and I stated therein that this subject of impulses, inspirations, and tendencies continuously presented to man for his choice “in conjunction with the study of the law of compensation,

is worthy of a complete book which I may prepare if I find a demand for it." I believe that the time has come for man, in the Occidental world, to know more about these laws and to live in harmony with them as have the Masters of the Far East, and the highly developed and successful persons of the Orient.

The business man is constantly confronted, in the affairs of his daily life, with the necessity of deciding between two plans, two urges, two propositions, two temptations, two "hunches." Or, there may be several distinctly different impulses and plans before him calling for a choice. He is also confronted with the diverse tendencies of his affairs to choose between a greater development of some of them, or a curtailment of others. He is confronted yearly with the problem of expansion or retraction. He finds himself face to face with important decisions, which must be made, that affect the present and future standing of his business and the success of his personal or business career.

The woman in the home finds herself facing similar problems. From day to day there are two urges, impulses, and temptations presented by the affairs of the members of her family, the arguments of solicitors and salesmen, the perplexities of her husband's personal affairs which bear upon the growth and development of the family and its best interests, and her own personal and intimate affairs. The woman in business and the young man in business just starting their careers, or trying to establish themselves in a selected field of effort, find themselves continuously called upon in the quiet of their personal examinations to make decisions that will unquestionably affect the remainder of their lives. To them, as to all others, come the urges and impulses, the

opportunities and temptations, the desires and wishes, with both negative and positive phases to be considered, and a choice to be decided upon.

As these persons decide, so will they determine their *fates* and establish their destinies. The fate of a day, like the fate of a year, may leave its fortunate or unfortunate results to affect the entire life and career of a person or a business.

Yielding to an urge or an inspiration, or submitting to an impulse or temptation, or taking advantage of an opportunity with no other warrant or reason than the judgment based upon analytical reasoning, is equivalent in most cases to choosing between right and wrong by the toss of a coin. Man's reasoning cannot rise higher than the premises upon which it is based, and the premises of knowledge forming the foundation of man's analytical reasoning may be faulty because they may not include a knowledge of the external influences and the natural laws governing his life and his affairs.

As the system contained in this book will show, there is a periodicity or cycle of periods regulating unfortunate periods in the life of each being, also the movement, progression, development, and maturity of each thing in life which begins at a point and proceeds onward to a conclusion—whether that thing is a business proposition, a journey, the building of a house or factory, the buying and selling of merchandise, the diseases and illnesses of the flesh, the conception and development of an embryo, the movement of the tides, or anything that is created and brought into existence by natural laws through divine decree or man's volition.

By working in harmony with the periods of one's own personal life and the periods of the business plan, proposition, or creation of man's thinking, the utmost success will be made and attained, while working out of harmony with these periods or in ignorance of them will bring frustration, failure, losses, and defeat.

Man is the free agent to choose whether he will work in harmony with the universal law of rhythm, whether he will choose rightly or wrongly. But the result of his choice will automatically follow, and this inevitable result constitutes a manifestation of the law of compensation.

He who chooses rightly and works in harmony with the law becomes the master of his fate, while he who fails to choose rightly and works out of harmony with the law is a slave to fate and a victim of destiny unconsciously created.

CHAPTER 3

COSMIC RHYTHM AND THE CYCLES OF LIFE

THE foolish person tries to ignore the phenomenal facts of life simply because he cannot learn the logical theory which explains them. With all the logic at our command, we may reason out of the domain of possibilities everything that may be called a theoretical explanation of the cosmic rhythm which produces the various cycles of life, but we cannot with the same logic and reasonableness negate the facts which have been observed. To the same degree that one may claim that electricity does not exist because its source and its nature may not be known to everyone who reads—yet by its manifestations it proves to be a fact in the phenomenal world—so we may ignore the invisible vibrations of cosmic rhythm and smile at the possibility of these things being divided into manifest cycles or periods, yet the phenomenal facts are quite observable and undeniable.

There are explanations which scientists may call *theoretical*, and metaphysicians will call *true*, which reveal the laws and principles of cosmic vibrations. But these explanations have no place in this book, and in fact deal with the fundamentals of the secret teachings of the Rosicrucians which may not be set forth in any public book, or printed in any public form. Moreover, these facts would not serve any purpose at this time, and, believing that this book will be perused by those of the practical type of mind who wish

a system that is workable, without the need of profound study, I will avoid any unnecessary postulations regarding the laws of the cosmic or spiritual world.

It is sufficient to say, therefore, that all energy in the universe, of whatever nature, has but a single source, but in its emanations and radiations becomes divided into various phases of undulations which the Rosicrucians have called *vibrations*. These undulations have certain periodicity or periods of kinetic and static manifestations, much like the radiations from the antenna of a transmitting radio station. We may think of these various undulations as being of different wavelengths, different rates of vibrations, or different periods as we please, but the fact is that the resulting effects from the different waves or radiations account for the various forms of known and unknown energies in the universe.

I will presume that those interested in the study of vibrations, so-called, realize that vibrations may be divided into a great many octaves of manifestation, and each octave may be divided into many distinct forms of manifestation in both the spiritual and material world. Even the few octaves which cover the manifestation of sound give a wide variation of manifestation; for some of the rates within the octaves of sound may be so low as to be inaudible to the average person, and manifest only through touch, while others may be so high as to be inaudible but manifest in light or other mental or metaphysical ways. Ordinary electricity is unquestionably another form of the periodic range of the universal vibrations, as is the divine essence of the soul, the vital life force of the animal body, and the lower vibrations of vitality in plant and mineral life.

In addition to the above manifestations caused by the varying rates of vibrations of cosmic energy we find that the energy controls and directs the rhythmic motion of all things in the universe, and I hardly need to remind my reader of the fact that motion is the fundamental principle of all material things, and that if motion were eliminated in the universe, we would see, hear, feel, and sense nothing. Matter itself is a result of the motion in the electrons, which is carried into the atoms and molecules. And the electronic motion is a result of the motion impregnated by the rhythmic pulsations of cosmic energy.

As stated in a previous paragraph, everything that is in the universe is existing and manifesting in accordance with a cycle of rhythm distinctly its own, and everything that has had a beginning or a start whereby it became a distinct entity moves forward in time in accordance with a cycle of progression distinctly its own. Those who have had the pleasure of reading the more simple explanations of Einstein's hypothesis of relativity, coupled with other recent, simple explanations of the theoretical relationship of time, motion, and space, will realize that time itself is an artificial relationship between motion and our consciousness and apprehension.

When it was learned that our sight-consciousness required a minimum of one eighth of a second to apprehend an impression, and that the impression registered upon the retina of the eye remained in the consciousness one sixteenth of a second after the sight impression had left the retina, it was found that by having the sight impression last one sixteenth and the consciousness of it remain for one sixteenth, we had an apprehensive period of two sixteenths of a second,

or one eighth of a second, divided into one sixteenth of actual physical impression and one sixteenth of retentive impression. This was a discovery made through what might be called experimental psychology, coupled with a truly metaphysical analysis of the time element in conscious apprehension.

Out of this metaphysical or almost mystical analysis evolved the very practical invention of the kinoscope which was later evolved step by step into the present-day motion-picture camera and projector. It is from the fundamental fact, however, that objective, worldly consciousness requires the element of time to apprehend and translate its apprehension into understanding, that we have become accustomed to associate a definite period of endurance or progression to the existence of all things. And we unconsciously establish a scale or standard of measurement of time whereby we may be conscious, relatively, of the existence of each thing in life.

It is known to the Rosicrucians who taught the principles of relativity and the fundamentals of the hypothetical conditions called *time* and *space*, long before Einstein or his predecessors, that the psychic consciousness of man does not require the element of time in its apprehension which is required by the objective or worldly consciousness, and, therefore, in the dream state or in any psychic state, the progression of facts evolving in the consciousness does not require the element of time for apprehension; the progression or sequence of events is disassociated from the objective standard of measurement of the time element.

Thus, in a dream or in a psychic state of consciousness events may occur and be apprehended by the consciousness in a flash of a second; but, when translated by the objective consciousness in a waking state, require minutes to explain and become associated with a period of time of from five minutes to five hours or more. It is not uncommon for a dream that seemed to cover a relatively objective period of an hour or more, to have actually required a negligible fraction of time to occur in the psychic state. In fact, we have no reason at all to believe that occurrences in the psychic state have any period of the time element in them whatsoever. They do not progress in relation to our objective consciousness of time.

In more simple words we may say that all events and all things existing as eventful are associated by the objective consciousness with time, since they require time to be apprehended by our objective minds. It is a fact that we cannot be conscious in an analytical way of two things at the same time, and that when we are attempting to be conscious or mindful of two things coincidental in objective time, we can only be conscious of them intermittently by having each different impression follow in sequence, giving each its allotted fraction of a second for apprehension.

Thus a man reading a book may walk along the street among many pedestrians. He may be successful in reading understandingly every word on the page, and at the same time avoid collision with others and make the proper progressive steps, side steps, and hesitations necessary to complete his walk. He may think that he is conscious of his walking, and the control of his steps, at the same time he

is conscious of his reading, but in truth he is dividing his attentiveness alternately between the words on the page and the steps he is taking.

Such alternation in conscious apprehension or realization may be so rapid as to seem almost coincidental. It is not the progression of events that actually requires the element of conscious time with which we are familiar, but our consciousness of the progression of events, and this is always relative and fictitious, having no foundation in cosmic terms.

The observable progression of events is impressed upon the consciousness in such periods of time as constitute what is known as a definite periodicity or a definite cycle, and as stated heretofore, each and every event begins a cycle of its own through which it progresses to culmination or to a finality. These cycles are called the *rhythm of life* when associated with our own existence as human beings, but more popularly called *cycles of progression* when related to our material affairs.

Thus each human being has a cycle of existence that is divided into identical periods for all beings. The cycle begins at the first breath of life breathed into the nostrils, and lasts for approximately 144 years. Very few complete this cycle of life because of violation of natural laws or inharmonious living. Worldly events have two cycles—the major and the minor. The major cycle is one sun year, or approximately 365 days, while the minor cycle is one sun day, or approximately 24 hours. Other events or affairs in our lives, such as ill-health in the form of diseases, accidents, and fevers, also have cycles varying in length according to the nature of the

thing itself, just as the gestation of the human embryo and of other animal embryos has cycles of distinctive lengths, and as seeds in the ground also have germination cycles.

Each cycle is divided into periods of equal length, and each of these periods produces certain definite effects upon the progression of the thing governed by the cycle. What is meant by this will be explained in the next chapter, but here the important point to bear in mind is that just as the breathing under all conditions and the beating of the heart and of the functioning of other organs within the body are rhythmic and in accordance with certain rates of periodicities which have become standard, and an alteration of which plainly indicates to the physician an abnormal condition, so all things in life move rhythmically, and the normal and natural rhythm for each thing in its cycle is in harmony with the cosmic rhythms. When anything has a rhythm that is out of harmony with the cosmic rhythms it is abnormal or subnormal, and therefore in the process of destruction or frustration. It is by being in rhythm with the Cosmic or in tune with the infinite that man may keep his health and his affairs progressing to the highest degree and manifesting abundantly in health, happiness, prosperity, and peace.

SELF-MASTERY AND FATE

CHAPTER 4

THE PERIODS OF EARTHLY CYCLES

IN the preceding chapter I stated that as the human being is an entity, physically, so each event or each thing created by nature or by man and having a beginning in the physical expression on this earth plane is an entity, having a cycle of existence distinctly its own. This refers even to diseases, or to so-called accidents, for they, too, are the results of man's actions, and therefore created by him, and have a definite worldly starting point and cycle of existence.

Cycles of time for the existence of things are like lines drawn from starting points and continuing for various lengths. And each of these lines is divided into periods or segments, sections or sectors, as you choose to call them, of equal lengths. Each of these sectors constitutes a different manifestation of cosmic urge, impulse, or influence, tending to direct the progress and development of each thing.

The ancient philosophers accepted the eminent philosopher's statement that in the beginning of all creation, God geometrized. It is true that the more we search into the origin and operation of spiritual and natural law, the more we find that the whole scheme of the universe and the incidental scheme of each individual thing in the universe operates and manifests in accordance with the principles of geometry. Thus God is the great Architect and Mathematician, and the very complex map of geometrical motions and designs for

the movement and existence of all things is but slowly being comprehended by man. We may never know the origin and general plan of God's entire universe, and we may never know the reason for the mathematical progression of all events. But we can know through observation and through test and trial the effect of these mathematical progressions in our own lives.

I have stated above that each event begins at a starting point, which is the beginning of a line of progression, and this line constitutes its mathematical cycle equivalent to a curved line beginning at the conception and birth of an event, attaining the peak of the curve at its maturity, and declining in its curve to the last point of culmination or finality. The expression "the course of events" is based upon a very ancient and continuous observation of the fact that most events reveal very clearly a definite course of progression. This fact has been considered so little in the business world by the busy materialist that he has overlooked one of the most helpful of all metaphysical principles, and it is the Rosicrucian alone who constantly maps his life and his daily affairs in accordance with the geometrical progression of mathematical operation throughout life. Hence the secret of his success, his power, and his ability to be a real master of his life instead of a victim of so-called fate.

The Rosicrucian begins his studies by a careful digest of the fundamental cycles of life, and learns to become acquainted with the periodicity of all things in the animal, mineral, and vegetable kingdom. He finally becomes acquainted through the studies with his own relationship to the cosmic cycles and those periods wherein he may do the

most desirable things at the propitious times. It is this that has gained for the Rosicrucian throughout the many past centuries the title of Master, for he becomes a master of his own life and his own affairs.

We may liken the line that represents the progressive course of events in life to the charted line drawn upon a map which the captain of an ocean steamship tries to follow when he leaves the port of New York expecting to reach the port of Liverpool. That line upon the map may be several thousand miles long, or it may be said to be seven days long. In the latter case, we may say that the cycle of the journey across the ocean, or the progression of the journey, is seven days long and is divided into seven periods, of one day each. The first period of one day begins at the hour and minute that the ship starts from the wharf. The second period of one day begins just twenty-four hours after that, and the other periods follow in the same manner. Hence the journey is a cycle of seven periods and we would say, therefore, that the periodicity of the cycle of the journey is seven days or seven periods.

Each of these days will produce a different effect in the events of the journey. The first day may produce or manifest a rough sea, with wind and storm. The second day may produce a calm sea, with every advantage for progressing rapidly and making up the time lost during the first day. The third day may produce not only a calm sea but warm temperatures, with a favorable wind enabling everyone to enjoy the journey to the utmost, and enabling the ship to make more rapid movement. The fourth day may produce a moderate sea but a strong headwind that will delay the journey, and the other days may produce still different effects.

If the captain and passengers of the boat knew the true periodicity of their journey, they would be prepared for certain events, and instead of being victims of fate, so-called, they would be forewarned and forearmed to be masters in every condition and circumstance.

The journey of life is much like a journey on the sea, and each life begins at a slightly different starting point. Even casual observation revealed long ago that man's life is divided into periods like the days of the ocean journey, with definite events occurring during each period. The average human being is unconscious of these periods, and still more unconscious of any knowledge about the events which are most apt to occur during each of these periods. Therefore, he is unprepared to meet them until they are in full manifestation and is handicapped in solving the problems of life by a lack of knowledge regarding the propitiousness of the tendencies which will be made manifest in each successive period.

The course of a business, whether it be manufacturing, selling merchandise, or some other line of endeavor, has a definite cycle or series of cycles of one year each, beginning with the first day that the business began to operate or the owner or proprietor entered into it. And each of these yearly periods or cycles is divided into segments of definite lengths, wherein certain tendencies, conditions, and circumstances are sure to arise or present themselves, and which may be most unfortunate if unknown or misunderstood, and exceedingly fortunate if appreciated and advantageously accepted.

Thus we see that the cycles of life really constitute a geometrical map or a mathematical scheme whereby we can

WITH THE CYCLES OF LIFE

mechanically and accurately map our lives and the external influences, and either take advantage of these things, or innocently and ignorantly submit to them. In the one case we are masters of our destiny, and in the other case, victims of our fate.

SELF-MASTERY AND FATE

CHAPTER 5

THE SIMPLE PERIODS OF HUMAN LIFE

ONE of the most simple and very apparent cycles of human life is one which the ancients observed and quickly learned to use as a basis for many of their mathematical and geometrical plans of life activities. Even in the modern science of medicine and in many of the newer statistical forms of analysis of human economics, this ancient cycle of human life is utilized as a fundamental scheme.

According to this primary cycle, human life is divided into a progression of periods, each period lasting approximately seven complete sun years or seven years of approximately 365 days each.

Merely as an illustration of how this simple cycle manifests itself, and not to use this cycle as a part of the system to be explained later on, I will call your attention to the fact that we can easily divide our lives into periods of seven years, and notice how each period has brought its definite results or produced effects upon our growth, development, and mastership.

PERIOD NO. 1

Birth to 7th Year

Consider the first period of seven years. This is the time during which our babyhood and early youth occurs, and when

the fundamentals of our education and cultural development are laid. It is really a period of self-discovery, as far as the objective material world and our relation to it are concerned. We learn to walk and talk, control our bodies, and relate ourselves properly to our physical and material environments.

PERIOD NO. 2

7th to 14th Year

In this period certain physical changes take place in our development, and the mental side of our nature takes a secondary place in the changes going on. It is just before the fulfillment of the second period that the important physical changes in both the male and female occur, preparing the child for the third stage. If these changes do not occur before the end of the second period, the child is psychologically and physiologically subnormal, and both physiology and psychology have unconsciously recognized this second period in the cycle of life.

PERIOD NO. 3

14th to 21st Year

In this period the physical changes drop back into secondary place together with the mental, and the psychic side of human nature is developed primarily. This brings about the sense of responsibility, giving dignity, poise, and character to the individual. It is during this process that the individual attains that degree of psychic or psychological, as well as mental and physiological development, that establishes the individual as a capable entity, qualified to assume legal responsibilities. The person who does not attain

this degree by the 21st year is backward in the progress that should have been made, and is classified as subnormal.

PERIOD No. 4

21st to 28th Year

In this period there is a development strongly centered in the emotional nature carrying on the unfoldment of the emotional spark that was awakened in the preceding period. During these years, the individual acquires stability, a further sense of responsibility, a softening of the nature, and a gradual activity in those higher, dormant faculties known as intuition, mental telepathy, unconscious psychometry, and similar psychic faculties, together with an awakening interest in music, art, language, and what may be termed the religious and higher things in life. An absence of any manifestation of the development of these faculties during this period would indicate to the psychologist or psychiatrist a subnormal development.

PERIOD NO. 5

28th to 35th Year

In this period we find the creative processes of the mind most active, and the ability to visualize, imagine, and mentally create greatly developed, with a developing attunement with the Cosmic Consciousness and the ethical standards of life. It is during this period that the greatest inventors have made most progress, and the business man has become energetic and successful. It is also noteworthy that it is during this period that many of the world's greatest philosophers, avatars, and mystics found the sudden Cosmic Illumination which is called *complete attunement* with the

Cosmic Consciousness. The greatest of these have begun their world-wide missions and written their greatest works during this period.

PERIOD NO. 6

35th to 42nd Year

In this period people enter a stage of development that induces the desire to explore, investigate, and reveal great knowledge and the hidden facts of life. A restlessness comes into their nature which makes them dissatisfied with the monotony of selfish and personal attainment, and quickens in their being the humanitarian and brotherly emotion which makes them want to share what they have with the world. Yet even if they have little else than time and knowledge to share, they want to explore or discover and bring these revealed things to the masses for their benefit.

It is during this period that people start disposing of great wealth that they have accumulated or inherited by building libraries or contributing to the arts, the sciences, schools, colleges, universities, or explorative and inventive expeditions and speculations. It is truly the culminating period of all the years that have preceded in the life of the average human being, and starts the system of compensation in the average individual's life whereby the individual feels the need of returning to the Cosmic and to mankind some of the benefits he has enjoyed.

PERIOD NO. 7

42nd to 49th Year

In this period the desire to rest, meditate, and philosophically speculate builds up in the human being a new chapter, which unfolds strongly and uniquely in each case until the individual becomes a new person with new hopes, new desires, a new viewpoint in life, and a new goal and ideal toward which to labor. The mind is turned more strongly toward religion and philosophy than to business. It is also turned to those humanitarian activities that bring consolation and peace, by giving help, health, and happiness to the downtrodden, disconsolate, or despondent. So surely does this period work out in the average person's life, to some degree, that one may easily judge the approximate age of any eminent character by noting the tendencies of his habits and the trend of his thoughts, even when such a person is in very moderate circumstances and can do nothing more than wish he were able to do the things that he has in his mind and heart.

PERIOD NO. 8

49th to 56th Year

In this period we find a tendency toward further retirement from personal or selfish ambition, accompanied by a gradual lessening of the vitality and physical prowess, but compensated for by a highly attuned psychic and mental nature. Here the pendulum is beginning to swing from the building up of a physical being to the building up of a spiritual being, and for this reason the physical body begins to lose its power to combat disease and to surmount the strains of accidents and undue strains upon the vitality. Vital

statistics prepared by insurance companies and government bureaus plainly show the great changes in the physical body which take place during this period and the preceding one as the pendulum begins to swing from the physical to the spiritual.

PERIOD NO. 9

56th to 63rd Year

In this period there is a continuation of the conditions in the preceding period, but accompanied now by a mellowing of the mental faculties together with the weakening of the physical prowess, leaving the individual more and more a psychic and spiritual being in harmony with the entire purpose of the cycle of progression. As man is born to become a living soul, and not merely a soul-animated physical body, so he evolves, period by period, from birth to his 63rd year, from a physical being to a spiritual being, thereby approaching more closely the inevitable purpose of his existence.

* * *

The other periods of seven years each contribute to the spiritual development and the gradual breaking down of the physical body. The end of the cycles is approximately at the 144th year, in order that the cycle of life may harmonize with other cycles and other periods which will be dealt with later.

Thus we can see in this very simple cycle of seven-year periods a rhythm of life that is universal for all and in accordance with a mathematical or geometrical plan that is incomprehensible unless we study all of the cosmic laws and

know, as the Rosicrucians do in their higher teachings, the universal scheme of cosmic rhythm.

One question may be asked here: "If this is a universal cycle with all beings, will it manifest the same effects in the lives of those who live in less-developed sections of the world as it does with those who live in more modernized areas? In answer to this we can only say that observation has shown that the cycle manifests its effects in every human being in accordance with the individual's progress through the larger cycles of universal life. In other words, the manifestations in each individual's life are in accordance with his or her stage of evolutionary development. Whether one believes in the doctrine of reincarnation or not, one cannot deny the effects of hereditary evolution, or the evolutionary effects of progressive generations.

Each generation of human beings of a normal type is brought to a higher degree of susceptibility to the influence of these cycles of life. To people in less-developed areas, the various periods outlined above would bring only such manifestations and changes in their nature as would be in keeping with their stage of evolution—or, in other words, in keeping with their degree of progress along the higher cycles of universal life.

In a lesser degree, there is considerable variation in these manifestations among those who are of one nation and in even the most enlightened part of the world. For instance, here in America there are those who more definitely and more clearly manifest the effects of these periods of the cycle in their lives than others, and even a casual investigation of the lives of these persons will show that one is more highly

evolved along the universal lines of cultural development than the other.

We may compare these seven-year periods of the cycle to the individual notes of the octave on the piano. Each octave has its notes, separated into definite periods or rates of vibrations, and the periods in one octave are identical with the periods in another octave. We may say, then, that a less-developed person living through a cycle of life that is comparable to one of the lower octaves on the piano keyboard, and although he passes through the periodic notes of that cycle, they do not manifest through him the same attunement or tone with harmonic vibrations that another person would manifest who might be passing through one of the higher octaves.

According to the doctrine of reincarnation and according to the doctrine of the evolution of character and personality, each human being passes through successive cycles like progressing through the various octaves of the keyboard from the lowest to the highest. We have no consciousness of what is the lowest octave, and we can have no consciousness of what may be the highest octave, or the last, if any, of the cycles of life. Life itself is continuous and immortal, and therefore it can have neither any beginning nor any ending.

Again I must call your attention to the fact that to attempt to think even of the beginning or the ending of the cycles of life, or of these cycles as having an endurance in time, is to attempt to reduce our comprehension to a time consciousness, which is purely a relative thing of the finite and not of the infinite. This is explained in the preceding chapter of this book.

CHAPTER 6

THE YEARLY CYCLE OF HUMAN LIFE

With Description of Cycle No. 2

IN the foregoing chapter I outlined the life cycle of each human being covering approximately 144 years and divided into periods of seven years each. Now we have another cycle to deal with, which we will refer to in the system explained later in this book as Cycle No. 2. This cycle has to do with our personal worldly affairs each year.

Cycle No. 2 is 365 days in length, or in other words, renews itself and starts over again at each one of our birthday anniversaries. Therefore, the duration of Cycle No. 2 is from birthday to birthday. This cycle is divided into seven periods, each having approximately 52 days and a few hours, or in other words, $52 \frac{1}{7}$ days. This means that each year of our lives, from birthday to birthday, is divided into seven periods during which certain conditions are favorable or unfavorable for the things we wish to do and must do in the course of our earthly existence.

This cycle is somewhat complex, and yet if my reader will follow me closely and refer to the tables and illustrations given in this chapter, he will have no trouble in understanding and utilizing Cycle No. 2 to aid him in attainment of self-mastery.

As stated above, Cycle No. 2 runs from birthday to birthday. It has nothing to do with the yearly calendar or the year of the calendar that begins in January and ends on

the last day of December. This means that each individual has a cycle all his own. The only way in which two or more persons may have the same cycle would be through these persons having been born on the same day.

If you were born, for instance, on March 20, then your yearly cycle is from March 20 to the following March 19, each year of your life. With a person born on June 2, his cycle would run from June 2 to the following June 1. This point must be kept in mind so that there is no confusion with the calendar year that runs from January to January; we must also keep in mind that this cycle has nothing to do with the astrological periods that begin and end around the 21st to the 23rd of each month.

Therefore, in figuring the seven periods of each of your yearly cycles, you must begin by dividing your years into sections of approximately 52 days each. If you were born, for instance, on March 20, you would begin with that day and count forward 52 days and then another 52 and another 52, and so on. Do the same if you were born on June 2, or on any other day.

For your convenience in figuring these periods, I am introducing here in these pages a calendar of 365 days of the year. This calendar is sufficiently accurate in its number of days to use for any year, regardless of whether the year is a leap year or not. You will note that the days of the months run consecutively after the name of each month. This makes it a simple matter to figure out the 52-day periods of your personal life cycle, or Cycle No. 2.

CHART A
CALENDAR FOR ANY YEAR

January	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31

*In Leap Years there are 29 days in February

CHART B
EXAMPLES OF CYCLE No. 2 OR No. 3
STARTING ON NOVEMBER 25

Period No. 1	Nov. 25 to Jan. 16	1st Period, Nov. 25 to Jan. 16
Period No. 2	Jan. 17 to Mar. 8	2nd Period, Jan. 17 to Mar. 8
Period No. 3	Mar. 9 to Apr. 30	3rd Period, Mar. 9 to Apr. 30
Period No. 4	May 1 to June 21	4th Period, May 1 to June 21
Period No. 5	June 22 to Aug. 12	5th Period, June 22 to Aug. 12
Period No. 6	Aug. 13 to Oct. 3	6th Period, Aug. 13 to Oct. 3
Period No. 7	Oct. 4 to Nov. 24	7th Period, Oct. 4 to Nov. 24

(NOTE: Either one of the above methods of tabulating the periods of a cycle may be used, in accordance with the instructions given on these pages.)

Let us take an illustration now of a person born on November 25. His yearly cycle begins on the November 25 and ends on November 24 of each year. We will start, therefore, with the calendar and write on a piece of paper the date, November 25, and begin to figure the first period of 52 days by counting on the lines of the calendar 52 days forward from November 25.

First we count five days to the end of November and then begin with December 1 as the sixth day. Continuing through to the end of December gives us 36 days, so we continue counting in January and find that the 52nd day falls on January 16. Therefore, we write on our piece of paper opposite November 25 the date January 16, and then opposite this, "First Period." This means that for a person born on November 25, the first period of his yearly cycle is from November 25 to January 16.

To find the second period of 52 days we start again at January 16 and count forward through January and February and partly into March until we have counted off 52 more days, which we find brings us to March 8. So we write on the paper again under the first line, the two dates, January 17 to March 8, and right opposite this, “Second Period.”

Again we begin with March 8 and count forward 52 days, which brings us to April 30. We write down the dates again, March 9 to April 30, and put opposite it, “Third Period.” Continuing this way we find that the fourth period is from May 1 to June 21. And the fifth period is from June 22 to August 12. The sixth period is from August 13 to October 3, and the seventh period October 4 to November 24.

These dates are approximate because we are laying aside the few hours that should be added each day to make the exact period of 52 $\frac{1}{7}$ days—or 52 days, 3 hours, and 24 minutes. If any of the periods are minus one day or plus one day, it will not make any serious difference in the application of the system. If your last period of 52 days falls a day ahead of your birthday, this will make no difference in the use of the system.

With a person born on February 8, the first period would be from the February 8 to April 1, by counting 52 days from February 8. And the second period would end on the May 23 by counting 52 days from April 1. To figure out these periods in your life is not a difficult matter, and it is not a mathematical matter so long as you have the calendar to use conveniently. The important thing to bear in mind is to write on a piece of paper the seven periods of your year, and to

number these periods from one to seven. These you should call your second cycle periods.

I am going to give you a third cycle shortly that is also very important, and it is divided into seven periods also. Those periods will be called the third cycle periods, and they must not be confused with the second cycle periods or the first cycle periods outlined in Chapter 5.

Now each of these periods in Cycle No. 2 contains opportunities, conditions, urges, influences, temptations, and cosmic effects which have an important and subtle bearing upon the success or failure, strength or weakness, joy or sorrow, of your personal affairs. I will now outline these things below.

PERIOD NO. 1

This is a period when a person should utilize every personal power and ability to advance his own interests among persons of influence who have powers or privileges to grant or give. It is a period when solicitation should be made for favors, either in seeking employment, benefits, loans, partnerships, investments, special concessions, releases, or even favors in the form of time or postponements or dismissals in court. It is an especially good period to seek favors or honors, help or recognition, from persons who are in high power or high positions such as government officials, judges, mayors, governors, senators, people at the head of large corporations or big business, or persons who hold valuable papers, documents, and matters that may be of great importance, and which may be released, modified, or otherwise affected by your solicitation.

This is also a good period for advancing one's own personal self among the populace, or with the people of your city, state, or country, or in building up your credit standing or your reputation with newspapers and influential people. It is a time to push yourself forward with discrimination and yet determination, for all of the cosmic vibrations are in favor of boosting and helping you personally so far as your name, reputation, honor, and integrity among high persons or the multitudes are concerned.

PERIOD NO. 2

This period is distinctly different from the foregoing period, for during these 52 days everything will tend to be favorably directed toward your plans regarding any journeys, especially those that are not for many months' or a year's duration, but those that are short, quick, and of immediate importance rather than of importance in the future. Journeys by water or by train are generally favored during this period. It is also an excellent time for moving your home to a new location, or moving your business, or moving your occupation, if it is something under your own control. In other words, this is a period for changes which are quick and soon over with.

In a business way this period will be found very favorable for such activities pertaining to movable things, and things of indefinite location. The moving of freight or the dealing with freight business, expressage, automobiles, wagons, carriages, trucks, public conveyances, public lectures, shows, performances, and things of this kind will be found successful. Strange to say, this period is also an excellent one for those who are dealing with liquids, chemicals, milk, water, water

power, gasoline, or other things of a liquid nature. Dealing with people who are in lines of business associated with all of the foregoing will also be more successful in this period than in any other.

Inversely, one should not plan a change of business or start a new career in business or attempt to build a permanent thing upon any change that is made during this period. Moving one's home may be successful if done during this period, but at the same time the buying of a new home during this period will be very apt to result in a future change because a change made during this particular period does not make for permanency. Therefore, all things done during this time should be of such a nature as to begin during the period and end shortly afterward or as to be of the present months or year rather than the future.

This period is also good for persons who are in business such as catering to transients, or to fluctuating business affairs, such as those who conduct hotels, or traffic, or who cater to persons who are constantly moving or passing by. It is also a good period in which to engage new employees or servants, or to begin any agricultural developments or planting. Contracts, agreements, legal papers, and other business affairs that are intended to continue over a period of years or remain permanent matters should not be started or completed during this period.

It is an unfavorable period in which to loan money or even borrow money, and is not good for the construction of any building or the starting of any business that has a considerable investment to last over a long period. Certainly it is an unfavorable period to speculate in the stock market or to gamble in any form.

PERIOD NO. 3

Here we have a period that may be fortunate or unfortunate according to the application of the cosmic powers, and the discretion and discrimination that a person uses. This period fills the individual with an almost uncontrollable impulse to want to do great and important things, and the fiery energy that goes through the human system during this period wants to express itself in many ways. If directed carefully, this period can be one of the greatest in the whole year for the building up of a business and the accomplishment of those things that call for great physical energy, physical effort, endurance, vitality, determination, and persistency.

On the other hand, if the energy is misspent, or applied without discrimination and judgment, great tasks may be undertaken or started that will not be completed in a long time, and too much for one person may be started through the restless energy that wants to express itself. This is an excellent period in which to overcome those obstacles and conditions that in the past periods seemed to check every advancement because of the energy and labor required.

It is an excellent period to begin anything that has to start with a bang and have a great impulse during the first month or two of its career. Certainly this is an excellent period for dealing with affairs of the army, the navy, military engineering, munitions, or with those persons or lines of business that deal with heavy muscular or extreme vital energy. It is likewise an excellent period for the building up of a business or interests dealing with iron, steel, cutlery, sharp instruments, or things connected with electrical machinery, furnaces, and fire.

It is also a fine period in which to deal with enemies, competitors, and rivals, who have heretofore been obstacles in the path, but it is a poor time to attempt to master those obstacles or persons with arguments or with contracts, papers, or agreements. If sheer energy, persistency, and long hours of activity and hard work will affect competitors or obstacles in the way, this is the period in which to overcome them in this manner.

It is during this period that many quarrels, arguments, and business strifes occur, and these should be avoided because they are not apt to end very successfully for any person involved. It is an excellent period for salesmen or lecturers or others who must depend upon very forceful oratory or fiery argument to convince.

PERIOD NO. 4

This period is considerably different from the preceding one, inasmuch as in it we have the cosmic forces strongly influencing and strengthening the mental, nervous, and psychic side of the nature rather than the physical. It is an excellent period for the writing and mental creation of books, plays, plans, business schemes, and other matters requiring a fertile mind, quick thinking, smooth-flowing language, and an unusual ability to express the thoughts in the mind. In fact, the mind will seem to be highly charged with new thoughts, new ideas, and easily contacted expressions of the Cosmic Mind.

Incidentally, it has been noticed that since the mind is very fertile and very sensitive during this period, ideas, impulses, and urges are apt to flow into the mental consciousness

very rapidly. To take advantage of most of these, the person must act upon impulse and quickly grasp the ideas and put them into practical application before others crowd them out. Therefore, it is a dependable period for acting upon impulses or so-called intuitive hunches. The nature of the person becomes optimistic and, because of the mental activity, somewhat nervous and restless, with the imagination highly charged.

It is a good period in which to deal with literary persons, reporters, messengers, to engage stenographers and writers, bookkeepers, engravers, artists, and persons whose work is primarily mental and rapid in expression. Artists are more inspired and more nimble in their work during this time.

A warning must be given here, however, that great deceptions can be practiced upon persons during this period. Stories, reports, papers, documents, or other written or spoken matter that may come to your attention during this period must be carefully analyzed before being accepted, because it is a period when falsehood is as nimble and eloquently expressed in words or writing as is the truth. Deception, therefore, is not only very easy, but very frequent. Forgeries in regard to personal and business papers, and counterfeits of important papers or money must be watched at this time. Many of the great losses in life through thievery, robbery, or deception occur during this period, and proper precaution should be taken to prevent these things.

It is a good time for study and for the absorption of special knowledge and for the building up of a quick and nimble mind and tongue. It is not a good time to enter into

marriage, to hire servants, or to return from a long journey or to buy homes, business propositions, or lands.

PERIOD NO. 5

Here we enter into what may be called the success period of each year, as far as our personal, private affairs are concerned. During these 52 days the cosmic impulses and tendencies are to bring happy fruition and successful termination of the things with which we have been laboring, or the things we have planned or put into action. It is during this time that our personal affairs expand, grow, and increase in prosperity. The mind of the person becomes filled with higher ideas of courtesy, religion, science, and law, and there is a tendency toward good fellowship, sociability, benevolence, honesty, and sympathy.

It is an excellent period for dealing with lawyers or judges of the court, government officials, clergymen, physicians, merchants, or people of wealth. It is also a good period in which to begin a long journey in contradistinction to the good period for short journeys which occurs during the second period of this cycle. This is also a very fine period for renewing or starting interests in philosophical works, metaphysical studies, the preparation of sermons, or legal briefs, or those things requiring very favorable influences to bring to a successful issue.

For that reason it is a fine time in which to collect money that is owing or to buy for the purpose of selling, and to sell or speculate or even to borrow. Any attempts during this period, however, to deal with tricky affairs that are not legitimate speculations, or to deal with cattle, to buy or sell cattle, or

to deal with meat products on a large scale, or to deal with marine affairs, will prove unsuccessful.

PERIOD NO. 6

Here is a period that may be called the holiday of the year. It is a time for pleasure, amusement, relaxation, and entertainment. This does not mean, however, that business will not prosper and that regular affairs of life should be withheld or modified during this period, for all things that are legitimate and good will continue with almost as much success as during the preceding period. However, this is the time in which to deal specifically with certain affairs of life with more intensity than at other periods.

Now is the time to make long or short visits for relaxation or for the renewing of friendships. It is a fine period for dealing with women, or for women to deal with men in the pleasurable things of life, and in the higher things of life. It is especially fortunate for such business matters as deal with the higher and more pleasant things of life such as with art, music, poetry, painting, sculpting, personal adornments, perfumes, incense, flowers, and so forth. Short journeys will be happy and successful during this time but not long voyages, or in fact any voyages by water.

This is a good period for the consummation of transactions of a speculative nature, or to buy stocks and bonds or to engage employees and assistants.

PERIOD NO. 7

This is the critical and disruptive period of life each year. I feel sure that after you have outlined the yearly cycle of

your life for each year, if you will then look back over the last ten or more years of your life and note the things that occurred during the seventh period of each of your years, that you will see how true this is. It is that sort of a period when devolution precedes evolution, or when the breaking down begins in order that there may be a new building up. It is like the period when the house is torn down, brick by brick, and leveled in order to rebuild again.

In one sense it is disruptive, and in another sense it is the first stage to reconstruction. For that reason, each should be warned to take advantage of the natural tendency of this period and at the same time guard against these tendencies that they may not go too far, or that one may not wrongly labor and run counter with the tendencies instead of cooperating with them. It is the period when most things that have been hanging fire and are about to end, or disrupt, do so. If a business or any other affair has been going poorly and has shown a tendency to fail, and go to pieces, this is the period when such a culmination is most apt to occur. If this result is not wanted, care must be exercised not to do those things which will help to bring it about. The mind is very apt to become despondent, discouraged, or pessimistic during this period, and that must be kept in mind, for if this attitude is allowed to affect the actions in business or in personal affairs, it will help to bring about a disastrous result.

The influences during this period are very subtle, and must be carefully analyzed and reasoned before being applied. We have said that during the fourth period of this cycle the rapidity with which ideas come to the mind, along with the cosmic influences creating them, makes it advisable to be quick and even impulsive in accepting and applying

these ideas. The very reverse is true in the present period. Impulsiveness here will bring disaster. If matters that are pending or ideas that suggest themselves can be postponed and held over until past the coming birthday, and put into the first period or the second period of this cycle, it will assure greater success.

This is a good period for dealing with elderly persons, judges, referees, or persons who must debate and consider carefully and for a long time before rendering their decisions. It is also a good time for business interests dealing with inventions and mechanical things, and even for applying for patents or government papers of protection. It is a very good period for dealing in real estate, mines, and minerals, and those things that are of the earth, and deeply seated in it, or in hidden or out-of-the-way places. For that reason it is a good period to deal with persons engaged in lines of business connected with these things, or with grain or fruits of the earth.

Certainly it is the most unfavorable period in the whole year for starting anything new or launching a new business or giving a new impulse or new expenditure in business except for protective purposes. Voyages by sea, long or short, or on land, should be avoided unless their effects are to result in weeks and months of the future when they will fall in another period.

* * *

Thus we have the seven periods of Cycle No. 2. The influences operating during each one of these periods may not begin on the first day of each period, nor end the last day of each period. In fact, the influences of each period may

begin a few days before the period, and lap over a few days into the succeeding period. For this reason the precise hour or part of the day in which each period begins is not important. The only way to be sure that you have the best influences of each period is to avoid the first and last two days of each period in doing anything of a very definite nature pertaining to that period, because at the beginning and ending of each of these periods there is a mixed influence of the preceding and succeeding one.

CHAPTER 7

PERIODS OF THE BUSINESS CYCLE

With Description of Cycle No. 3

EARLIER in this book I stated that everything that has a beginning in the worldly plan of existence starts its career in accordance with a cycle of progression just as the human life begins a cycle at birth. Just how long such cycles may last or continue to manifest depends upon many things, and just as human life on this plane may last for a month, a year, 30 years, or 80 or more, so a business proposition or an institution or a commercial plan may have a life of activity covering a month or a year or a score of years. However long it may operate or continue to exist, its existence will be in accordance with a cycle of progression that is just as definite as the cycle of progression of human life.

In other words, if several people unite today to organize and incorporate a new business under a new name, to carry on a new line of activity, and the new name of the company and its new plans are adopted and definitely completed today, then this new business would have its birthday today, and would begin its career today, and would have a cycle of progression beginning with today, just as though these persons had given birth to a human form with a soul.

Each one of our business institutions, business schemes, plans, or forms of activity, has a birthday. In other words, there is some day in the year that is passing that constitutes the day on which the business first started, or first made

its representations to the public, or began its material activities.

Most businesses operating today can easily determine what day of the month in the years that are past they began their activities, but the so-called fiscal year should have nothing to do with the determination of the birthday of a business. Many businesses that actually began their career in June, July, or August have made their fiscal year run from September to September, or from January to January. If the beginning of the fiscal year is used as the true birthdate of the company, a mistake may be made in working out the periods of each year. It is not absolutely necessary to have the precise or exact date of the starting of the business or proposition, whatever it may be, as long as one can select the day of the beginning approximately. In other words, a variation of two or three days will not make any difference.

Important points to bear in mind in determining what is the true birthday of a business are as follows: The day on which the company received its incorporation charter is not as important as the day on which the company began its business affairs in dealing with the public. The day on which a number of persons gathered together and decided to start a business and actually selected the name and officers of the business is a more correct birthday than the day on which the first announcement was made to the public or the first article was sold. In smaller lines of business, the day on which a store or factory was rented and the work of installing equipment or furnishings was started would be the birthday of the business. The day on which a person gave up his other affairs and began to plan and work out a new proposition would be a

more correct birthday than the day on which he actually sold or handled any of the products of his business.

If a business has had a formal opening with a formal announcement of the opening, and a reception of the public, and a definite start of the business in a formal way, then this day would be the birthday of a business. With a business that has changed hands or changed its name, the date on which the firm began to operate with the new name or with the new owners would be the birthdate of the present business, regardless of how long it had been operating under the older name. Thus we see that some little thought must be given to the determination of what is the approximate birthday of a business.

When we speak of business, we mean not only stores which sell merchandise of any nature whatsoever at retail, but also of factories and manufacturing businesses, brokerage firms, real estate offices, professional businesses such as those of physicians, artists, musicians, and others in similar lines. A birthday may be the opening of the office of a lawyer or adviser of any kind, or the opening of a mail order or sales proposition, the starting of a canvassing or selling plan, or any scheme or definite operation that has to do with commercial or business activities, wherein either a group of persons or only one person is involved.

Having determined, therefore, the approximate birthday of any business or proposition of a material business nature, one should proceed as with the marking of the periods of the cycle of human life. In other words, start with the approximate date of birth and write down on a piece of paper

the periods of 52 days each. Let us say a person or group of people started the manufacturing of a piece of machinery. Let us say that the business was born on the day when the partners came together and deposited their money in a bank and decided to go into business together and selected a name for their firm. Let us say that this date was approximately June 3, 1914. June 3 of each year would be the anniversary of the birthday of the concern.

Starting, therefore, with June 3, we would count off on the calendar given on the preceding pages 52 days from June 3. This would give us July 25 as the date of the end of the first period, and the beginning of the second period. Counting off another 52 days, we would write the end of the second period on the piece of paper and so on until we had written down the dates of the beginning and ending of the seven periods in each yearly cycle of the business.

Now in each of these seven periods various cosmic influences, urges, tendencies, and impulses would affect the affairs of the business, just as though that business were a human entity. Since the business itself depends upon the actions and reactions of human nature on the part of the public, and those officers and persons directing the business, so we find the business itself is reacting to the impulses, urges, and tendencies of the complexity of the human nature involved. This enables us, therefore, to analyze the trend of each business proposition, and to discover that it has certain favorable and unfavorable periods during which the best interests of the business may be protected, advanced, modified, or conserved.

Let me present, therefore, a brief analysis of what each business of any nature whatsoever may expect during the seven periods of its yearly cycle.

PERIOD NO. 1

During the first 52 days of the yearly cycle of each business, beginning with its birthday and covering the 52 days following, each business will find greater success in all forms of promotion that solicit or depend for their success upon the good will and the preferment of the public. It is not as excellent a period for the actual building up of sales and return of money as it is a period for securing approval, favor, recognition, and general good will.

This would be the period to solicit endorsements or high recognition by eminent persons and concerns that would either result eventually in sales through such persons, or in giving widespread publicity and advertising to the concern. It is also an excellent period in which to advertise a business widely, not so much for direct sales as to build up prestige and public recognition.

It is a good period for the sending forth of emissaries, representatives, or high members of the firm to meet other eminent persons in the business world and, therefore, secure recognition and high favor. For this reason it is an excellent period to deal with government officials, judges of the court, or senators, or congressmen from whom you desire preferment, special favors, or the passage of protective bills or regulations. This makes the period also good for the securing of political influence, political cooperation, and recognition. The thought of the concern during this

period should be not of money, but of name, reputation, and prestige.

PERIOD NO. 2

During this period any firm or business of any nature will find that it is a good time to make important changes of a temporary nature in regard to important employees, modifications in business practice, temporary locations, and for trying out short-time plans and propositions. On the other hand, it is a very unfavorable period during which to make any new agreements, any new plans of a definite nature, or to enter into any contracts or agreements of any kind unless they are reduced to writing, and properly sealed and signed so as to give them a long-time standing. Verbal agreements and arrangements entered into at this time are apt to be cast aside quickly and changed very rapidly or suddenly, and amount to nothing. It is also a good period for the building up of business friendships, and every business firm would do well to take advantage of this period to contact new and prospective customers in a friendly way, for business friendships of a very helpful nature have generally been built up during this period.

PERIOD NO. 3

Here we have a period of construction and great energizing power. It is during this period that any business proposition should be pushed to its utmost. Every facility and every means of manufacturing, selling, producing, advertising, promoting, and extending the business should be adopted and utilized to the utmost during this period. It is also a good period for the arrangement of plans for collections, or to send out collectors or letters intended to

collect money, but it is not a good period for attempting to fight any issues in court that have to do with the activities of business enemies, business rivals, or business competition. Other legal matters, however, may be pushed at this period, and will generally receive more favorable reaction than at any other period, especially if the matter is one that calls for the expenditure of a great deal of energy and of considerable fighting for the protection of certain issues or rights.

On the other hand, every firm and business should watch out for dangerous accidents, disasters, and troubles through enemies, through fires, or through sudden explosions of wrath, enmity, or hatred during this period. Manufacturing plants and other propositions should be careful of fires or explosions from fires, gases, and stored-up energies of any kind during this period. It is during this period also that personal enemies of the business will attempt to wreck it or even to injure the character or life of a person connected with a business, if the business has attained any degree of enmity on the part of competitors or others.

It is a very good period for dealing with army and navy matters, the military departments of the government, engineering, munitions, machinery, or firms or individuals associated with these.

PERIOD NO. 4

This is the period in which any firm or business would do well to enter into its largest campaign of widespread advertising, whether this be nationwide advertising or the mere solicitation by letter of customers in a limited area. Whatever writing, planning, and scheming of promotion a

business firm or individual may want to do in any year of its business, it will be found to be most successful during this period of the business cycle of each year. On the other hand, it is also an excellent period for the drawing up of new contracts, new agreements, papers of incorporation, documents, transfers, and so forth.

It is an excellent period to deal with newspapermen, diplomats, arbitrators, or others who can use their mentalities or printed or written words to further the interests of the concern. On the other hand, firms must be careful during this period to watch out for deception by word of mouth or writing, for forgeries, and for tricky agreements or plans cleverly presented and which are apt to have a serious reaction in many ways.

PERIOD NO. 5

Here is a period of growth and financial success for any concern or business proposition. This is the period in which to seek investment, or seek to secure credit and extend the time in which payments must be made or negotiations closed. It is one of the best periods in the business year for selling, and the actual distribution of material on a sales basis, if immediate results and a quick and fair return of money are desired. It is an excellent period in which to collect bad or old debts, and it is an excellent time in which to bring matters into court where the favorable decision desired hangs by a slender thread. For all things being quick and right, this period is favorable to a constructive and just decision.

It is an excellent period also for the promotion of the business into foreign lands or distant places or with large concerns that deal in international matters or have interna-

tional distribution and sales agreements. It seems to be an especially good period for business firms to promote their affairs with railroad, railway, and electric companies, and with all companies and concerns that deal in things that cater to the pleasures and happiness of the public.

PERIOD NO. 6

This is the period in each year when every business should relax its activities if it finds it necessary to relax at all, and should plan its periods for the vacation or absence of any of its important directors or operators. It is also an excellent period for the promotion of certain branches of business such as those that deal with the art world, or with music, poetry, sculpting, artists' materials, women's clothing, or articles of adornment, beauty preparations, high-grade shoes, hosiery, evening wraps, hats, luxurious automobiles, oriental rugs, antique furniture, fine books, expensive musical instruments, concerts, operas, and other things representing the luxuries, refinements, and clean and wholesome pleasures of life. Therefore, it is well to push the sale of things of this nature during this period, or to promote good will or interest among persons who are associated with such lines of business.

This is an excellent period for the heads of a concern or the individual owner of any kind of business to make the acquaintance of his customers, and to make such intimate contacts with persons as may be helpful to the business or the individuals of the business in the near future. It is also a good period for the collection of money, the buying of stocks and bonds, or the promotion of the finances of the company through investment in conservative stocks of other

concerns. Therefore, it would be an excellent period for the bringing about of partnerships, monopolistic corporations, and the formation of subsidiary associations and alliances of a similar nature.

PERIOD NO. 7

Here we have the reconstruction period for all business propositions, and during these last 52 days before the birthday of the concern or business, great care must be taken not to start any new line of activity or to go too heavily into advertising that is intended to build up a new department or a new phase of the business, or to do otherwise than cooperate with the cosmic tendencies to reconstruct. Since it is the period during which changes of a tearing down nature must be expected, it is a wrong period in which to plan to do reconstruction without the preliminary stage of tearing down. In other words, during this period no expansion must be expected unless it is associated in some way with a breaking down or tearing down process as a part of the reconstruction.

Since some form of breaking down and change is very apt to take place during these 52 days, every business concern or individual should see that any contemplated changes or tearing down processes that have been in mind are brought to issue during this time, and therefore permitted to expend themselves or manifest themselves while such a period is favorable. Certainly no new alliances, affiliations, partnerships, or agreements, contracts, or offers of agreement or contract should be made during this period.

It is an excellent time to consult with persons in retirement, or who have been in business and have retired, or with

judges, referees, or advisers of any kind. All acts must be guarded with a conservative attitude, and extreme caution and providence manifested in every line of activity. Great diplomacy must be shown in every act, and every business should take advantage of this period to conserve its activities, hold steady to its line of progress, and not allow anything of a radical nature in either advertising, selling, buying, or planning to occur.

* * *

Thus we have an outline of the favorable and unfavorable influences, urges, and tendencies from the Cosmic during the seven periods of the yearly cycle of each business or form of business activity. You may test the occurrences of this outline by going back over your business affairs for several years, and noting in what periods of each year you had trouble with your competitors or with enemies, or in what periods of each year you have had the greatest sales and the most success in promotion, or the most disruptive and tearing down conditions to contend with.

You will soon find, if you review your business activities over a period of ten or more years, that your business affairs have naturally divided themselves into periods that agree with the outline given above. You will also notice, if you are keenly analytical, that in certain periods of the past when you have attempted to do certain things with your business, your plans have failed or the scheme you had in mind or started did not materialize as you expected, and you will see that it was because you started these things or planned these things in a period that was not favorable.

SELF-MASTERY AND FATE

CHAPTER 8

HOW TO USE THE PERIODS OF THE CYCLES

IN the foregoing chapters, two distinct cycles have been outlined. Cycle No. 2, explained in Chapter 6, relates to your own personal existence, and explains what tendencies and conditions will be fortunate or unfortunate for you during each of the seven periods that come between your birthdays. Cycle No. 3, presented in Chapter 7, pertains to the career of your business or any venture or proposition which you have created or which has been brought into birth at some definite time.

Now if you are a business man or woman, or employed in business, or venturing into some business, or have some proposition which you wish to carry on to success, you will find that you have two cycles to deal with: first, the cycle of your own personal life; and second, the cycle of the business or proposition in which you are interested. Each of these two cycles has seven periods to the year, and it is not often that the periods of each of these two cycles are coincidental. If your business or your business proposition was created and started on one of your birthdays, then its periods each year would run coincidentally with the periods of your own personal life. Otherwise, two periods of different conditions will confront you.

For instance, let us assume that you who are reading this book were born around June 1. And let us say that

the business you are interested in is something that had its beginning around the preceding July 1. In trying to find out what you should do and should not do in your business and personal affairs during the next 30 or 60 days, you would find, if you tabulated the cycle of your business and the cycle of your personal life, that personally you are now in the first period of your yearly cycle, whereas your business would be in the seventh period of your business cycle.

In other words, your own personal tendencies, interests, and affairs would be affected by the conditions outlined in Period No. 1 of Cycle No. 2, in Chapter 6 of this book, and your business affairs would be influenced by the conditions explained in Period No. 7 of Cycle No. 3 outlined in Chapter 7 of this book. In trying to determine, therefore, what you should do at the present time, you would have to analyze and carefully study the conditions in Period No. 7 of Cycle No. 3, and the conditions in Period No. 1 of Cycle No. 2 pertaining to your personal life.

Whenever it occurs that the time in which you are interested, and about which you are consulting this system, brings your personal life and your business life into the same period, then you can easily understand what to do and what not to do. But, whenever the two periods are different, and you find opposing influences in each of the periods, you must blend them, analyze them, and decide for yourself what to do. It has been found that certain points will be helpful in this regard. If the business you are in is exclusively your own, then you may be guided by the conditions of your own personal life cycle, as more important and more dominating than the conditions in your business cycle, but the conditions

of the business cycle should always be carefully watched by you, and the things that are unfavorable therein carefully avoided, regardless of what may be stated in the periods of your personal cycle.

If the business you are in, or the business matter in which you are interested, is not exclusively your own, but is a partnership, corporation, or a combination of interests of a number of individuals, then you must bear in mind that to make the business the most successful, you must follow its individual cycle and periods, regardless of your own periods or the periods of the other persons connected with the business.

There are many times in the affairs of big business men, and all successful business men and women of any degree, when personal desires, ambitions, success and profits must be laid aside in order that the business which they control may prosper and succeed. In other words, all persons who have had any real success in business at all will tell you that very often there have been opportunities, temptations, and inclinations in their lives for journeys abroad or long vacations, or other things that would profit them personally, help their health, and increase their knowledge and wisdom.

And yet with all of these things coming at opportune times, and with every temptation to yield to them, they have had to pass them by and sacrifice their own personal interests and opportunities solely because business affairs had a different trend and a different set of conditions. On the other hand, it is known that very often when conditions in business are most unfavorable or seemingly so, there are certain conditions in the personal life of an individual connected

with that business that permit him to lay business aside and indulge in his own personal affairs with success and without serious injury to his business interests.

The important point to be considered always is whether your individual success, financial progress, and best interests in life are so related to your business affairs that both of them will suffer together, or both of them prosper together, or whether they can be so separated that you individually may prosper while the business may decline, and vice versa. Another important matter that must be considered is that in most cases your own personal cycle is of more importance to you and your connection with the business than the cycle of the business itself.

If you are merely an employee in business, then the cycle of the business with which you are connected is of little importance to you except insofar as you can work with it and help the business by taking advantage of its good periods. If, on the other hand, the only business you have is something that is owned and controlled by you and is your sole income, and you and your family are exclusively dependent upon it, then the business cycle becomes an important matter for your consideration.

If it occurs that in one period of your personal life cycle the conditions are such that it is indicated you should exert every possible energy to build and create more business, and push your business interests to the utmost, while at the same time the period of the business cycle indicates that you should let your business remain quiet and not push it too strongly, then the only thing for you to do is to use the conditions of your personal cycle to think, plan, and create

new and better things for your business, but do not put them into effect until there is a good period in your business cycle when such things should be done.

The use of the system outlined in this book requires the careful admixture of the indications given in both the personal and business cycles. It calls for a careful study and analysis of the periods in each of these two cycles and a proper blending of them until you come to a conclusion as to what you should do and which of the influences and conditions are the most important. Again I would remind you of the fact that in the average case an individual's personal cycle is of more importance than the business cycle, but for corporations or big business combines where there are a number of people owning and directing the business, and where the business is an impersonal one, the business cycle should be given more consideration than the personal cycle of any one of the persons connected with the business.

In all the affairs of the home, of social interests, personal finances, personal plans and progress, the personal cycle is unquestionably the one to be followed above all others.

SELF-MASTERY AND FATE

CHAPTER 9

THE PERIODS OF THE
HEALTH CYCLE

With Description of Cycle No. 4

FOR those who want to give special attention to their health during critical periods, or generally throughout the year, the following matter and that in Chapter 10 will be of considerable help.

The health cycle should be mapped out as are the preceding cycles, by starting with the birthday and dividing each year into seven periods of 52 days each.

The conditions in regard to health in each one of these periods of each year are as follows:

PERIOD NO. 1

During this period the vitality and constitutional health should be at its best and, if it is below normal, it will be more quickly and easily increased and strengthened by normal living and the avoidance of the violation of any natural laws. Plenty of outdoor walking, good air, drinking plenty of water and eating proper foods, avoiding foods that are overheating, especially the starches and raw or rare meats—this will yield results. The eyes should be guarded against overuse or use in bright electric lights or sunlight, and if any operation is planned, or system of health building is to be adopted, this is the period in which to start these things.

PERIOD NO. 2

This is a period in which many light and temporary physical conditions may affect the body, and passing emotional conditions affect the mind. In other words, during this period a person may have temporary trouble with the stomach, bowels, bloodstream, and nerves. These conditions seem to come quickly, last but a few days, and pass away quickly. None of these should be neglected; each should be given immediate attention, but there need be no anxiety regarding the continuance of such conditions if immediate attention is given, for all of the influences tend to bring rapid changes in the health and physical condition of the body during these 52 days. During this period there are apt to be days with headaches, upset stomachs, trouble with the eyes or the ears, catarrh, coughs, aches and pains through mild forms of cold, and with women occasionally aches and pains in the breasts and abdomen. During this period everyone should try to be cheerful and not permit the mind to dwell upon the temporary conditions that affect the body, but simply attend promptly to the checking of any condition that may arise and then cast it out of the mind.

PERIOD NO. 3

This is a period when accidents may happen, and often sudden operations come into one's life, of either a minor or major nature. Likewise, suffering by fire or injury through sharp instruments, falls, or sudden blows, is more likely during this period than any other. Persons should be careful of their food and not overeat, and the body should be kept normally warm because during this period there will be a tendency toward colds, often resulting from overeating or

overheating the body. The bloodstream should be kept clean and the bowels active, so that blood conditions will not result in sores, boils, eczema, rashes, or other more serious conditions of the skin and blood. The blood pressure also should be watched during this period, for there will be a tendency for it to rise, and overwork or strain should be avoided. Any abnormal strain upon any part of the body is very apt to bring a breaking down during this period.

PERIOD NO. 4

During this period the nervous system of your body will be tried to its utmost and there will be many tendencies toward nervousness expressing itself in the functioning of various organs or in an outer form of restlessness and uneasiness. Too much study, reading, planning, or use of the mind and nervous system will surely bring definite reactions during this period. More sleep and more rest are required during this period than in any other part of the year. Fretfulness and nervousness may also affect the digestion, the functioning of the stomach, and may also produce a nervous heart which may cause misgivings and inconvenience. Persons who have been laboring too long or too tediously with mental problems or work requiring mental strain should be forced to relax and rest during this period, or a mental breakdown is inevitable.

PERIOD NO. 5

This is another good period, when the health should be very good, especially if normal living is indulged in, and the great outdoors utilized for deep breathing, fairly long walks, and good exercise. There will probably be a tendency

during this period to overindulge in the things that please the flesh, such as the eating of preferred foods, elaborate meals and banquets, rich concoctions, spicy drinks, and so forth, and even overindulgence morally and ethically in many ways. All of this must be avoided during this period in order to prevent serious conditions. This is a good period in which to recover from fevers, chronic conditions, or other abnormal or subnormal conditions of the body which have been existing for some time. During this period, mental suggestions, metaphysical principles, and right thinking will have more effect upon the body and the health than at any other period.

PERIOD NO. 6

This period is another one in which overindulgence should be carefully avoided in regard to work, mental strain, eating, or any of the pleasures of the flesh. It is a period during which the skin, throat, internal generative system, and kidneys may become affected. Therefore, plenty of water should be drunk during this period, the bowels kept open, and rest with outdoor exercise should be indulged in more frequently than mental strain or overwork.

PERIOD NO. 7

This is the period during which chronic or lingering conditions are often contracted, and which remain a long time and cause considerable trouble in overcoming. Everyone should be especially careful of catching colds or contracting serious contagious fevers during this period by avoiding the places where such things may be contacted. The mind and whole nature is very apt to be despondent and below normal in the ability to ward off and fight an incoming condition.

WITH THE CYCLES OF LIFE

Even the bloodstream may be lowered in its vitality at this period and, therefore, is unable to fight even the normal amount of germs or unfavorable influences that generally come in contact with every human being.

It is not a good time, however, for taking medicine or having an operation performed, or for starting any new or drastic method of improving the health unless in an emergency or unless it is to be continued over a long period, so that its real effect will come into the next period of 52 days, which will be Period No. 1 of the next cycle. The eyes, the ears, and in fact any one of the five senses may become affected during this period, and care should be taken that colds or other conditions do not linger during this period or continue without proper expert attention. It is one of the most serious periods of the whole year for each person, in regard to diseases and chronic conditions.

SELF-MASTERY AND FATE

CHAPTER 10

THE CYCLES OF DISEASE AND SEX

AS stated in a previous paragraph, the laws and principles set forth in this book have naught to do with the art and practice of the system called *astrology*, and whether one believes that the planets have any effect upon life or not is immaterial in consideration and application of the system set forth in these chapters.

The influence of the Moon upon the tides and upon plant and animal life has been in considerable dispute and I believe that most of us have read many books arguing for and against such a claim. However, there are many observations which indicate that by noting the lunar cycles and the rhythm of the periods of the Moon, we cannot help coming to the conclusion that there is at least some influence measured by the periods of the Moon, which does affect animal and plant life.

Certain it is, we are able to notice a rhythmic periodicity in connection with diseases, fevers, and some normal functionings of the human body related to the psychic side of our beings, and which are coincident with the rhythmic periods of the Moon. Whether this relationship is merely incidental and of no importance, or whether it establishes and proves a great universal law, I will leave to my readers to determine. I must call attention first of all to the fact that the psychic and emotional sides of our beings are closely related to the origin, development, continuation, and final

ending of all diseases, abnormal, mental, and psychological conditions, and other so-called involuntary activities of the human body.

I need not call attention to the interesting fact that has always puzzled psychologists, psychiatrists, and others, that those who are suffering from a temporary or prolonged abnormal mental condition seem to have periods of stress, quiet, action, and reaction, in keeping with the periods of the lunar rhythm. The ancients noticed this so long ago that the term *lunatic* was brought into use under the false belief that the Moon, or *luna*, was responsible for the abnormal mental states of human beings. Many of the more subtle and vital activities of the inner or secret organs of the human body are unquestionably associated with the psychic nature of humans, and also associated in some way with the lunar system.

So true is the association of the lunar rhythm with the manifestations of many of the psychic and more subtle effects and conditions of the human body that the periods of these conditions are measured by the Moon periods of approximately 28 days each.

While all this is generally admitted by the masses and by medical authorities, and undoubtedly seriously considered by the student of nature's laws, the relation of such rhythm to the phases of the Moon is not generally known. Recent discoveries by science, however, have confirmed many of the principles known to the Rosicrucians and used by them in many ways.

The Moon as a planet has a very definite cycle of phases, the cycle covering a period of approximately 28 days and

WITH THE CYCLES OF LIFE

known as a lunar month or a lunar cycle. We will use the term *cycle*. Because this cycle is divided into phases and these phases are also divisible, we will proceed to divide the cycle into units, each unit being a rhythmic one, as we shall see.

One half of the Moon's cycle is 14 days; one half of this (or one fourth of the cycle) is 7 days; one half of this is 3.5 days. This 3.5 days equals 84 hours.

The full cycle of the Moon constituting one complete revolution from perigee to apogee, and back again to perigee, is the lunar month referred to above. This complete cycle is often referred to as the *long cycle* of the Moon. A *short cycle*, on the other hand, would be the ordinary tide cycle corresponding to the upper and lower transits of the Moon. This short cycle is, on the average, 12 hours. Hence, we have two Moon cycles to refer to: the short one of 12 hours, known as the Moon's tide cycle, and the long one of 28 days on the average. We can deal only with averages because of slight variations in time.

Because there are long and short cycles, we will also have long and short units of these cycles. Not as an arbitrary matter, but because of fundamental laws which you will recognize, we will call the 3.5 days, arrived at above, the unit of the long cycle, or a *long unit*. Taking the short cycle of 12 hours and dividing it, we will have 3 hours as a *short unit*.

First let us note that a *long unit* of 3.5 days equals 7 short cycles, or 7×12 hours.

The two units, arrived at above, one of 3 hours, and one of 3.5 days, manifest themselves in the rhythmic actions

of mind and body like waves or undulations of a rhythmic wave. Here is where we make important discoveries and can go beyond the findings of science, even, through our other knowledge of certain laws of nature.

In the case of diseases we find some very interesting and helpful facts by analyzing average cases and using the averages of units of the Moon's cycle. These averages betray the effect of anabolic and catabolic lunar phases or units of the cycle as shown in the incubation periods of the following diseases:

Typhoid Fever	7 - 21 days	(2 - 6 long units)
Varicella	14 days	(4 long units)
Smallpox	7 - 14 days	(2 - 4 long units)
Scarlet fever	3.5 days	(1 long unit)
Measles	10.5 days	(3 long units)
Whooping cough	10.5 days	(3 long units)
Dengue	3.5 days	(1 long unit)
Diphtheria	3.5 - 10.5 days	(1 - 3 long units)

In all acute fever cases of any name or nature the rhythmic period of these units is very pronounced and definite. Regular changes occur every seven days (as has been noted for years) or, in other words, after every two long units (one positive and one negative, as we shall see). The longer the disease continues, the more definite are the changes every seven days, and even the single unit, 3.5 days, is well marked and important.

The units of rhythm also manifest in the process of germination and gestation of life, and have the effect also of

determining sex. The average time in hatching eggs of many species is 3.5 days (one long unit). In many insects it is 1.5 weeks (three long units). The hen lays eggs for three weeks (six long units) and sits on them for an equal period.

In human beings and many other forms of life each sex possesses an equal number of chromosomes, but the sex chromosomes (XX) are alike in the female and unlike in the male. The female egg contains 22 autosomes plus 1 X chromosome. The sperm are of two kinds: half of them carry 22 autosomes plus 1 X; the other half carry 22 autosomes plus 1 Y. The Y chromosomes are diminutive. When two X chromosomes come together at fertilization, the offspring is a girl. When X and Y chromosomes come together, the offspring is a boy. The difference is in potentiality or polarity.

Returning again to the short cycle of twelve hours, called the Moon's tide cycle, we find that the action of the tides gives us the key to the potentials. The six hours of time preceding the maximum point of high tide are strengthening and the six hours immediately following the hour of high tide are weakening in their effect on the psychological and psychic or emotional processes of life. The first three hours before high tide point are positive hours, or constitute a *positive short unit* (or wave) of the rhythmic cycle; while the first three hours after the point of high tide are negative and constitute the *negative short unit*. Each positive unit is preceded by a negative and followed by a negative; hence in every 12 hours, or tide cycle, there are two positive and two negative units; in each day of 24 hours there are four of each of these units. But, to be able to determine when they are negative or positive we must take the hour of high tide as the key—taking the hour of high tide as it is known for

each locality on the face of the Earth, regardless of whether the locality is near a body of water or not.

Taking the long cycle or lunar month cycle of an average of 28 days, we have the long unit of 3.5 days. There are eight of these long units in each long cycle. We find that the first of these units immediately preceding the hour of full moon is a positive long unit and the unit following a full moon is a negative unit. Hence we have 3.5 days before full moon as positive in nature and 3.5 days immediately following full moon as negative in nature. There are four such positive and four such negative units of 3.5 days in each lunar cycle of 28 days.

It is easy to see that in addition to the cycles explained in previous chapters we are living under the influences of a very systematic, though strange, series of alternating psychic units of positive and negative rhythmic waves, some 3 hours long and others 3.5 days long. Therefore, while one of the long positive units of 3.5 days is in effect there will be 28 short units of 3 hours each, alternately negative and positive in effect also. A positive short unit in effect during a positive long unit will give a very positive effect; a negative short unit in effect during a positive long unit will give a neutral condition; a negative short unit in effect during a negative long unit will give a decidedly negative condition.

The long units of 3.5 days have their greatest influence on purely psychic functionings of the organs or psychic processes during disease or abnormal conditions of the body as a whole. The short units have their greatest effect on the mental, nervous, and biological functionings and processes of the body in either health or disease.

CHART C

It is for this reason that the long periods have an important effect on such diseases (fevers) as we have mentioned, and many others; while in such conditions as fertilization, fecundation, contagion, and similar processes the shorter units have a greater effect. A purely positive unit or period of time produces a strong life-giving, *masculine* condition, while a purely negative unit or period produces a weaker, *feminine* condition. The one is active, the other restful. The neutral period, as mentioned above, produces a passive condition.

We find the short units exerting their influence very strongly in the conditions relating to childbirth. Here the nervous system, the sympathetic processes, and the organic functionings, are very sensitive to the influences we have been describing. During the negative long unit of time, especially *the first three hours* after high tide maximum point, the body is at rest and the contractions are weaker and less helpful during labor, while the positive long unit, especially *the first three hours immediately preceding* the high tide point, produces an active condition as far as the contractions and other process conditions are concerned, and less wilful effort is needed by the patient, with no external or artificial assistance given by the physician.

If the birth does not occur during the first two units (six hours) preceding high tide, it will not occur without forced and painful conditions during the next three hours (the first unit after high tide) or without unnecessary suffering and weakness during the next three hours (the second unit after high tide). The patient should be permitted to rest during the negative units and become active and helpful only during the first unit before high tide.

It will be noted that the contractions through labor are rhythmic and become stronger during the positive units of time and passive or weak during the negative units. By taking advantage of such influences on the rhythm the patient retains much strength, the use of drugs become unnecessary, and artificial assistance is entirely avoided. Of 100 tests made by this method, 98 confirmed each principle involved and the other two were affected by other causes and conditions of abnormality.

In thinking or planning, in talking or doing any mental or functional act that requires strength of the nervous system, impressiveness or personal magnetism and good vitality, take advantage of the positive units of time. In the treatment of disease administer all help possible during the long positive units and the short positive units, but permit the patient to rest during the negative periods. If a crisis is due during the long negative period, keep the patient as quiet as possible until a positive unit is at hand, especially a long one. Then if the patient has not succumbed, the positive unit will assist in passing over it successfully.

To properly determine the units of time one should secure from an authentic source the daily or weekly schedule of tides for the city or locality where one lives; likewise a Moon table, such as is published in most almanacs, giving the revolutions or phase and cycles of the Moon for each month.

Important Notice

All that has been learned or revealed by experiment regarding the Moon's cycles is contained in the foregoing pages of this chapter. Neither the author of the book nor the publishers can attempt to give to individual readers any information regarding the lunar periods and influence upon tides for various localities, nor the Moon's probable cycle of influence in connection with various diseases and illnesses. Whatever indefiniteness or incompleteness there may be regarding the Moon and its influence in such matters is a problem that awaits further study and investigation at the hands of the new scientific age. Let us hope that the rising generation, becoming free of the bias and prejudices of the past, will undertake this great work.

CHAPTER 11

THE DAILY CYCLES OF SIGNIFICANT HOURS

THERE is another important cycle, which will probably be used by the readers of this book more frequently than the other cycles because of its timeliness and the ease with which it may be consulted in regard to many occurrences of the day. I know of thousands of business men and women who have used this cycle in an abbreviated form, supplied by me in the past as a guide to their affairs, and who consult it during the day in connection with every important matter that comes upon the horizon of their business or their personal affairs. We have tested this cycle in thousands of ways, and all who were fortunate enough to know of it report that it is one of the most dependable guides ever used by them.

This cycle divides the 24 hours of the day into seven periods. Each period consists of approximately 3 hours, 25 minutes, and 43 seconds. The daily cycle begins at midnight and ends at midnight; noon of each day is the center of the cycle. The first period of the cycle is from midnight to 3:25 a.m.; the second cycle ends at 6:51 a.m.; the third cycle ends at 10:17 a.m.; the fourth cycle ends at 1:42 p.m.; the fifth cycle ends at 5:08 p.m.; the sixth cycle ends at 8:34 p.m., and the seventh cycle at midnight.

These periods will apply in all parts of the world, but the time used must be the actual time of the country or the

city in which the person lives. If daylight saving time is used in any locality, or any other temporary variation of clock time or standard time, as it is called, these variations must be ignored and the standard time as it is measured from Greenwich must be used.

Standard time, of course, varies slightly from mean time, but the variation is only of a few minutes in most localities, and will not require adjustment for any particular use of this cycle.

As stated in previous pages, the use of the periods of the various cycles must always allow for variations of a few minutes, hours, or days, at the beginning of each cycle. In using Cycle No. 2 and Cycle No. 3, a variation of a day, or at least of a few hours, must be allowed at the beginning and ending of each of the periods. The full effect of the conditions pertaining to each period of any of these cycles does not become manifest until the period is fairly well established.

In the case of the present cycle, no matter where you live, you should allow five minutes or even ten minutes at the beginning and ending of each period for the conditions to become established. Therefore, although the first period of this cycle ends at 3:25 in the morning, and the second one begins at that moment, it is safer to consider that the first period ends at 3:20 and the second period begins at 3:30. This leaves a neutral period of five or ten minutes at the end and beginning of each period, when the full effect of the condition allowed to the period may not be manifest. This, therefore, will take care of any slight difference between standard and mean time in your locality. Standard time is

the time used by railroads, and by the government, and by it all clocks in each community are set.

The value of the daily cycles becomes apparent the minute one attempts to use the system. Testing it for a few weeks will give better warrant for its use than any argument I may present in these pages. Those who feel reluctant to guide their lives and their daily affairs by any mechanical or strange system like this need not feel that there are any superstitions connected with this matter. A superstition ceases to be a superstition as soon as the principle back of it becomes manifest, and the operation of the principle proves the existence of a fundamental law. While some may argue that the use of such systems as these is the result of faith or belief in them, the fact remains that such faith and belief are natural results from the discovery of the fact that the law is workable and *works*. As I said above, it hardly behooves me to take your time and my time to argue the benefits to be derived from this system, for it takes only a few weeks of test and trial to show the law that is in operation back of it.

Before attempting to use the daily cycle, the following chapter dealing with the complete instructions for its use must be carefully read. Once these instructions are understood, it will be a simple matter to refer to the periods of the daily cycle any hour of the day and be guided by the information given. It may be somewhat new in the lives of many persons—this regulating of their business affairs by such a schedule—but if stockbrokers and business men dealing with stocks and bonds and the fluctuations of Wall Street find it profitable to consult a system like this, and if the heads of

big manufacturing and selling corporations find it helpful to consult this system in their daily affairs, certainly every business man and woman will find it pleasant, interesting, and profitable to consult the clock and the periods in this book, just as the captain of a ship consults his maps and his various guides each hour of the day and night.

CHAPTER 12

HOW TO USE THE DAILY CYCLE OF SEVEN PERIODS

AS was stated in the previous chapter, this cycle divides the 24 hours of each day into seven periods. Each period has approximately 3 hours and 25 minutes in it. The periods begin at midnight and end at midnight.

Please note, however, that the periods of each day are not identical in significance. For instance, the first period on Sunday is quite different in significance from the first period on Monday. And the fifth or sixth period on a Tuesday is quite different from the fifth or sixth period on a Wednesday, or any other day but Tuesday. All the periods of Wednesday, for instance, are the same for every Wednesday, but they will not apply on the other days of the week. The same thing may be said of Thursday, Friday, or Saturday.

The charts which are given in this chapter make this very plain and easy to understand. The illustration given herewith of the 24-hour clock shows the day divided into A.M. and P.M., with the seven periods of the 24 hours marked on the dial of the clock. Please notice that midnight is at the top of the dial and noon is at the bottom of the dial, and that all of the hours on one side of the dial are P.M., while the hours on the other side are A.M. This clock enables you to see at a glance the hours in each one of the seven periods, from midnight to midnight.

We are going to name these seven periods by the letters A, B, C, D, E, F, and G, just like the notes on a piano, or any other musical instrument. I suppose that most of my readers know that the letters of the musical scale run from A to G and begin with A again. The seven periods of the 24 hours of the day run in the same manner.

In using this daily cycle for any day of the week, merely turn to page 105 and look at Chart E (Periods for Each Day of the Week), and note what periods for the day you are to consult. Then turn to the list of daily periods and read the description which fits.

For instance: Let us suppose that it is Monday, and that you want to know what are the best things to do and what things you should avoid doing during the early business hours of Monday. By turning to Chart E, you will see that 8:00 Monday morning is in the third period of Monday; therefore, it is in Monday's "E" period, while noontime on the same day is in Monday's "F" period. By turning then to Chapter 8 and reading the description of these day periods, we look at the period for "E" and note what conditions are propitious at that time and what conditions or tendencies should be avoided. We may do the same thing for the "F" period of Monday.

Let us take another example. You may be planning to visit some person on a Monday evening around 8:00 to discuss business matters with him. By turning to Chart E you will see that 8:00 on Monday evening is in the sixth period of the day, and that it is Monday's "A" period. By referring to the description of the "A" period, you will notice that it is an excellent time in which to ask favors, and to solicit aid

WITH THE CYCLES OF LIFE

CHART D

The Seven Periods of the Daily Cycle

and help from prominent persons of high positions, and so forth.

But you will also notice that this sixth period of the day ends at approximately 8:34 in the evening, and that unless you can present your proposition and get action on it before 8:34 in the evening, your discussion of it will run into the seventh period. This period, which is the “B” period of Monday, is good for visiting and social affairs and pleasantries, but not so good for the business purposes you have in mind. Therefore, your business proposition may be postponed or set aside until some other day. This warns you to try seeing your important friends earlier in the evening, but not before 5:30; that would be too early for the sixth period.

You will note, however, that although 5:30 to 8:30 is the “A” period for Monday, it is the “D” period for Tuesday, and the “G” period for Wednesday, and that if you wanted to find another good “A” period during which you might bring your business solicitation before some important persons, you would have to wait until the third period of Tuesday morning, between 7:00 and 10:00, or the “A” period of Wednesday, which would be between 8:30 p.m. and midnight.

As another illustration: Let us assume that you are anxious to find the proper period or periods of the week in which to collect some money or invest some money where it will eventually bring good returns, or you wish to start a new move or plan or proposition which you hope will be a financial success. By reading the descriptions of the day periods, you will discover that the “F” period of the daily cycle is a good one in which to do the things you are planning to do in

WITH THE CYCLES OF LIFE

CHART E

PERIODS FOR EACH DAY OF THE WEEK

TIME PERIOD	SUN.	MON.	TUE.	WED.	THU.	FRI.	SAT.
No. 1 Midnight to 3:25 a.m.	G	C	F	B	E	A	D
No. 2 3:25 a.m. to 6:51 a.m.	A	D	G	C	F	B	E
No. 3 6:51 a.m. to 10:17 a.m.	B	E	A	D	G	C	F
No. 4 10:17 a.m. to 1:42 p.m.	C	F	B	E	A	D	G
No. 5 1:42 p.m. to 5:08 p.m.	D	G	C	F	B	E	A
No. 6 5:08 p.m. to 8:34 p.m.	E	A	D	G	C	F	B
No. 7 8:34 p.m. to Midnight	F	B	E	A	D	G	C

connection with financial matters. Now, by consulting Chart E you will note that there are seven “F” periods in the week.

The first one is during the seventh period of Sunday from 8:34 to 12:00 p.m.; the next one is during the fourth period of Monday, which is from 10:17 a.m. to 1:42 p.m.; the next one is in the first period of Tuesday morning, midnight to 3:25; the next one is in the fifth period of Wednesday, from 1:42 p.m. to 5:08 p.m.; the next one is the second period of Thursday, which is from 3:25 a.m. to 6:51 in the morning; the next one is during the sixth period of Friday, which is from 5:08 p.m. to 8:34 p.m.; and the last one is during the third period of Saturday, which is from 6:51 a.m. to 10:17 a.m.

In picking out the best of the seven “F” periods, or any other of the lettered periods of the week, two points should be kept in mind. First, those that are late at night or very early in the morning must be eliminated because of the impossibility of using these midnight hours for general purposes. Second, one should be guided by the best periods for the particular thing to be accomplished, bearing in mind that several of these lettered periods may serve the purpose, rather than only one. In the illustration just given above, of the “F” periods, we find there are seven that you can use for your financial purposes, and of these seven, the best ones to use would be the “F” period of Monday, which is during the early business hours of the morning, or the “F” period of Wednesday, which is early afternoon, or the “F” period of Friday, which is between 5:00 and 8:00 p.m.

The next important way in which to use these daily periods is as follows: Suppose that someone comes to you

with a business proposition, a plan, a request, a demand, or a suggestion of some kind, and you find yourself becoming interested in what is proposed or required. Before taking any action on the matter, you should immediately turn to the description of these daily periods and to the table of these and see what period of the day you are in, and note whether it is a propitious time for the matter in hand.

Let us say that the person who has come to you has a contract or an agreement, or a lease, or some paper to sign, and glowing terms and promises are being expressed to you, and you have been swayed by oratory, fine words, and fine arguments. Suppose that when you turn to the charts in these pages, you find that this matter has come before you on a Monday morning, at 9:30. You find that this is an “E” period for Monday, and not a good period for signing papers, signing contracts or agreements, and not a good period in which to place any faith in the spoken promises and glittering word pictures of anyone. In this way you will be warned not to enter into the matter but to dismiss it.

Even if you attempt to hold the matter off until the next period, which is an “F” period, and therefore fortunate for financial matters and for contracts and papers, you will not help matters, since the matter actually had its birth and its start in your interests during the “E” period. By your voluntary postponement of it, you will not help yourself, for that would be establishing an artificial condition. If, on the other hand, the person who proposed these things to you had come to you during the “F” period instead of the “E” period, you could have felt that it was safer and more dependable.

On the other hand, suppose that these matters had been presented to you by this man on Friday at the same hour, 11:30. By reference to the description of the lettered periods of the day, you would find that this "D" period of Friday at 11:30 is not a good time for the making of agreements, contracts, or investments that are to last for any length of time or have any degree of permanency to them; therefore, you would refuse to enter into the proposition and would dismiss it.

Bear in mind that once a matter is dismissed by you or dropped by you because it has come to you in a period that indicates that it is not safe or good, it should never be taken up again at any other period. To attempt to do this would be to frustrate the principles of this system, and set them aside entirely. If a proposition comes to you at a period that indicates that it is not a good thing for you to enter into, its merits will not be changed by having it come up again at another period. One cannot imagine a mining proposition that is thoroughly unsound, or a speculative business proposition that has no foundation to it, being radically changed and made safe and sound overnight by delaying the presentation of the proposition a few hours.

The significance lies in the period in which it comes to you for the first time. A proposition may be perfectly safe for others to invest in or to consider or cooperate with, but for you, it is not safe, or good, or propitious, or fortunate, and this is signified by the time in which it first comes to your attention. Therefore, you will be justified in setting it aside permanently, even though others who hear of it at a more propitious time may find it good for them and go into

it. If you are to get any benefit out of this system at all, it must be remembered that the system in each application is representing you, and your best interests, and not all humanity.

A person may come to your home or to your business office, with some proposition, at 10:00 in the morning, and because of the hour and the period, you find it advisable to reject it as being unfavorable or unfortunate. The solicitor, however, may walk a few blocks and present the same proposition to one of your neighbors. During the time of his walk, the third period of the day has ended, and the fourth period has begun, and so the solicitor approaches your neighbor in an entirely different period than the one in which he approached you, and the fourth period may be a propitious or fortunate time for the proposition he submits. Therefore, your neighbor would be warranted in accepting it, whereas you rejected it.

This does not show a weakness or an inconsistency in the system. We all know that there are propositions which are fortunate, helpful, and worthy of consideration on the part of some persons, while the same things are unfortunate and inadvisable for other persons. We know that one man can invest money in a certain proposition and make money out of it, while others who invest in it realize later that it was not a fortunate thing for them. This system, therefore, is consistent with the varied conditions which surround each individual, and helps to explain why there are such inequalities and unequal opportunities and advantages for human beings.

By carefully studying and analyzing the matters set forth in Chapter 13, describing the lettered periods of the day, you will become familiar with those things which should be undertaken, planned, or started and those things which should be avoided or dismissed during the different periods. Therefore, you should watch the hours of each day in your office, business, or home affairs, and act accordingly.

Perhaps one interesting point should be emphasized here. It appears from a long test of this system by persons who have kept accurate statistics and records of the results, that the more urgent the proposition which a person is considering, and the more vital it is to his personal or business affairs, the more important it is to him to consider the period and act accordingly. In other words, the more trivial affairs of social and business life, or the mere routine matters of daily business and social affairs may be carried on safely without consulting this system.

But to the same degree that any matter is of vital moment and calls for careful judgment, careful analysis, and considerable thought, an intense consideration should be given the system and the period of the day. Surely in any matter that is of utmost importance, where the decision or choice will bring lasting and serious results for either good or bad, it is far better to consult this system and be guided by it than to depend upon hasty judgment, a toss of the coin, or the acceptance of an urge that may be a temptation and an external suggestion from some other mind.

As has been stated in an earlier chapter of this book, urges, inspirations, temptations, and impulses to do things or to hesitate in doing things come to us from the Cosmic and

from the minds of persons around us, and very often there are two impulses or two urges, two arguments, two tendencies, and we must choose between them and accept one or the other. Here is where we exert our privilege as a free agent, but we must ever abide by the result of our decision. It is far better, therefore, to place dependence in a system like this than in our objective analytical ability, or in any rational system of thinking or superficial analysis.

This system has been tried and tested and proved to be in accordance with some higher laws that you may not understand, or which may not even interest you. Yet here is the system, and its simplicity, wide range of adaptability and power to beget confidence, warrants its use. You can make of it a real silent partner in all your personal, private, or public affairs.

SELF-MASTERY AND FATE

CHAPTER 13

DESCRIPTION OF DAILY PERIODS

“A” PERIOD

THERE are many things which may be done during this period of the day, with the hope of fortunate realization and cosmic cooperation. For instance, one may concentrate or meditate upon any plan for the purpose of evolving its details; he may ask favors from persons in high positions, especially when such favors relate to a promotion in position, in political power, or in social position; he may ask for stays or delays in legal procedure, the loan of money, the endorsement or recommendation of a proposition, the introduction to a person in high position.

This is a propitious time for dealing with public officials, or persons of high rank; the signing of wills, deeds, or transfers, the writing of important letters that seek favors, promotions, or recommendations, or which carry to the mind of another person a high regard of one's self, his business, or any plan he is proposing. It is a good time in which to talk to bankers or financiers for the purpose of building up personal credit or the credit of a business, the making of a public appearance or address for the purpose of bringing esteem and honor to yourself or your business, or for building up your reputation or the reputation of your affairs.

It is not a good period to deal with criminals or evil matters, even as a lawyer or adviser. It is a time filled with energy which must be controlled. It is also a period filled

with fiery impulses which must be governed, just as all words and acts must be cautiously controlled. It is not a good period to start a new business, a new plan, or a new proposition of any kind; it is not good for the buying of livestock; neither is it good for the signing of contracts or agreements.

It is not a good period in which to start short journeys of several days' duration, nor is it a good period in which to deal with marital affairs or to marry, or to go courting. It is a bad period in which to loan money, to move into a new location for either home or business, or to start the erection of a new building of any kind. And it is not a good time in which to make the first financial investment in a new business. It is not fortunate for buying real estate or even for selling or renting it. Nor is it a good period for surgical operations.

“B” PERIOD

This period is fortunate for the following things: Matters dealing with art, music, the beautifying of the home or person, or with matters pertaining to purely material and sensual affairs. It is an excellent period for starting any new undertaking; for the enjoyment of art, music, and drama; for the buying of livestock; for the collecting of accounts; or for dealing with the public in connection with public administration, public affairs, and public utilities, or soliciting business from the public. It is also good for the hiring of agents, collectors, traveling representatives, salesmen, and employees for important positions in the business or home.

New acquaintances made during this period are generally dependable and worthy of friendship and trust, if they come

into your life purely in a social way. It is a good period to start short journeys, lasting for two or three days, or less than a month; a good time for marriage and courting, for loaning money or borrowing money; to put into material form any new plans for business or pleasure; for indulging in recreation and social function. It is also a good period for seeking favors in a social way, or business favors in social circles. It is also good for speculating, for games of chance, and for investments of a speculative nature; also a good period for dealing with women in either business or social matters.

It is not a period of great ambition, and while it is changeable, it is easily adapted to many conditions. It is a fruitful period inasmuch as most things started or culminated during this period will be more prolific than one may anticipate. It also brings its impulses of an intellectual and social nature, which must be guarded against. It is not a good time for hiring servants or persons for menial positions, and is not a good time for starting long journeys, especially those which either by train or water take one far from home.

“C” PERIOD

This period is especially fortunate for dealing with the fine arts, or the intellectual things of life, especially education, scientific research, publishing, printing, instructing in schools, colleges, universities, and in the promotion of campaigns involving an educational element. It is a good time for study, memory work, and absorption of special knowledge, analytical examination of documents, books, papers, and propositions, or to deal with legal arguments in court requiring the use of the intellect and logic. It is an

especially good period for mental activity of any kind, including writing, thinking, speaking, and self-examination. It is also a good period to indulge in the drama, music, and art.

The buying of livestock, or dealing in cattle or the livestock market, is fortunate during this period. It is a good time for the making of contracts providing same are not for long periods but of short duration, collecting of accounts, making of new acquaintances that are dependable, the hiring of business employees and servants of all kinds and classes. It is also a good time to start short journeys, to do literary and newspaper work, prepare advertising, start new advertising campaigns, or to send out literature to the public pertaining to business or social affairs.

It is also a fortunate time for the taking of medicine or any system of therapeutics which is to benefit the physical body. It is a good time to lend money, but it is questionable whether it is a good period in which to borrow. It is a good time in which to erect new buildings, or to plan new undertakings; and students of the occult, the philosophical, and metaphysical will find that this is an excellent period for study and objective realization of great truths.

It is a good period in which to take a chance with undertakings that are highly tricky, or questionable from a financial point of view, for one who has the means to do this without bringing financial embarrassment should the result not be all that is expected. It is a good period in which to have a few minutes of recreation or social intercourse, and for signing important papers of all kinds, and it is likewise the best period for traveling salesmen to call upon the most

difficult of prospective customers. It is also a good time for writing important letters.

This period is not good for dealing with private or public enemies or bringing them into court, or attempting to adjust matters with them, for this period will bring endless discussions and arguments without any beneficial results. It is a period that is quite changeable in many ways, giving great mental activity, but is not good for prudence and caution, and, therefore, no dependence should be placed in one's usual cautiousness. It is not good for marriage, and it is a questionable period to deal with lawyers in regard to any problem, or to deal with inventions and mechanical problems, or to seek promotion in business, or to ask for the favor or recognition of public officials or prominent persons. It is not a good time to buy real estate, and it is questionable whether it is a good time to sell real estate. It is a doubtful period for seeking favors, or for spiritual development or concentration, and is a very unfortunate period for dealing with surgeons or having a surgical operation of any kind.

It should be remembered that during this period one comes in contact with the nimbleness of mind and tongue. Any person presenting a proposition or plan to you at this time is very apt to exaggerate or mislead through his statements or his evidence. Forgers, blackmailers, and persons who are deceitful, lying, and too nimble with their expert fingers, are apt to present themselves during this period. Therefore guard yourself accordingly.

“D” PERIOD

Here we have a period that is especially fortunate for all general material affairs of business, dealings with the public in any general capacity, educational work of any kind, planting or farming operations, the making of new acquaintances, and the hiring of servants of all classes.

It is also a good period in which to start short journeys or long journeys by water, and for writing, supervising, or dealing with literary or newspaper work. It is also a good period for marriage or for courting, for all marine affairs, for the taking of medicine or any system of therapeutic help for the body or mind, for metaphysical study and analysis, or for dealing with shipping interests, transportation interests, or the actual shipping of goods to places out of the city in which you may live. It is also good for dealing with surgeons or for surgical operations, and it is one of the good periods for salesmen, traveling agents, and others to solicit and sell, and for dealing especially with women. It is a period in which the ambitions may be highly aroused, and while these ambitions may be very impulsive, they will generally prove fruitful.

It is not a good period for commencing any new undertaking, the buying of livestock, the making of contracts, or the signing of legal papers of any kind, or starting lawsuits or court actions. It is not a good period in which to borrow money or attempt to borrow it, nor sign any papers or notes pertaining to money matters, nor speculate, nor take part in games of chance of any kind. It is also a bad period for writing letters, pleas, or requests of any kind asking for

important favors or aids in connection with business, personal, or social life.

“E” PERIOD

This period is particularly good for aggressive pursuits, or those activities that require deep thought followed by a long campaign or a long period of steady action. It is good to begin these things during this period. It is an excellent time to have one's affairs come before judges, referees, magistrates, police authorities, senators, governors, mayors, or the presidents of large corporations, or those persons who have within their power the privilege to decide or render decisions in any matters of dispute. It is a good period for bringing permanency to anything started or finished during it, and gives great persistency and endurance to all activities.

It is also good for literary or newspaper work or advertising, or sales promotion by mail through the use of letters or brief printed communications. It is good, too, for starting any legal action in court, or for the submission of briefs or arguments, and for all inventions or mechanical problems or matters dealing with them, also for matters pertaining to metallurgy, or affairs with metal workers. It is a good time to move into a new house or to buy and sell real estate or to move into or transfer real estate. It is an excellent period for starting or indulging in scientific pursuits, and for spiritual meditation.

This period, however, is also unfortunate for certain things, and these are quite definite; it should be noted that the unfortunate things will prove to be unfortunate indeed. They are: The making of contracts or agreements of any

kind, other than the purchase of homes; attempting to collect money; the planting of seeds, or starting of farm operations; making new acquaintances for the first time; the hiring of servants, agents, salesmen, or collectors of any class or for any position.

The period is also very unfortunate for starting long journeys especially by water; for marriage; the taking of medicine or any method of mental or physical cure; borrowing or loaning money; erecting new buildings; dealing with public officials or prominent persons from whom you seek personal favors or special recognition; starting any risky business; indulging in recreational or social affairs; speculating in business, in the stock market, or otherwise; being operated upon by a surgeon; or for writing letters of an important nature.

“F” PERIOD

This is one of the most fortunate periods in each day. It might be called the lucky period, just as the preceding one is generally considered the unlucky period. During this period of each day, we find conditions are fortunate for the starting of any new undertaking, such as the buying or marketing of cattle or livestock, either in speculation or for actual business purposes; for making contracts or signing contracts, agreements, and all papers of specific stipulation; for collecting accounts or raising money; for educational work and educational interests; or for making new acquaintances.

It is also a good period for starting long journeys, either for business or pleasure, and also for short journeys by water

and other means, and for literary and newspaper work, or for dealing with lawyers, or the submission of briefs of papers to court, or the actual starting of court procedure. It is also good for marriage or courting, for borrowing money, erecting of new buildings, working out the plans of new undertakings, and holding directors' meetings for the discussion of business conditions or new ventures, for seeking promotion in business, or the building up of trade and credit reputes, dealing with public officials, or with the public mass in all affairs, or with prominent persons. It is a good time for the buying or selling of real estate, for all social affairs and recreations, for seeking favors and for signing papers dealing with important matters of any nature. It is the fortunate period for all forms of speculation, and for the writing of important letters.

There are a few things that should be noticed in regard to this fortunate period, however. It is a period that brings a great deal of energy to the body and mind, and tempts one to overdraw in many ways. And yet with all the impulsiveness of this period it is generally fruitful, and, therefore, fortunate. It is a more fortunate period for men than for women in business affairs, but more fortunate for women than men in social affairs. It is a period of positiveness, and yet with a natural tendency toward caution and prudence. It generally gives and begets the spirit and love of justice, and the period makes for permanency. It is not a good time for hiring servants for any menial position, nor is it good for marine affairs.

“G” PERIOD

This period is especially good for mastering those affairs which require considerable energy and aggressiveness, endurance, and persistency. It is an excellent period for dealing with those matters that require the expenditure of more physical energy than mental energy, and require real labor and muscle. Therefore, all material and sensual affairs will be fortunate during this period, as well as the collecting of money, the hiring of traveling salesmen, agents or collectors, or the soliciting on their part. It is also fortunate for martial affairs, marine affairs, the working out of mechanical problems, inventions, or building plans, or matters dealing with metal and metal workers. It is also good for scientific pursuits.

It is not a good period for any beneficent matters, or matters dealing with the receipt of gifts or favors, or public humanitarian activities, nor is this period fraught with much prudence and caution. It is an unfortunate period for the buying of cattle or livestock, or speculating with them, or for dealing with enemies, or for starting long journeys, or for legal actions, or dealings with lawyers or matters in court. Naturally it would be a bad period for marriage or for courting, and for seeking favors generally. It is very questionable whether it is a good period for surgical operations, or for dealing with women. This is the period in which accidents are apt to occur; therefore, one should be careful about being in any place of hazard or being near firearms, fire explosions, or other things that would affect the physical body. In illness, fevers are apt to be high during this time

WITH THE CYCLES OF LIFE

and the temperature of the body is naturally warmer during this period than at any other.

SELF-MASTERY AND FATE

CHAPTER 14

THE SOUL CYCLE

IN preceding chapters we have spoken of the cosmic vibrations and emanations throughout the universe, and the effect that these have upon the personal affairs of human beings through the tendencies, urges, inspirations, and conditions they create or stimulate in our daily lives. It should be apparent to anyone who analyzes the principles involved that these cosmic vibrations and cosmic periods of rhythm would have some effect upon the soul, personality, and character of each human being.

As was stated before, the ideas contained in this book and the various systems presented herewith have no relationship with the postulations and principles of the so-called art of astrology. However, if the soul entering each human body at birth is an essential part of the cosmic energy or cosmic vitality and if this energy or vitality reaches the Earth's surface in rhythmic pulsations of various combinations of rates and resulting tendencies, then a person born at any rhythmic period of the year should have natural tendencies different from those possessed by a person born during a different rhythmic period. It is not my intention to enter into a scientific explanation of how this is so, and why, but merely to present the effects of such rhythmic pulsations upon the soul and character of classes of individuals, and let these facts establish the existence of the law. Those who wish to devote their time and study to a deep investigation

of the principles involved may do so, and they will find in the work much knowledge and happiness.

Passing over the laws or principles, therefore, we come to the *observed facts*, and note that the *solar year* of 365 days may be divided into seven distinct periods, which constitute the *soul cycle*.

It must be borne in mind that the solar year begins on or about March 22, when we have that distinct astroph phenomenon known as the *spring equinox*. In all countries, as in ancient times, the birth of the new year occurs on or about March 22. The establishment of January 1 as the beginning of a new year is a purely arbitrary thing and has no foundation in natural law. The solar year is approximately 365 days in length, and for all general purposes we may figure the year as being 365 days long. If divided into seven equal periods, we find that once again we have a periodicity of 52 days and a few hours. We may ignore the fraction of a day in each period, and make each period an even 52 days, as we have with the other cycles.

Therefore, we begin the soul cycle on March 22, and divide it into periods of 52 days each as follows: From March 22 to May 12; May 13 to July 3; July 4 to August 24; August 25 to October 15; October 16 to December 6; December 7 to January 27; January 28 to March 21. Each of these periods has a dual polarity, and we find that the first half of each period produces a slightly different effect from the last half of each period. Therefore, we have seven periods, each having two natures, and producing a total of fourteen distinct natures or combinations of conditions.

Now everyone who is born takes the first breath of life and breathes into his system that cosmic energy which starts his soul consciousness in attunement with the cosmic vibrations and rhythm existing at that time, and, according to the ancient observations which have been verified through centuries of careful examination and scrutiny, each person *continues to vibrate in attunement with the rhythm established at the moment of birth*. It is as though each person becomes an affinity of the rhythmic conditions existing at the time of birth, and, therefore, is continuously more sensitive, receptive, and responsive to the effects of that rhythm than to any of the others. It is as though various notes on a perfectly tuned musical instrument were being played at different hours of the day, and that a person who was born just as the note "A" was being played would ever after be responsive to and affected by the sound of "A" or the vibrations of the note "A" to a greater degree than to any of the other notes played in the entire octave.

As a matter of fact, we are, as individuals, attuned to certain musical notes or musical rates of vibrations, and that is why some pieces of music which have our natural note more predominant than other notes affect us strongly. Every created material thing has its musical note, whether it be a glass pitcher or goblet, a chair, a mechanical device, or a copper pot. The note with which it is attuned is its natural note, and, therefore, there are certain harmonics of this note which have effects upon it also, to a lesser extent and in a different manner. If a harmonic of the true natural note of a glass vessel can be properly played upon a violin string, for instance, it may either cause the glass vessel to shatter to pieces, or it may have some other effect upon it, according

to which harmonic of the natural note is played. All of this, however, deals with other principles than those covered in the present volume, and may some day be presented in another volume dealing with natural harmonics in human life.

In outlining the system of the soul cycle, we observe that the seven periods with two polarities to each of them give us fourteen combinations of notes or rhythmic pulsations which produce certain definite characteristics, tendencies, and elements in the personality or *soul consciousness* of each individual. It is my purpose to outline each of the fourteen periods, so that the reader may have a true character analysis of the *inner nature* or *soul personality* of every person he contacts.

Before beginning to outline this system, with the various descriptions, I must call the reader's attention to the following important points. It must be kept in mind that the cosmic effect upon the *soul consciousness* of each person does not always manifest itself in the *outer, objective nature* of an individual. The inner personality of people we meet may be very different from the outer individuality or character. In many cases only intimate, friendly relationships over a long period of time will reveal to us the true inner nature of a person whom we think we have understood very thoroughly.

The outer, objective mind and character of a person may clothe him with certain tendencies, habits, expressions, and mannerisms which he may have assumed or acquired, or even affected for various reasons, and which may not be truly consistent with the inner self. The various systems of character reading, such as palmistry, physiognomy, phrenology, handwriting, and so forth may be a fair index

to the characteristics of the outer self, with occasional points relating to the inner self, but all of those systems fail in giving us a true picture of the inherent, deep-seated *soul personality*.

Very often we find through character analysis of the outer self that persons whom we meet are in different occupations, professions, avocations, or social positions than we expected or anticipated to find them. We discover, then, that the system we had used for such character reading was only an index to the changing objective self, and because this outer self is vacillating and has the power and privilege to assume and affect *temporary* conditions, mannerisms, choices of professions and occupations, that we can place no dependability upon the system we have used. Whenever we use the system, however, that gives us an index of the *inner nature* of any person, we find upon close questioning and intimate association that, regardless of the outer life and characteristics of the person, inwardly, privately, and in seclusion these persons live true to the inner index and cosmic soul nature.

Furthermore, it avails us very little to become thoroughly acquainted with the outer character and nature of any individual. As far as any benefit being derived from a knowledge of the outer nature of a person is concerned, it is just as safe and serves just as much purpose to take persons as we find them outwardly and casually. Very few persons are capable of concealing their true outward natures. An acquaintanceship with anyone for one day, which would include casual conversation with him and an observation of his activities in business or home life, will tell us as much about his outer

habits and outer characteristics as any involved system that has ever been devised. I mean, of course, that to the student of human nature and to the analytical mind this would be so.

Knowing the general outer, objective, material traits, habits, and characteristics of a person does not in any considerable way give us an advantage, benefit, or protection. The man who is a thief outwardly and in all of his habits cannot conceal that from the careful observer. It is the man who is inwardly a thief, cheat, and deceiver, while outwardly posing as honest, dependable and reliable, that must be guarded against, and against whom we must be protected and warned.

In all social and business relations, the real value of character analysis or intimate acquaintance with personality must relate to the *true self within*, and not to the fictitious, temporary, vacillating, inconsequential outer self. If we would know whether it is safe to trust another person with our secrets, money, confidence, or association, then we must know the real nature and personality within, regardless of the artificial or temporary characteristics of the outer self. If we would know whom to select for a partner in business or marriage, whom to select as a friend or companion, or to perform an important errand or commission, or to fill an important position or place of authority, we must judge by the true inner nature and not by the temporary nature of the outer self.

If we would know our friends better, and understand their moods with the resulting fancies, foibles, and tendencies, we must know the real inner selves of those friends and disregard the outer selves.

If parents want to understand their children and help them to develop along the lines that originated as natural cosmic tendencies, and which will keep them in attunement with the cosmic personalities born within them, and result in greater happiness and success in life, the parents should have an intimate understanding of the *inner natures of the children*, and disregard the passing characteristics that impinge themselves upon children as a result of casual association, imitation of another's habits, and similar external influences of a temporary nature.

And above all else, if we would know our real self and learn *why* there seems to be a constant conflict between the changing desires and wishes of the outer self, and the natural tendencies that urge from within, and thereby make the best of our life in all affairs and in every situation, we should know with what tendencies, abilities, characteristics, and strong points of personality we are born, and thereby become acquainted with the inner self in a surprising manner.

The following index to *soul character and personality* will do all these things in a different manner than any system of character reading has ever done heretofore. But just because the indications and index of characteristics given herewith pertain to the inner self, the reader must be warned against what may seem to him to be contradictions or inconsistencies.

You may be tempted to use your own life as the first example with which to test this system. You may select your birthday from the table of periods published herewith and discover in what period and what polarity of the period of

the solar year you were born. Then turning to the descriptive index for that period, you may read that you have characteristics, tendencies, faculties, and abilities that seem different from those that you have been using, manifesting, and exhibiting outwardly to yourself and to your closest acquaintances.

Here, then, will be the temptation for you to feel that this system is either unreliable or incomplete. You may say to yourself, or to others, that you do not have the tendencies and characteristics indicated in these pages. The experts who have used this system, however, would say to you, "How do you know whether these are your real, inner characteristics or not?" You may say that you have often thought of yourself, noticed your natural habits, and carefully analyzed your inner wishes and desires. But the expert will say to you that until you have carefully analyzed yourself over a period of many years, and have carefully tabulated, without bias, prejudice, or personal interest, the strong and weak points of your character, *you cannot be a proper judge* of the real nature that was born into you at the time of your birth.

You will find that you will do better in testing the system to read the inner characteristics and nature of *someone with whom you have been acquainted* over a long period, and with a few of whose inner, personal traits you have become acquainted. If you are able to judge the other person without personal interest, and without personal bias or prejudice, you will be able to discern his subtle and minute traits of inner character better than you are able to judge your own.

The real value of this index is that it enables the honest investigator of his own inner self, or of the inner selves of

his children and friends, to help strengthen the inherited birthrights that are good, and overcome those which are unfortunate or undesirable. In other words, this index should become a guide to character building, and the molding of a more ideal and perfect personality.

Granting that each one of us is born with certain tendencies, with certain natural abilities and special faculties, it is certain that the best of these, or those which are good and useful, will become a greater asset to us if developed than any abilities or capabilities which we may arbitrarily assume to be ours, and artificially create in our own lives.

Let us say, for example, that a man's inner nature is revealed in the index as being that of a natural healer or *physician*, and that he has certain cosmic tendencies and abilities for healing which, although part of his inner nature, remain dormant awaiting development, application, and usefulness. Let us assume also that not knowing of this natural tendency of his inner nature, he arbitrarily selected as his profession that of architecture, because of acquaintances he had in that profession, and because of another inner, natural tendency toward art and drawing.

To become the proficient architect that he wishes to be, he has to create and build up a faculty or ability that was not naturally born in him, and this effort requires years of study, along with years of patient practice. Even so, he cannot attain in his profession of architecture that success, prosperity, and renown which would come to him if he had become a physician. He would find that to become a proficient physician he would have had to do less studying, less

concentration upon the development of his ability, and less striving after the success and fame that he sought.

As an architect, he might attain a reputation as a careful, conscientious, and mechanically exact worker. As a physician, however, he would have attained the reputation for being an inspired, natural, prolific, and wonderful healer. There would be that difference between his work as a physician and his work as an architect that is noticeable in the work of the great masters in art, music, and the sciences, which comes from inner inspiration and so-called fortunate inheritance.

Another person may have an inner, natural ability for writing and for the beautiful expression of thoughts in impressive language. Not conscious of this natural tendency, he may become a painter or a musician by arbitrary choice, or because within him there was also the cosmic urge to express himself in the finer arts. To become a proficient musician or painter would require for him many years of study and practice, accompanied by many years of suffering and privation, bringing fame and fortune to his name only after he had passed to the great Beyond.

As a writer, however, he would have found his pen and mind becoming more facile and prolific in expression, with less study and less practice than art required, and he would have found fame and fortune early in his life and would have lived to enjoy the fruits of his divine inheritance. As a writer, he would have been recognized as an inspired thinker, but as an artist or musician he would have been classified as mediocre, or perhaps simply as a successful one who had battled against the odds of life to attain recognition.

In other words, the faculties and tendencies which are our divine inheritance through cosmic direction at the time of birth are the things which we may easily develop and apply in our lives to attain success, happiness, prosperity, and at the same time contribute to the needs of humanity and the benefits of civilization.

It would appear, therefore, from all of the observable facts, that each one of us is born to fulfill certain niches in life and to carry on definite missions in connection with certain lines of work in our earthly lives. We hear so often of the *born* musician, the *born* artist, the *born* business man, the *born* creator and thinker, and others, who seem to have come into this life with certain abilities well established and well developed. Such persons are those who have learned, or discovered in some way, their true inheritance and natural birthright, and have been permitted to develop along these inherited lines and to become successful in expressing them for the benefit of others.

A musician may be born in a family of carpenters, and a great architect may be born in a family of farmers who have never had even a primitive realization of architectural design. A great musician may be born in a family of persons who have never heard good music and had no opportunity of judging between good music and that which is otherwise. Nothing can explain this great diversity of natural tendencies, except the cosmic law of divine inheritance. That in some cases a carpenter may have a son who becomes even more successful than himself in that trade, or an artist or musician may have a son or daughter who follows successfully in the same line, in no wise warrants the belief that

physical inheritance determines the natural tendencies and attributes which we find in all human beings.

Therefore, in the following chapters a complete system is offered to you whereby you may analyze and study the inner, natural, inherited tendencies, abilities, and traits of character of any man, woman, or child. Again the note of warning must be sounded in regard to the differences in the stages of evolution to be found in the human race.

It has been proven that there is truly no racial supremacy. Those of any race given equal opportunity and advantage will display in one or more generations an intelligence equal to any other. This has been shown in the case of individuals whose parents and grandparents lived under the most primitive conditions. When the offspring were reared in a higher civilization and given an advanced education, they attained success in intellectual capacities.

Remarkable accomplishments, however, on the part of what once were erroneously called inferior races, when given the opportunity to develop their natural tendencies, plainly indicate that neither race nor color have any bearing upon the blessings which each human being may receive from the Cosmic. And this should make all of us more tolerant and sympathetic in our thought of those in other lands, and among other races, who may not have the advantages we may have, but are nevertheless equal with us as sons of God and recipients of the cosmic benedictions.

CHAPTER 15

HOW TO DETERMINE THE PERIODS OF THE SOUL CYCLE

IN the following pages you will find an outline of the seven periods of the soul cycle for the solar year. Every person's birthday comes within one of these seven periods. You will also note that each of the seven periods is divided into two polarities, an A and B polarity.

For instance, the first period in the soul cycle is from March 22 to May 12. This period is subdivided into two polarities: the A polarity from March 22 to April 17, and the B polarity from April 17 to May 12. A person born on April 20 would be in the B polarity of the first period of the soul cycle. A person born on December 3 would be in the B polarity of the fifth period of the soul cycle. A person born on March 21 would be in the B polarity of the seventh soul cycle.

Persons who are born at midnight on the division of any period will have to be judged by a combination of the indications given for both periods. For instance, a person who was born at midnight on October 15 would have his birthday on the precise division between the fourth and fifth periods of the cycle. Therefore, to judge the inner character of this person, a blending of the B polarity of the fourth cycle and the A polarity of the fifth cycle would have to be taken into consideration. All of the seven periods end at midnight

and begin at midnight of the days indicated, and the same is true of the A and B polarities. A person born at midnight on June 8 would be in the second period of the cycle, but in reading the description of the character and personality, a blending of both the A and B polarities of the second period would have to be taken into consideration.

The hour of birth has naught to do with this system, except as it pertains to the midnight hour as stated above. The *place* of birth has naught to do with this system, unless the birth occurred years ago in some country like Russia, where the calendar has been changed and the true day of birth is not definitely known. The *year of birth* is of no importance, for the periods in the cycle are the same year after year. It is better not to attempt to analyze the characteristics or personality of a person when the precise birthdate is not known, unless, of course, it is known to be within two or three days of the center of one of the polarities of the periods, when a variation of a few days will not make any particular difference.

Perhaps one other little word of advice or recommendation may be accepted by you. Personally, I would appreciate it if all those who are using this system and who may, from time to time, copy from this book a description of some person and give it to him as a helpful guide, would when doing this, call the written description not a life reading or a horoscope, or any similar term that may be misleading, but a *Soul Reading from the Cycles of Life*.

This will distinguish these descriptions from so-called life readings or astrological readings with which they have no connection, and with which they should not be related

CHART F

PERIODS AND POLARITIES OF THE SOUL CYCLE

Period No. 1 March 22 - May 12

Polarity A March 22 - April 17

Polarity B April 17 - May 12

Period No. 2 May 13 - July 4

Polarity A May 13 - June 8

Polarity B June 8 - July 3

Period No. 3 July 4 - August 24

Polarity A July 4 - July 31

Polarity B July 31 - August 24

Period No. 4 August 25 - October 15

Polarity A August 25 - September 20

Polarity B September 20 - October 15

Period No. 5 October 16 - December 6

Polarity A October 16 - November 11

Polarity B November 11 - December 6

Period No. 6 December 7 - January 27

Polarity A December 7 - January 1

Polarity B January 1 - January 27

Period No. 7 January 28 - March 21

Polarity A January 28 - February 23

Polarity B February 23 - March 21

even in the mind of a person who is not familiar with any of these systems. It is the wish of the author to keep the systems in this book distinguished from all others, as they have been in his own personal use for so many years. You will find generally that your friends and acquaintances will appreciate the knowledge that the reading or description you give them is from a different system, and resulting from a unique method that is free from any superstitious beliefs or any principles that may be undesirable in their minds.

CHAPTER 16

DESCRIPTION OF THE PERIODS OF THE SOUL CYCLE

PERIOD NO. 1

March 22 to May 12

THOSE in this period inherit from the Cosmic a very lofty nature, with a deep-seated desire to achieve a high place or a high position in the esteem of the public and in the hearts of their closest acquaintances. They carry over from their previous incarnations the lessons and tribulations which have taught them the necessity for looking above and beyond the commonplace things of life and holding a vision of the highest ideals as their goals. They also carry into this life recollections of the experience of having achieved a notable place or position in life in some foreign land, and having tasted of a full cup with many of the luxurious and beautiful things of earthly existence.

Therefore, in this incarnation, no matter in what station socially, racially, or financially they may be, there is always the inner urge to try to live a noble life, or at least one that will be above the commonplace, and that will bring them the respect and perhaps the adoration of the multitude. There is not just the desire for wealth, or the material luxuries of life, although there is a taste for these things slightly beyond the average; but the great desire, the great longing, that actuates these persons in their subjective thinking and planning is the attainment of public renown and approval.

For this reason, these persons reluctantly deal with sordid things and constantly struggle against things that are mean, lowly, or objectionable to good taste and high ethical standards. This means that if these persons are starting this incarnation or the lessons of this life in a lowly social or financial position, there is a continual restlessness and dissatisfaction that urges them onward and upward. They always sense the nobility of their last life. They are generally trustworthy, for they have learned in the past that deceit, falsity, underhandedness, and unethical practices hold them back in the progress they wish to make. Their words are generally their bonds, and their aspirations are not dreamy or mystical, but practical, and adhere to a straight line of progress.

There is, of course, the natural tendency carried over from the past to want to rule and dominate, and, therefore, be the heads or be the leaders of any plan, organization, or group of interests with which they may be connected, and in such capacities they will succeed because of the other inherent qualities. They are generally careful in the selection of their words, and the use of language in writing, and have commanding personalities when they are allowed to develop properly, and well-developed dramatic faculties. Such persons are usually affable among their peers, with perhaps a slight tendency to be impatient with those who do not aspire to rise, or who may be classed in their subconscious minds as the lowly serfs of a past kingdom.

These persons can always be reached and appealed to through suggestions of sumptuousness and magnificence, and whatever may be honorable. They will succeed best in business matters wherein they may be managers, directors,

WITH THE CYCLES OF LIFE

controllers, or overseers, mayors, governors, or any high governmental officers, or holders of important positions in the courts of law. In more humble positions they will succeed as sheriffs, magistrates of small courts, or executive positions of a similar nature.

They have an excellent preparation and faculty for the study of law, and in an artistic manner they are fond of metals and working in metals, not as jewelers, but as designers and creators of beautiful and magnificent things of metal. As second choice, they would succeed as designers and creators of magnificent buildings or arrangers of beautiful homes, or the creators of beautiful costumes, and articles of adornment.

The physical weakness which they have inherited in this life are affections of the heart and brain, perhaps through overwork mentally, and tendencies toward weakness of the eyes, and toward fevers. They will find joy and recollection of familiar things from the past in traveling in such countries as Chaldea, Phoenicia, Italy, Sicily, Switzerland, and Scotland.

Polarity A **March 22 to April 17**

Persons born in the first half of Period No. 1 will be more active in fighting their way to the top of the ladder of their ambitions than those in the B polarity. They will use all of their vital energy and power, and every physical means to achieve leadership and dominating positions, and they will be like warriors in mastering and controlling any situation or any line of work with which they are connected. Their constitutions will be fiery and strong, and their personal

magnetism well developed, with excellent speaking voices and commanding style in writing.

Polarity B

April 17 to May 12

Those born in the last half of Period No. 1 will have greater tendencies to seek the goals of their ambitions in the fine arts or in the more refined and delicate places of life. They will be more genteel than those in the A polarity, if given the opportunity to develop their inherent tendencies, and they will be more subtle, more smiling, and more quiet in their achievements of success than those in the A polarity. Nevertheless, there is the same determination, with an additional characteristic that some may call *bull-headedness*. These persons will be found associated with art, drama, and music, either as hobbies or as professions if they have the opportunities to allow their natural tendencies to guide them.

PERIOD NO. 2

May 12 to July 3

Persons born in this period come into this life carrying from the Cosmic and from their last previous incarnations memories of many peculiar experiences and tendencies, characteristics, that make strange combinations. In the first place, they bring into this life from the past a deep-seated desire to travel and move about, or they have been successful and happy in this in a previous life. The continuation in this life in any one place or in any one line of thought, or in any one hobby for a long time spells monotony to these persons, and however they may try outwardly to associate themselves permanently with some place or set of conditions, the inner

restlessness causes them to feel uncomfortable and to seek a change. In one of their incarnations they have been not only experienced in journeying, but in exploring, investigating, and in trying to taste all phases of life.

Everything that they associate themselves with is of the more delicate, refined, and temperamental nature. They have inherent desires to be well-mannered, thereby expressing tender natures, and the wish to be well-received and well-considered. There is a cosmic desire to search for novelties and the passing pleasures of human life that are wholesome, and yet filled with joy and happiness. Yet there is another equally strong desire, carried over from an old incarnation by each of these persons, to delve occasionally into the sciences and the more practical things of life, and these two desires constitute the strange complex that occasionally manifests itself in the lives of these persons.

They are practical, saving, conservative in many ways, and yet their lives are of the present hour always, and they have a tendency to let the future take care of itself because of their faith in the just reward that will come. They prefer to live free of the cares of this life, seeking peace and quiet whenever they are troubled; they are not easily led into quarrels, arguments, or disagreements. They love to spend much time in meditation. In many affairs there is a tendency to be fickle, or we may say that those judging them outwardly would believe this to be so, whereas in truth it is only another form of the expression of the desire for change and for new experiences.

They are honest, careful, ethically precise in many ways, and clean and wholesome in character, but are very apt to

be misjudged because of their changeable natures. These persons must guard against being led into the company of those who seek only the pleasures of the flesh, for once they are started on a downward path, they become heavy drinkers, and are beggarly, careless, and given to disregard the niceties of life.

In the trades and professions, these persons will succeed well as traveling representatives, or persons connected with business affairs that require changes of location, changes of contact, with many branches, and fluctuating interests. There are inherent faculties and abilities which will make them excellent secretaries, designers, artists, saleswomen or salesmen, actors or actresses, concert entertainers, newspaper reporters, or servants in fine homes. A peculiar tendency on the part of these persons is that of marrying persons who will bestow titles upon them or will bring changes of position into their lives. Very often the women marry men who look upon them and treat them as queens or as countesses, and pay continued adoration to them, whereas the men often marry women who are well-to-do, and who look upon their husbands as kings in the homes.

Inherited physical weaknesses give a tendency toward troubles with the bladder, and toward rheumatic diseases, colds, and coughs. Often these colds will manifest through disturbance in the stomach or in the feet or eyes. These persons will find joy and interest in traveling through such countries as Norway, Denmark, the Netherlands, and Belgium, where they will contact sights and conditions familiar to them from the past.

Polarity A

May 12 to June 8

Those born in the first half of Period No. 2 will have very quick intellects, and will be more apt to enter into businesses that permit them to use their minds and fingers rather than all of the muscles of their bodies. In other words, quick minds, quick tongues, and quick hands will serve them usually well, and they are very apt to be employed in two occupations or have two hobbies and interests at the same time, and to give the impression to others that they are almost dual in their manner of living and expressing themselves. They should do everything that is in their power to develop the intellectual and mental side of their lives, because of inherited mental faculties. Persons in this polarity will make themselves known by their intellectual pursuits and will be credited with excellent education and excellent training, even if they have not actually had them in any school or academy.

Polarity B

June 8 to July 3

Those born in the last half of Period No. 2 are generally outstanding characters in the intellectual world, for they continually associate themselves with those interests or industries that deal with education, the fine arts, or the law. Their intellectual capabilities are more reserved and must be discovered, and they usually manifest in excellent memories, fine appreciation of language, intuitive senses that enable them to foresee and prophesy or perhaps sense oncoming conditions before anyone else may think of them. They are somewhat more stable in their physical changes of location,

although the love of travel and of change of residence causes them to move occasionally. They will vacillate more in their intellectual pursuits and in their reading and studying than in their physical environment, however. These persons are able to serve as secretaries or associates in business to a greater degree than those in any other period or polarity.

PERIOD NO. 3

July 4 to August 25

Persons born in this period carry from the past into this life the experiences of great struggles and achievement through determination and self-mastership. In other words, we have in this period those who are already potentially self-masters and masters of fate. And they have a strong constitution, a fiery, impetuous nature, and the will power and ability to accomplish against great odds, if there is sufficient motive and some encouragement.

In addition to this inner nature, which is a part of their soul consciousness, their births during this period have given them from the Cosmic other related faculties and abilities which will enable them to be bold, confident, invisible characters in the achievement of any great purpose. These persons will challenge any obstacles that may arise in their lives, even though outwardly they may not realize that they have been stirred to action or aroused to a fighting spirit by obstacles that others may have looked upon as insurmountable or perhaps insignificant according to their natures. In other words, this is the type of person who can be encouraged and led into action by presenting an obstacle to him, as being one that others have failed to overcome. Naturally these persons are lovers of contest, and seekers

of honors in contests, not merely for the aggrandizement, but because of the mastership it will establish.

They are apt at times to be boastful of their abilities and in this thing demonstrate a weakness that must be overcome. They never hesitate to risk lives or limbs, or their best interests, to achieve anything that they believe was destined for them to master, whether it is in association with their own personal interests or not. Naturally these persons, if properly placed and properly trained, become great leaders in movements or employments calling for the use of strong will power, strong hands, and strong principles. If allowed to have their own choice in professions, they will most generally succeed as captains or officers in an army, or as leaders in great movements calling for strong, masterful leadership.

In more conservative positions they will succeed as surgeons or chemists, or even as carpenters and contractors. They have an inherited inclination and liking, brought over from the past, for the making of small things that are intricate and of a mechanical nature. Therefore, they often are inventive and are successful in such lines as watchmaking, electrical designing, or the making of small mechanical devices of a very important nature.

Their physical weaknesses may manifest in the tendency toward diseases of the blood, such as carbuncles, ringworm, eczema, sores of the skin, yellow jaundice, and similar conditions. There is also a tendency toward trouble from gallstones or burning fevers, and these persons should be very careful of their diet, for they are apt to eat highly seasoned foods and too much meat. We will find these per-

sons attracted to and interested in such places as Lombardy, Bavaria, northern France, and Paris, for there they will recall conditions that seem familiar.

Polarity A
July 4 to July 31

Persons born in the first half of Period No. 3 are very apt to be adventuresome and to travel a great deal seeking adventure and the doing of things that call for the risking of life and limb, and they are, therefore, natural explorers and investigators. If unable to travel considerably, they will explore even in their own immediate country, and be known by their restless desires to delve into the mystery of conditions that baffle the conservative nature of a person who is not so ready to risk his life. These persons make good leaders of armies, or leaders of naval forces, and they are often associated with political or reform movements, for they love conquest and can carry an issue to victory. These persons often lead double lives in many ways, for they will have many interests and two outstanding occupations or methods of applying the faculties of their natures.

Polarity B
July 31 to August 24

Those born in the last half of Period No. 3 generally succeed in achieving the attainment of some position that places them at the head of some great organization, as in some high political office equivalent to that of a governor, mayor, judge, or president. They are naturally kingly and queenly by all of their instincts and habits, and they love pomp and ceremony, limelight, and adoration and approval

of the public. They live their lives in keeping with these desires, and, therefore, carefully guard their weaknesses and those habits which might jeopardize the high positions they seek, or which they attain, for they learned this lesson in a previous life. In any occupation, whether on the stage, in literary work, in business, or in social affairs, the persons in this polarity are leaders or outstanding characters, and the mediocre positions in life will not satisfy them. Children born in this polarity should be given every form of education and training that will enable them to hold high positions with efficiency and with honor to themselves and their parents.

PERIOD NO. 4

August 25 to October 15

Persons born in this period carry into this life from a previous incarnation the attainment of high personal powers, the positions of leadership that have to do with education, the fine arts, and especially the development of civilization, and the best interests of the public. Together with these characteristics, such persons have received from the Cosmic the additional benefits of wonderful faculties for study, and the attainment of knowledge, and the ability to express themselves in words or writing together with very fine memories, the ability to reason logically, and to live a life of estheticism if the opportunity is afforded.

These persons are hard to become acquainted with objectively, for their intellectual abilities and knowledge enable them to clothe themselves with the colors of their environment and to meet persons on their own level. We may find these persons in the most humble positions of life, seemingly occupied with pursuits and affairs of a lowly type,

and yet we will discover through acquaintanceship that they are truly prepared and trained for higher and better positions than those in which we find them. On the other hand, we may find these persons in the highest positions of the literary world, or at the head of educational institutions where they give more thought to the advancement of humanity than to their own advancement.

The cosmic rhythm has created in them a natural desire for learning and for research, and they are very fond of mysteries, whether in fiction or in actuality. These persons also have the tendency to appreciate the power of words and the fine points in law and scientific knowledge. There is a tendency toward searching into the occult and into the secret and arcane wisdom of all ages, as well as into philosophy and religion, but in the latter sense the tendency is toward nonsectarianism and the building up of universal brotherhood and love.

These persons are very capable in trade or business, and make excellent merchants because of their ability to read human nature and to understand the desires and wishes of others. For that reason they would make good salesmen or saleswomen, or good instructors of sales forces, or writers and preparers of advertising and sales literature. Their ability to reason logically and to express their ideas with logical arguments makes them qualified for many positions where this natural ability can be used. Very often their abilities lead them into politics, where they succeed well, but not to the same extent that they would in some truly humanitarian profession.

These persons have usually acquired considerable advancement in metaphysical and occult illumination in

a previous incarnation, and very often they were formerly adepts in one of the arcane brotherhoods, most often the Rosicrucian Order. There is something about their soul personality development and spiritual attainment that makes them truly great masters inwardly, and they are restless and unhappy until they contact in this incarnation that place or point in their soul progress where they left off in the last incarnation.

These persons should be guided to the Rosicrucian work or some similar course of study and development at an early age, for that will be the beginning of another phase of rapid progress and development for them. Honor, temperance, and mystical idealism, accompanied by an unusually wonderful imagination, are the keynotes of their real inner characters. We find these persons very often occupied in the present incarnation as literary workers, mathematicians, secretaries, writers, sculptors, poets, orators, school teachers, college professors, bankers, clergymen, or ambassadors.

The physical weaknesses, which are subtle physical tendencies of their natures, generally express themselves in so-called vertigoes, dizziness of the head or brain fatigue, accompanied sometimes by a slight degree of stammering or imperfection of enunciation, due to the rapid thinking and the attempt at rapid expression of thought. There may also be a tendency toward hoarseness, dry cough, or colds in the head. These persons will find great joy and happiness in visiting or traveling through such places as Flanders, Egypt, India, and most of all, the southern part of France.

Polarity A**August 25 to September 20**

Persons born in the first half of Period No. 4 are generally shining lights in the educational and intellectual world. More women than men come into this period and become teachers of music, fine arts, or in a more humble way creators of costumes or workers at fine sewing and other trades or arts requiring nimbleness of finger and hand. On the other hand, the men of this period have a natural tendency toward the spiritual things of life, and would be excellent clergymen or teachers of ethics, philosophy, and morals, if they could express themselves freely and *outside of the limitations of sectarianism*. Persons in this polarity are generally very genial, good-natured, polished, cultured, and artistically and musically inclined. But this polarity also gives great strength of character and a dominating magnetism that would make them well qualified as physicians and surgeons, or judges and magistrates.

Children born in this polarity must be directed very carefully, because the imagination is highly developed and this may create in them imaginary ideas which they will represent as truth and thus fall into the habit of making false statements. They, too, much be guarded against a restlessness of nature, ever seeking the strange and peculiar things of life and ignoring the practical. Overstudy on the part of such children must be guarded against, because the nervous and mental systems will not stand the strain during childhood and early youth.

Polarity B**September 20 to October 15**

Persons born in the last half of Period No. 4 are particularly well adapted to the use of their mental abilities

and logical reasoning in making decisions and in coming to reasonable conclusions. They are well balanced in all of their faculties and have a great desire to balance all their thoughts and all their knowledge. In examining the evidence or the statements on any subject, or in any matter of dispute, they are sure to seek for the balance and to want to establish an equality in all things. The tendency in their lives is to be more or less esthetic, with a great love for the pretty, beautiful, luxurious, nice, and comfortable things of life. They are generally supporters or patrons of the arts and music, as well as drama, and make good artists and writers, especially of happy and fantastic tales with good moral principles involved. These persons are seldom ruffled or upset, and go through life with a tranquility and evenness that is a great help to others as well as themselves. They, therefore, should occupy such positions as enable them to hold conditions in certain bounds, or to direct the lives of children and young people along the lines of peace, harmony, and beauty.

PERIOD NO. 5

October 16 to December 6

Persons born in this period are generally those who attain great success and fame in their particular callings, although this success may not always be measured in worldly things or in a financial way. These persons carry over from the past incarnation one lesson which they have learned well, and which becomes the keynote of their inner, secret natures, and that is, that as one *gives and does for others*, so one attains and succeeds in life. Therefore, these persons are fundamentally generous, good-natured, kindly, and often free in their actions and lives to such an extent that their own success and progress seems to be nil from a material

point of view, and for this reason they are often misjudged as failures in life.

On the other hand, they do acquire an unusual amount of knowledge, a great deal of culture and polish, an extreme amount of happiness and pleasure, and withal are comfortable and satisfied with their lot in life, even though it may be in poor circumstances or in humble position. In every crisis the Cosmic comes to their rescue and brings about satisfactory conditions. This, however, does not prevent them from seeking greater things and a greater abundance of this life's blessings. But they are philosophically inclined through the lessons they have learned in the past, and believe that they should give thanks every morning for life itself, and not complain if they have the least of the worldly blessings, for they realize that they have in their knowledge and in their mystical powers a greater asset than most other human beings, and for this they are eternally thankful.

These persons also bring into this life from the Cosmic, through the vibrations of the period in which they were born, an unusually philosophical nature, accompanied with the ability to acquire languages and to understand the spiritual and natural laws of the universe to an unusual degree. This makes it simple for them to acquire and master the principle of harmony in art, music, writing, and even in chemistry.

Being capable, therefore, of expressing themselves in so many different ways, these persons are really in possession of more hobbies throughout life than those born in any other period. Whenever they seek relaxation or a change from occupation, they can turn their hands to music, to

mechanics, to art, or to the sciences, and dabble in any one of these things to a degree that almost borders upon professional expertness. For this reason they may enter into various occupations in their youth and change often as they go through life. They finally settle into positions where their complex abilities can be used, one by one, throughout the weeks and months, and thereby hold unique positions which other persons could not fill.

Fundamentally, there is a great love for animals, for outdoor sports, and for nature itself. They are open, frank, honest, and cheerful, and deplore deceit and underhandedness. They have carried over with them a very high degree of mystical development and of religious and spiritual attunement, and are often thrown into deep spells of spiritual meditation that others may look upon as despondency. They seem to sense the sufferings of the world as well as the pleasures of the world.

These persons would make excellent directors of organizations, where they are concerned with the scope of larger plans and things of a national or international importance rather than with the smaller details of executive management. They are capable of planning great schemes and carrying them out successfully, and for this reason they may enter the profession of advertisement writing and planning, sales organization work, or the control and management of schools, colleges, and universities. In business methods, however, their generosity, charity, and liberal nature does not bring them personal fortune, nor help to build up the financial end of their plans, but it does bring success in every other direction, which eventually leads to financial success. We are more apt to find these persons in the positions of

judges, senators, lawyers, priests, doctors of law, professors in universities, newspaper editors, or magazine editors, or conductors of shops or places of antiques, or dealers in the arcane and mystical things of life.

In physical weaknesses the most common manifestation is in connection with inflammation of various parts of the body though colds or overwork, accompanied by conditions of the blood due to overeating or irregular eating, or the eating of rich foods. Skin diseases, rheumatic conditions, quinsy, and apoplexy are general conditions found with these people. These persons will find great joy and happiness in journeying through or visiting Babylon, Persia, Egypt, Palestine, and the strange byways of the Orient where they may come in contact with ancient familiarities, especially in Egypt, China, and Japan.

Polarity A

October 16 to November 11

Persons born in the first half of Period No. 5 are very aggressive in their business affairs because they have a nature that is filled with determination and energy. They do not rise to heights in the same channels as those in the B polarity, because those in the A polarity have a feeling that they must fight their way through life and must be everlastingly at something in order to keep themselves from slipping back into a mediocre position. The aggressiveness of the persons in this polarity leads them into many unique positions and makes them outstanding characters in their ability to accomplish difficult things. They have a tendency, however, toward accidents and toward delays through their own rash exertions. These persons will find themselves best fitted for

positions in connection with the government, or as attorneys, occupied daily in arguments and dissensions, fighting for certain principles with considerable success.

Polarity B

November 11 to December 6

Those born in the last half of Period No. 5 are almost the opposite of those born in the A polarity in regard to aggressiveness. The warlike spirit of their nature is greatly subdued and they would rather stay away from a quarrel or argument than take any part in it. They believe that everything will eventually adjust itself successfully and properly without contention. They are more happy, cheerful, and free in their living than those in the A polarity, and while not seeking positions or labors or problems that call for strenuous physical effort, they do love to tackle problems that call for mystical understanding or intellectual mastership, and careful, logical reasoning for a solution.

These persons make very dependable friends, are often leaders of humanitarian movements, and occupy themselves more in helping others than in helping themselves. They enjoy the nice things of life, but always have an inclination to seek places that are covered, secret, or out of the way, and to associate with the persons who are of lowly or humble station and try to help them. On the other hand, these persons live an open, noble life, and constantly try to rise to greatest of mystical heights and become spiritually attuned with the highest forces in the universe. Great masters, great adepts, and those ready for the highest forms of mystical initiation are generally found in this polarity.

PERIOD NO. 6

December 7 to January 27

Those persons born in this period bring with them from the past incarnation a benediction which they have earned through suffering and much trial and pain. This benediction is in the form of a reward, and brings to these persons that happiness, joy, and indulgence in the pleasant things of life which they have not had before, but which they may have had an opportunity to enjoy, but discarded or cast aside in some previous incarnation, and then had to do without for a long time to learn the great lesson. However, being born in this period brings the benediction and blessing of attainment, peace, and attunement with the pleasant, cheerful, lovely things of human life.

As they use these pleasures, however, in this incarnation, so will they determine for themselves what their fate will be in their next incarnation. If they abuse the benediction that is theirs this time or cast it lightly aside in any way, it will be denied to them at the close of this incarnation and in a future one. To carry out this benediction, the cosmic vibrations of this period have given them certain faculties and functions which, if developed and applied properly, will bring them the joy and happiness they should have. Therefore, these persons have a natural tendency toward music, toward merriment, amusements, singing, pleasant voice, pleasing disposition, and a cheerful aspect of life.

There is a distaste born in them in this incarnation for anything sordid or deceitful, and virtue and honor are constant urges of their present, inner dispositions. For this reason, these people are not usually given to quarrelling or wrangling, nor to viciousness of any kind. Early in

childhood and all through life they will show a tendency toward cleanliness in health, cleanliness in habits, and even a conservative attitude toward all indulgences. This makes many of the persons born in this period of the esthetic type, and we may easily recognize most of them by their physical appearance, for they seem to be of the mental temperament, and what one would casually call the artistic or musical type.

Seldom are they of very robust build or even of really robust health. Naturally, they tend to become musicians, artists, sculptors, actors, actresses, designers, or teachers of these arts and professions. The men make excellent jewelers, when they are not engaged in music, art, or drama, or dealers in silks and fine dress materials, embroideries, and things of this kind; for while they may go into these lines of business for the money there is in them, the real instinctive reason is their desire to be with and around fine materials and artistic creations. For the same reason they may go into the business of manufacturing and selling perfumes, or works of art, and become engravers or dealers in commodities that are for personal adornment or the decoration of homes.

These characters are ones which need sympathy and understanding if one is to become well acquainted with them, and they should never be forced to go into lines of business that deal with mechanics or heavy machinery, or coarse and muscular occupations. They are easily frightened and easily annoyed, and should never be placed as children or young people where there is great disturbance and a lack of quiet and peace. For such persons to be driven into war or into the melee of Wall Street or conditions of this kind is to be

forced into an early annihilation of their best faculties and abilities, and to bring about a gradual breaking down of the body leading to early transition. These persons are really the makers of the mirth in life, and are usually the wholesome, sweet characters that we love to idealize.

In physical weaknesses, they generally suffer from nervousness due to overstudy or unpleasant environment, or very often from the suppression of natural functions due to an extreme moral viewpoint. In fact, this moral viewpoint may lead some of them to refrain from marriage until late in life, and in this repression they bring about a weakening of the constitution. Most of their physical suffering will be in parts of the body located in the abdomen, and especially in the bladder, kidneys, and bowels. These persons will find great joy and happiness in traveling through or visiting Arabia, parts of Austria, especially around Vienna, along the Mediterranean coast, and England and the New England states of America.

Polarity A

December 7 to January 2

Persons born in the first half of Period No. 6 are a little more serious in life than those in Polarity B, for they generally have a tendency to want to teach and promulgate their esthetic ideas and to help establish these things in their own community or nation. For this reason they may become associated with reform movements, or with educational movements, promulgating philosophy and ethics. Very often these persons become critics of the drama or of art and music, for it is their desire to separate the bad from the best in life. Even in all that seems perfect to others they see flaws, and can constructively and helpfully analyze and point out the errors that others do not see.

For this reason we find these persons in this polarity occupying very definite positions, generally as critics or teachers of a distinct class or even as judges in competitions, or as readers for magazines and newspapers, where they may pass judgment upon matter that is submitted for use. Their analytical minds enable them to accomplish a great deal of good for humanity, and especially in all of the arts and sciences, where they are more successful as analytical experts than as real developers of any one of the principles involved in any of the sciences and arts.

Polarity B

January 2 to January 27

Persons born in the last half of Period No. 6 are critical to an extreme extent, and while they do not allow this criticism to be applied for the benefit of others (for they hesitate to become known as reformers or to be identified with the criticism of matters of any kind), they nevertheless become critical of their own lives and of their own actions. This causes them considerable unrest and often makes them of that type which we call *Aquarian*. In other words, they often find themselves changing their opinions and doing things hastily and impulsively because of a sudden impression or a sudden critical attitude, and after the act is completed or the words spoken, they again analyze and criticize their actions and wonder why they did or said the things that have passed.

These persons also become antiquarians and love to delve into old bookshops, museums, and places of research, for they find pleasure and happiness in analyzing and criticizing, examining and studying the unusual things of life.

They make wonderful friends and are good entertainers, for they can talk well and long of unusual experiences and things which they have witnessed or enjoyed in life. There is the ability to build up stories and fictitious pictures and situations which enable them to become excellent writers of plays, dramas, or scenarios.

These persons enjoy life in a peculiar way through indulgence in their own unique forms of pleasure, and are often looked upon as being Bohemian, queer, or unusual in life. They are never accused, however, of being peculiar in their mental equipment, or of being irrational in any sense. They are always greatly loved by a large number of friends, and in all parties, entertainments, and associations are far from being *wallflowers*, or undesirable elements. These persons often attract to themselves an excellent companion for life in either marriage or business, and are really one of the important types making up the complex nature of humanity.

PERIOD NO. 7

January 28 to March 21

Those born in this period carry from their previous lives into this one the necessity for accomplishing very serious and important work in connection with the evolution of humanity. They are those who have brought into their lives through their own actions in the last incarnation, the need for learning, first, the serious aspects of life and, second, teaching these things to others through their own living or through their instruction.

They are usually those who have gone through a great many incarnations and are highly evolved and experienced in the lessons to be learned from all the experiences that life

has to give in many foreign lands. For this reason, early in life these persons as children, or even as little babies, would be called *old souls*, and considered older than their years. From the Cosmic they have also inherited as a gift the ability to recall much of their past instruction, and most of the experiences they have had in life along with the additional faculty to systematize their knowledge and to acquire readily new knowledge and relate it to that which they have already stored up in the inner consciousness.

Therefore, it is not surprising to find that these persons in this period have an unusually deep imagination that seems to be prophetic and capable of imagining things which occurred in great antiquity, or which will occur in the future. They also have the ability to argue, to explain logically, and to present their thoughts and pictures systematically. They are, however, reserved in their utterances and reserved and dignified in all of their actions. They give one the feeling constantly of a person who feels that he or she is being observed and watched and analyzed, and, therefore, must be on guard in connection with every thought and act.

In judgment, they are severe because they are strict and careful. Unlike those in the fifth period, they do not allow their hearts to influence their judgments. To these persons *the law is the law*, and is both merciful and just, and no exceptions and no variations of the law must be allowed because of sentiment. Therefore, being stern and just they are generally greatly honored and respected, and seldom accused of being too severe or unfairly strict.

These persons believe that the great things of life are attained through study, and the careful building up of acqui-

sitions along definite lines. They are extremely systematic, and take advantage of every principle of natural law and of man-made laws to assure themselves of the things they want in life and to protect what they have. They are not mercenary, but on the other hand they are not overly generous. They are, of course, naturally honest and more severe in regard to the exactness of statement and precision of things than those in any of the other periods. For all these reasons, these persons would make excellent judges, magistrates, or heads of large corporations and big business propositions.

A peculiar thing, however, is that in moderate circumstances and when born in mediocre positions, they often become employed in connection with such lines as plumbing, bricklaying, plastering, building, gardening, dyeing of cloth, printing, or in one of the other trades or businesses that are usually united in unions or under define wage scales as labor-trades. If these persons only knew that their inherent desire for exactness, precision, and truthfulness could lead them into higher occupations, such as magistrates and judges, they would seek education and training for such positions early in life and succeed well indeed.

On the other hand, their firm belief that the benefits of life and the necessities can be acquired only by slow acquisition and the careful attainment of them leads them into occupations that are well established, protected by union laws and government laws, and which seldom fluctuate in hours of employment or in salaries. Thus they hamper their own progress by a false understanding of the principles of life. Many of these persons also become nuns, monks, or members of monastic organizations or bodies, and live secluded

WITH THE CYCLES OF LIFE

lives where they can labor in their definite systematic manner to bring into their lives that which they feel is right.

The diseases which are natural to them through the vibrations of their period are impediments of the ears, teeth, or eyes, and sometimes of speech, and such conditions as proceed from colds, such as tuberculosis, and often pneumonia. On the other hand, their excellent constitutions enable them to live to a very old age, and they suffer only from jaundice or dropsy, with occasionally a touch of palsy or apoplexy. These persons are not usually ill until late in life, and are able to fight off many of the ailments that come to others. They will find great joy and pleasure in visiting such countries as Turkey, the Balkan states, Spain, parts of Africa, and South America.

Polarity A

January 28 to February 23

Persons born in the first half of Period No. 7 are very often led into occupations that are unusual, such as those of chemical experts, criminologists, investigators, explorers, research workers in ancient history, archeology, geology, and similar subjects. They are easily classified as being profound in knowledge, and devoted to only one, or possibly two, subjects in life. They usually dress in a quiet manner and give the appearance of being much older than they are. They show extreme reserve, a tendency toward orthodox and religious devotion, caring little for the gaieties of life, and seldom patronizing anything that is frivolous or transitory.

They are diligent workers, consistent, dependable, careful, and often employed in the same positions or same lines

of work throughout their entire lives. These persons are often known as the *salt of the earth*, and are wonderful friends to those who can make a contact beneath the surface and win their favor. There is a desire to reform the world in certain regards, but these persons are consistent enough to adopt the reform themselves and live the life and set an example.

Polarity B

February 23 to March 21

Persons born in the last half of Period No. 7 are quite opposite to those of Polarity A, inasmuch as they are not quite so serious in life and do seek some pleasure and happiness as a relaxation and reaction from their more serious studies and occupations. The persons in this polarity have an unusual tendency toward mysticism, occultism, and the mysterious things of the universe, and of nature. The persons in this polarity seem to acquire more fortune in a material sense than those in Polarity A, and often attain considerable fame in their particular fields of effort.

However, they are quite dual in nature, and are capable of living a dual life inasmuch as they may be outwardly at the head of a great organization, or contacting the public in a smiling, happy mood, while at home or in the privacy of their own seclusion they may be quiet, reserved, and more interested in the deep, more serious things of life than one would suspect. These persons have a great magnetic power, which they can exert easily over others, and have a tendency to read easily the minds of other persons and to project their consciousness into space and there sense the thoughts and actions of others. These persons also love to be near the water and love to take long journeys, more for the purpose

WITH THE CYCLES OF LIFE

of studying human nature or studying the history and conditions of the country and place than for pleasure, although they do enjoy being on the water and in cities near it.

SELF-MASTERY AND FATE

CHAPTER 17

THE CYCLES OF REINCARNATION

JUST as each year of our lives begins a new cycle, and each one of these cycles is divided into periods of progression and development, with intermittent periods of action and reaction, and just as the general cycle of life is divided into periods of seven years through which we progress from a purely physical creature to a more or less perfected spiritual being, merely clothed in a physical body, so our whole existence in this universe is divided into larger periods of approximately 144 years which constitute the periods in a long cycle of incarnation and reincarnation.

Just as you who read this book today may be in the sixth period of your complex life cycle in this incarnation, and in the fourth period of your yearly cycle, so you may be in the eighth or the tenth or the fiftieth or one hundredth period of your long cycle of reincarnations.

Whether one believes in the doctrines of evolution of the species of man or not, there is one thing quite sure, and that is that man as a definite and distinct species has been evolving since the time he became man as a distinct creature. In other words, man as MAN had some beginning, whether that beginning was spontaneous, as the orthodoxy of some religions claim, or whether man's beginning was the culmination of stages of evolution preceding his distinct nature. Therefore, from the time of the beginning of man as the highest creature in God's Kingdom, man has continued to evolve as a man, and this evolution will continue forever.

We may liken the beginning of man's career to the making of a book. The critical materialist may say that a book with its beautiful binding, well-printed pages, attractive illustrations, gold lettering, and gilded edges, was nothing more or less at one time than a mass of cotton pulp, silkworm strands, and mineral crystals. He may say truthfully that the book we now admire evolved beautifully out of lesser things, and, therefore, had a very primitive beginning in the elements of the earth, plant, and animal life. But the mystic or the philosopher might reply and say that the book never was a book until all of these elements had been gathered together by a master mind, their natures changed, their tendencies altered, and new combinations created, and in the twinkling of an eye brought together spontaneously into a new thing called a BOOK, and that preceding its creation as a book, it did not exist even in any primitive form.

Thus the mystic is not concerned with what changes the evolution of earthly elements may have brought into the process of preparation for the physical composition of man's body, but is concerned primarily with the creation of man by the placing of the highest consciousness of God within a physical form and thereby spontaneously creating and bringing into existence a new species, a new creature, a new manifestation of Godliness called *man*. From the time of man's creation onward, the physical evolution that occurs in his body is purely secondary to the greater evolution that is occurring in his spiritual nature and in his soul personality.

It is unquestionably true that man's physical form today is a vast improvement over the form that primitive man

possessed. Unquestionably the physical form of man has evolved from a lower type of man's body to a higher type of man's body, and such evolution has not reached its heights nor even sensed its ultimate goal. Man is as responsible for this physical evolution as is God, for as man re-creates his environment, it reacts upon his physical as well as his mental development, and perfects the upward tendency of his evolution on Earth.

The evolution of a person's soul personality proceeds through its contact with the experiences, trials, tribulations, and lessons of this earthly life as well as through its contact with the universal, Divine Consciousness of the Cosmic Mind of God.

The mystics of all lands and the devout students of religion of all lands—which means more than three fourths of the Earth's population—realize that the spiritual evolution and perfection of man could not occur in the short period of one incarnation. That would be equivalent to but one period of seven years in the earthly life cycle of each person here on Earth. If we look upon the earthly life cycle and realize that each seven years brings its progress and increasing evolution to the soul personality and mind, as well as to the body of each individual on this earthly plane, we will realize how different it would be if each of us lived but one period of that cycle, for instance, from our birthday to our seventh year.

Certain wonderful changes and improvements in the body, mind, and soul personality would unquestionably take place in that short span of existence, but look at the remarkable changes that occur in the next period, from the

seventh to the fourteenth birthday, and then again from the fourteenth to the twenty-first, and so on.

If we think of the evolution and cycle of the soul personality and of the existence here on Earth in a physical body as being like the periods of a life cycle, we will see that each incarnation in a physical body is like a period of seven years in the earthly cycle. It is only through progressive experiences and the continuation of experiences that we can evolve. If there were but one period in which we lived on Earth, and if that period were even 300, 400, or 500 years long, it would not be sufficient for each soul personality to learn all that it must learn, to suffer all that it must suffer, to master all that it should master, and attain all that is attainable in order to reach that degree of perfection which would constitute a reason for our existence at all.

How often we notice a young man or young woman of brilliant mind and of unusual capabilities, and ask the question, how old is he? or, how old is she? We want to know whether these young persons are in the second or third period of their earthly life cycle. In other words, we want to know whether they are in the period between seven and fourteen, or fourteen and twenty-one. This is to enable us to comprehend the reason for the extraordinary mental development or spiritual progress that we notice in these children. Is it not just as appropriate, then, when we find a person highly evolved in spiritual things, well developed in the mastership over earthly conditions and greatly illumined in the mystical and natural laws of the universe, to ask, in what incarnation this person may be? We mean, to ask whether this person is in the third, fourth, twentieth, fiftieth, or one hundredth period of incarnation on this earth plane. We have

no way of answering such questions, but still we ask them and wonder about it. We often notice in young people that look, that poise, that character, that something that warrants us in saying, "It is an old soul." Whence came this universal feeling that some have lived much longer than others?

This is not a plea in behalf of the doctrine of reincarnation, for the doctrine itself needs no plea at my hands, and this is not the place in which to present an outline of the doctrine, or submit any of a thousand or more arguments which substantiate the doctrine. My sole intention here is to arouse questions in your mind and start some very interesting thinking that may lead you to some worthwhile conclusions.

A few years ago the mere mention of any idea connected with the belief in reincarnation elicited smiles and facetious comments. Today, clergymen of many denominations and leaders in their respective fields of work, eminent writers, philosophers, editors, physicians, and scientists freely comment on their belief in the doctrine of reincarnation and point out the fact that it is the only merciful, just, logical, sane, and rational explanation of the differences we see in life, and of the inequalities, the tests, trials, and joys and blessings enjoyed so differently by all human beings.

The doctrine was once a fundamental principle in the Christian religion, but was arbitrarily rejected by those who could not comprehend it, and today the Christian religion is the only one in which the doctrine is completely set aside and misunderstood. Fortunately, the great leaders in the Christian church are reviving the doctrine again through a gradual comprehension of its real principles and of its truth.

The important point I wish to impress upon your mind is that the doctrine of reincarnation presents to us the one dominating and overtone cycle of life by which all other cycles are standardized, and from which all other undulating periods emanate. Without a comprehension of the cycle of incarnations, all other cycles are incomprehensible, and one may say that without a comprehension of the true nature of our ontological existence, all other details of our earthly life or of our spiritual existence in the universe are likewise incomprehensible.

Let him who reads this book, therefore, find it within his heart or within the scope of his rational thinking to lay aside bias and prejudice and come out of the darkness of unbelief or wrong belief, and look into the greater truths that are offered by the mystic and the student of the true spiritual laws. Read such books as will give you a better understanding of your true relationship to the universe, to God, and to humanity. Discover your own place in the life you are living and in the lives of all other beings. Learn the powers that you possess and thereby break through the fictitious wall of limitations that has been placed about you by man-made creeds and modern doctrines. Expand your consciousness until you become attuned with the infinite, where all truths, laws, and principles will appeal to the rationalism of your soul and the wisdom of the Divine Mind within you. This will bring added degrees of mastership and of leadership.

Within you and about your own existence are the greatest fields for exploration that man has ever known. And while you are delving into the mysteries of your business, the mysteries of your social, financial, and other affairs, do not neglect to delve into the mysteries of your life, the mysteries

of your own being. In other words, recall the ancient scriptural injunction: "With all thy getting, get understanding."

Important Notice

The publishers of this book wish to call the reader's attention to the fact that neither the editors, publishers, nor the author of the book can undertake to work out the personal cycles or the individual periods relating to any personal or business problems which may confront any reader of this book. The system set forth in this book has been tried and tested for many years before it was issued in this form, and the instructions contained in it are sufficient to enable any man or woman gradually to apply the system successfully and to gain the utmost benefit through such application.

The sale of this book does not carry with it, therefore, the privilege of personal correspondence and personal help in the matter of working out individual problems. While the publishers will appreciate comments and suggestions for the improvement of this book in its future editions, they will not be able to answer personal letters asking for help in connection with the problems of business, health, social, or other affairs of any individual.

Reference Indicator

The book *Self-Mastery and Fate with the Cycles of Life*, which thousands have read and used daily, proves what economists and scientists know—that there is a periodicity in human and natural events. In life there are fortunate and unfortunate hours for every act. We are pleased to introduce to the readers of this book a simple indicator based on the charts of the book which at a single glance reveals the hourly periods—accurately, mathematically true. One glance at this indicator informs the reader of the nature of the daily periods governing his life—no guesswork.

This handy reference indicator is ever-ready to reveal the tendencies of the cycles affecting you. The figures and lettering on each side of the indicator are representative of the two diagrams shown in Chapter 12 of the book *Self-Mastery and Fate with the Cycles of Life* that fully explains the things to avoid during certain periods, or the profitable periods that await you.

THE ROSICRUCIAN ORDER

Purpose and Work of the Order

The Rosicrucian Order, AMORC, is a philosophical and initiatic tradition. As students progress in their studies, they are initiated into the next level or degree.

Rosicrucians are men and women around the world who study the laws of nature in order to live in harmony with them. Individuals study the Rosicrucian lessons in the privacy of their own homes on subjects such as the nature of the soul, developing intuition, classical Greek philosophy, energy centers in the body, and self-healing techniques.

The Rosicrucian tradition encourages each student to discover the wisdom, compassion, strength, and peace that already reside within each of us.

Rosicrucian History and Mysteries

by Rosicrucian author
Christian Rebisse

Softcover, 7.5 in. x 10.5 in.
244 pages

Suggested retail price: \$24.95

The Rosicrucian Order, AMORC, is proud to announce the publication of this new work by Rosicrucian author Christian Rebisse. Originally published in French in 2003, this scholarly work is now available in English. This book is excellently researched—complete with endnotes, an index, a chronology, and a thematic bibliography suggesting sources for further reading. *Rosicrucian History and Mysteries* is abundantly illustrated with over 90 illustrations—many from rare and unusual sources. Here is the definitive history of Rosicrucianism, from the earliest of times to the present. This book is a must read for anyone interested in the Rosicrucian Order. Your Rosicrucian library will not be complete without this exceptional volume.

Treasures of the Rosicrucian Egyptian Museum

A Catalogue

by *Lisa Schwappach-Shirriff, M.A.*

Curator

Rosicrucian Egyptian Museum

Softcover, 7.5 in. x 10.5 in.

160 pages; color

Suggested retail price: \$24.95

The history of the Rosicrucian Egyptian Museum in San Jose, California, began with a dream. H. Spencer Lewis, the leader of the museum's sponsoring organization, the Rosicrucian Order, AMORC, cherished this dream and through his efforts the museum came into being. Today, the Rosicrucian Egyptian Museum houses the largest collection of Egyptian, Assyrian, and Babylonian artifacts on exhibit in western North America.

This catalogue features the museum's major artifacts, including more than 250 artifact photos in color. Also included are essays providing fascinating insights into the daily life and culture of the ancient Egyptians, and a history of the Rosicrucian Egyptian Museum and its magnificent collection. With its captivating essays and beautiful photos, this museum catalogue brings ancient Egypt to life!

For other books published by the Rosicrucian Order, AMORC, please visit www.rosicrucian.org. And for more information about the Rosicrucian Egyptian Museum, please visit www.egyptianmuseum.org

Self-Mastery and Fate

with the Cycles of Life

This book reveals how you can take advantage of certain periods to bring success, happiness, health, and prosperity into your life. It also shows you which periods are not favorable for many of the things you want to accomplish.

Using the system described in this book, you can map out charts of your life every week, every month, and every year without mathematics and without consulting any other book or almanac. These charts will show you just what you can expect each week and month—what you should avoid and what you should do to bring success and happiness into your life. An understanding of the Cycles of Life can help you realize your own potential in every aspect of living.

Self-Mastery and Fate will be a guide for your health, education, finances, business, social affairs, character development, marriage, home life, and every other matter you confront every day and every year of your life.

About the Author

H. Spencer Lewis is the author of several books, including *The Mystical Life of Jesus*, *The Symbolic Prophecy of the Great Pyramid*, *Mansions of the Soul*, *Mental Poisoning*, and others. Until his transition in 1939, he was Imperator of the Rosicrucian Order, AMORC. For many years, students of mysticism and philosophy have been fascinated by his timeless writings. His simple, straightforward style reveals a keen insight into the age-old mysteries of life.

The Emperor's Greetings

I am delighted that the Rosicrucian Press, Printing and Publishing Department of the Supreme Grand Lodge of the A.M.O.R.C., has again decided to publish a new edition of the Official Manual. I know that it is greatly needed and will be sincerely appreciated. Years ago we issued a small, private Manual for our Lodges but that issue soon became exhausted and others followed. This new Manual will take the place of the older ones and will, as usual, contain changes and additions designed to make it a valuable Guide to the Work and Studies of the Order.

Naturally such a book as this must be limited in its contents and carefully worded.

I know that many benefits will come through this book to our members as well as to general readers. It should be a weekly guide to the monographs and lessons for every member, and a help to every officer of our branches throughout the North and South American Jurisdiction. The many diagrams and plates have been carefully prepared so as to make plain many points in the monographs of the various Degrees.

Members and Officers will do well to recommend the use of this Manual to all members, for it will help in many ways to promote a better understanding of the Order and its teachings, and bring about a better agreement in regard to the terms, rules, and regulations, and practices of all our work.

Therefore, through the pages of this Manual, I again greet our members and the student reader and wish them every success and joy in the Glorious Search for Light, and Love.

In Peace Profound,

H. SPENCER LEWIS, F.R.C.

IMPERATOR

December 1, 1937.

(Letter of greetings from the first Emperor of the Worldwide Order
Rosae Crucis in this cycle.)

WHAT THE MANUAL CONTAINS

This Manual contains many helps for the members as outlined herewith:

1st. A Manual of the Order generally, its purposes, formation, arrangement of Lodges, description of Officers, their duties, etc., and the various regulations of membership. This is of unusual value to every member and officer.

2nd. The plates and diagrams used in connection with certain of the Degrees. These diagrams serve two purposes. Members will be able to refer to them in connection with the monographs which they receive for private study. Explanations of the diagrams are given in the weekly monographs at the proper time. Therefore, a complete explanation cannot be given in this Manual in advance of the particular monograph to which each refers.

3rd. Diagrams and illustrations of many of the symbols used in our Order and in the ancient teachings of the Rosicrucian and other mystics.

4th. A glossary of the principal terms and words used in the teachings throughout all the Degrees. It is not a complete dictionary of all the terms used, for this would require a very large volume and would be unnecessary. For example, such words as "Alchemy" are not included, for the definition given in any standard dictionary is identical with the sense in which we use them. Only where terms have special meanings have we included them in the glossary. (See pages 151 and 152.)

5th. General instructions which should be read carefully by our members from time to time until they are very familiar with them. This will help all of us to give you greater service in the work.

6th. Other matter of help to all members.

HOW TO USE THE MANUAL

Sanctum Members of the Grand Lodge should have access to this Manual early in their studies, preferably at the beginning of the First Degree. They should read the Manual through carefully, giving particular attention to those parts which are indicated to be of valuable aid in connection with their complete studies.

Part One

THE A.M.O.R.C. AND ITS ORGANIZATION

Every member of the A.M.O.R.C. should be familiar with the facts of the establishment of the organization, its Constitution, and its private system of operation.

The widespread confusion in the United States because of the popular use of the word Rosicrucian by so many movements, publishers, and small research societies—a condition not permitted in other countries—makes necessary the understanding of the following facts (and we trust that every member will refer to these pages in any discussion of the authority and rights of AMORC):

- The history of the Rosicrucian ORDER in other lands has been well covered in many books in recent years, though all are warned against giving credence to the statements made in the older editions of encyclopedias wherein it is said that the Order started in Germany in the eighteenth century and ended there. Such a story has been copied and recopied without investigation and is without foundation. However, this fallacy is being corrected in new editions of leading encyclopedias such as: Encyclopaedia Britannica, 14th Revised Edition; Modern Encyclopedia; Webster's Unabridged Dictionary; Histoire des Rose Croix; Encyclopedia Americana; The World Book; New Standard Encyclopedia; Concise Encyclopedia; Progressive Reference Library; New Century Dictionary; Funk and Wagnalls Dictionary; Winston's Cumulative Loose-Leaf Encyclopedia and Dictionary.

We are more concerned with its introduction into the New World. We find here, too, many books and records which give reliable and precise details of the coming to America of the first Rosicrucian colony from Europe, under Sir Francis Bacon's original plan, in the year 1694, and its establishment for many years, first at Philadelphia, then at Ephrata, Pennsylvania, where some of the original buildings still stand. (See p. 16.)

The first foundation in America in 1694 (which left Europe in 1693) grew into a large and potent power of considerable importance

- See: Rosicrucian Questions and Answers with Complete History of the Order, published by the Rosicrucian Publishing Department (AMORC), San Jose, California, U.S.A.

in the affairs of the birth of the American nation, as can be seen by records in Philadelphia and Washington. The ancient law that each 108 years was a cycle of rebirth, activity, rest, and waiting, made the great work in America come to a close, as far as public activities were concerned, in 1801 (108 years after the founders left Europe). Then for another 108 years the Order in the Americas was in its rest period with only certain descendants of the last initiates passing to one another the rare records and official documents.

Then came 1909—108 years after the year 1801—and the time for rebirth and reorganization in a public form was at hand. The story of how H. Spencer Lewis, first Emperor for the present cycle of activity, was chosen to bear the burden of reorganization, has often been told, investigated, verified, and acknowledged by the highest Rosicrucian authorities of Europe and other lands.

Having had passed to him in the proper way certain knowledge preserved by the descendants of the first foundation in America, he prepared himself through various courses of study and association with scientific and metaphysical bodies, for the work he was to undertake in 1909. Then in the month of July of that year he went to France, where he was introduced to the proper authorities and inducted into the mysteries and the methods of carrying out his life mission.

Returning to America, he held many private sessions with men and women who had been initiated into the Order in France and India and other lands, who formed with him the first foundation committee. Together they labored for six years so that in the seventh year of preparation they could announce to the American public the reestablishment of the Rosicrucian Order. The first official manifesto was warmly greeted by a gathering of over three hundred prominent students of the ancient Rosicrucian teachings who examined the official papers, seals and warrants possessed by Emperor Lewis, and formed the first American Council of the Order. A report of that session was sent to France, to the body of men who undertook the burden of supporting the foundation work in America, and a few months later the Grand Council of the Ordre Rose Croix of France recognized the Emperor for the Order in America.

Thereafter further organization meetings were held until a point was reached when two officials of the International Council of the Order visited America, approved of the organization as established here, and, upon their report to the International Convention in Europe, the American Order was made an independent Jurisdiction coming directly under the guidance of the International Council of the Order instead of under the sponsorship of the French Jurisdiction.

And this gave the Ancient and Mystical Order Rosae Crucis (AMORC) of North America a representation in the International Council, in its National and International Conventions and Congresses, and made the American AMORC a part of the A.M.O.R.C. of the world. Therefore, the A.M.O.R.C. is today the ONLY Rosicrucian movement in America having such authority and connections.

However, there are other Rosicrucian movements in America.

They use the term or word Rosicrucian, but none of these Rosicrucian movements or publishing companies or societies use the term ROSICRUCIAN ORDER, nor do they use the title Ancient and Mystical ORDER Rosae Cruris.

Ever since the A.M.O.R.C. was organized in America it has made its definite and unequivocal claim of genuineness. Its Supreme Lodge was duly incorporated, not as a society or fellowship of Rosicrucians, but as "The Ancient and Mystical Order of Rosae Cruris of the Great White Brotherhood." Please note the word Order and the Latin term Rosae Crucis in the title. Its Colleges and University were also incorporated, and a Patent was secured from the United States Government protecting the name and symbols of the Order in the United States and throughout the World. The name and symbols are also registered with many other nations of this jurisdiction. AMORC is the only Rosicrucian movement in North America having a patent on the symbol of the Cross with ONE rose in its center, which is the true ancient symbol of the Order in all lands.

Therefore, AMORC repeats again its statement: It is a part of the worldwide Rosicrucian Order, most Jurisdictions of which use the same name except for slight variations due to translation in foreign languages. It is part of the ONE and ONLY Rosicrucian ORDER that is truly international. It is the only Rosicrucian movement, society, or body, in North and South America having membership and representation in the "International Council, Antiquus Arcanus Ordo Rosae Rubeae et Aureae Crucis." The A.M.O.R.C. of America, therefore, is duly represented in the International Congress and Conventions held at stated periods in Europe and adheres to the ancient traditions and customs in all of its standards and practices. This means that it does NOT publish books claiming to contain the private Rosicrucian fundamentals, rituals, rites, or TEACHINGS; does not deal with sex problems, sex practices, or indulgences under the guise of higher teachings; is strictly nonreligious, noncommercial, and not affiliated with any esoteric society, fraternity, fellowship, or movement.

In August of 1934 in Brussels, Belgium, a special conclave of the highest officers of the fourteen outstanding mystical, arcane, and metaphysical movements of the world was held. The object of the conclave was to perpetuate, by the forming of an international organization, the traditional rituals, teachings, laws and principles of each of the respective organizations, and to establish such rules and regulations and method of procedure as would identify each of these outstanding organizations as being authentic and genuine, as distinguished from the number of movements of a clandestine nature throughout the world.

Each of these fourteen organizations traces its origin authentically for centuries into the past. The A.M.O.R.C. was the only organization of North America officially recognized at this conclave. The various bodies represented formed what is termed the "Federation Universelle des Ordres et Societes Initiatiques." Various honors were conferred upon the highest officers of AMORC represented at this

conclave, and additional charters of authority and recognition were conferred upon the Emperor of AMORC of North America. [The FUDOSI does not now operate objectively.]

One of the resolutions of this conclave was that "the A.M.O.R.C. is the only authentic, recognized Rosicrucian organization in North America as decreed by the unanimous decision of the Imperators and Grand Masters of the fourteen ancient mystical groups assembled in convention at Brussels, Belgium, August 1934."

If our members will read the foregoing statements again they will see that AMORC has never claimed and could not claim to be connected with the honorable fraternity of Freemasons, even though that body has in one of its higher degrees one grade named in honor of the Ancient Rosicrucians; and AMORC is not connected in any way with any publishing firm, group, or movement using the word Rosicrucian unless it is also using the word AMORC and the true patented symbols of the Order.

Nothing said herein is intended to cast any aspersion on the work being done by any group of students using the word Rosicrucian to indicate the sincerity of their search for Truth. The A.M.O.R.C. always maintains the attitude of broad-mindedness and tolerance toward every person or group of persons seeking to contribute to the uplift of man. And this attitude we desire to have expressed by every member of the Order.

The present Worldwide Jurisdiction of the Order consists of the Americas, Australasia, Europe, Africa, and Asia—the jurisdiction having been extended throughout the years.

Those readers of the Rosicrucian Manual who are not members of the Rosicrucian Order, AMORC, and have not had other descriptive literature pertaining to its activities and purposes, may address a communication to Scribe R. H. M., Rosicrucian Order, AMORC, San Jose, California 95191, U.S.A., and ask for a complimentary copy of *The Mastery of Life*. This will be sent without any obligation and is intensely interesting. Members of the organization have had this book and are thoroughly acquainted with the information it contains.

SIR FRANCIS BACON

Imperator of the Rosirucians in the seventeenth century,
Modern Symbolical Drawing.

[7]

FRA. MICHAEL MAIER

Grand Master of Rosicrucians in Germany in the seventeenth century
and Sir Francis Bacon's Deputy on the Continent.

LORD RAYMOND VI

As Count of Toulouse, refused to prosecute the mystics who laid the foundation for Rosicrucian philosophy in Southern France in the thirteenth century. As a mystic martyr, his body was refused burial in "Holy Ground," but was preserved for 600 years in the Knights Templar Building, built by his forefathers.

H. SPENCER LEWIS, Ph.D.. F.R.C.

Former Emperor, A.M.O.R.C. of North and South America and founder of its second cycle of activity in the Western Hemisphere—Member of the Supreme Council R.C. of the World — Legate of the Order in France—Minister of the Foreign Legation—Ordained Priest of the Ashrama in India—Honorary Councilor of the Corda Fratres, Italy—Sri Sobhita. Symbolic Great White Lodge. Tibet —Rex, Universitatis Illuminati—Fellow, Andhra University India—Chancellor, Rose-Croix University.

(Set Biographical Reference on page 125)

MRS. MAY BANKS-STACEY
Co-founder and First Grand Matre in U.S.A
(See Biographical Reference on page 123)

MASTER KUT-HU-MI, THE ILLUSTRIOUS
D . . . G ... M ... of Tibet (Bod-Yul)
Beloved Hierophant of the R.C.

ROBERT FLUDD

Robert Fludd (1574-1637)— English physician, mystic philosopher, and Rosicrucian apologist. Fludd wrote the Brief Apology for the Fraternity of the Rosy Cross and other treatises wherein he zealously defended the Rosicrucians of his time.

ISAAC NEWTON

Sir Isaac Newton (1642-1727)—English natural philosopher and Rosicrucian. Newton, a genius in the worlds of physics and mathematics, put forth concepts which had a revolutionary impact on science.

JACOB BOEHME

Jacob Boehme (1575-1624)—German mystical philosopher and Rosicrucian. Boehme was the author of *Aurora*, a book which inspired ecclesiastical opposition, but provided a profound influence on later philosophical thought.

EPHRATA CLOISTER IN PENNSYLVANIA

A commune of single men and women called The Ephrata Society was established in 1732 by Conrad Beissel and Peter Miller, both Rosicrucians. Buildings such as the one shown here still exist as part of a historical park known as the Ephrata Cloister.

Above- THE PLAZA AND FOUNTAIN, This view was taken from the promenade of the Rose-Croix University building and reveals the attractive plaza and the fountain, which at night may be magnificently illuminated. The plaza is the center for pleasant chats.

Right THE ROSE-CROIX UNIVERSITY BUILDING. This beautiful edifice of Egyptian architecture is the Rose-Croix University building, located in Rosicrucian Park. It houses physics, chemistry, light, radio, and photography laboratories, as well as a research library and demonstration halls.

Lower left-PHYSICS LABORATORY. This is a partial view of the Physics laboratory of the Rose-Croix University building. Experimentation in vibrations of sound, light, and color, and other phenomena of nature are part of the research conducted in this laboratory.

Lower right - LECTURE AND DEMONSTRATION HALL. This most modern lecture and demonstration hall is located in the Rose-Croix University building. The widearms of the seats make it possible for the students attending the sessions to take notes of the principal points of the professor's lectures. The amphitheater arrangement of the hall gives each student an unobstructed view of the platform and demonstration table.

ROSICRUCIAN PARK IN SAN JOSE, CALIFORNIA

The authentic Egyptian motif used in buildings, grounds, and statuary catches the eye and imagination of thousands who visit Rosicrucian Park each month. The Rosicrucian Egyptian Museum houses one of the largest collections of Egyptian, Assyrian, and Babylonian antiquities on display in the United States. Many of the Museum's acquisitions are extremely rare and draw distinguished visitors from all over the world.

A MODERN ALCHEMIST IN HIS LABORATORY

Monsieur H. Jolivet Castelot, Past President, French Alchemical Society and High Officer of La Rose-Croix of France, who demonstrated the Rosicrucian Doctrines and produced gold by transmutation.

Great American Manifesto

Issued by the Charter Members of the Supreme Grand Lodge as
Founders of the Order in America

The Ancient and Mystical Order Rosae Crucis in the United States of America, its Territories and Dependencies, shall be an independent organization operating under its own Constitution.

Its purpose shall be the same as those of the "Order Rosae Crucis" throughout the world, and its Constitution shall be identical in spirit with that which guides and directs this Order in other lands. The Order in America shall, however, retain its fraternal and spiritual relation with this Order in other countries, regardless of its independent jurisdiction, and shall maintain its adherence to the traditional principles and laws of the ancient Rosicrucians.

Since both the ancient and modern form of government of the Order are autocratic in nature, the government of the Order in America shall adopt strictly autocratic principles of government; but because of the necessary division of America into many jurisdictions operating under one American Constitution, the said Constitution shall embody such changes or modifications as will properly meet the requirements of this jurisdiction.

Therefore, it is declared that the attached Constitution, of which this Pronunziamento is a part, was prepared after consultation with all possible authorities and with proper discussion by all the Founders of the Order in America, and was finally approved and adopted by the Charter Members of the Supreme Grand Lodge in America and shall be adopted and ratified by all Lodges now organized or hereafter to be organized and Chartered by the Supreme Grand Lodge or the Emperor of the Order in America.

Decreed and Issued June, 1915, at a meeting of the First American Supreme Council held in the city of New York, N.Y.

Part Two

EXTRACTS FROM THE CONSTITUTION AND STATUTES OF THE GRAND LODGE OF THE ANCIENT, MYSTICAL ORDER ROSAE CRUCIS

WORLDWIDE JURISDICTION (THE AMERICAS, AUSTRALASIA,
EUROPE, AFRICA, AND ASIA)

ARTICLE I—Section 1

This lodge is a separate and distinct body created and chartered by the Hierarchy of the Supreme Grand Lodge of The Ancient, Mystical Order Rosae Crucis, Worldwide Jurisdiction (hereinafter referred to as the Grand Lodge of AMORC, or as Grand Lodge).

Section 2

This Grand Lodge is subordinate to and derives its existence and powers from the Emperor and the Board of Directors composing the Supreme Grand Lodge of AMORC. It is chartered as the Grand Lodge of the general membership of the A.M.O.R.C. and is a separate and distinct body from the Supreme Grand Lodge and, with its properly authorized affiliated bodies and members at large constitutes the membership section of the Order (AMORC) in this jurisdiction.

Section 3

The See of this Grand Lodge shall be located at the Grand Lodge Headquarters offices selected by the Directors of the Supreme Grand Lodge.

Section 4

All members of the Order of AMORC in this jurisdiction shall be known as Rosicrucian members, and their membership is restricted to affiliation exclusively with this Grand Lodge and any affiliated bodies in this jurisdiction empowered by it.

Section 5A

All members (except the directors of the Supreme Grand Lodge) within this jurisdiction of the Order are members exclusively of this Grand Lodge.

ARTICLE II.—Section 6A

All matters within the official cognizance and concern of the Order are divided into two classes, namely: Doctrinal-Ritualistic and Administrative. The Administrative is divided into two branches, Legislative and Judicial.

Section 6B

Doctrinal-Ritualistic matters of the Order (including the Hierarchal authority for the Order and all Esoteric Power) rest in the hands of the Emperor, who may assign some sections of this work to the Grand Master, Grand Secretary, Grand Treasurer, or other high officers of the Grand Lodge. The administrative control of this Grand Lodge, in accordance with the provisions of the charter from the Supreme Grand Lodge, rests in the exclusive control of the Board of Directors of the Supreme Grand Lodge and said Board of Directors may assign certain phases of the administrative work of the Grand Lodge to officers and members of this body.

ARTICLE III.—Section 7C

The administrative matters of the Order affecting this Grand Lodge or the general membership shall be directed by the Board of Directors of the Supreme Grand Lodge, in accordance with such rules and regulations as the Legislative and Judicial branches may from time to time adopt in keeping with the spirit and purpose of the landmarks and ideals of the Rosicrucian Fraternity. All decrees, rules and regulations issued by the Board of Directors of the Supreme Grand Lodge and bearing the signature of the Emperor and the Supreme Secretary or of all the members of the Board shall be binding, conclusive and final, on this Grand Lodge, its affiliated bodies, and all officers and members of the general membership of the Order in this jurisdiction.

Section 8

All provisions of this Constitution and regulations of the Grand Lodge and its affiliated bodies are subject and subordinate to the Administrative power, decrees, and jurisdiction of the Board of Directors of the Supreme Grand Lodge.

ARTICLE IV.—Section 9A

It is hereby recognized that the executive powers of the Board of Directors of the Supreme Grand Lodge shall include the right to create Regional Grand Lodges in this Worldwide Jurisdiction.

Section 9B

These Regional Grand Lodges are subordinate to the Supreme Grand Lodge, and this Grand Lodge, and are governed by the provisions of this Grand Lodge Constitution and Statutes. . . .

Section 9C

All official proclamations, decrees, edicts, orders, announcements, and instructions issued by these Regional Grand Lodges must be done with the approval of the Supreme Grand Lodge and this Grand Lodge.

Section 9D

It is hereby recognized that the executive powers of the Board of Directors of the Supreme Grand Lodge include the right, as members of the International Council, to sponsor Lodges in territories, countries, nations, or lands other than North or South America where at time of the issuance of such sponsorship or such papers of authority there is no Supreme or Grand Lodge of the Rosicrucian Order affiliated with the International Rosicrucian Council in existence or about to become chartered and authorized by a superior body. When, after a designated time, the functioning and procedure of administration of the sponsored body meets the approval of the Supreme Grand Lodge of this jurisdiction it may appeal to the International Council for recognition of the newly formed body as an independent jurisdiction, providing the territory or land in which it is located is not within the jurisdiction of another superior body.

ARTICLE V.—Section 10

The JUDICIAL powers of the Supreme Grand Lodge and its Board of Directors as affecting this Grand Lodge are as follows: Those which include the decision of all controversies between any of the affiliated bodies of the Grand Lodge or between affiliated bodies and the Grand Lodge, or between a member of AMORC and the Grand Lodge, or one or more of the affiliated bodies and a member or members of another body; or between one or more affiliated bodies and one or more members at large; or between members of the same or two or more affiliated bodies; and between the general members affiliated with the Grand Lodge and known as Sanctum members. Its judicial powers shall also be of an appellate nature embracing the revision of all matters and controversies, or of discipline and the investigation of all such matters along with the exercise of such disciplinary authority and the direction of the procedure of all trials and hearings in regard to charges brought against any member or any affiliated body under this Grand Lodge, or similar matters. All members and affiliated bodies of this Grand Lodge shall use every means within the Order for the adjustment of any controversies or preplexities. The members of this Order or any of the affiliated bodies thereof shall not seek redress in the courts for any complaints or grievances until such member or such affiliated has exhausted its rights in the tribunals of the Order. The seeking of redress in the courts, with first exhausting its rights in the established tribunals of the Order, shall automatically cancel all rights of membership in the Order and all rights granted by the charter to the affiliated body.

ARTICLE VI.—Section 11

The officers of this Grand Lodge are:

1. Grand Master
2. Grand Secretary
3. Grand Treasurer

4. Grand Regional Administrator
5. Grand Councilors
6. Such doctrinal and ritualistic officers as the Imperator may decree from time to time.

Section 12

The Grand Master, Grand Secretary, Grand Treasurer, and Grand Regional Administrator of this Grand Lodge shall be appointed by a majority vote of the Board of Directors of the Supreme Grand Lodge. These Grand Lodge officers shall serve during the pleasure of the Board of Directors of the Supreme Grand Lodge.

Section 13

The honorary title of Deputy Grand Master may be bestowed by the Grand Master with the approval of the Imperator upon Grand Lodge members for outstanding services to the Grand Lodge and to the principles of the Rosicrucian Order. The honorary title of Deputy Grand Master shall be retained at the pleasure of the Imperator.

Section 14

The selection and appointment of the doctrinal and ritualistic officers of this Grand Lodge shall be at the discretion of the Imperator and may be upon recommendation of the officers of the Grand Lodge or the Board of Directors of the Supreme Grand Lodge. The tenure of their office shall be at the pleasure of the Imperator and/or the Supreme Grand Lodge.

Section 15

The officers of this Grand Lodge constitute an administrative body of the Grand Lodge that is subordinate to the Supreme Grand Lodge in all respects and their administrative duties in this Grand Lodge shall be those assigned to them by the Board of Directors of the Supreme Grand Lodge.

Section 16

These Grand Lodge officers and the members affiliated with the Grand Lodge directly as Sanctum members or as members of any of the affiliated bodies, or chapters chartered and empowered in accordance with this Constitution, constitute the only general membership of the Order in this jurisdiction, and all members of the Order in this jurisdiction are members exclusively of this Grand Lodge under the ritualistic guidance of the foregoing Grand Lodge officers.

ARTICLE VII.—Section 17

This Grand Lodge may include:

1. A Grand Council.
2. Regional Grand Lodges, Affiliated Lodges, Chapters, and Pronaoi.
3. Sanctum members constituting the membership of the Order including honorary and life members. Sanctum mem-

bers in good standing are eligible to affiliate with an affiliated body of this Grand Lodge in accordance with the provisions of the Statutes of the Grand Lodge.

Section 18

The Grand Council shall consist of the Grand Master, Grand Secretary, Grand Treasurer, Grand Regional Administrator, and at least nine but not more than twenty-five additional members, the exact number to be determined annually at the meeting of the Grand Council. Each Grand Councilor must be in good standing in membership of this Grand Lodge at the time of his election.

Section 19A

The members of the Grand Council other than the Grand Master, Grand Secretary, Grand Treasurer, and Grand Regional Administrator shall be elected at each annual Convention of the A.M.O.R.C. in this jurisdiction by the delegates and members thus assembled, in any manner that best expresses their wishes in this regard, and so long as such methods of election are acceptable to the Supreme Grand Lodge. The persons thus elected must have the approval and endorsement of the Supreme Grand Lodge and its Board of Directors, and must be truly representative of the spirit of the Order.

ARTICLE XIV.—Section 38

The power to amend this Constitution, revise it, or modify it is vested exclusively in and reserved to the Board of Directors of the Supreme Grand Lodge, Incorporated, in accordance with the ancient landmarks, principles, and customs of the Order which provide that the Supreme Hierarchy of the Order in each jurisdiction shall have this exclusive control and direction of the material and spiritual activities of the Order.

STATUTES OF THE GRAND LODGE AND AFFILIATED BODIES OF A.M.O.R.C. OF THE WORLDWIDE JURISDICTION

CHAPTER VII PUBLICITY and PUBLICATIONS

Section 131

The general propaganda work of the Order shall be officially conducted by the Supreme Grand Lodge exclusively, assisted by such other affiliated bodies or committees as the Supreme Grand Lodge may indicate from time to time.

Section 132

The local propaganda work may be conducted by an affiliated Lodge or Chapter or by the Grand Lodge, provided that no propa-

ganda work or publicity of any nature whatsoever shall be undertaken or attempted by any body subordinate to the Supreme Grand Lodge, except by its express approval and consent given in writing, and in that event, only in accordance with instructions given by the Supreme Grand Lodge, and at all times under its supervision and not otherwise.

Section 133

No body subordinate to the Supreme Grand Lodge shall issue or cause to be issued or tolerate the issuance or utterance of any book, pamphlet, treatise, lecture, exposition, or interpretation concerning this Order or its ideals, principles, laws, rituals, teachings, symbols, Statutes, or any other phase of the work of this Order, unless same shall have been first submitted to the Supreme Grand Lodge for approval. All authorized publicity, publication, or propaganda matter shall state on its face that it is issued under the authority of the Supreme Grand Lodge of A.M.O.R.C.

Copies of the Constitution and Statutes of the Grand Lodge of the A.M.O.R.C. may be purchased from the Rosicrucian Supply Bureau in San Jose, CA 95191. Translations in languages other than English may be obtained from the respective Grand Lodge.

ANNUAL CELEBRATION DAYS

There may be held two special assemblies each year. One shall be the New Year Feast and the other the Outdoor Fete.

A

The New Year Feast will occur about the 21st of each March, the exact date being proclaimed by a pronunziamento issued by the Imperator every February. It is to celebrate the New Rosicrucian Year which begins on the minute when the sign of "Aries" rises on the horizon on that day in March when the "Sun" just enters the sign of "Aries." (The year 1916 A.D. corresponds to the Rosicrucian year of 3269, which began on March 21, 1916, at 1:06 A.M. Eastern Time). Such New Year Celebrations shall be held in the Temples of all Lodges and attended by the Council, Officers, and members of the Lodge and such especially invited guests or visiting members of the Order whose presence the Master desires for reasons good and sufficient unto himself. There shall be a symbolical feast consisting

principally of corn, or its products; salt, or that which tastes most strongly of it; and wine, in the form of unfermented grape juice; and any other delicacies or refreshments suitable to the occasion. All Officers shall wear their full regalia and all others their aprons or other insignia. There shall be only sacred music, symbolical addresses, and sincere rejoicing for the New Year.

B

At this New Year Feast it has been customary for the Master to bestow such honorary titles on his members as he may contemplate, to make new appointments, to fill vacancies, etc., and to turn his control over to any newly elected Masters and Officers.

C

All other regular or special Convocations or meetings of each Lodge are to be postponed in order that the New Year Feast may be held on the day decreed by the Imperator.

D

The Annual Outdoor Fete may be held at the discretion of the Master of each Lodge, on or about the 23rd day of September of each year. It shall be that day when the Sun enters the sign of Libra.

This Annual Outdoor Fete should be held by each Lodge independently, to celebrate the laying of the foundation stones of the Great Pyramid in America. Each Lodge shall arrange to go on this day (or the following one, should it rain or be stormy) to an open space in the suburbs near such Lodge, and with prayer and addresses, have each member of the Lodge deposit in one small pile a simple little stone or pebble, symbolical of "placing a stone for the foundation of the Great Pyramid in America." No regalia other than the apron is worn by Officers and members. Privacy of the Fete need not be maintained, but the public or the uninitiated must not be given, in the prayers or addresses, any of the private "work," signs, or symbols of the Order. Such a Fete may be held at sundown, if desired. This fete may be held either outdoors or indoors at the discretion of the Lodge Officers.

SPECIAL CEREMONIES

Funeral Service

For details pertaining to this service, see "Funeral Service" in the Rosicrucian Dictionary.

Naming Ritual (The Rosicrucian Appellation Rite)

For details with respect to this ritual, see "Naming," in the Rosicrucian Dictionary.

Marriage Ceremony

For details with respect to this ceremony, see "Marriage Ceremony" in the Rosicrucian Dictionary.

SOME OF THE OFFICIAL SEALS OF THE A.M.O.R.C.

1. General symbol of the Order in the world
2. The Great Seal of the Supreme Council
3. The Seal and Sign of the Supreme Treasurer
4. The Seal of the Founder
5. Original Emblem worn by the Fratres and Sorores
6. The Rosae Crucis (official)
7. The Seal and Sign of the Supreme Secretary
8. Great Seal of the Grand Master
9. The Sacred Insignia of the Imperator

Part Three

OPERATING MANUAL

We present to our members a Manual regarding the work, symbols, and other matters pertaining to our Order. This Manual will answer many questions continually asked, and will be a guide for officers and members in promptly and more efficiently advancing in the principles of the Order.

The matter has been prepared under the direction of the Imperator and must conform with the Constitution of the Order as well as the unwritten laws used by the American Supreme Council in its procedures. Wherever the following may differ from the Constitution, the Constitution is binding.

This Manual should have a careful reading and study, and should be consulted often.

PURPOSE AND WORK OF THE ORDER

All applicants for admission—and, in fact, all serious inquirers regarding the Order—should be correctly informed as to the purposes and work of the Order.

The only correct way of so informing the inquirer is to adhere to the following statements:

The Order is primarily a humanitarian movement, making for greater health, happiness, and peace in the earthly lives of all mankind. Note particularly that we say in the earthly lives of men, for we have naught to do with any doctrine devoted to the interests of individuals living in an unknown, future state. The work of Rosicrucians is to be done here and now; not that we have neither hope nor expectation of another life after this but we know that the happiness of the future depends upon what we do today for others as well as for ourselves.

Also, our purposes are to enable men and women to live clean, normal, natural lives, as Nature intended, enjoying all the privileges of Nature, and all benefits and gifts equally with all of mankind; and to be free from the shackles of superstition, the limits of ignorance, and suffering.

The work of the Order—using the word work in an official sense—consists of teaching, studying, and testing such laws of God and Nature as make our members Masters in the Holy Temple (the physical body), and Workers in the Divine Laboratory (Nature's domains). This enables the fratres and sorores to render more efficient help to those who do not know, who need or require help and assistance.

Therefore, the Order is a school, a college, a fraternity, with a laboratory. The members are students and workers. The graduates are unselfish servants of God to mankind, efficiently educated, trained, and experienced, attuned with the mighty forces of the Cosmic or Divine Mind, and masters of matter, space, and time. This makes them essentially mystics, adepts, and magi—creators of their own destiny.

There are no other benefits or rights. All members are pledged to give unselfish service, without other hope or expectation of remuneration than to evolve the self and prepare it for greater work.

JURISDICTION

Masters of subordinate Lodges, in all jurisdictions, have autocratic power within their individual Lodges, limited by the Constitution of the Order, the Grand Master of the jurisdiction, and the bylaws of the individual Lodges.

Members, belonging to one jurisdiction, but visiting Lodges in another jurisdiction, must be subject to the rulings and laws of the jurisdiction in which they are visiting.

Masters visiting any jurisdiction will likewise submit to the rules and laws of the jurisdiction visited, except when honorary exceptions are made by the Grand Master of such jurisdiction.

Men and women may become members of our Order through being invited to make application for admission, and then having such application passed upon.

The applicants must, therefore, bear the burden of supplication. They may be invited to make application, but having been invited, and having accepted the invitation to make application, each applicant makes plea for admission, and must humbly seek and pray for admission, as though he or she had not been invited to do so. In other words, the invitation to make application does not indicate that the applicant is desired to such an extent that supplication for admission is not necessary.

When an application blank is given to a man or woman, with the invitation to make plea for admission, the member thus inviting another must advise the prospective applicant that admission to the Order depends upon the applicant's plea and his or her qualifications; and the members must also make it plain that a membership committee will pass upon the application in a formal and regular way.

The said application blanks are then voted upon by the Lodge or the Lodge Council (see Constitution of the Order). The applicant, elected to membership must be so notified; he shall then call upon

the Secretary and advance the proper initiation fee and be informed of the date of initiation.

ENTERING THE LODGE— (Guardians Examination)

In order to enter one of our regular Lodges (or Chapters), each applicant for admission, claiming to be a member, must submit to an examination by the Guardian at the door of the Lodge. This is an ancient custom, and should be rigidly adhered to by all Guardians, as a matter of form. In fact, it will be proper for the Guardian to demand from each applicant a membership card. Also he should demand the password if necessary, and test the member regarding the rightful possession of the card.

The possession of either a membership card or the password of any Degree, or both, does not constitute a benefit or right by which the possessor can demand admittance into one of our Lodge Temples. Both, or either of these possessions, may be unlawfully known or owned by a man or woman. It is the duty of the Guardian to learn whether this is so or not, if any doubt prevails.

Naturally, the question arises—and perhaps will never be thoroughly settled—as to what constitutes thorough satisfaction, in some cases. All that each Guardian can do, and **MUST DO**, is to make himself or herself feel that every fair test has been applied, when there is any doubt, and, if still doubtful, leave the matter to the Master of the Lodge, who will make the final test and decide.

The Guardian and Master cannot be too exact in the questions asked, and the answers returned. In other words, the member should **PROVE** his or her initiation into the Degree where admission is now sought, regardless of the possession of the password or membership card or even demit.

All such tests should be given in private, where the member cannot be coached by any other person. Likewise, the Guardian should be sure, in testing or asking a member for the password at the Temple door, that no one else hears such password given. The password should always be whispered to the Guardian at the door.

Vouching for Visitors. A visiting member may be vouched for by another member of a Lodge, if the member so vouching can assure the Guardian that he or she has actually seen the visiting member in one of our Lodges, at some time when a regular convocation or lecture was in session; or if the member so vouching can assure the Guardian that the visiting member has passed every test as to the rightful possession of a password, and the vouching member further knows, by lawful or satisfactory evidence, that the visitor is a duly and properly initiated member of some Degree of our Order. In such a case, the Guardian can demand the password in the usual way, ask for the membership card, and then admit the visitor to the Lodge.

Membership Cards must be shown, upon demand, by all members, and the card must show that all dues of the Grand Lodge and respective Lodge, Chapter, or Pronaos, to which the member belongs, have been paid. No one shall be admitted to any Lodge (their own or

another), unless dues are paid up. In some Lodges or jurisdictions, if dues are in arrears, the member cannot enjoy the privileges of active membership. The only guide for Guardians, in the case of visiting members, is to accept evidence of a receipt for current dues. Naturally, members presenting demits should have a membership card showing all dues paid up to the time of demit. New dues in the Lodge to which transferred, must begin at the time of admission to such Lodge.

Responsibility for Admission to Lodges. The Guardians as well as the Masters are responsible to the Order and the Supreme Grand Lodge for the admission into any Lodge of anyone who is not a properly initiated member in good standing.

If a visitor wishes to attend one full Degree, or take an initiation, he should secure a demit from his own Lodge for the time of his visit.

VISITORS

Visitors to a Lodge must submit to the rules and laws of such Lodge and the Constitution of the Order. Visits to a Lodge cannot extend over a period of more than three months, after which time a visitor must be transferred to such Lodge. During the time of visiting a Lodge, whether in the same city or another city than that in which the member's own Lodge is located, a visitor must pay his or her regular dues to the Lodge to which he or she belongs. By showing a membership card to the Secretary of a Lodge, indicating that the dues have been paid to one's parent Lodge, one may visit any Lodge without paying dues to such Lodge. Arrears in dues to any parent Lodge, will prohibit a member from visiting a Lodge.

Grand Lodge Sanctum Members may visit or attend general sessions or feast Ceremonies of a regular Temple. They may attend an initiation or "class" of the Degree they have attained in the Grand Lodge (or any lower Degree), but may not repeat such visit more than twice in succession without becoming members of such Lodge and subject to its regulations, except under special circumstances as determined by the Officers of the Lodge.

TRANSFERS

Members may be transferred from one Lodge to another only when the member intends or expects to be a member of the Lodge to which he is transferred for three months or more. If a member wishes to attend another Lodge for less than three months, he or she must be classed as a visitor to that Lodge, and be subject to the hospitality of such Lodge.

Continued visits to any Lodge should be made only when a member is in another city than that in which his own Lodge is located.

When a member is transferred to a Lodge, and presents to that Lodge a properly signed demit, the Secretary of such Lodge should

give precedence to such transferred member over all other applicants for admission to that Lodge, should there be a waiting list for admission.

Should a member wish to transfer to a Grand Lodge in another jurisdiction because of language difficulties or proximity of location, the member must first apply for a Certificate of Demit from the Grand Lodge he or she is presently affiliated with.

Upon transfer, the member must assume all the obligations and dues of the Lodge to which he is transferred, regardless of what they may have been in a former Lodge.

DEMITTS

EXCERPTS from STATUTES of the GRAND LODGE CHAPTER VI

Section 126

A member in good standing and not suspended for nonpayment of dues and who has paid or offers to pay all his dues in the Grand Lodge may apply to the Grand Secretary for a demit and the Grand Secretary shall issue same. The member receiving such demit shall have the status of inactive membership in the Grand Lodge. He may resume active membership in accordance with the provisions of Section 155 of these Statutes.

CHAPTER VIII

Section 155

An inactive member may petition the Grand Secretary for reinstatement to full, active membership, accompanying his petition with the necessary amount to pay delinquent dues, or that portion thereof which may be requested by the Grand Lodge. He shall be reinstated to good standing in the Grand Lodge unless his plea for reinstatement be denied by the Imperator and/or the Grand Master.

THE ANTECHAMBER OF A TEMPLE

This is the room in which the initiates are first prepared for initiation in the various Degrees. On such occasions it shall be guarded by the Guardian of the Temple, assisted by the Deputy Master. In the First Degree Initiation, this room is in charge of the Conductor of the Lodge, and no one may enter it without permission of the Conductor, unless so decreed by the Master.

THE CHAMBER OF A TEMPLE

This is a hidden room, wherein the first part of the First Initiation is conducted. It is the Chamber of the Cross, the Abiding Place of Life and "Death," the Tomb of Silence, and the Place of Terror. All

these names have been applied to it in the past, and each expresses to the mind of the Initiate its function in the First Degree Initiation.

This Chamber is guarded, at First Degree Initiations, first by the Conductor in the antechamber, then by the Herald, and then by the Torchbearer.

When not used for ceremonies, it should be revered and kept undefiled by the uninitiated. Nothing should ever occur in it to profane it (such as levity, unbecoming conduct, or profane labor).

THE THRESHOLD OF THE TEMPLE

This is the most beloved place in each Lodge to the initiated, for it represents the Doorway to Light and Knowledge.

It is the entrance from the Chamber to the Lodge, and, in the First Degree Initiation, is guarded by the Guardian of the Temple, while any other entrance to the Lodge is guarded by the Secretary or Deputy Master.

The Threshold should never be crossed after or between Convocations or lectures. It represents the Passage from Darkness to Light, and from finite life to infinite life.

THE TEMPLE

The word is derived from the Latin *tempos*—time. To us, the true Temple of which we hope to be Masters is the body of man, finding its counterpart in the Universe, which is the Temple of God.

The term Temple is applied to our buildings, devoted to the worship of God and God's laws, wherein are Chambers for study, work, and meditation. Because of the sacredness of such study, work, and meditation, our Temples are sacred, and must be so considered and regarded, passively and actively, by all members. "As above, so below." The Temple of God is universal, non-sectarian, charged with cosmic powers and vibrating forces, and designed by the Master Architect to continue His creative work in love, goodness, and justice; so our Temples should represent a place where universal minds, regardless of creeds or dogmas, may abide, attuned with such vibratory forces within as make for love, goodness, justice, and peace, that Nature may continue her creation without interruption or interference.

THE LODGE

Within our sacred Temples there are many Chambers, the principal one being the Lodge. The Lodge is the Central Chamber of all Temples, devoted to the general Convocation and formal study of God's Works. It is, therefore, the "inner" or "middle" Chamber, the Soul of the Temple, the first circle within the great circle—the Holy Sanctum, the "abiding place of the Presence of God."

Our Lodges also represent the surface of the Earth, with four cardinal points or horizons—East, South, West, and North, with

earth, fire, and water beneath our feet, and air and "Nous" overhead, beyond which are the "stars and sky"—the immaterial world.

The Lodge is arranged so that it serves its purpose and performs its functions symbolically and practically. Its appointments are such as to make for efficiency in the Work to be done, and regularity in practices performed therein. These arrangements and appointments are explained hereinafter.

The furnishings of a Lodge of our Order are standardized, and serve the excellent purpose of providing the necessary articles and means for Work and Worship. These, too, are explained hereinafter.

THE "EAST"

The "East" of the Lodge is the first point on the horizon, and, therefore, the most important point of direction in the Lodge to all Rosicrucians. It was in the East that man first saw the "Symbol of Life," and knew, by what he saw, that God's Laws were mechanically and mathematically perfect. The diurnal rising of the Sun, with such infinite exactness, after a period of transition from ebbing life at the West, to its dismal darkness of the North, likewise teaches man that life is continuous and immortal, rising again and again in the East, the South, and the West.

In the East is the new life begun. From the East comes forth the Glory of God, "which is of God." Therefore, in our Lodges, the East is the point in which all fratres and sorores seek that Dawn of Illumination and Divine Resurrection, from the "dismal darkness of the North," that will make them free from the superstitions of darkness (ignorance), and the fears of night (evil).

For this reason, the East is always respected and saluted, as the "place of Divine Illumination and Resurrection." It must be so regarded at all times, and must never be occupied by the profane (unilluminated, uninitiated) or the unworthy.

THE "SOUTH"

The "South," in our Lodges, is that point where the Sun (source of illumination) shines in the greatest glory and strength, and finds the culmination of its ascendancy in the realm of Heaven (spirituality). Therefore, this point is where the Divine Mind finds fullest (spiritual) expression, and is occupied in all Lodges by the Chaplain, the spiritual representative of God in His Temple.

From the "South" shall come words of prayer and holy blessings, in all matter of our Work and Service for God and Man.

THE "WEST"

In the "West," the Sun of life slowly resigns itself to the close of its journey, and, in radiant splendor, goes to rest in the "arms of the Mother" (peace and quiet). It is where the Matre (mother) of the

Lodge awaits the coming of her children, and welcomes them ever to "rest awhile and tarry in Communion with God."

THE "NORTH"

The place of "dismal darkness," where the Sun sheds not its glorious light. It is the abyss of evil, the valley of death (stagnation), the realm of darkness (ignorance), the hours of night (evil).

It is "the place from whence cometh naught but desire to come hither;" hence, it is the place or point in the Lodge where the Seeker for Light (applicant) dwelleth, and the Neophyte (new Initiate) enters the Lodge in search of more light.

THE SHEKINAH

In the center of the Lodge, where lines from the four points of the horizon would meet, is the Heart of the Soul of the Temple.

This point—the fifth point of the Lodge—is occupied by the Sacred Triangle, called the Shekinah (pronounced she-ky-nah, with accent on the middle syllable).

The Shekinah is the Symbolical Place, representing "the Presence of God in our Midst."

It is "the point within the inner circle." (The outer circle is the Temple; the inner circle is the Lodge.)

Thus, it is "the Triangle within the two circles."

It indicates, therefore, that God is in all places (Lodges—meeting places), at all times (Temple—time); therefore, He is omnipresent.

The Shekinah is illuminated at all convocations, to symbolize the "fire and fervor, flame and light" of the Divine Presence.

Three candles are used upon the Shekinah to remind us of the law that with no less than three "points" can perfect manifestations exist.

The Shekinah is placed with its third point toward the West, so that the "Presence of God" may manifest in the West, where dwell the children of Light in peace, love, and meditation.

The outer two points of the Shekinah are toward the North and South.

The Shekinah receives its power through the sacred, mystical, vibrations generated in the East of the Lodge, and which radiate through the Sanctum toward the Shekinah, which is the focal point for such vibrations. Thus, the "Presence of God" is carried in vibrations from the East to the "Heart of the Soul of the Temple."

THE SANCTUM

In each Lodge there is a place, a condition, called the Sanctum. It is located between the Shekinah and the East. The Holy Place occupies all the space between the eastern edge of the Shekinah and the steps leading to the East, but does not reach to both sides of the Lodge. The southern and northern boundaries of this space are

determined by leaving on each side of the Lodge sufficient walking space—about 75 to 90 cm (two and one-half to three feet)—for reaching either the northern or southern sides of the East. The remainder of the space between the East and the Shekinah forms the Holy Sanctum.

The Sanctum is kept holy, and reserved exclusively for certain points or parts of sacred ceremonies or Convocations held in the Lodge, and must not be used for other purposes.

It is also the place where neophytes and members stand for the taking of Sacred Oaths and Obligations, and where fratres and sorores are Knighted or Titled.

Trespassing between the East and the Shekinah, or in other words, "crossing the Sanctum," is not only forbidden to all but the Master or Colombe, but is a "serious and grievous error," because of the traditional reverence associated with it.

The foundation for such a solemn warning is in the statement previously made (see Shekinah), wherein it is explained that from the East come forth "Light, Life, and Love," and the Shekinah receives its power (the Presence of God) from the vibrations passing from the East to the Shekinah. This would make the Sanctum a place always charged with sacred vibrations, and trespassing between the East and the Shekinah would interrupt the flow of such vibrations, and disturb the harmony established there.

When the Sanctum is entered for any legitimate purpose, he who enters it may pass only to the center of it, and must leave it from the same point by which he entered it. Likewise must each who enters it immediately face the East, from the center of it, and make the "Sign of the Cross" before doing that act or performing that function which necessitated entrance into the Sanctum. In leaving the Sanctum, he who entered it must only leave by the same point of entrance.

THE MASTER

"For he who is greatest among you, shall be the greatest Servant unto all."

The Master of every Lodge is the Master-Servant. That title and position have been bestowed upon one because of ability, character, worthiness, and willingness to serve.

The Master of each Lodge is, by virtue of the Constitution, the ritualistic executive of the Lodge, limited in his acts only by the Constitution and the Decrees of the Imperator, the Grand Master, or the Supreme Council.

Symbolically, he is the Greatest Light of each Temple, and each Lodge. He is the Imperator's representative in each Temple, and the Grand Master's representative in each Lodge.

His place is in the East, from whence all knowledge comes. He stands in the East at all Convocations and lectures, to act as a medium—the master messenger—for the radiation of Light and the dissemination of Knowledge.

The Grand Master shall be addressed as: Worthy Grand Master. During all Convocations he shall be saluted as hereinafter explained (see Salutations), and in all ways shown that respect, consideration, and honor due his noble, unselfish, and ritualistic position.

In subordinate Lodges the Master shall be addressed as: The Worthy Master. He shall be saluted and respected in the same manner as a Grand Master, as far as form and ceremony are concerned, although amenable to the Grand Master of his jurisdiction and its Grand Council.

THE MATRE

The mother of each Lodge holds therein a position akin to that of the Master. Her station is in the West, where the Sun retires in glory, and life closes its material activities and finds sweet repose.

She is Mother in a material and spiritual sense to the children of each Lodge (the fratres and sorores), and to her should be confided those intimate personal problems of life which none but a mother can understand. Then she, in turn, may secretly and in strict confidence seek the help of the Master of her Lodge and such fratres and sorores as can render the material or spiritual help necessary.

THE VESTAL FIRE

This symbolical furnishing of all Lodges and Chapters of our Order occupies a place directly in front of the steps in the East. The stand, on which the Vestal's Urn is placed, should be at least 61 cm (two feet) from the steps leading to the East, to permit room for the Colombe to stand between it and the East.

In the days of old, every Lodge was furnished with a Vestal Altar—on which a Holy Fire burned continuously day and night and was attended by a caretaker—or on which there was a blue light, burning during all Convocations in Lodges.

In our Lodges of today, the Vestal Altar may be replaced by a stand of some kind, appropriate in design, and surmounted by a metal Urn, in which a simulated flame may appear representing the ancient "Vestal Fire,"—and wherein the "Lesser Light" is demonstrated at Initiations.

In accordance with tradition, a low-intensity red light may be used also, by having a light with a red bulb burning on the Vestal Stand in the Lodge.

THE COLOMBE

The "Colombe" of each Lodge is the ritualistic Vestal. Aside from her ritualistic work, she should see that the red light or simulated fire on the Vestal Stand is lighted for each Convocation.

She should have a permanent seat at the right side of the Vestal Stand, and this must never be occupied by any other officer or mem-

ber of the Order. A visiting Colombe should be seated at the left side of the Vestal Stand.

The Colombe of each Lodge represents "Light, Life, and Love," also the Conscience of each frater and soror of the Lodge.

In all Convocations, ceremonies, lectures, Council hearings, or discussions, she should have ritualistic precedence over all others, excepting the Master, in any act of Ceremony or Rite. "When Colombe speaks, all shall be silent!" says an old law of the Temple; for from the mouth of a child comes wisdom, and from the bosom of conscience comes truth.

Colombes must be less than 14 years of age, when appointed to office, and not younger than 10 years of age. Each must serve until 16 years of age, during which time she must retain her virtue (remaining unmarried). Each is retired with honor on her 16th birthday, when a successor is installed with fitting ceremony. Colombes are, in fact, symbolic of conscience during their term of office. They shall be installed and attend regular Convocations.

THE SIGN OF THE CROSS

Reference has been made many times in the preceding pages to the Sign of the Cross. An explanation of this term and Sign is necessary.

Briefly written, in ancient manuscript and in official papers, the term is expressed or indicated by "S.C." Again, the term and sign are expressed by a cross (+), and often words, "Sign of the +," are used.

The Sign itself is made as follows: Starting with the left hand at the side of the body, hanging in a natural position, the right hand is brought up to a place on a level with the chest, about 25 cm (ten inches) in front of the body. The fingers of the right hand are closed except the thumb and first and second fingers, which are extended and brought together at the fingertips, the fingers pointing outward from the body.

Then the right hand, with fingers held as described, starts to make the Sign, by moving the hand upward, in a perfectly perpendicular line, until the hand is about level with the eyes. Then the hand is brought downward in a curved line, to a place about opposite the left shoulder; then straight across in a horizontal line at right angles to the perpendicular line, to a place opposite the right shoulder; then on a curved line like an arc, to a level with the eyes, where the Sign began, and downward on another perpendicular line to the navel. Then drop the right hand to the side.

These perpendicular and horizontal lines cross each other opposite the heart, at which place on the Cross the Rose is placed. At no time should the hand and fingers come nearer the body than 25 cm (ten inches). The Sign is not made toward one's body, but from it, and away from the person making the Sign.

It should be made slowly and with dignity and sincere reverence. It represents the Obligation and Oath, taken by all initiates at the time of the First Degree Initiation, and at other times in ceremonies and Convocations. The various lines formed in making this Sign contain many ancient symbols and signs.

It is used by Masters, Officers, and members, when taking or indicating a solemn Obligation to the Order or its members. It should never be supplanted by any form of pledge. Even in courts of law, and elsewhere, when one is called upon to pledge to an oath or statement, by placing the hands upon the Holy Bible, or by raising the hand, the Sign of the Cross may be used in preference. In many instances, when taking an oath, one is privileged to use whatever form is the most sacred to the maker of the oath; this permits the Rosicrucians to vow their allegiance to an obligation or swear to any

statement, in court or out of it, by making the Sign of the Cross in preference to any other form. However, this deviation is not recommended.

SALUTATIONS

The following salutations shall be used by all members, under the circumstances indicated:

Entering the Lodge. Whenever a Degree initiation is being held in a Lodge or the Lodge is open to members, all members must approach the door of the Lodge, and if requested to do so, must in a whisper give the regular password for such Degree as may be working in the Lodge to the Guardian at the door. If demanded, the member must submit to an examination (see Entering the Lodge, p. 30). Unless the password, if requested, can be given, admission to the Lodge will be denied by the Guardian.

After entering the Lodge, the member must make a Salutation to the East. This is done by the member walking directly to a point just west of the Shekinah, facing East and taking three steps forward. The right hand is placed over the heart and the forefinger of the left hand to the center of the forehead above the bridge of the nose. After three or four seconds, the hands are dropped, three steps are taken backward, the member turns to the right or left, and is seated. The purpose of such salutation, when first entering a Lodge, is to indicate that the member renews or signifies remembrance of the obligation taken in the First Degree Initiation. This is the general Sign of Salutation in all jurisdictions.

Saluting the Master. If, during any Convocation or lecture, a member shall await the first opportunity to interrupt the Master, he or she shall rise in front of his or her seat and face the East, then, when the Master observes this, make the Sign of the Cross. The Master will then say: "How may I serve my Frater (or Soror)?" Then the member shall say: "Worthy Master," and proceed to ask the question, make a plea, ask permission to leave the Lodge, etc. While thus speaking, the member must face the East, and speak with dignity. When through speaking, the member must take his or her seat quietly, or do that thing which was desired, without interrupting the Convocation or lecture.

THE OBLIGATION OF SERVICE

All initiates in the First Degree Initiation are called upon to stand in the Holy Sanctum of the Lodge, and facing the East, make a certain Sign and at the same time repeat after the Master the following sacred Obligation, which is voluntarily taken, and is forever binding upon all members:

"Before the Sign of the Cross, and in the name of our God, I promise to forever do my utmost to restore to the world the light which is gone and the Secrets of the universe that have been withheld from the profane mind."

This Obligation of Service makes it imperative for the members

to study and practice, to test and try the private laws taught in our Order, and to apply them at every opportune time, so that the light which is gone may be restored and darkness (ignorance and evil) dispelled.

LODGE DECORUM

It should not be necessary to speak on this subject to a Rosicrucian; for all appreciate the sanctity and goodness of the Temple and the Lodge.

Once within the Temple, the members must refrain from loud conversation or unnecessary walking about. Bear in mind that some within the Lodge may be in deep meditation, requiring silence; others may be conducting silent and sacred Convocations. Entrance into the Lodge should not disturb these silent workers.

LEAVING THE LODGE

At the close of all Convocations or lectures, after the Master has properly closed the Work and bade the members depart, they shall remain standing before their seats, facing the East, until the Master has departed from the East and slowly proceeded down the Lodge and out of the door, into the antechamber. Then the members may quietly move toward the door, or hold their informal meeting until the Lodge is finally closed by the Guardian, by announcing verbally or by sounding a gong that all must leave, and the Lodge Room be closed for the time.

LECTURES

The principal teachings of the Order are given to the Sanctum members in the form of monographs which are in manuscript form. In fact, each Degree of our Order consists of an initiation and from twelve to fifty or more monographs. In the higher Degrees the monographs increase in number with each Degree.

These lectures, or monographs, are prepared by the Imperators staff at the Supreme Grand Lodge and sent to Sanctum members throughout the Worldwide Jurisdiction (The Americas, Australasia, Europe, Africa, and Asia).

All members receive identical monographs. For the benefit of the Latin-American countries, the monographs are translated into Spanish, but are issued directly from the Department of Instruction of the Grand Lodge in San Jose. No Master of any subordinate Lodge or Chapter shall be authorized or permitted to add to the work or teachings or to insert any personal opinion. Other Grand Lodges of AMORC, as those of France and Brazil, issue the monographs in the language of their own countries.

Once a week during most of the year, in the Supreme Temple of

the Supreme Grand Lodge at Rosicrucian Park, San Jose, California, there is an assembly for all members living in the vicinity of Rosicrucian Park or who may be visiting or passing through. The ceremony on that occasion is of a mystical nature, with an inspiring ritual; and members in good standing of any Degree may attend.

The teachings are modified or added to from time to time, according to new findings here or abroad. Such changes or additions will be sent to each Grand Lodge, to be given to the members.

There is no particular advantage in attending lectures at the Grand Lodge in preference to other Lodges. In all Lodges there are those who do research work between lectures and are prepared at each lecture to ask intelligent questions or enter into a discussion of the lecture. Therefore, it behooves every Master to encourage the asking of questions and the discussion of points contained in the lectures.

When questions are asked of the Master which he cannot answer from the official point of view, he will frankly state so, and may then write to the Grand Lodge for the answer.

When questions are asked which the Master believes call for answers pertaining to work covered in higher Degrees, the Master shall properly refrain from answering and defer each such question.

"ROSAE CRUCIS"

This is the Latin form of the name, and is generally used in all countries because it lends itself very readily to use in all languages and at the same time is a complete translation of the true meaning. The words, translated into English, mean: "Of the Rosy Cross." Therefore, the words "of the" should never precede the words "Rosae Crucis." The name of our Order is The Ancient and Mystical Order Rosae Crucis. Order Rosae Crucis is a shorter way of writing the name, and it means: Order of the Rosy Cross. The official abbreviation of the name, however, is, as given in the Constitution, A. M. O. R. C.

The words Rosae Crucis are never translated when used in other languages. For instance: Our Latin-American division of the Grand Lodge, conducted in the Spanish tongue, translates the name Ancient and Mystical Order Rosae Crucis as follows: Antigua y Mistica Orden Rosae Crucis.

ROSY CROSS

This term is not used officially by our Order, except as an explanation of the term Rosae Crucis. The reason for this is twofold. By using Rosae Crucis instead, we adhere to the traditional custom. And we likewise keep from identifying ourselves with any of the commercial propositions that use the term Rosy Cross as titles for written-to-sell books which have nothing to do with our work, or as the name for colonization schemes, classes, etc. (See pp. 72-76 for further information on this symbol.)

THE TRIANGLES

There has been much discussion as to why we use as a symbol the inverted triangle. Just why the triangle with point downward is called inverted has not been explained to us. There is no reason, except mystically, why a triangle, such as ours, should have any definite position. A triangle is always a triangle, regardless of position, and to use the word inverted is to presume that the triangle has a proper position of some kind which can be inverted.

We are not unaware of the fact that certain organizations in the United States have used the triangle with the point upward as a mystical sign, but this did not give to that position of the triangle any proper or just position which should not be varied.

But the very best—and truthful—explanation for our use of the triangle in this fashion is the fact that it was used by the old Mystics of Egypt and possibly Atlantis, to represent the Divine (or so-called spiritual) creations of the universe, while the triangle with the point upward was used to represent the material creations of the world. (The pyramids of Egypt typify the material triangle.)

The doctrine of the trinity is an after-creation of the old mystical Law of the Triangle. By comparing the laws given in our Temple lectures regarding the two triangles (in the First Degree Temple monographs) with this doctrine, one will find at once the similarity, as well as an explanation of why the triangle with the point downward represents Divine or spiritual creations.

Throughout the work of the higher Degrees, the triangle or the "law of three points," helps to solve many problems. In fact, in the work being done at the Supreme Grand Lodge in the laboratory or out of it, in chemistry, electricity, healing, music, and even in the more subtle manifestations of Nature's laws, the triangle in one of its two positions is used and always becomes the final or grand universal solvent.

The cross within the spiritual triangle is one of the official symbols of our Order and is a very sacred symbol. In one form or another it is to be found on every seal of every Lodge. It is an identifying mark not used by any other organization or society in the world.

PRIVACY

There seems to be some doubt in the minds of many of our members as to what is private in our work and what is not. This doubt may be removed by the following explanation:

The principal object of privacy in our Order is to prevent those who do not belong to our Order (those who have not been examined, tested, tried, initiated, and instructed), from entering our sessions and Convocations, and enjoying those privileges or rights which our members enjoy, by virtue of their obligations and service.

Therefore, the principles of privacy are associated with all that transpires in each initiation ceremony, or immediately preceding or following. In other words, those things which every member is

bound by oath to keep private are: The features of each initiation ceremony, including what was said by the Master and each Officer, as well as the member, in the Temple ceremony; and what was done by the Masters, Officers, and members during, preceding, or following the ceremony. This includes the methods of opening and closing such ceremonies, the terms, words, phrases, signs, symbols, etc., used in the Temple, Lodge, or Outer Chambers on the evening or day of such initiations, as well as the grips, passwords, salutations, and signs of recognition.

The foregoing things are to be held sacredly private by the members. The first Oath, taken by every Initiate before being initiated is as follows: "Before the Sign of the Cross, I promise upon my honor, not to reveal to any one but a known Frater or Soror of this Order, the Signs, Secrets, or Words which I may learn prior to, during, or after passing through the First Degree." This Oath, being taken prior to membership, is considered binding upon the member for all Degrees. However, each Degree has its own Oath, similar in substance to the foregoing, as far as privacy of signs, words, and symbols is concerned.

WHAT IS NOT PRIVATE

There is no obligation upon the members of the Order, however, to keep private all the laws and principles which they learn in our lectures and teachings. It is not the purpose of the Order to educate men and women in vital fundamental laws which they can never efficiently and properly use for the benefit of others. To say that none of our laws or principles should be given or used outside of our membership would defeat the very purpose of our Order.

Discretion must be used, however. Our members are taught certain vital laws, so that they may use and apply them for the avowed purposes of the Order. It will not generally help a man or a woman outside of our Order, who needs help, to explain to him or her the workings of Nature's laws. What is needed most in the average case is to set into operation such laws and principles as will bring about the results desired. Therefore, explanations which convey our laws and principles are unnecessary, and sometimes defeat the purpose in mind, and may, in other cases, cause trouble, worry, or ill effects.

But, there are cases where one will find it advisable, if not absolutely necessary, to explain to one outside of our Order the working of some of Nature's laws; for such an understanding may do all that is necessary to relieve a condition, or enable a troubled heart or sick body to find health, happiness, and Peace Profound.

Certainly, no member will find in this privilege a reason to take all the lectures or teachings of our Order, or even part of them, and use them for a basis of another school or system, and either sell the instruction or publicly publish or teach it. The privilege which each member enjoys, in giving some principles or laws to those who need them, makes discretion necessary, and when discretion is not used, but wilfully cast aside, the member violates sacred obligations, and

will be forever cast outside the pale of the Great White Lodge. This is why the true teachings have never been published in books.

Those who are sincerely interested and worthy of membership, at some time, are easily recognized. To them the Order should be spoken of carefully, and only casually, until they are discovered to be anxious to unite in the work and purposes of the Order. Then and only then, should they be invited by a member to make application, as described herein.

In all ways, and in all things, maintain the dignity and austerity of the Order, and always be watchful for the seeker of knowledge who will greatly appreciate your bringing to his attention the existence of the Order and the means of entering it.

The Rosicrucian Order, AMORC, it must be understood, is not secret in the sense of the concealment of either its identity or location. For example, Rosicrucian Park in San Jose, California, which is the See of the Order, has a number of prominent buildings and the name of AMORC is conspicuously displayed. Further, there are approximately 400,000 persons a year of the general public—schools, colleges, and so on—who visit the Rosicrucian Egyptian Museum and Planetarium. Also, all of our Grand Lodges throughout the world, and our subordinate Lodges, Chapters, and Pronaoi publicly reveal our identity in public announcements. Therefore, all that is private, are the rituals and teachings which are extended to the member of the Order. Such a practice, then, is not different than that of many other fraternal Orders, even those which are not philosophical or esoteric in nature.

Part Four

MEMBERSHIP INFORMATION

MEMBERSHIP

All members of AMORC in the Worldwide Jurisdiction (the Americas, Australasia, Europe, Africa, and Asia) are members of the Grand Lodge. Their membership privileges and obligations are formally defined in the Constitution and Statutes of the Grand Lodge, excerpts of which are contained in this Manual.

GRAND LODGE SANCTUM MEMBERSHIP. All members of the Grand Lodge of AMORC in the Worldwide Jurisdiction (the Americas, Australasia, Europe, Africa, and Asia) are Sanctum Members; that is, they are individuals who have affiliated with the Order as members of the Grand Lodge and receive their membership privileges directly from the Grand Lodge.

Historically, Sanctum Membership (formerly known as National Membership) meant membership by correspondence only. At the national convention of the Rosicrucian Order, AMORC, held in the summer of 1917 at Pittsburgh, Pennsylvania, it was voted to establish what was then termed a National Lodge for the purpose of providing correspondence instruction to those who could not attend Temple Lodges. These correspondence lectures (monographs) originally composed three Degrees and covered a period of about ten months. Each Degree had its own initiation ritual to be performed by the member at home in his own Sanctum. Such rituals were based upon the elaborate Egyptian-style rituals that were used in the Temples of the Order and conducted by a staff of ritualistic officers.

Sanctum Membership as it exists today is the result of development and improvement of the original National Lodge Membership established early in the history of this jurisdiction of the Order. In recent years this type of membership has grown and many innovations have been added. The monographs and lessons which constitute the instructions are especially prepared to convey the Rosicrucian teachings to the individual Sanctum Member. The three Degrees which were originally a part of the National Lodge have been expanded but are still the first studies entered upon by the member. In these first three Degrees (or "Atria") of Sanctum membership there is contained a summary of Rosicrucian principles and a wealth of personal experiments, exercises, and tests which will make each member highly proficient in the attainment of certain degrees of mastery, and will qualify the member for advancement into the Temple and higher Degrees of the Order's teachings.

Sanctum Members contribute their dues directly to the Grand Lodge in their jurisdiction. They are privileged to visit Lodges, Chapters, and Pronaoi of the organization, and are specially invited upon unusual occasions or whenever there is a feast or general ceremony. The members hold official membership cards and are given certain signs and symbols which are related to their membership. Furthermore, members who qualify upon the completion of the pri-

many three Degrees or Atria may be permitted to receive the higher teachings of the Order in the same manner as the first three Degrees are presented.

LODGE, CHAPTER, AND PRONAOS MEMBERSHIP. Sanctum Members may form Pronaoi, Chapters, and Lodges in cities and localities where there are a sufficient number of members to conform to the requirements of the Constitution and Statutes for the formation of a Lodge, Chapter, or Pronaos. New Chapters and Pronaoi are organized from time to time, and if you do not find one near you listed in our monthly magazine, the Rosicrucian Digest, further information can be obtained by writing to the Grand Master. All members of Lodges, Chapters, and Pronaoi are Grand Lodge Sanctum Members paying their monthly dues to the Grand Lodge in their jurisdiction and usually nominal additional dues to the local Lodge, Chapter, or Pronaos to help meet its operational expenses. Chapters and Lodges have their distinctive activities. Pronaos rituals are in a simpler form than Lodge and Chapter rituals, making it possible for smaller groups of members to work together in this type of activity. There are Lodges in many cities throughout the worldwide jurisdiction. They maintain Temples for a ritualistic body to conduct the Degree initiations, and as these initiations are held from time to time, members in any part of the worldwide jurisdiction who can visit one of the Lodges have the opportunity of receiving the full, elaborate initiations of the Order.

GENERAL INSTRUCTIONS FOR ALL MEMBERS

The real benefits of Grand Lodge membership in AMORC—as Sanctum Members and as affiliates in an affiliated body—are many. The most important are:

- (1) Association with a body of men and women of like mind and purposes, ever ready to assist and cooperate, as true fratres and sorores;
- (2) Association with a national and international staff of Officers and Directors controlling an organization of widespread interests, unusual facilities, and distinct powers for the carrying on of personal and practical work in behalf of mankind generally and the fratres and sorores especially;
- (3) The privilege of direct and specialized Rosicrucian advice in personal problems relating to health, business, and ethical matters;
- (4) The very special benefit that comes through the gradual and proper change of one's viewpoint of all the essential things of life, thereby eliminating the mysterious and perplexing matters which hold many in poverty, ill-health, and discontent;

(5) The awakening and development of certain latent or dormant faculties within each of us which will enable us to improve our position in life, increase our ability to do and accomplish, and bring greater success;

(6) The cosmic and spiritual attunement with the Universal Mind and Master Minds so that we may live in cooperation with the constructive divine laws and loving Divine Mind;

(7) The careful instruction and guidance in the attainment of such knowledge as will make us mighty and keen in the understanding and mastering of life's duties and obligations; also the complete instruction in the fundamentals of those arts and sciences which will make each student, each member, strong in intellect, masterful in his daily occupation, perfect in his understanding, broad in his comprehension, and magnetic in his influence over the lesser minds of the world.

Our members will see, therefore, that of the seven points of benefits outlined above, only one, the seventh, pertains to the course of instruction, and that, therefore, to look upon membership in AMORC as being simply studentship in a school, is to ignore many of the more important benefits.

It is a fact that the average member, or fully seventy-five out of every hundred, has need every month for many of the other six points of benefit, and in times of emergency, sorrow, distress, perplexity, or serious complications in personal affairs, the members find more need for the first six benefits than for the seventh.

In many lands where the members have been students for twenty or more years, and where they have long since completed the regular courses of study included in the seventh benefit, they retain active membership in the fraternity solely because of the other six benefits.

The great aim of the Rosicrucians has ever been to assist all mankind in evolving to the highest degree of earthly perfection, and to render aid to every living being "to the glory of God and the benefit of mankind." This is covered in point number two in the above list. But, to do this, the organization includes the very complete courses of study.

Therefore, our members will see that the payment of their monthly dues is not for the purpose of supporting the course of study or the monographs, but for the entire list of benefits, and many others which are of such a personal nature and so diverse that they could not be listed here without consuming many pages. The real benefits of association with the Rosicrucians have always been the outstanding lights which have brought thousands to the portals of each branch of the Order yearly, humbly seeking permission to make the acquaintance of those who would invite them to unite with the Order.

The course of study may be set aside at times through changes in one's daily routine of living, or through temporary changes in environment, and for other reasons, but the other benefits of membership continue at all times, as long as a member remains in active membership.

On the other hand, as we have said, the mere payment of the monthly dues, without giving any thought to the studies, without attempting to render service to others, and live the progressive, constructive life of a true Rosicrucian, will not constitute good standing in the Order.

For this reason members of the Order are requested to make certain reports of their studies, their experiences, or their activities in connection with their membership. Sanctum Members make these reports directly to the officers and staff of the Grand Lodge. To progress from one Degree to another, certain examinations must be satisfactorily completed—after each of the lower Degrees has been studied.

One important point should be perfectly plain to all who read this Manual: The A.M.O.R.C. will NOT accept into membership those who wish to enjoy its benefits but DO NOT want to pursue its course of study and become trained to assist in the general advancement of mankind. Hundreds of inquiries are received each year from men and women who believe they have sufficient knowledge of the esoteric and mystical sciences and who want, therefore, only the benefits of association with the Rosicrucians. Regardless of the fact that these persons offer to pay their yearly dues in advance or make other financial inducements, they are never invited to join the A.M.O.R.C. and cannot become members.

The work of Grand Lodge Sanctum Membership is unique. It consists of the most complete course of home-study of metaphysics and mysticism ever offered, in addition to the other benefits of membership. The members do not pay for the instruction. The lessons are not sold, and membership does not consist of simply reading the weekly monographs and trying the experiments.

To be in good standing as Sanctum Members of the Grand Lodge the members must not only meet their monthly obligations—which are nominal—but they must live up to the rules and standards of Rosicrucian adeptship—and the careful study and practice of the teachings are but two points of the system.

PRELIMINARY STUDIES

The monographs and experimental work which are received by the Neophyte members are prepared in such manner that the member can gain a complete comprehension and a usable working knowledge of the Rosicrucian teachings. The introductory lessons which Neophytes first receive are arranged in two divisions: The first contains six preliminary monographs called "Private Mandamuses" and the other contains three Degrees or "Atria," with twelve to seventeen monographs each. Supplementary material, experiments, and many practical applications of the principles presented are included

in each section. Each Atrium also has an initiation ritual by which this ceremony can be performed by the Neophyte in his own home. These rituals illustrate and demonstrate some of the important Rosicrucian teachings.

The monographs are constantly being improved, amended, and extended, and members receive additional instruction in accordance with their personal requirements, advancement, and psychic development. The monographs are not made in quantities for use for several years, as with correspondence courses, but made only in such groups of classification as will meet the special needs of the various grades of standing of the members. The instructions, therefore, are practically personal and direct, and, when coupled with the advice and instruction sent separately from the lessons in letters, form a very personal system of instruction.

For six weeks the new members receive personal, private communications from an especially assigned Master of the highest work in the organization, who carefully analyzes the needs and requirements of the Neophyte and instructs him in those fundamental principles and laws of nature which will enable the student to qualify himself in the most rapid time and perfect manner possible. These instructions are in the form of Private Mandamus lectures, discourses, and other matter sent under seal by mail to the member. The member studies these preliminary instructions and tries certain experiments of a fundamental nature which are highly illuminating and intensely interesting, and reports to the Class Masters at the Grand Lodge his comments, results of the experiments, and understanding of the points involved. In this way for six weeks the new member and an officer of the organization are in intimate contact by correspondence and in psychic contact through the Rosicrucian methods. At the end of the sixth week, if the member is properly prepared, he is admitted into the First Atrium of the Neophyte studies and is given other confidential instructions.

The introductory lessons are not elementary, but preliminary to the higher Temple Degree monographs, and provide the means by which the Neophytes can qualify for these Temple Degrees and receive them for study in their own home in the same manner as the introductory Degrees.

The instructions, lessons, laws, and principles given to the member in these preliminary monographs contain many astonishing ideas and do more to inculcate the true Rosicrucian art in the consciousness of the member than any preliminary steps that have ever been devised.

After the proper preparation and the development of certain psychic faculties and functions during the six weeks or more of preliminary preparation, the member is ready for the personal initiation of a psychic and spiritual nature whereby he becomes acquainted in his own home with some of the highest principles.

The first papers sent to the new member after his admission into the First Atrium include not only the beautiful and symbolical initiation ceremony which he or she is able to perform easily and quietly

in the privacy of some part of the home, but many other papers of important instruction and guidance are also sent to the member.

Thereafter, the member receives instructions in sealed envelopes containing the private monographs, and instructions, including many fascinating tests of cosmic laws, many experiments of astonishing principles and scores of practical, helpful principles which the member can demonstrate and apply in his daily life for his own benefit and self-evolution.

All Sanctum Members are urged to visit at some time or other one of the Temples of the Order throughout the worldwide jurisdiction, and especially to attend the annual Rosicrucian World Convention, or some special session of the Supreme Grand Lodge in San Jose, California. The studies, especially prepared by the Emperor's staff, are complete, however, and members finding it impossible to attend Lodge or Chapter sessions will not be inconvenienced.

THE TEMPLE DEGREES

There are other higher, advanced Degrees that follow the Neophyte or preliminary Degrees for those members who qualify. These extend not only the monographs to the members for personal study, but also charts, diagrams, and interesting, instructive experiments and demonstrations of the Rosicrucian principles. The subjects of these higher Degrees follow in a logical continuity by which the member progresses step by step in his comprehension and ability to achieve.

These teachings contain the most complete presentation of laws and principles which have been handed down through the ages. Edited by modern authorities so as to be of practical value today, they cover all of the points, laws, and principles touched upon in the three Neophyte Degrees of Sanctum Membership of the Grand Lodge, each law and principle being presented in more complete and demonstrable form. In addition, are also included subjects and mystical laws which could not be put into the three Neophyte Degrees. As explained before, they are reserved for those Sanctum Members who have made the necessary preparation and progress. Demonstra-

tions are such as can be performed at home; thus, members are able to benefit from personalized instruction.

These lessons and monographs are the same throughout the A.M.O.R.C. of the Worldwide Jurisdiction (The Americas, Australasia, Europe, Africa, and Asia). In addition to the lectures and study material, all members have the privilege of associating with an AMORC Lodge, Chapter, or Pronaos, where rituals and discussions are part of the group's activity.

Members who complete the Ninth Degree are eligible to continue on in the work of the Rosicrucian Order through specialized studies under the direction of the Imperator. They will also have the opportunity to assemble with others who have reached the same point in the teachings for the exchange of knowledge that may be beneficial to the good of the Order.

THE ROSE-CROIX UNIVERSITY

In keeping with the ancient and modern practices of the Rosicrucian Order in various lands, the Supreme Grand Lodge of the Ancient, Mystical Order of Rosae Crucis maintains a Rose-Croix University for the Worldwide Jurisdiction (The Americas, Australasia, Europe, Africa, and Asia) at Rosicrucian Park, San Jose, California.

The large Rose-Croix University Building,* in which special sciences are taught and demonstrated, and profound scientific research is carried on, was constructed from the donations sent to the Order for this purpose by thousands of advanced Rosicrucians in all parts of North America. It is probably the first university building ever to be erected in the New World from the contributions of so many thousands of supporters.

At the University there are special courses in accordance with a definite curriculum consisting exclusively of personal and class instruction limited to a group of students carefully selected. The fees for this personal instruction have been made very nominal so that those who desire to specialize in certain subjects and are worthy of this instruction may find it convenient. Some of the most eminent scientists and teachers in various fields compose the faculty of the University.

Those who are sincerely interested in desiring to come to San Jose and attend the University and study under these teachers are invited to write to the Registrar, in care of AMORC, and ask for literature pertaining to the University. Certain preliminary requirements are necessary, however, and all applicants must be members of the A.M.O.R.C. in good standing. The idly curious will not be admitted to any of the classes or allowed to participate in any of the courses of instruction.

The Rose-Croix University of the Worldwide Jurisdiction (The Americas, Australasia, Europe, Africa, and Asia) is maintained by the Supreme Grand Lodge of AMORC as one of its allied activities and in harmony with similar work being done in the Rosicrucian universities and colleges of other lands.

* See photographs of University on Page 17.

INTERESTING FACTS FOR OUR MEMBERS TO EXPLAIN TO INQUIRERS ABOUT AMORC

The following facts are based upon an examination of 1,000 application blanks taken at random from our files. They are typical, therefore, of the entire membership.

GENERALITIES

Males, 51%; females, 49%; average age of all members, thirty-nine; average age of males, forty; average of females, thirty-eight. In regard to marriage, 59% are married. These figures show that the average member is a serious person with certain responsibilities and problems, and not an esthetic dreamer.

SOCIAL AND POLITICAL

Each member of the Rosicrucian Order must pledge allegiance to the flag of the respective country in which he lives. He must likewise strive to be a law-abiding citizen of that country. This creates a high standard of public-spirited members of the Rosicrucian Order throughout the world. We also find that 38% of our members have college, academic, or honorary degrees. This is another high percentage for an international organization.

PREVIOUS ESOTERIC STUDIES

The records show that 90% of our members have studied along similar lines for over two years before uniting with us; 50% have studied for over ten years before joining with us, and 30% have been students of these subjects for over twenty years. They came into AMORC because they had not found the light they sought.

OCCUPATIONS

Nine percent are professionals; 8% are educators; 35% are in the trades and arts requiring a skilled education; 20% are in technical and managerial positions; 10% call themselves housewives; 4% are retired from business; 6% are students.

SOME INTERESTING QUESTIONS OFFICIALLY ANSWERED

To save much correspondence, and at the same time give our members official answers to questions which are often asked, in order that they may be prepared to answer similar questions asked by friends or acquaintances, we publish the following taken from the records of our daily correspondence:

Ques. What is represented by the letters A. M. O. R. C?

Ans. It is the abbreviation of the name, Ancient and Mystical Order Rosae Crucis. (Ancient and Mystical Order of the Rosy Cross.) The Latin name of the Order, as found in many foreign manuscripts and ancient documents, is *Antiquus Arcanus Ordo Rosae Rubeae et Aureae Crucis*. In many countries the Latin is translated into the native tongue, and in most cases the initials AMORC represent the translated term.

Ques. Has the A.M.O.R.C. any relation to any other Rosicrucian society?

Ans. The A.M.O.R.C. is not a part of, or related to, any other so-called Rosicrucian society, movement, or any other organization using the name Rosicrucian. The genuine fraternity is always known as the Rosicrucian ORDER, and never as society or fellowship. The term Rosicrucian Brotherhood is used sometimes by the Order as a substitute general term. There is only one Rosicrucian Order in the Americas, Australasia, Europe, Africa, and Asia, recognized as the authorized body perpetuating the ancient organization, and which was affiliated with the international federation of esoteric orders and societies. The A.M.O.R.C. is affiliated in the fraternal and federation sense, however, with the Rosicrucian Order and its allied bodies in other lands.

Ques. What is the esoteric Federation?

Ans. The Federation was known as *Federation Universelle des Ordres et Societes Initiatiques* (or by the initials of the term, FUDOSI). It was an alliance of fourteen or more of the esoteric organizations throughout the world which were carrying out the work of the Great White Brotherhood, and all of which conducted esoteric initiations for the attunement of the Initiate with the Cosmic Consciousness. The A.M.O.R.C. of the Worldwide Jurisdiction (the Americas, Australasia, Europe, Africa, and Asia) and its affiliate, the Traditional Martinist Order, were the only representatives of this Federation in this part of the Western world. (The FUDOSI does not now operate objectively.)

Ques. How can there be a number of Rosicrucian societies without relationship?

Ans. The word or term Rosicrucian has been misused and improperly applied by a number of publishing houses or small organizations, either because they believe that the word Rosicrucian simply means mystical, metaphysical, or arcane, or because they are deliberately attempting to deceive the public. It has been established in international congress and in many legal controversies that the word or term Rosicrucian belongs exclusively to the fraternity or order that invented or devised the symbol of the Rosy Cross, and that the term Rosicrucian distinctly applies to and describes one organization and one system of philosophical thought. The name and symbols of the Rosy Cross are the exclusive property of the legitimate fraternity, and its chartered bodies throughout the world.

Ques. Has the A.M.O.R.C. any relation in the past or present with the Roman Catholic Church, or the Jesuits?

Ans. There was a time in the ancient periods of the Order when some Jesuits were greedy interested in the teachings, and some joined the Order, just as many others of various religious denominations have joined the Order in the past and present; but today there are no Jesuits or representatives of the Roman Catholic Church serving in any official capacity in the A.M.O.R.C., nor is there any official or unofficial connection between the A.M.O.R.C. and any religious sect or denomination.

Ques. What relation has the A.M.O.R.C. with other metaphysical, mystical societies, including Theosophy?

Ans. The A.M.O.R.C. is not affiliated with any other organizations except those of the great Federation of esoteric bodies which does not include the Theosophical Society, or any of the smaller popular mystical movements throughout the world. The work of the Rosicrucian Order is distinctly different from the work and teachings of these other organizations, and while AMORC looks kindly upon all activities assisting in the unfoldment and development of man's higher powers and faculties, for the sake of definite understanding, it must be stated that none of the popular movements are like unto the Rosicrucian Order.

Ques. What explanation can be made regarding the work of the Rosicrucian Fellowship as explained by the late Mr. Max Heindel?

Ans. Mr. Heindel was a keen student of the Theosophical teachings, and journeyed to Europe where he studied under a private teacher who was a Theosophist, and not a Rosicrucian. Mr. Heindel then returned to America and wrote his personal version of the teachings which he had received, and unfortunately used the term Rosicrucian to describe the work of his personal organization, and his personal philosophy. The Rosicrucian Fellowship does not maintain temples and lodges throughout the country, as does the Rosicrucian Order, and its teachings are in nowise similar to, nor in any way connected with the genuine teachings, rituals, ideals, and principles of the Rosicrucian fraternity. The genuine Rosicrucian Order never prints and offers for sale any books or pamphlets claimed to contain

the real inner, private teachings of the fraternity, and it does not deal with the speculative and weird subjects included in the books and pamphlets of most of the mystical organizations which have appropriated the term Rosicrucian. The Rosicrucian Fellowship has never been recognized by the international Rosicrucian Council, and was not recognized by the international federation of esoteric orders. These comments, which can be supported by facts, are offered with kind intention, but are perfectly frank and given in the spirit of defining the difference between the organizations.

Ques. In what way is the A.M.O.R.C. distinctive from other mystical, scientific, and esoteric schools?

Ans. In the first place, the A.M.O.R.C. is not a personally created school of individual or personal philosophy discovered or invented by an individual or a small group of individuals. It is an international fraternity with its schools, lodges, classrooms, graded system of private instruction and practices having been evolved throughout the ages through the contributions of the master minds of all countries in all periods and conditions. It is primarily a collegiate system of instruction and a fraternity combined in a manner that enables the members to master such laws and principles in life as will enable them to help themselves and to help others. It is not a theoretical or speculative school, and does not deal exclusively with esoteric subjects that are of no practical value, and does not promulgate the ideas and strange beliefs of any individual or self-appointed world master.

Ques. Is it not commercial since it charges dues?

Ans. The dues paid by the members, as in any other society or order, are contributions toward the operating expenses of the fraternal section of the organization, and therefore assist in the maintenance of Lodge Rooms, classrooms, reading rooms, libraries, and other expenses which provide the material, physical needs and requirements of the members. The many benefits that are given to the members in exchange for their support of the great scheme of the organization more than compensate them for the nominal amount of dues that have been established in order to insure the continuity of the teachings and to help defray the cost of the upkeep of the organization. The lessons and private teachings of the Order are not sold nor is any price put upon these instructions of the regular graded system of the Order. These are given freely to all members of the Order who are in good standing and are loaned to the members, the actual ownership always remaining with the organization. The small dues paid by the members are contributions toward the maintenance of the other features of the membership. The Order is incorporated as a noncommercial, nonprofit body. It has no shares of stock, and none of the interests, assets, or funds of the Order are held in control by or inure to any individual officer, and all of the valued buildings, property, and equipment of the organization are in the name of the corporate body to be held in perpetuity for the future of the Order, and definitely beyond the control or personal possession of any officer or member of the Order.

Ques. Has the A.M.O.R.C. enjoyed a good reputation?

Ans. The Order under the present regime of administration has carried on its work publicly for over sixty years, during which time it has enjoyed excellent newspaper, magazine, radio, television, and other forms of publicity. The organization has naught to do with politics, controversies in religion or church, and deals with no immoral or questionable subjects, or practices, and is therefore unlikely to be entangled in any unpleasant notoriety. It has received the endorsement of the highest types of characters in all ages, and is known as an organization working for the highest forms of personal culture, good citizenship, and universal peace.

Ques. Do the Rosicrucians have any "coming world master" as have other mystical schools?

Ans. No. The Rosicrucians know better than this. They know that the next great Master to come to each being will be the Master Within, and not some foreign person of one tongue, affiliated with one school, and limiting his redemption to those who are within a certain fold. And, the Rosicrucians have never solicited funds for the support of propaganda for any such masters, or the organizing of colonies or Utopian places where anticipated masters or new races might be born or created.

Ques. What are the religious convictions of the Rosicrucians?

Ans. The religious convictions of the Rosicrucians are as diversified as the races and types of persons in the organization. Since it is a universal and international movement with members living in all lands, and of every creed and tongue, its religious attitude is strictly nonsectarian. There are members in the organization who are priests, clergymen, rabbis, and directors and workers in every one of the various religions throughout the world. There is nothing in the Rosicrucian teachings to interfere with the individual's religious convictions, while on the other hand the teachings will tend to support the revelations of spiritual truths as found in all of the sacred writings of the past and present.

Ques. In what manner is the A.M.O.R.C. perpetuating the ancient fraternity?

Ans. By continually promoting the ancient teachings with the modified applications and traditional revelations of science and discovery which will enable the student to derive the utmost of benefit from the teachings under modern conditions and in meeting the everyday problems of life. The Order also continues to erect buildings and to establish a permanent international organization free of all debt, and designed to perpetuate far into the future the foundation of the organization, and the maintenance of its ideals, teachings, principles, and general activities. For this reason all of the assets of the organization are held in legal form which guarantees that no officer or member may control them or controvert them. The same ancient landmarks, ideals, and purposes which made the Rosicrucian frater-

nity so efficient in its world activities during the past centuries are maintained by the present organization. A sacred heritage has been given to the Order in the Western world, and it will pass this heritage on to the future generations.

Any member of the Rosicrucian Order may procure a copy of the booklet entitled, *Who and What Are the Rosicrucians*, which sets forth definite answers relative to the nature, purposes, and activities of the organization—which the member may use for his own information and also to furnish information to inquirers. This may be purchased from the Rosicrucian Supply Bureau.

Readers of the Rosicrucian Manual who are not members of the Rosicrucian Order and have not read the *Mastery of Life*, explaining in further detail the objects, purposes, and benefits of the Order, may obtain a copy of this very enlightening and helpful booklet by requesting it from Scribe R. H. M., Rosicrucian Order, AMORC, San Jose, California 95191.

ARE ALL SEEKERS WORTHY?

This is the big question which every organization such as AMORC must solve. Most organizations attempt to find an answer to the questions through investigation before admitting the applicant. AMORC makes its preliminary investigation through the usual channels, then investigates along its own lines. After this a certain number of inquirers are rejected. The others are admitted into the three preliminary (Neophyte) Degrees, which cover about one year of close examination and preparation. After that those found worthy are admitted into the higher work of the Order. More tests are applied while preparing the seeker for further advancement. Then, those finally adjudged worthy are admitted into various branches of the work not generally known to those who are uninitiated.

Our statistics show that out of every thousand persons who are accepted into the Order—

Only 600 are admitted into the higher work;

Only 400 reach the Seventh Degree;

Only 363 reach the Ninth Degree;

Only 340 reach beyond the general work of the Order.

Every possible encouragement is given to the worthy and sincere, and it is our ambition to make everyone who enters the first Degree truly prepared to continue. We regret each loss and seek ever to change these figures so that more will reach the top. But, certain standards must be maintained and we cannot alter the cosmic, psychic, and mundane rules that apply to all things.

Part Five

MYSTIC SYMBOLS

And Their Meanings

ESPECIALLY PREPARED FOR THIS MANUAL

The explanation of ancient symbolism is included in the Rosicrucian teachings.

"In the beginning was the word:"

(1) In the Beginning
Is the Dot, or Point.

(2) The Dot or Point
Extends Itself in
Curve.

(3) The Curve Is
Continued, Con-
forming to Law.

(4) The Law Holds
the Curve Equi-
distant From the
Original Point.

(5) Hence the Ex-
tended Curve
Forms a Circle.

(6) The Circle Uniting
at Place Marked A,
Which Focalizes Its
Power to Extend.

(7) The Focal Point
Proceeds to Ex-
tend Itself, But

(8) Because of the Law
of Attraction and
Repulsion, Moves In
a Straight line.

(9) To a Point on the
Circle Which Is One-
Third Distant.

(10) Because There Are
3 Forces at Work—
Self-Extension,
Repulsion, and
Attraction.

(11) Hence the 3 Prime
Powers Divide Their
Action and Permit

(12) The Extension of the
Line in 3 Straight
Movements.

*And in this wise was the TRIANGLE of 3 equal sides,
called the TETRAGRAMMATON, produced by Law*

FIGURE 1

Here we see the outline and origin of one of the earliest mystical and philosophical symbols, based upon the symbol of creation as shown in diagrams (6) and (12) on the preceding page. The serpent here represents earthly creation made manifest, with the power to perpetuate its own body and existence. The head is the focal point.

FIGURE 2

Another old symbol based on diagram No. (4), preceding page.

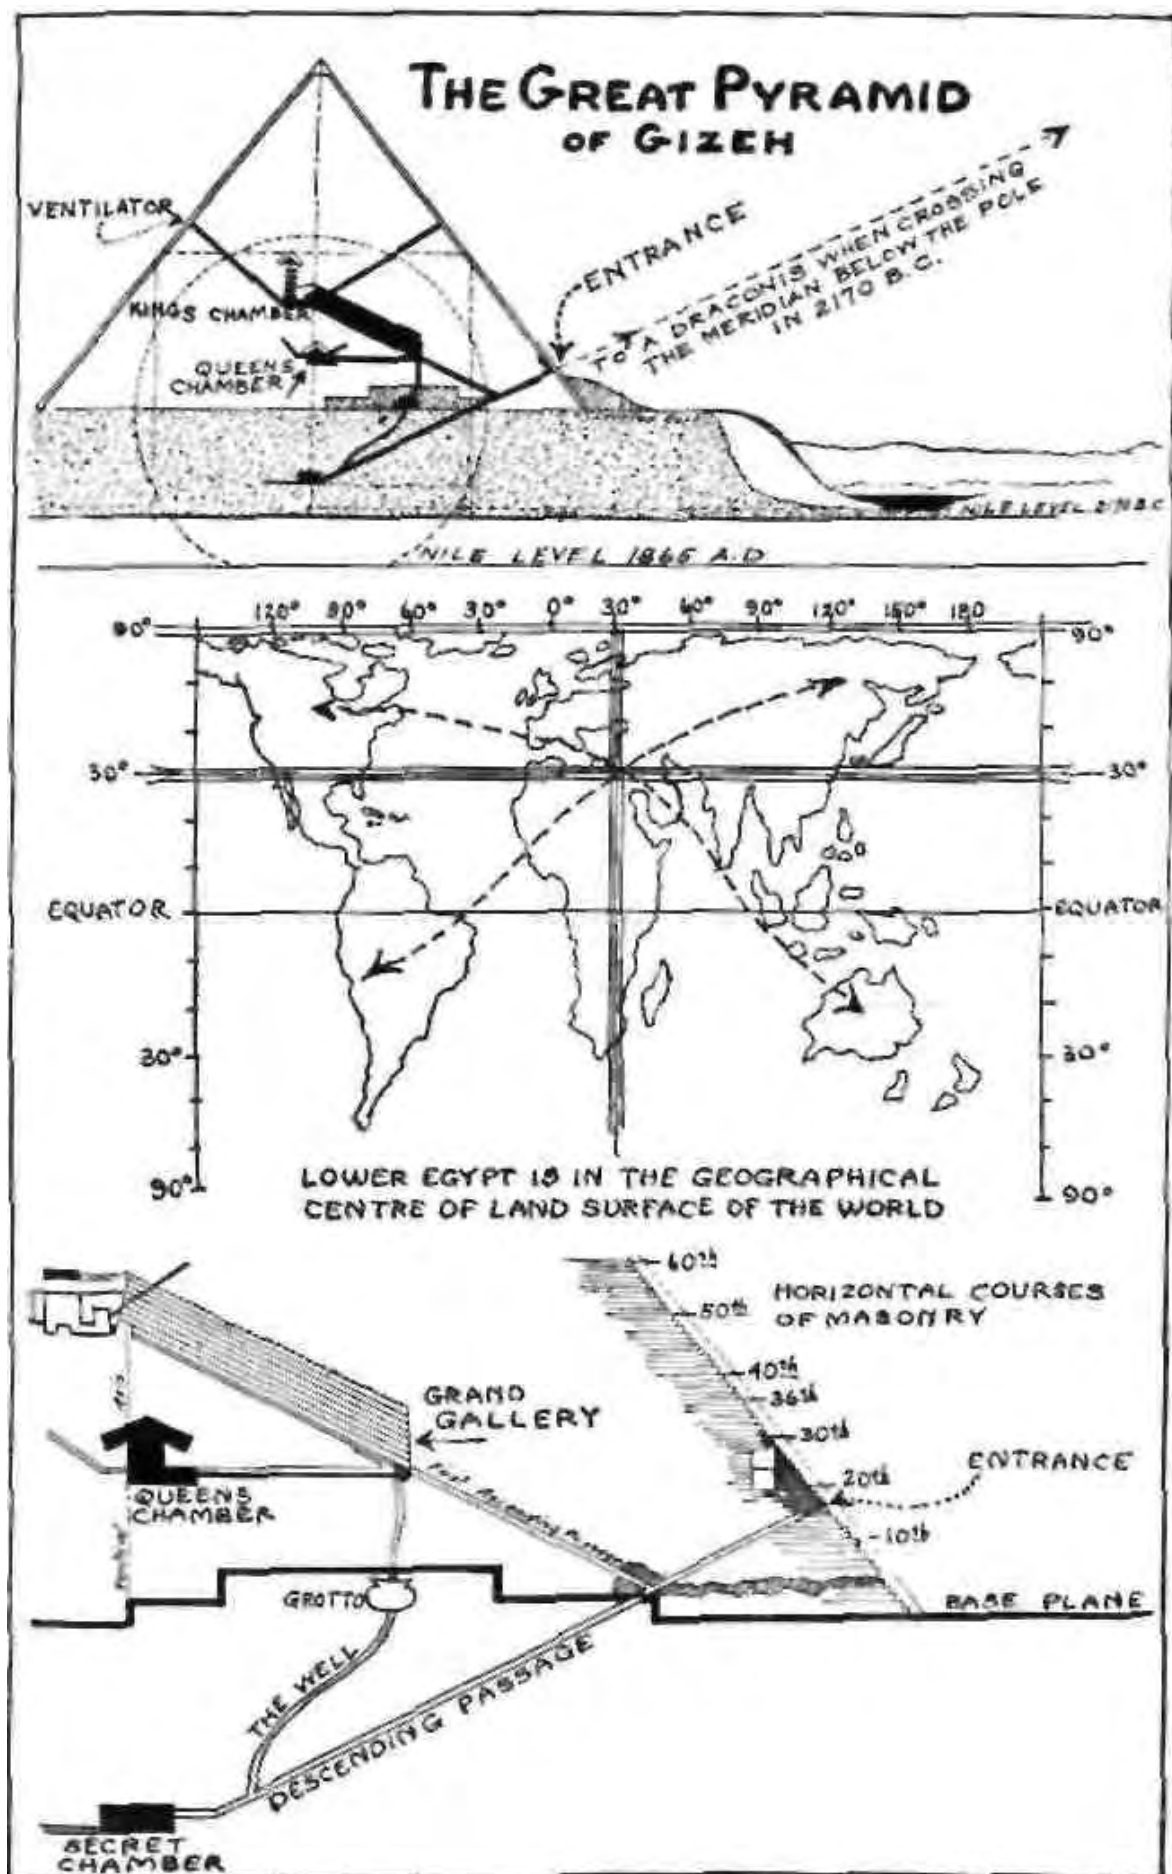

FIGURE 3

Here we have an old mystical symbol representing the elementary geometrical laws used in all mystic symbols. This one is based on diagram No. (11), preceding page.

FURTHER DEVELOPMENTS OF THE TRIANGLE

THE EVOLUTION OF THE PRIMITIVE CROSS

AMERICAN INDIAN

True, official, Rosicrucian Cross

ROSICRUCIAN NEOPHYTE

EVOLUTION OF THE CROSS

Many who see the symbol of the Rosy Cross for the first time believe it to be a Christian symbol—very likely a Roman Catholic symbol—and most surely a religious symbol. We have found that we are called upon daily to make some explanation, not only about the Rosy Cross, but the cross in any form, in our correspondence. We trust, therefore, that this explanation will anticipate many questions.

First of all, let us say that the cross was not originally a religious symbol and is used by many organizations, in some form or another, as a symbol without any religious significance. Nor was there any such thing as a Christian cross during the time of the birth of the Christian doctrines as taught by the Master Jesus. It is a coincidence in religious matters that Jesus, like many others for centuries before him, was crucified on a cross—and not even on a cross like that now used as the Christian symbol; and it was due to another coincidence that the cross was adopted by the Christian fathers, centuries after the Crucifixion, as a symbol of the Christian faith. They might have adopted the exclusive use of a golden crown (which they do at times) or the crown of thorns, or many other symbols typical of some event in his life and works.

Those who are of the Jewish religion justly feel that the cross is a symbol to them of suffering in the form of persecution. One need only read the real history of the Jews to note how they suffered needlessly and continuously through campaigns conducted by those who ever cried aloud: "Via Cruris!" By way of the Cross the Jew was ever made to be an outcast and a persecuted victim of the ancient systems which merely used the sacred symbol to hide their real purposes. For, truly, the Christian principles have naught in them to justify that which has been perpetrated in their name; but the same may be said of many other religious movements during their early stages.

However, we wish to assure Jews and Gentiles, Roman Catholics, and Protestants alike, that to the Orientals—who belong to none of these four classifications—the Rosy Cross symbol is sacred, not as a religious symbol, but as a divine symbol, because it represents the true divinity of man and all nature.

The origin of the cross is lost in antiquity—it is so old! Perhaps the first use of it was in drawing lines from the four cardinal points, north, south, east, and west. Such lines from such points—important indeed to the ancients—would form a cross. The first definite form of the cross, however, as a mystical or secret symbol was that often called the TAU CROSS and used by the ancient Phoenicians. This cross is shown in the first illustration on the chart of crosses (page 71).

The next important development was the addition of a loop to the

top of the Tau Cross. This formed what is often called the Egyptian Cross, because it became a very important symbol of their rituals. By them it was called the Crux Ansata, or Cross of Life, and was their symbol of immortality or the continuity of life. It is often found in the hands of statues and in pictures of their gods and goddesses as the "Key of Life." By some, who are entirely ignorant of the facts, it is claimed that the Crux Ansata was a sex symbol. That is because, to the early Egyptians, the reproductive process throughout all nature, in all plant and animal life, was a great mystery. That the seed in the ground, or any cell of living matter, could reproduce its kind and assist in maintaining a continuous line of its own species, proved the continuity of all life, or in other words, demonstrated the principle of immortality, through birth, transition, and rebirth. This led them to the doctrine of reincarnation and the Crux Ansata became the symbol of that belief in immortality. One will see at once that the relation to sex matters was remote and purely incidental, as must be the study of such physical processes in relation to the whole scheme of the continuity of life.

The Rosicrucians today use the Crux Ansata as a symbol of immortality and reincarnation exclusively. To them it has no other meaning.

In a study of some of the other crosses we see arbitrary changes and additions so as to form unique symbols, and we find the cross was common to nearly all ancient races, antedating the Christian era.

The Rosy Cross of the Rosicrucians is always a gold cross with the distinctive looped ends as shown in the illustration. There is always ONE red rose in the center of the cross, and sometimes for purely decorative purposes a green stem may be attached to the rose; but there is never more than one rose, and a symbol composed of a cross with seven, or three, or four roses in the form of a wreath around the cross or over the cross, is not a true Rosicrucian symbol, but a personal adaptation, counterfeit, or an imitation. The most ancient of all pictures of the Rosicrucian symbol, and all references to it in the most ancient manuscripts, describe it as a gold cross with a "ruby red rose." The symbol described herein as the true Rosy Cross is registered in the United States Patent Office as the official Rosicrucian symbol, and such patent registration is held exclusively by AMORC. The name and symbol are also registered with many other nations of this jurisdiction.

THE ROSE AND THE CROSS

A book might be written upon the subject of the symbology or mystical meaning of the Rose and the Cross. The most popular explanation of the two symbols—the one which writers in encyclopedias love to use with great show of seeming authority—is that the Cross and the Rose have much to do with dew and other alchemical terms. This is simply a fanciful, though satisfactory, explanation for the casual reader. It is not the truth, however.

As far as legend is concerned, we are informed in our own records that man first used the symbol of the Cross when, in Egypt, or possibly Atlantis, a mystic stood at sunrise upon a plain, and, looking toward the East, he raised his arms to a level with his shoulders in adoration of the Sun—the giver of life. Then, turning to face the West to salute the place where life ended, symbolically, he found that his arms and body, while in the act of salutation, formed a shadow on the ground before him, cast by the rising Sun. The shadow was in the form of the Cross, and to him it

meant that life was but a shadow—the shadow of the Cross.

An explanation, often offered by the wise, is that the origin of the Cross was in the Crux Ansata of the Egyptians—the cross with the oval opening at top, often seen in Egyptian designs and used symbolically in Egyptian and mystical Eastern writings. The Crux Ansata, called the cross of life, was designed by the Egyptians and mystics to represent the continuity or immortality of life. The statement that in time the oval, or upper part of the Crux Ansata was closed into one perpendicular piece, thereby giving the original of the Cross we use, is a mistake, for in our records we find, as will others find, on the oldest Egyptian records of mysticism and history, both crosses used in the same period. They seemed to come into existence about the same time—at that time when the master minds of the Orient were originating and creating symbols which would have definite meanings in the minds of the learned students. If the Cross and other symbols confuse and perplex the wise today, it is not to be wondered at that in the days gone by there were many who saw naught in these symbols but arbitrary marks of indefinite character.

The Rose, on the other hand, offers little trouble to the student of symbology. Its fragrance, its cycles of budding into life, maturing into full bloom and sweetness and then dropping to decay and dust, represent the Cycles of Life—even human life. That the seed of the

disintegrating Rose should drop to earth and in earth find again the opportunity to be reborn, typifies the mystic's understanding of the continuity of life, or reincarnation.

In our work, the Cross represents many things esoterically; likewise the Rose. But exoterically, the Rose represents evolution, while the Cross represents the labors and burdens of life and the karma which we must endure in our earthly existence.

In our ritual of the First Degree Initiation, there is this reference to the Cross and the Rose: "Life is represented by Light, Aspiration by the Rose and the Cross, and Death by Darkness." From this we would learn that Aspiration—the desire to do, to serve, to accomplish, and to master and finally attain—is possible through the karma (cross) we must endure and the evolution (rose) we attain thereby.

THE HERMETIC ROSE CROSS

The intricate symbol above is called the alchemical and Hermetic Rose Cross, and is a very old mystical symbol. It is composed of two Rosy Crosses united into one: the small Rosy Cross at the center—representative of man, the microcosm—is in turn the center point of a larger rose residing at the heart of the large cross—symbolic of the macrocosm. Upon the four ends of the large cross are inscribed the three alchemical symbols: mercury, sulphur, and salt. At the top of the cross, mercury is placed in the center, sulphur on the left, and salt on the right. Upon the other ends of the cross the symbols have been inscribed in such an order as to conform to the esoteric tradition.

Also upon each arm, adjacent to the alchemical symbols, is the symbol of the pentagram. This five-pointed figure is a symbolic rep-

resentation of the Rosy Cross itself: the victory of the quintessence over the four alchemical elements. The wheel at the top of each pentagram represents the quintessence; the small triangle on the left, with the point downward and a line parallel to the base, symbolizes earth; the triangle above, with a line parallel to the base but with the point upward, represents air; the upper triangle on the right of the pentagram, with the point downward, symbolizes water; the lower small triangle on the right, with the point upward, represents fire.

On the lower arm of the figure, below the large rose, is a hexagram—symbol of the macrocosm—composed of two interlaced triangles. At its points are inscribed the six planets, according to the ancient astrological tradition: at the bottom is the Moon, at its right is Venus, followed in turn by Jupiter, Saturn, Mars, and Mercury. At the center of the hexagram is the Sun. The order of arrangement of these symbols conforms to certain Kabalistic rituals.

The lower end of the longest arm is divided into four sections by two diagonal lines. These sections are colored according to the four colors of Malkuth of the Kabalistic "Tree of Life." The four sets of three rays which extend outward from the center of the large cross symbolize the Divine Light. The letters inscribed upon each large center-ray combine into I N R I, which combination, according to the Rosicrucian historian Fr. Wittemans, represents a Latin motto meaning "Mature is completely renewed by fire." The letters upon the smaller rays represent invocative names of Latin, Egyptian, and Greek origin.

The petals of the large rose on the cross are twenty-two in number, and stand for the twenty-two letters of the Hebrew Kabalistic alphabet. The outer circle of twelve petals represents the twelve single letters of this alphabet, and in particular the twelve signs of the Zodiac. The next circle of seven petals symbolizes the seven double letters—in particular the seven astrological planets. The innermost circle of three petals represents the three Mother-letters—air, fire, and water.

At the center of the large rose is the microcosmic Rose Cross, an unfolded cube with a five-petaled rose at its center. Four barbs emerge from behind this cross, pointing into the four directions in space.

The complete symbol or "Encyclopedic" Rose Cross symbolizes all the majesty, power, beauty, and protection of the Rosicrucian Order.

THE MAGNET

(In connection with the lessons of the First
Degree of Temple Monographs)

In a number of lessons reference is made to the magnet, and the laws and principles demonstrated by the magnet are used to illustrate other laws.

Certain simple points about the magnet will be of interest to our members, and for this we will refer to the illustration shown on the opposite page.

The magnet with which we are most familiar is shaped like a horse-shoe (illustration No. 2), but it may be shaped like No. 1 on the opposite page. The purpose of such forms is to bring the two poles of the magnet close together; for every piece of steel or other mineral having magnetic qualities must have two poles or points of distinct polarity—the north pole and the south pole, marked N and S on the chart.

When the two poles come within a certain distance of each other, a magnetic effect is made manifest. This is because each pole has an aura or field of magnetic attraction around it. If we say that the north pole is negative, and the south pole positive, in polarity, then the north pole has a space around it in which negative magnetism radiates, and around the south pole is a field or space in which positive magnetism radiates.

We cannot see this magnetic radiation—any more than we can see any form of electrical energy; but we can demonstrate it. By holding one end or pole of the magnet under a piece of paper and then sprinkling a very fine steel powder on top of the paper, we will see the powder moving in certain lines, which plainly show the lines of magnetic attraction and repulsion.

In illustration No. 3 we see a small, straight magnet under a piece of tissue paper and the powder grains of steel sprinkled over the paper. This enables us to see the radiations of magnetism from each pole.

When the north and south poles of a magnet are brought so close together that their fields of magnetism or auras begin to contact each other, there is a stressed condition set up which is greatest in the center of the space between the two poles. This magnetic field and stressed condition is used in many wonderful electrical inventions, and the same principle in nature is responsible for many startling, natural phenomena. Even in the most minute forms of cell life in animal bodies, the principles of magnetism are responsible for the continuance and reproduction of life. Illustration No. 4 shows the stressed field between the north (negative) and south (positive) poles. The negative is attracted to the positive and the positive reaches out to

take the negative; combining, they form a magnetic field of dual, active potentiality. The greater the magnets, the larger this field and the more powerful the force.

If two north or two south poles are brought together or near each other, their lines of magnetism repulse each other. This shows the principle that "like repels like and attracts unlike."

In illustration No. 5 we have another interesting principle illustrated. If we take the piece of steel bar shown in illustration No. 3, which has its north and south poles and its neutral part in the center of the bar. and saw it into four short pieces, we find that we have four perfect magnets, each having a north and south pole like the longer bar.

In illustration No. 6 we see the peculiar", yet strictly logical effects of the magnetic fields when two bar magnets are brought into relation to each other at right angles.

In illustration No. 7 a short magnetic bar is held under the paper and turned around rapidly. We see that the revolving magnetic field pulls the steel powder around with it.

Even a steel ball or piece of pipe may be magnetized, in which case the inside of the ball may have one pole and the outside another, or the opposite sides of the pipe may be of different polarities. This is indicated by illustration No. 8.

Bear in mind that when we speak of polarities in our lessons we are referring to the magnetic polarities, such as are shown in these illustrations. All living, vital bodies, whether mineral, plant, or animal, have magnetic polarities, and all such living things are therefore magnets, with both positive (south) and negative (north) poles or polarities; but in one sense or another each of these has one of the polarities predominating through greater strength. Thus we speak of a body being of a positive polarity or negative polarity, referring to the predominating magnetism of its two poles.

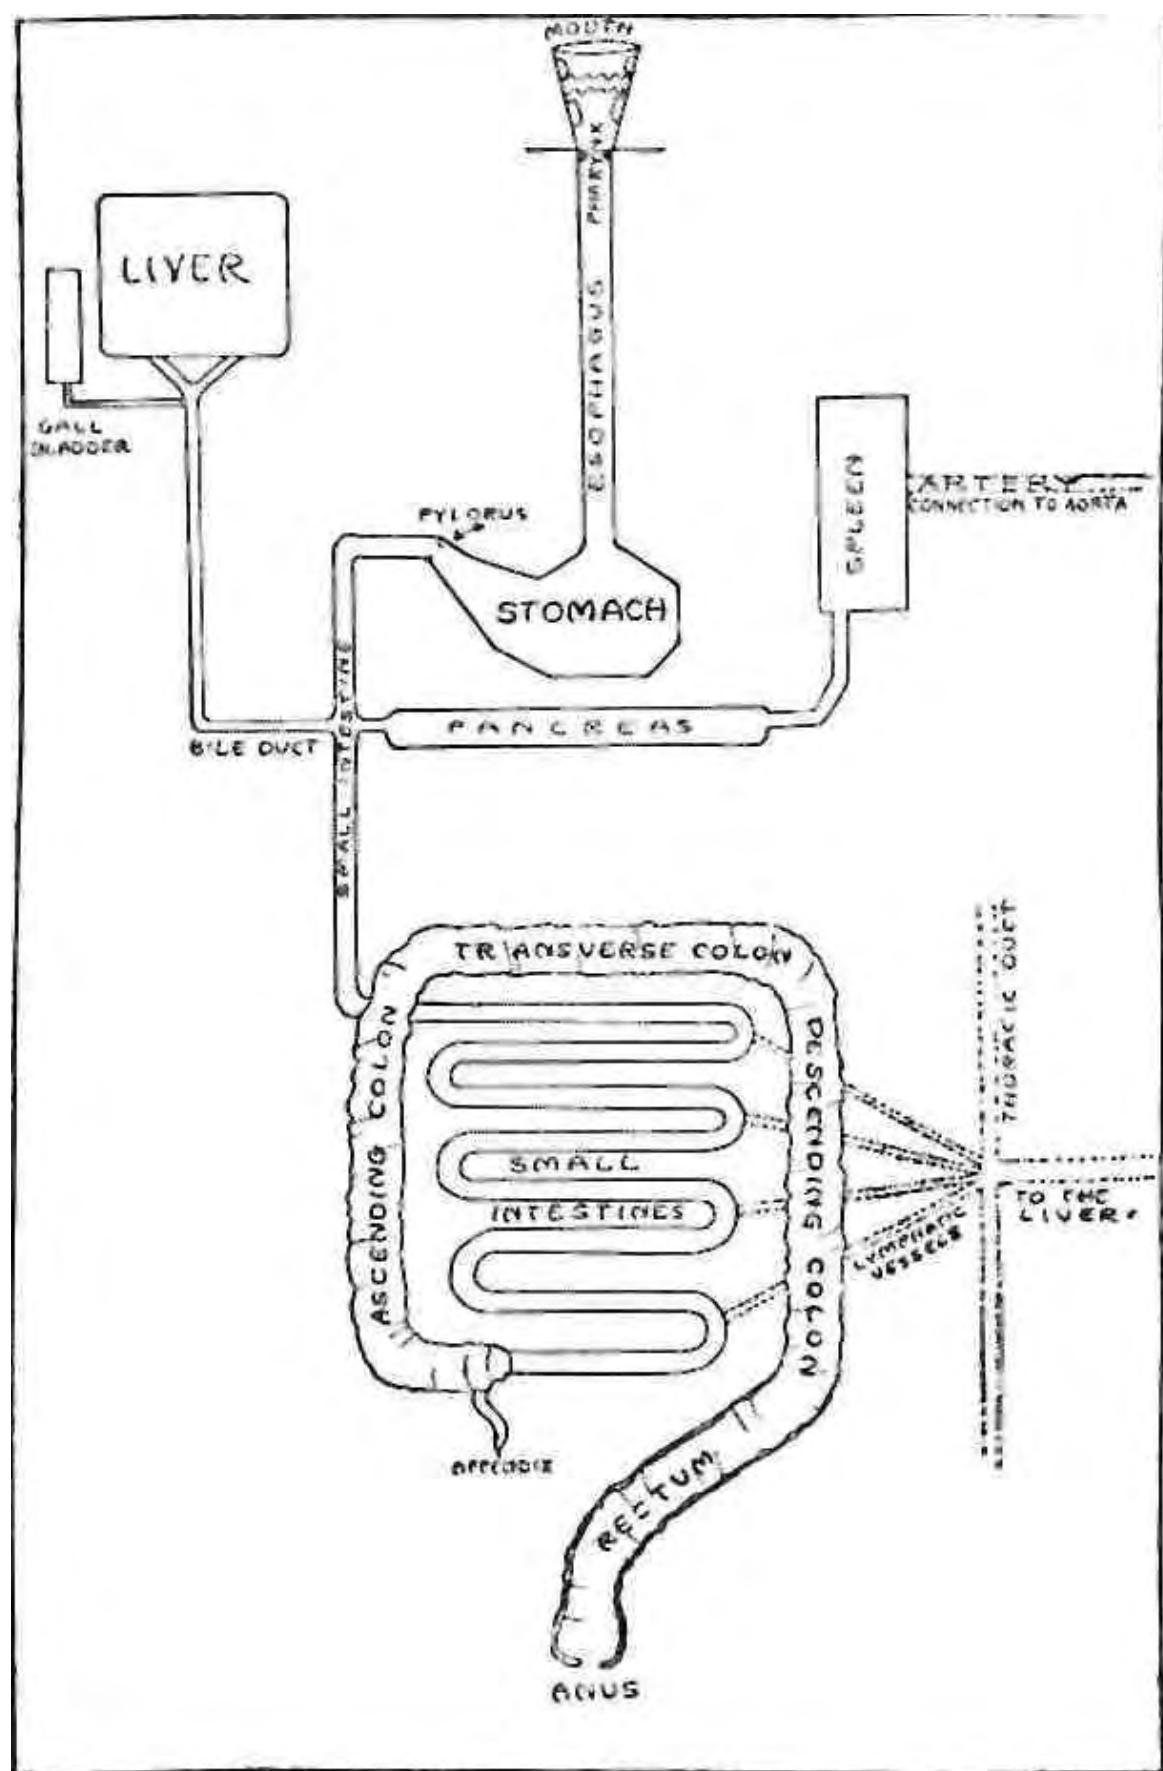

Chart 1

SIXTH TEMPLE DEGREE REFERENCES

EXPLANATION OF CHART 1

DIGESTION AND NUTRITION

The chart shown herewith is not to be considered as an anatomical drawing of the internal parts of the human body. The various organs and connections shown in the diagram herewith are arranged so that the mechanical action will be plain and understandable, and not in accordance with the true relations found in the human body. For instance, the position of the liver and gall bladder is not in keeping with the true condition. The same may be said of the spleen. And the connections from the intestines to the liver at the lower part of the page indicate where the liver should be located if we were going to be partly correct as far as the diagram is concerned. However, this mechanical drawing will serve a better purpose than any anatomical drawing you may find in any book.

It is well for our members to understand the mechanical process of eating and digesting food. We must keep in mind that food, whether in liquid or solid form, supplies the negative elements for the human body, just as breathing supplies the positive elements. When the positive elements in the breath of life come in contact with the negative elements of the physical body, there is a unit formed of the negative and positive polarities that constitutes life through the chemical action as well as the psychic action. This diagram and chart will help you to understand how the food is turned into the negative elements which release their negative electricity, or power, and thereby form one-half of the necessary vitality for life.

Food—as well as liquid—is taken into the mouth where, while being crushed, masticated, and reduced to particles—as in a crushing device at the bottom of a grinder—a certain amount of saliva mixes with it to prepare it for digestion. It passes through the pharynx in swallowing and goes down the esophagus (or throat) to the stomach.

In the stomach the work of churning takes place. The little valve or opening from the stomach to the intestines, called the "pylorus," remains partly closed during the churning process. After the stomach has expanded and turned the food from side to side and mixed it well, the "pylorus" automatically opens (and only when the proper time has come!) and the food passes into the beginning of the small intestines. On the way down the intestines there flows into the mixed food some bile from the gall bladder (through the bile duct) and also some "pancreatic fluid" from the pancreas.

These two fluids, mixing with the food, help to "cut" the food and dissolve it into its primary "negative elements."

Chart 2

EXPLANATION OF CHART 2

NUTRITION AND BLOOD CIRCULATION

The purpose of this diagram is twofold. It is unusually clear and explanatory—especially for our work.

First of all, we see how the nutrition from food is taken into the circulatory system. At the side of the chart we see the vessels which lead from the intestines. These connect with the liver. In this way all nutrition from the food we eat passes to the liver. Here it is filtered, purified, and formed into what we call "negative elements" of the blood. From the liver these "negative elements" pass into the principal vein carrying blood to the heart.

However, all fatty elements—which are separated from food in the process of digestion and assimilation in the intestines—do not enter the liver but pass through the so-called "thoracic duct" and go directly to the heart to form "lymph elements." This is plainly shown on the chart.

Now the "negative elements," forming negative blood, enter the right side of the heart and from there they are sent through the two "pulmonary arteries" to the lungs, to be made positive. That is, each negative blood cell is sent to the lungs to receive a positive polarity; and from the lungs this vitalized blood returns to the left side of the heart and there it is pumped out through the arteries to all parts of the body. As this positive blood, vitalized, travels through the system it uses up its vitality or positive polarity and again becomes only negative cells or negative blood. Where it changes from positive to negative it does its greatest work in what are called "capillaries." The negative blood must, therefore, return once more to the heart and from there be sent again to the lungs to be vitalized with a new positive polarity. This is a continuous process.

In our various breathing exercises we attempt to take more of the positive elements into our body than in the normal process of breathing. All the negative elements in the body will absorb, through the blood, as much positive vitality as we take in through breathing. In normal breathing, or what we should call subnormal breathing, we merely take in a small amount of the positive, which reaches the negative cells of the blood and charges only a small portion of the negative with the positive. By deeper breathing, or by holding the breath, as explained in our monographs, we cause more of the negative cells of the blood to become charged with the positive vitality of the air and thereby make our blood stronger or greater in its vitality. Other breathing exercises show us in our lessons how we can take on an additional amount of positive energy for psychic experiments and for special healing work. All of this, of course, is explained in detail in the monographs.

Chart 3

EXPLANATION OF CHART 3

PRINCIPAL ARTERIES

In our use of the blood for healing purposes, as well as for all mystic or psychic purposes, we deal with the vitalized or positive blood. This is the blood which travels through the arteries of the human body. Arteries carry the blood, the vitalized blood, from the heart to every part of the body to carry on the constructive work of nature. Veins, on the other hand, return the devitalized blood to the heart, and do not concern us gready.

The diagram on Chart 3 shows the principal arteries. From the upper part of the heart rises the great aortic arch (indicated by the figure 1. See also diagram on Chart 2). From this arch, or large vessel, branch all the arteries supplying the great amount of vitalized blood to the body.

Every artery carrying blood to the most minute part of the body joins one of the principal arteries shown on this diagram. In our work, whenever it is necessary to know the source of blood for any small artery, one need only refer to any medical or anatomical book, or dictionary, and see what principal artery it connects with, and then trace it to the principal artery on this diagram.

The arteries throughout the body carry the positive blood of the system. Therefore, the arteries radiate the utmost vitality in a physical and also in a psychic sense. For that reason all healing work, where the hands are used, takes advantage of the natural radiation of power from these arteries. In the hands of each person there are arteries as well as veins, and it is from the arteries that the hands receive their vitality as used in all healing work. Part of this vitality is the natural health and life of the physical body and part of it is the psychic power which is also in the blood and generated by the blood.

In the monographs and lessons of the Sixth Degree many references are made to methods whereby the blood can be stimulated or increased in vitality in certain parts of the body through certain methods known only to Rosicrucians. That is why this chart becomes very interesting and helpful in the Sixth Degree work. It is easy to understand how the vitalized blood in these arteries becomes weakened and less vitalized as it circulates around through the body and finally passes into the veins. But in some human processes it is necessary to keep the blood in these arteries from being weakened and less vitalized as it reaches the part or section of the body which is diseased. Our methods show the members how this can be accomplished. It is one of the important methods of healing work known only to the Rosicrucians.

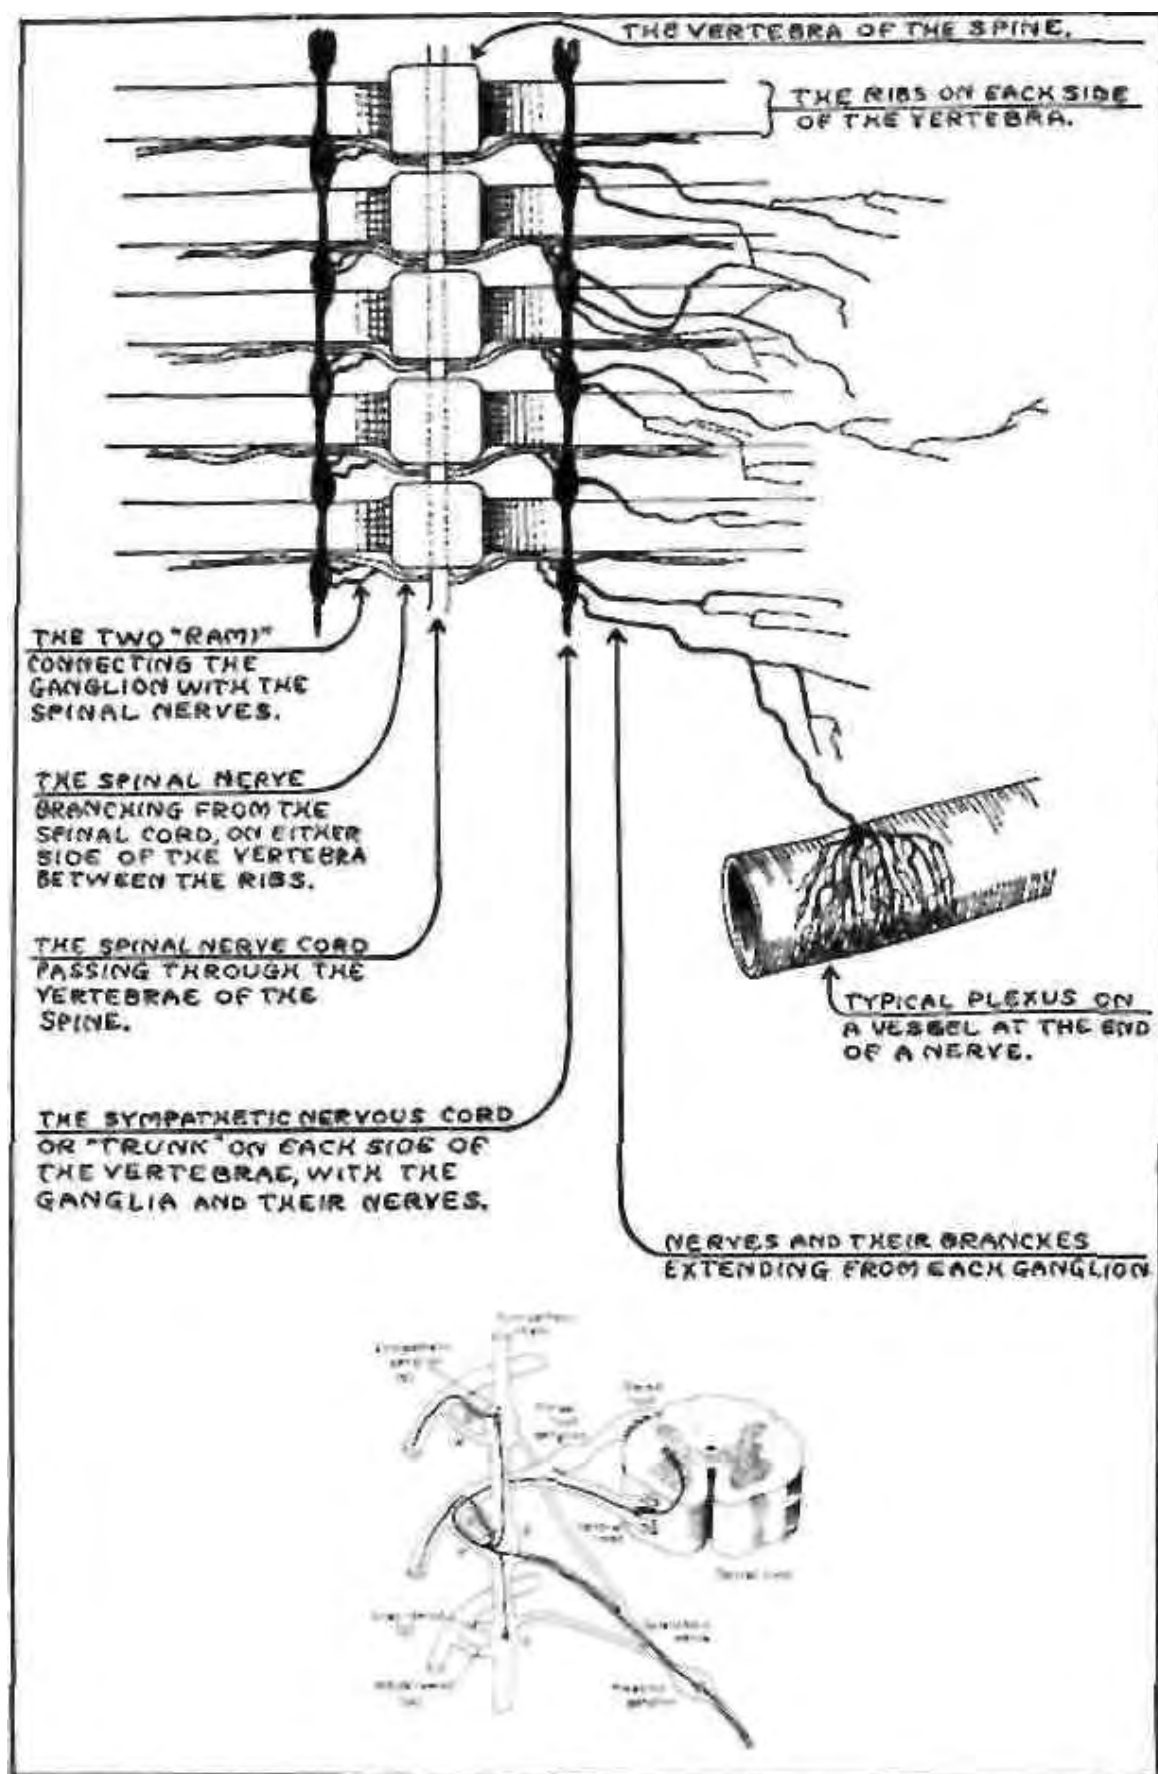

Chart 4

EXPLANATION OF CHART 4

GENERAL NERVOUS SYSTEM

The purpose of this chart is to show, in a mechanical fashion, the arrangement of the vertebrae of the spine and the location of the nervous systems.

In the upper diagram five vertebrae, with their ribs, are drawn mechanically as though they were sections of some metal framework of a piece of machinery. The center squares represent the vertebrae, while attached to either side of these vertebrae are the ribs. The vertebrae represent the sections of a spinal column (See Chart 6).

Through the center of the vertebrae passes the spinal nerve cord—a heavy cord consisting of nerves—the top of which is the medulla oblongata (as shown in the upper diagram on Chart 8) and is connected with the brain. This cord is the center of the general nervous system.

Branching out from this cord, between each two vertebrae, are smaller nerves, called spinal nerves, which connect on each side with the sympathetic trunks.

There are two sympathetic trunks, one on each side of the vertebrae of the spinal column (on the inside of the ribs) and running parallel with the middle spinal cord, as shown in the diagram.

Each sympathetic trunk consists of a heavy cord of many nerves with "ganglia" opposite nearly every rib. From each ganglion are two nerves, called "rami" connecting the spinal nerves to the sympathetic ganglia. And from each "ganglion" are sympathetic nerves going to various plexuses of organs, muscles, or vessels of the body. The reader's attention is called to the fact that man has two nervous systems—the Spinal Nervous System and the Autonomic Nervous System with its sympathetic and parasympathetic divisions. Both of these systems are shown in the diagrams on the opposite page, which of course are not true to life so far as anatomy is concerned. Please note that the sympathetic and parasympathetic divisions are dual or double; a part of it is on each side of the vertebrae of the spine. The Rosicrucians were the first to realize the wonderful work of the Autonomic Nervous System and its connection with the psychic body of man. Many systems of modern treatments deal with the Spinal Nervous System and any injury or pressure upon it; but the Rosicrucians center their attention upon the Autonomic, and point out in the easy, simple lessons of the Sixth Degree how the Autonomic Nervous System can be used to cure disease or relieve conditions that cannot be treated in any other way. For this reason the student is asked to keep in mind the fact that he is dealing with new principles in our work and that he will find many revelations and startling laws not generally known.

LEGEND OF CHART 4A

THE AUTONOMIC NERVOUS SYSTEM

Legend:

----- Sympathetic Division

----- Parasympathetic Division

B-brain structures: B₁ cerebral lobes, B₂ thalamus with B₃ pineal and B₄ pituitary, B₅ cerebellum, B₆ midbrain, B₇ medulla.

P —plexi: P₁ solar plexus, P₂ pelvic plexus.

G- ganglia: G₁ ciliary g., G₂ pteryopalatine g., G₃ submaxillary g., G₄ otic g., G₅ ganglion of Ribes (cranial termination of the sympathetic trunk ganglion system), G₆ superior cervical g., G₇ middle cervical g., G₈ inferior cervical g., G₉ celiac g., G₁₀ superior mesenteric g., G₁₁ inferior mesenteric g.

C - cervical spinal cord (cervical vertebrae 1-8)

T- thoracic spinal cord (thoracic vertebrae 1-12)

L - lumbar spinal cord (lumbar vertebrae 1-5)

S —sacral spinal cord (sacral vertebrae)

Chart 5

EXPLANATION OF CHART 5

DETAILS OF AUTONOMIC SYSTEM

In the upper drawing we see a section of the human body opened and the organs and muscles removed to show the sympathetic trunk cord and the parasympathetic Vagus Nerve on the right side of the vertebrae.

Just beneath each rib we see the spinal nerve running parallel with the rib. From these spinal nerves we also see the two "rami" uniting with the ganglia from the heavy sympathetic trunk.

A few vessels are also shown, and it will be noticed how the sympathetic nerves, from the various ganglia, branch out over the wall of the esophagus, the right bronchus, and over the aorta. This shows that a "plexus" covers the wall of a vessel or organ (as also shown on Chart 4), radiating outward into a number of nerve endings, called synapses.

The lower diagram shows an enlarged view of a section of the sympathetic trunk giving an exact picture of the ganglia, their size, form, and location.

(It will prove interesting to the deep student to read in various physiology textbooks on the "Nervous System" the diversified explanations and theories of the purposes and formation of "Ganglia" and "Neurons.")

The reason for the two forms of nervous systems in the human body will be easily understood when we say that the Spinal Nervous System conveys energy and power that is of a gross nature, to take care of the physical actions and functions of the human body. The Autonomic Nervous System, however, belongs to the psychic part of man, and there is a place in the human body, shown in our monographs and thoroughly explained, where the psychic power and energy are generated and sent into the Autonomic Nervous System. This system, therefore, uses a higher rate of energy, which is almost a cosmic energy, and this energy can be used for the healing of diseases and curing of conditions because its real purpose in the human body is to carry on the reconstructive actions in the human body. This function of the Autonomic Nervous System was not known until the Rosicrucians explained it and even today it is thoroughly understood only by those who have the lectures and lessons of our work. It makes healing and the prevention of disease understandable and gives every one of our members a wonderful power not possessed by those who do not know the laws and principles.

Chart 6

EXPLANATION OF CHART 6

NAMES OF VERTEBRAE AND NERVES

The spinal column consists of 25 or 26 pieces, in the average body. The 25th piece—at the bottom of the column—may have the 26th section loosely attached to the end of it, or this 26th section may form part of the 25th. However, originally, at some time, the large 25th section consisted of nine definite divisions, each having the same purpose as each of the separate vertebrae above. Therefore, we continue to look upon the spinal column as consisting of 33 sections (that is, counting the so-called "Atlas" as the first section). Upon the first section—the "Atlas"—rests the skull, which, from one viewpoint, forms another section of the spine, and would, therefore, make a 34th section.

However, using the plan or diagram of the spine as usually adopted by all textbooks on anatomy, we have, as shown in the two diagrams opposite, 33 or 34 sections or divisions. Through this spine runs the spinal cord of the general or Central Nervous System. And branching out from between the vertebrae, or sections of the spine, are two spinal nerves. These come from the spinal cord running down through the center of the vertebrae, and pass right and left from the spine. Joining to these spinal nerves are the two "rami" on each side. (Refer to the lower diagram on Chart 4.)

In our work we have a "nerve note" and a "music note" for each of the spinal nerves between the vertebrae. These are plainly shown on the diagram opposite, as well as the universally adopted name of each vertebra.

In the monographs of the Sixth Degree there are complete instructions as to how members may easily take advantage of the relationship between the various nerves and their association with colors, music sounds, and nerve energy. We show our members that music notes will arouse certain connections of the Autonomic Nervous System into special activity and thereby cause the energy of these nerves to function more freely and completely. The same is true in regard to colors. And we show our members how even the mind, or thought waves, can reach the sympathetic connections and help in curing or relieving conditions. All of this is part of the wonderful system of the Rosicrucian teachings, laws, and principles.

Chart 7 (Plate 1)

EXPLANATION OF CHART 7

Plate 1

FUNCTIONS OF THE GANGLIA

(Study first the Explanation of Symbols given at bottom of Plate 2
on next page.)

"A" is the sympathetic trunk running to the brain and down through the body.

Connected to the first four rami is the Superior Cervical Ganglion. Branching from this ganglion are six sympathetic nerves with their extensions leading to plexuses numbered 1, 2, 3, 4, 5, 6, 7, 8, and 9, and to two other ganglia numbered 1A and 11, and to one spinal nerve numbered 10. We also note that from the second ramus one sympathetic nerve reaches out independent of the ganglion and connects with the nerve ending at 1A.

The 4th, 5th, and 6th rami connect with the Middle Cervical Ganglion and this ganglion has two nerves extending from it leading to plexuses nos. 12 and 13.

The 7th and 8th rami connect with the Inferior Cervical Ganglion from which 5 nerves extend leading to plexuses nos. 13, 18, and to spinal nerves nos. 17, 19, and 20, and indirectly to spinal nerve no. 22, which connects with plexus no. 23.

Between the Middle Cervical Ganglion and the Inferior Cervical Ganglion there is a nerve acting as a "loop" and connecting the two ganglia as shown on the diagram. From this "loop" there are three sympathetic nerves leading to plexus no. 14, and spinal nerves 15A and 15B.

From the 6th and from the 7th rami we see sympathetic nerves extending independent of the ganglia to spinal nerve no. 16, and spinal nerve no. 20.

The connections through the various parts of the body indicated by charts seven and eight form the most complete outline of this subject ever presented to any student. These charts and the references to them in the Sixth Degree constitute the work of many years of scientific research by the greatest authorities of Europe and America. The Rosicrucians were the first to have a complete outline of this system and to know exactly what part of the human body was connected with every other part. Therefore, our members will find in these charts and in the monographs of the Sixth Degree, a complete system that is not the personal opinion of any one man or the result of some discovery. It means that thousands of experiments had to be made to test the principle of each idea as it was revealed through experimentation, and that only after tests and trials by many thousands of our members in many lands for many years were we ready to put this matter into the teachings for practical application.

The subject may look difficult when examined from these charts, but the monographs in the Sixth Degree are so simply worded and so intensely interesting that long before the student realizes that he has been studying he is really absorbing knowledge that would take many

Chart 7 (Plate 2)

years to acquire through any regular school of medicine or physiology. The many monographs of the Sixth Degree arranged in even steps gradually give the student a power of knowledge that cannot be measured in any way except from the Rosicrucian standard, and that means the highest standard of efficiency and power. Hundreds of our students every month tell us that they have learned more about their own bodies, and how to prevent disease and how to be strong and healthy, than they ever learned in any of the colleges or schools to which they have gone. Even physicians and scientists highly endorse the unusual knowledge contained in this Sixth Degree.

EXPLANATION OF CHART 7

Plate 2

FUNCTIONS OF GANGLIA

(Continued)

From the 9th ramus (which is located between the 1st and 2nd Thoracic Vertebrae) we have the First Thoracic Ganglion. From this extend three sympathetic nerves connecting with spinal nerves nos. 19 and 20, and leading to spinal nerve no. 21.

The 10th, 11th, 12th, and 13th rami have separate ganglia, but these are connected by four sympathetic nerves which lead to plexus no. 24, and connect indirectly by way of nerve no. 25 with the plexus no. 5. Connection is also made with sympathetic nerves leading to plexus no. 30.

By studying the charts in this way one can easily figure the connections made by each ramus and each ganglion.

The "Plate Two" of this chart continues "Plate One" and shows all the connections made by the other rami.

Please note that each plexus and nerve ending is numbered, but is referred to only upon occasion, if found necessary to give additional explanation.

Chart 8

EXPLANATION OF CHART 8

DETAILS OF HEAD AND NECK

Reference to the upper drawing on the opposite page will help the student to understand the location of the vertebrae in the neck. One should note that in the neck the vertebrae lie far from the surface and cannot be felt as is possible in the thorax of the body. The 7th and 8th Cervical Vertebrae are usually the first to come near the surface of the body. The one most prominent in its projection in the neck or just below the neck is the 1st Thoracic Vertebra.

L The Oral Vestibule, between teeth and Up

2. Oral Cavity

3. Hyoid Bone

4. The Epiglottis

5. Thyroid Cartilage

6. Cricoid Cartilage

7. Tracheal Cartilage

8. The Larynx

9. The vertebrae of the spine with the spinal cord running from the medulla oblongata down through the center of each vertebra.

The lower drawing shows the principal arteries of the head connecting on each side of the neck with the Common Carotid Artery (see Chart 3). It also shows location of the beginning of the sympathetic trunk on each side of the neck.

10. The Superior Cervical Ganglion of the sympathetic trunk. (Just back of the ear, on a line with the mouth.)

11. The Middle Cervical Ganglion. (On a line beneath the Superior Ganglion, and level with the "adam's apple" of the throat.)

SNOW CRYSTALS

ICE CRYSTALS

MINERAL CRYSTALS

ACID CRYSTALS

CRYSTALLOGRAPHY

In various parts of our monographs reference is made to the law of the triangle in the composition of matter, the manifestation of matter, and the manifestation of Spirit Energy and psychic energy. And in other places reference is made to crystallography, or the law of crystal formation in matter.

Crystallography so beautifully illustrates the law of the triangle in all nature that we urge the student to investigate the subject in encyclopedias or other reference books. For those who cannot do this, we append here a short article on this subject. Before reading that article, however, let us call your attention to the chart shown on the opposite page.

Illustration No. 1 shows some of the typical forms of crystals as known to science. These are but a few out of a great many, and attention is called not only to the very evident working of the law of the triangle, but also to the beautiful grace in form.

In Illustration No. 2 we see how the law of the triangle shows itself in connection with a demonstration of vibrations. By placing a piece of glass on a pedestal and sprinkling sand on the glass, one can manifest the vibrations by drawing a violin bow on the edge of the glass and cause the vibrations to flow across the surface of the glass and thereby arrange the sand in various forms, as shown in the seven black squares of Illustration No. 2. In the lessons of our higher Degrees, where the metaphysical principles are taught, we learn that thought vibrations can be directed into designs and "forms" just as with the sand and the physical vibrations on the glass.

The rest of the chart shows how nature adheres to the law of the triangle in the formation of snow crystals, ice crystals, mineral crystals, and acid crystals. Nature is truly an artist in her great work, but solely because she uses system and order.

CRYSTALLOGRAPHY

THE SCIENCE WHICH TREATS OF CRYSTALS

A crystal is a portion of inorganic matter with a definite molecular structure and an outward form bounded by plane surfaces called "crystal faces," and conforming to the angles of a triangle. These crystal faces result from the regular arrangement of the particles of the substance undergoing solidification, every addition of matter to the crystal in the process of formation being piled upon the particles already solidified as cannon balls or oranges are built up into a pile. All of which reveals the "Law of the Triangle." The reason for this is that every minute particle of crystallizing substance, which we

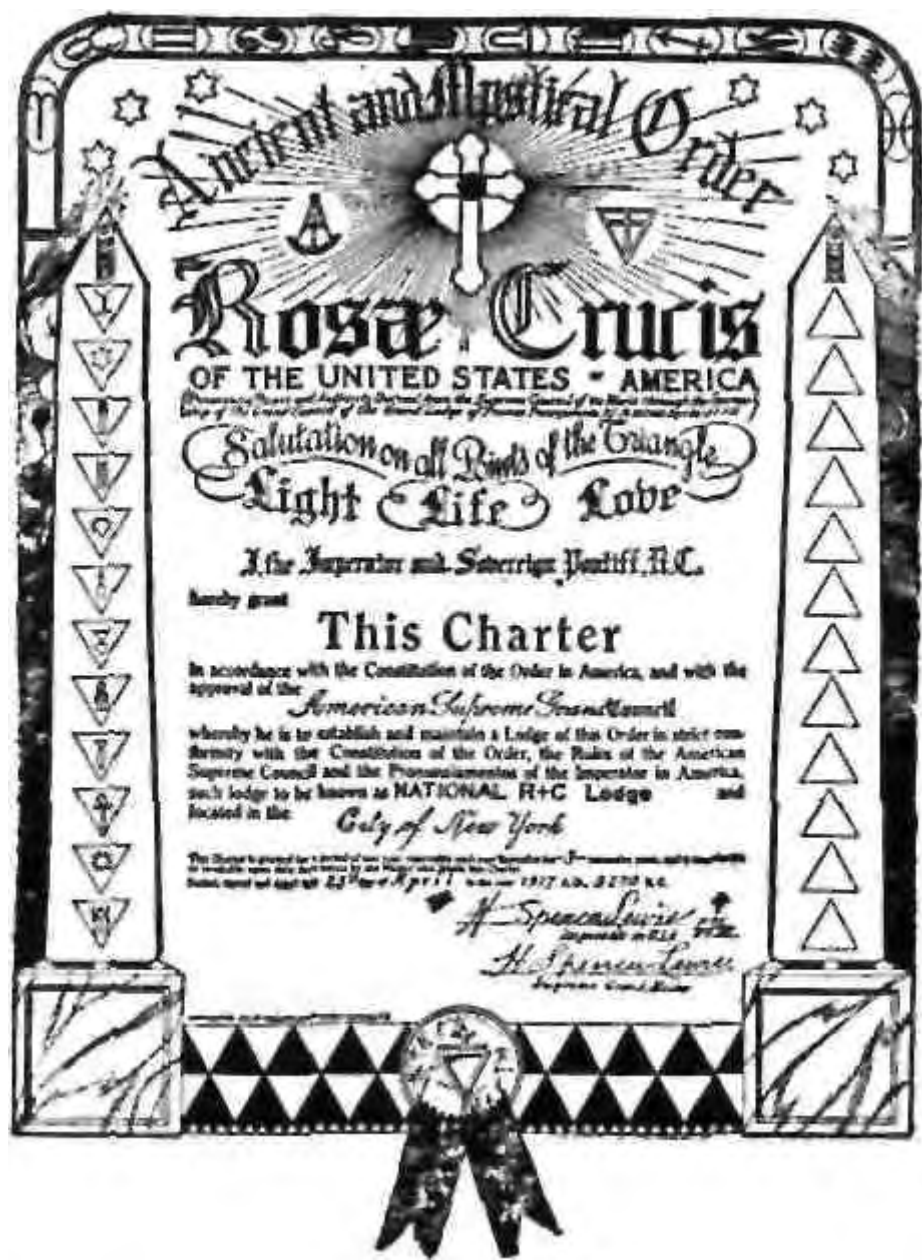

call a "crystal molecule," has certain lines of attractive force by which it gathers to itself other crystal molecules of the same substance, in the same way that a magnet attaches itself to a piece of iron or to another magnet. Crystal molecules of different substances generally have different lines of attraction, some being of different intensity; hence it follows that in most cases the solid formed by the piling together of the crystal molecules of a certain chemical compound has an outward shape characteristic of that compound. We also assume that the direction of attraction of the unit of crystal accretion (the crystal molecule) is dependent upon the structure of the chemical molecule of the substance crystallizing; that is, made up of a number of chemical molecules grouped together. Hence only elementary chemical substances and definite chemical compounds form crystals.

So that the crystal molecules of a substance may come into sufficiently close proximity to admit of their being mutually attracted along their lines of crystallizing force, it is necessary that they should be crowded together by reason of the contraction of the space in which they are confined. This happens where a mass solidifies by cooling, or when by evaporation the amount of a substance dissolved in a liquid (such as water) exceeds in quantity the amount which the solvent can retain in solution under the conditions obtaining. Either condition results in the formation of crystals. A condition of formation more rarely met with is that in which crystals form directly from vapors, as in the case of iodine or chloride of ammonia.

The best means of studying the formation of crystals is afforded by the evaporation of a solution of some soluble compound, such as salt or blue vitriol, until it is supersaturated, when crystals of the dissolved substance will be thrown down. If two substances, such as salt and borax, are dissolved in the same solution, the result of evaporation will be crystals of both substances, each set of molecules building themselves up into distinctive forms. Solutions show considerable inertness, and it is often necessary to start the process of crystallization by introducing some solid substance (a crystal of the substance) to form a nucleus for the growing crystal.

The outward form (the solid bounded by plane faces) is only an expression of the regular grouping of molecules which takes place when a substance crystallizes; consequently we may expect other evidences of the molecular arrangement. These evidences become apparent when we consider the physical properties, such as the transmission of light, heat, and electricity through crystals. A sphere cut from a quartz crystal does not expand equally in all directions when heated, as does a sphere of an uncrystallized substance, such as glass or amber; neither does a piece of beryl transmit polarized light in the same way as does a piece of glass of the same shape. This latter property of crystals is of great use in the detection of imitation gems. In the sphere of quartz we find that the action of heat pulls the molecules apart in one direction more than in other directions and the sphere becomes an ellipsoid. Substances like glass, showing no evidences of crystallization, are said to be amorphous. A substance

in which the molecules have responded to crystallization but in which crystal faces have not been developed is said to be crystalline. Crystalline masses are often the result of the close crowding of crystals to the exclusion of the development of crystal outlines.

THE CHARTER GRANTED TO THE FORMER
NATIONAL ROSICRUCIAN LODGE

DALTON'S LAW OF PROPORTIONS

THE STORY OF THE ATOM

(Especially Prepared for All Members of the Order)

By DR. H. SPENCER LEWIS, F. R. C.

Revised to meet modern research findings and interpretations by Dr. Onslow H. Wilson, Ph.D., F. R. C.

Brothers and Sisters, permit me to introduce Dr. John Dalton, the public expounder of the atomic laws, the mystic of his day, and the scientific puzzle of the scientific world.

Dalton has a special interest for us, because he WAS a member of the Order and DID attend the lectures and worked in the laboratory of the Lodges in two different cities where he pursued his experiments and observations. The principles upon which he worked, and which formed the foundation of his Philosophy of Chemistry, he learned in our Lodges in the first three Degrees and in the 8th, 9th, and 10th Degrees. Every member of our Order today, who has passed through the First Degree and then through the Fourth knows that Dalton's principles (as they are outlined here in his own words) are a logical result of the regular study of our teachings. The great mystery, which puzzles the scientists today, as to "where did Dalton get his first ideas, and did they come from Newton?" is easily answered by those who are in our Order; for Dalton and every other member MUST receive such principles in order to understand even the elementary work of our Degrees.

But let us consider the value of Dalton's work. Soon after he had made some important discoveries he was called upon to address certain scientific bodies, the most important in the country at the time, and so great became the interest in his work that he decided, like many an optimistic disciple of truth, to help the science of chemistry and physics by publishing some of his theories in such form as would be available to those very scientists who later condemned his work as "crude."

Dalton's papers, as published by him in 1805 to 1808, contained not all the laws he had formulated by his researches and experiments. He knew well enough that to give all the laws, to explain all the workings of the R. C. Triangle in the composition of matter, as now explained to all our members of the First and Fourth Degrees, would be to reveal that which would never be understood by the uninitiated and always misunderstood by his critics. But Dalton did refer to the triangle in some places of his manuscript and in some of his public speeches. In fact, the triangle was the key to his work, the use of it becoming an obsession with him. All in all, Dalton made many thousands—not hundreds—of observations of the workings of nature and kept them well tabulated and classified. He made many hundreds of laboratory experiments, and he had students and friends cooperating with him in making other experiments. He climbed mountains

almost daily to register certain effects; he had certain instruments in his home and outside of it constantly attuned to register various manifestations and demonstrations of nature. He lived the life of a hermit in many ways; isolated from all pleasure, building his own instruments, devising his own methods, and accumulating facts which would take a dozen volumes to record. And all this because he searched for the triangle and its law in everything that was or seemed to be. And among all these trials he made 200,000 meteorological observations which are still preserved in records owned by a foreign scientific society.

In a letter to Jonathan Otley in 1796 (six years before he made public much of his discoveries) he said: "I may answer that my head is too full of triangles, chemical processes, and electrical experiments to think much of marriage."

In the matter which follows, I will attempt to make plain to our members the laws which Dalton evolved, based upon the working of the triangle. I will make plain to them that which may not be so plain to those not initiated into our Order. Furthermore, I have added to Dalton's original charts, reproduced herewith, those points and illustrations regarding Atoms which he did not make public. The charts, themselves, have not been published in this form, or complete in any form, since his transition, and no doubt students of chemistry generally, as well as research workers in the field of physics, will appreciate this rare treat.

The life of Dalton may be learned from almost any good reference book or encyclopedia. But what follows is taken from his own writings and from my own Rosicrucian manuscripts and Secret Mandamuses. It gives a fair example of how complete and replete with valuable, unpublished, and little known information are the papers possessed by the Masters of our Order.

Passing then from the generalities to the specific points of Dalton's work, we must make reference to the charts from time to time. I will quote Dalton's own words whenever his language is plain enough for our members (for it is often robed with symbolism which requires interpretation). But I shall use my own methods of presenting the facts more often, and when statements are not directly quoted they are in my own words, giving the facts as I KNOW them and have had them demonstrated to me in the Order's work and in my own experiments in a typical R. C. laboratory.

It is difficult to approach a subject like this, for so much leads up to it which must be passed in a short magazine article. But essentially, the first two monographs of the First Degree of our Order show that matter is composed of those particles which manifest the first distinction of material expression.

In other words, the particular things which make a book are the pages in size and number, the cover, and the title page. The pages alone do not constitute a book; the cover alone, regardless of its appearing as a book and its having the distinction of a book, does not constitute a book; nor does the title page of a book, alone and independent, constitute a book. Yet each of these things is necessary to a book; without them a book is not possible, and each must have certain quali-

ties of its own in order to make it assist in composing a book. Thus it is with matter. Matter as a whole is a composite thing. But the elements which compose it may have the natural distinctions or qualities necessary to make matter, without being matter themselves. Therefore, the Rosicrucians start their study of matter with the nature and quality of that which enters into the composition of matter, and one of the particles thus studied is the ATOM. . . .

Dalton did not discover the Atom, nor did he ever publicly or privately claim to have discovered it. But he did find that the Atom was subject to some wonderful laws, and these laws are unchangeable and universal in their application.

Starting, then, with the premise, the FACT, that matter in all its expressions, in all its classifications, is composed of molecules, and that these molecules are only a collection of Atoms united and held together by some force or power, we are at once ready to study the Atoms themselves. And our first conclusion is that there must be different kinds of Atoms in order to make different kinds of molecules of matter. This conclusion finds confirmation in the findings of modern science. Modern scientists now know that there are at least 110 different kinds of atoms. In fact, based on modern scientific computations, it now appears that it may not be possible to have more than 144 different types of atoms. Should validation for this prediction be forthcoming, it would constitute substantiation for yet another Rosicrucian statement of principle.

Dalton proceeded to determine that there was not only a definite quality to each type of Atom, but also a definite weight to each type of Atom, as he called the other distinctive feature of each Atom. And—right here I find myself in a quandary. I must explain what is meant by "weight," and to do so I would have to refer to terms which I do not care to put into public print. Members of our First Degree will recall that matter is made manifest by a certain condition, a certain attribute, which distinguishes one kind of matter from another. This feature of matter is according to numbers—and the difference in the numbers makes a difference in the manifestation of matter. The particles which compose Atoms—as explained in the monographs of the First Degree—are a result of this distinctive condition which has different numbers of expression. Now, when Dalton referred to the "weights of Atoms" he did not refer to "weight" as it is usually understood by the word. Chemistry has always supposed that he did mean "weight" in its physical and common sense, and gradually they have found that there is a difference between their observations and what they thought he meant. That has occasioned considerable criticism of Dalton's theories, and I do not suppose that chemists will give any credence to my explanation, so I will not explain to them but to our own members.

So Dalton began to classify Atoms according to their inner nature. Here it should be mentioned that the Atom, in Frater Dalton's view was essentially that proposed by Democritus in the fifth century B.C. For Democritus the Atom was that point of indivisibility beyond which a piece of matter could no longer be divided. An Atom was seen as a solid sphere in which no empty space or void was to be found.

Therefore, when Frater Dalton referred to the "inner nature" of atoms he referred to their vibratory nature. On the other hand, if a modern scientist were to refer to the "inner nature" of atoms, automatically one would think of the number of units of positive electricity associated with the nucleus. Yet, interestingly enough, in either case one would be correct in saying that atoms are classified in accordance with their inner nature. But what does modern science have to say that might correspond to the Rosicrucian principle of vibration in relation to this "inner nature"?

Rosicrucians have long contended that all matter is vibratory in nature. The famous Einstein equation, $E = mc^2$, is but a modern restatement of this age-old principle. When the Einstein equation is applied to a particle of matter, a value representing the total energy-content of the particle is obtained. This quantity of energy, often referred to as a packet or quantum of electromagnetic radiation, is expressible in terms of vibration. When the total mass (weight) of atoms is converted to vibration in accordance with the Einstein equation, all known types of atoms may indeed be classified, sequentially, in order of increasing vibration. However, according to current views, the mass or weight of an atom is not that quality which imparts to it its distinctive chemical character. Rather, it is the atomic number, the number of units of positive electricity in the nucleus which determines the chemical character of an atom. To date 106 different types of atoms have been identified. Accordingly, types of atoms differ from one another solely on the basis of the number of positive units of electricity in their nuclei, i.e., on the basis of their "inner nature." The simplest type of atom, hydrogen, has only one unit of positive electricity (associated with the proton) in its nucleus. The next simplest, helium, has two units, the next has three units, etc. As may be expected element number 106 has 106 units of positive electricity in its nucleus. Thus, for the modern scientist the "inner nature" of an atom is associated with the number of units of positive electricity in its nucleus.

When we, as Rosicrucians, say inner nature, we refer to that nature which atoms have and which is a result of the smaller particles composing them. Our members will remember that matter is expressed by the triangle in our work, and that at the three corners of the triangle are certain steps in the evolution or composition of matter. The Atom is at the second point. So I will call Atoms point TWO of the triangle, and the particles which compose them, point ONE of the triangle. Now point one is a result of certain numbers and these numbers assist in composing the Atoms. Therefore, Dalton worked to discover the NUMBERS COMPOSING EACH ATOM. He avoided the large figures and used a scale by calling one thousand, one; two thousand, two, etc., up to 200,000, which he called 200, etc. That made it easy to write brief notes. To date no set of numbers associated with modern ideas about the vibratory nature of atoms have been found to correspond with those of Dr. Dalton. The result of Dalton's years of work produced what is to be found in the upper part of PLATE ONE.

Now, because of the extreme difficulty in assigning "weights" or vibration numbers to individual atoms, a scale of relative numbers proved to be very useful. To make this clear, it is necessary to digress for a moment and invite you to reason, step by step, with Frater Dalton. In this way we shall each share in the inner experience which Frater Dalton must have had in arriving at his conclusions.

In the first place, it should be noted that Frater Dalton was, among other things, a meteorologist. He was therefore vitally interested in the atmosphere as a mixture of gases. He constantly analysed gases in order to determine their compositions. Among the many gases that he studied were the two now known as methane and ethylene. Frater Dalton discovered that in the gas methane there were always six parts of carbon in two parts of hydrogen. In the gas ethylene he found that there were always six parts of carbon to one part of hydrogen. Frater Dalton also analysed the two gases now known as carbon monoxide and carbon dioxide. He found that in carbon monoxide there were always six parts of carbon to eight parts of oxygen, while in carbon dioxide there were always six parts of carbon to sixteen parts of oxygen.

Frater Dalton performed thousands of analyses, on the basis of which he was able to formulate his laws of Definite Proportions and Multiple Proportions. Nevertheless, he was still faced with the question of how he might combine the pieces of information at his disposal to build a comprehensive theory accounting for the manner in which atoms combine in terms of their "weights." How could one devise a system whereby relative "weights" could be assigned to each type of atom? In order to answer this question, two more pieces of information are needed.

Frater Dalton knew that hydrogen gas was the least dense, and must therefore be composed of the lightest type of all the atoms known. He also knew that if two things, A and B, are both equivalent to a third, C, then A and B must also be equivalent to each other. Let us examine how these principles were applied to the two pairs of gases mentioned earlier. Recall that Frater Dalton discovered that:

- 1 One part of hydrogen (A) combined with six parts of carbon (C) to form ethylene;
2. Eight parts of oxygen (B) combined with six parts of carbon (C) to form carbon monoxide.

For Frater Dalton then, one part of hydrogen, A, and eight parts of oxygen, B, were both equivalent to six parts of carbon, C. Thus one part of hydrogen, A, is chemically equivalent to eight parts of oxygen, B. In a bold and daring manner Frater Dalton concluded that an atom of carbon must "weigh" 5-6 times more than an atom of hydrogen, while an oxygen atom must "weigh" 7-8 times more than an atom of hydrogen. He therefore assigned a "weight" of one to the hydrogen atom, a "weight" of five to the carbon atom and a "weight" of seven to the oxygen atom. See Table I. All other "weights" were similarly assigned in this relative manner. The same method of assigning relative weights is still in use today.

TABLE I—LIST OF SIMPLE ELEMENTS

No.	Nature	"Weight"
1.	Hydrogen.....	1
2.	Azote (nitrogen)	5
3.	Carbon or Charcoal	5
4.	Oxygen	7
5.	Phosphorus	9
6.	Sulphur	13
7.	Magnesia	20
8.	Lime	23
9.	Soda.....	28
10.	Potash	42
11.	Strontites.....	46
12.	Barytes.....	68
13.	Iron.	38
14.	Zinc.	56
15.	Copper	56
16.	Lead	95
17.	Silver.....	100
18.	Platina	100
19.	Gold	140
20.	Mercury	167
21.	Nickel.....	25 or 50
22.	Tin.....	50
23.	Bismuth.....	68
24.	Antimony	40
25.	Arsenic.....	42
26.	Cobalt.....	55
27.	Manganese	40
28.	Uranium	60?
29.	Tungsten	56?
30.	Titanium	40?
31.	Cerium	45?
32.	Magnesia.....	17
33.	Alumine	15
34.	Silex	45
35.	Yttria.....	53
36.	Glucine.....	30
37.	Zircon.....	45

It should be noted that a number of "elements" listed in Table I notably Magnesia, Lime, Soda, Potash, Strontites and Barytes have been demonstrated to represent complex molecules from which simple elements have been isolated. It should also be noted that because of difficulties in obtaining exactly reproducible results some "elements" were assigned more than one "weight"—e.g.. Magnesia.

PLATE ONE

In Plate I, we have Dalton's division of Atoms into Elements. Let us consider first the "Simple Elements," numbered from 1 to 37. These numbers do not refer to "weights," size, or nature. All numbers on the plates refer only to the matter in the text.

Dalton invented a series of symbols to represent the Atoms, each symbol based upon a circle with a definite mark or letter inside. Many of these symbols he took from the Rosicrucian work, especially that which pertains to astrology, alchemy, and the Triangle and Cross. (Note, for instance, symbols numbered 1, 5, 6, 7, 10, 11, 20, 32, 33, 34, 35, 36, and 37.)

Erater Dalton's system of atomic symbols permitted the symbolic representation of a molecule by the combined symbols of its constituent atoms. See Plate I, Nos. 38-51. Although modern scientists have devised their own symbols for the various types of atoms, they continue to use Prater Dalton's method of representing molecules by the combined symbols of their constituent atoms. The modern symbol for the hydrogen atom is H, for the carbon atom it is C, while for the oxygen atom it is O.

DALTON'S LAW OF PROPORTIONS

It is in the combining of two or more Atoms to make another form of matter, another manifestation of matter, that Dalton discovered the workings of the triangle. He did not express it in the terms of the triangle as we do in our own Temple monographs, for his lectures were for the public, but he did express it in this wise: "One added to two to make one is equivalent to two added to one to make one; and in adding two to two to make one, or one to three to make one, the same law in its square is maintained by its conformity to the law of three; and every other multiple is a duplication of the original law."

This is beautifully illustrated in the charts herewith and as we come to each example I will call attention to this law.

BINARY ELEMENTS

Borrowing from the well known principle of minimization of energy or least action in physics, Frater Dalton concluded that "when two types of atoms combine to form more than one type of molecule, then the simplest molecule always contains only one atom of each type." Applying this principle to the four gases mentioned earlier, Frater Dalton assigned a chemical formula of CH for the gas ethylene, CH₂ for the gas methane, CO for the gas carbon monoxide and CO₂ for the gas carbon dioxide. And because one part of hydrogen is chemically equivalent to eight parts of oxygen, a molecule of water, for Frater Dalton, was assigned the formula HO.

In Table I, No. 38 represents "one Atom of water or steam, composed of one Atom of Oxygen and one of Hydrogen, retained in physi-

Dalton's Law of Proportions (R+C)

Grand Lodge

Plate 1

cal contact by a strong affinity and supposed to be surrounded by a common atmosphere of heat; relative weight is 8."

The above are Dalton's own words, and they mean just this: that water or steam, in its molecule, is composed of one Atom of Hydrogen and one Atom of Oxygen. The "weight" of Hydrogen is 1; the "weight" of Oxygen is 7; therefore, the combined weight of the two, making the molecule of water or steam, is 8. See Table I. The two Atoms are held together by the strong affinity of vibrations, which is the quality referred to by Dalton when he uses the word "weight" symbolically to represent this quality as explained earlier in this article. This strong affinity, or quality, or power, is explained further on by charts and words.

When Atoms unite as do Hydrogen and Oxygen and others, they do so according to a law. This statement has been generally confirmed by modern scientists. Nevertheless as any modern Chemistry text will show, the general principle that simplest molecules always contain one of each type of atom entering into its composition, works only sometimes, at best. Thus in the examples cited above, modern science has confirmed that carbon monoxide does indeed contain only one atom of carbon and one atom of oxygen. Consequently, despite the differences in names, the formula of CO is correct both in the modern system as well as in that of Frater Dalton. Similarly, the formula for carbon dioxide is CO₂ in both systems. However, when we try to apply the principle to methane and ethylene we run into severe difficulty. Modern methods confirm that the ratio of hydrogen-to-carbon in methane is indeed twice that in ethylene. Nevertheless, modern science has established that the molecular formula for methane is CH₄ while that of ethylene is C₂H₄. Thus we see that according to modern formulations, the ratio of the number of hydrogen atoms to carbon atoms in methane is 4:1, whereas for ethylene it is 2:1, rather than the 2:1 and 1:1 as Frater Dalton thought. What then was the source of Frater Dalton's error?

Through the benefit of hindsight, it now seems clear that the "one part of hydrogen" to which Frater Dalton referred in actuality did not correspond to one atom of hydrogen as he assumed. Frater Dalton applied the principle of "LIKE REPELS LIKE" to atoms and reasoned that like atoms repel each other and hence could not combine to form molecules. As a consequence he did not suspect that his "one part of hydrogen" actually corresponded to one molecule of hydrogen consisting of two atoms of hydrogen. In other words, an atom of carbon "weighs" six times more than a molecule of hydrogen and not six times more than an atom of hydrogen as Frater Dalton thought. Similarly, an atom of oxygen "weighs" eight times more than a molecule of hydrogen, while an atom of nitrogen "weighs" seven times more than a hydrogen molecule.

This misapplication of the principle of "likes repelling likes" therefore had consequences in the realm of assigning formulas to molecules. An outstanding example is that of water. Operating under the assumption that an atom of hydrogen was chemically equivalent to an oxygen atom, Frater Dalton assigned a formula of HO to a molecule of steam. We now know that the "atom" of hydrogen with which

Frater Dalton was dealing was in actuality a molecule consisting of two atoms of hydrogen. It is therefore easy for us to recognize the proper formula for a molecule of steam as H₂O. Nevertheless, let us not lose sight of the principles which Frater Dalton applied in arriving at his formulas for it is these very principles that our modern scientists continue to use in arriving at their formulations. Regardless of the errors that scientists of the future may find in our formulations, the same age-old principles will find their application in whatever formulations prove to be suitable in any time.

TERNARY ELEMENTS

Another form of elements is that composed of two Atoms of one kind and one of another. The three Atoms composing an element generally would not be of the same nature; they would repel each other according to the law of like repelling like. The molecule ozone, being composed of three atoms of oxygen is a notable exception. Usually, however, when an element is composed of three Atoms, two of them are alike and one is unlike. THE UNLIKE ATOM IS ALWAYS IN THE CENTER. The reason is that the two similar Atoms, in the tendency to repel each other, will separate as far as possible. That permits the dissimilar Atom to come in between them, for both of the similar ones are attracted to this single Atom, which, in turn, is attracted to them. Therefore, the single dissimilar Atom pulls the other two closely to it, while they try to push each other away. In this manner the two similar Atoms would be on the opposite sides. This is plainly shown in the diagrams Nos. 44, 45, 46, and 47 of Plate 1.

The diagrams represent elements as follows:

- No. 44. 1 Atom of Nitrous Oxide, composed of 2 of Azote (Nitrogen) and 1 of Oxygen.....
17
- No. 45. 1 Atom of Nitric Acid,* composed of 1 of Azote (Nitrogen) and 2 of Oxygen.....
19
- No. 46. 1 Atom of Carbonic Acid,* composed of 1 of Carbon and 2 of Oxygen
19
- No. 47. 1 Atom of Carburetted Hydrogen,* composed of 1 of Carbon and 2 of Hydrogen
7

In each case of the above four Ternary elements, the "weight" of the element is given at the end of the line. It will be noticed that two of them, while totally different in nature, have the same "weight."

QUATERNARY ELEMENTS

Now we come to those elements composed of four primary Atoms. In fact, the four examples of quaternary elements given in Plate 1 are molecules composed of several Atoms.

First, note the manner in which these Atoms unite when there are three of one kind and one of an unlike kind. Here is another beautiful example of like attracting unlike and repelling like. Take

• Dalton's "Nitric Acid" is now known as Nitrogen Dioxide, his "Carbonic Acid" is now Carbon Dioxide while "Carburetted Hydrogen" is the gas Ethylene

No. 48, for instance: the unlike Atom remains in the center while the other three Atoms arrange themselves in perfect order around the unlike Atom. Each of the three outside Atoms is attracted equally by the unlike Atom in the center. That makes them hug, so to speak, the center Atom as closely as possible, all the while pushing the other like Atoms away. Because each of the three outside Atoms is pushing the other away from it, they keep equidistant, and the spaces between these three Atoms are always as mathematically equal as though they had been placed in position by some carefully adjusted instrument—in fact more perfectly posited in this regard than any system of measurement we know of could do it.

Another law, demonstrated by this attraction and repulsion between Atoms, is that when there are more of one kind than of another, as in Nos. 48, 49, 50, and 51, the greater number of like Atoms will be on the outside.

Also, please note that four Atoms arranged in this way make the form of a triangle; thus the triangle on the "material plane" is used to indicate quaternary elements as shown before the word "quaternary" on Plate 1. Some of the most interesting and profound problems of chemistry are solved through a study of the composition of the quaternary elements, and this is what Dalton referred to many times when he said, as do many Rosicrucians in their work in chemistry, that he was "busy with triangles."

No. 48 is a molecule of Oxynitric Acid,* composed of 1 Atom of	
Azote and 3 of Oxygen	26
No. 49 is a molecule of Sulphuric Acid,* composed of 1 Atom	
of Sulphur and 3 of Oxygen.....	34
No. 50 is a molecule of Sulphuretted Hydrogen,* composed of	
1 Atom of Sulphur and 3 of Hydrogen	16
No. 51 is a molecule of Alcohol,* composed of 1 Atom of Hy-	
drogen and 3 of Carbon	16

PLATE TWO

Let us examine now two other forms of elements, called Quinquenary and Sextenary. These are illustrated as Nos. 52 and 53.

In No. 52 we have a very different arrangement of five Atoms. Three of them are alike and two of them are unlike. In this element, called Nitrous Acid, we have a combination of Nitric Acid and Nitrous Gas. By referring to No. 41 on Plate 1, you will find that Nitrous Gas is composed of one Atom of Azote (Nitrogen) and one Atom of Oxygen. The two combined make Nitrous Gas. By referring to No. 45 on Plate 1, you will also see that Nitric Acid is composed of one Atom of Azote (Nitrogen) and two Atoms of Oxygen. In other words, the difference between Nitric Acid and Nitrous Gas is a difference of one more Atom of Oxygen in the Acid. But to turn these into a

• Dalton's "Oxynitric Acid" being composed of one atom of Nitrogen (Azote) and three atoms of oxygen might correspond to what modern scientists call the Nitrate Ion which is not a molecule because ions, by definition are not electrically neutral. Dalton's molecule of Sulphuric Acid, being composed of one atom of sulphur and three atoms of oxygen is now known as Sulphur Trioxide. The chemical formulas given for "Sulphuretted Hydrogen" and "Alcohol" are not possible by current formulations. By current formulations all alcohols, by definition contain at least one hydroxyl (OH) group in their formula. The modern formula for Sulphuric Acid is H₂SO₄.

NITROUS ACID we must combine the Nitric Acid and the Nitrous Gas. That means combining the five Atoms. Illustration No. 52 shows the only possible way in which these five Atoms of two different natures could combine. Four could unite, as shown, with the fifth Atom clinging to one side of the Azote (Nitrogen) Atom as far away from its companion Oxygen Atoms as it could be without severing the attraction that exists between it and the Azote (Nitrogen) Atom. The relation of these five Atoms to each other and the form they thus take illustrates one of Dalton's principles in his law of proportions—that in combining, the Atoms adhere to the law of the triangle, the square, or a combination of them. For in No. 52 we can see both the triangle and the square. Its "weight" is 31 according to Dalton. By modern formulations the weight would be 76.

In No. 53 a different problem is presented. Here we have six Atoms of three different natures. It represents a molecule of Acetous Acid and is composed of two Atoms of Carbon and two of Water. But whereas Carbon is composed of only one simple element, water is composed of two Atoms (one of Hydrogen and one of Oxygen). The manner in which these six Atoms arrange themselves is interesting, yet in no other way could these six be placed and still maintain their attraction and repulsion.

And now we come to Septenary elements. No. 54 represents Nitrate of Ammonia. It is composed of one Atom of Nitric Acid, one of Ammonia, and one of Water, as will be seen by referring to Nos. 45, 39, and 38 of Plate 1. Its relative "weight" is 33. No. 55 represents Sugar and is composed of one of Alcohol and one of Carbonic Acid as shown in Nos. 51 and 46 of Plate 1. Its relative "weight" is 35.

Both of these elements are composed of seven Atoms and in form they represent the outline of a circle inside of which are three triangles, the center Atom being the vertex of each of the three triangles. Thus again we find the law of the triangle, square, and circle being demonstrated.

For the purpose of diagrammatic illustration the Atoms will be considered as perfect spheres. That they may at times be of different shapes is because they may be compressed or flattened in places by contact with other Atoms.

The spherical shape of Atoms accounts for much that could not be accounted for in any other way, and the shape also makes for many conditions and phenomena in chemistry and physics of a very interesting nature. In fact, the spherical form of Atoms, as well as their chemical nature, enables them to manifest in many different ways.

This latter fact Dalton illustrated by the diagrams shown on Plate 2.

Here we have in Figure A nine Atoms placed within a square so that we may study their relation one to another. We notice that by having the Atoms touch each other, as they do in this diagram, Atom No. 5 makes contact only with four other Atoms—Nos. 2, 4, 6, and 8. We note also that there is a considerable space between these nine Atoms.

If we consider each layer of Atoms in this square space as being a

stratum, we have three strata in Figure A. Between these layers or strata we have the large openings or "air" space. This means that in any such arrangement of Atoms there will be a great amount of space between the Atoms, and this space is occupied by what we shall simply call "air."

Now if we take these nine Atoms and arrange them as shown in Figure D, we change the square to a rhomboidal form. By arranging the Atoms in this wise we do several things of considerable importance. Dr. Dalton, in his papers to the scientific bodies of his day, spoke only of one or two results attained by this arrangement of the Atoms, but I will speak of another result which he knew well but did not fully illustrate.

First of all it will be seen, as Dr. Dalton pointed out, that this arrangement of the Atoms causes Atom No. 5 to contact SIX other Atoms instead of only four as shown in Figure A. Thus, Atom No. 5 is in contact with Atoms Nos. 2, 3, 4, 6, 7, and 8. Furthermore, Atoms Nos. 2, 4, 6, and 8 now touch one another, whereas they did not in the arrangement in Figure A.

This different arrangement makes every Atom in the composition of anything a center of a mystic group, so to speak. For every such center Atom will have six other Atoms surrounding it, each making contact with the other. Thus each group consists of seven Atoms—the center one and its six companions. This is why such a group is called a mystic group. And the true power of such a group is usually determined by the nature of the center Atom. The result of such grouping, in a truly mystical way, is explained later on.

But the principal point which Dr. Dalton wished to bring forth by such an illustration of grouping was this: That when the Atoms were so arranged the amount of air space between the Atoms was reduced. By examining the grouping in Figure D one will see that there is considerably less air space between the Atoms than between those in Figure A. He held, and it has been demonstrated as true, that when the air is extracted from the matter by rearrangement of its Atoms, the change or new condition is brought about by this law.

The most interesting point, however, which Dr. Dalton touched upon, though did not fully explain in his lifetime, is illustrated in Figures B, C, E, and F.

By changing the arrangement of Atoms as shown in Figure D, the strata of the Atoms are altered in a manner clearly shown by the diagrams. By taking any three Atoms in Figure A and grouping them in the same relation to each other as shown in Figure B, we discover another law. For example, we show Atoms numbered 6, 8, and 9 of Figure A. In Figure B we see these three Atoms in precisely the same relation to each other as they occupied in Figure A.

Now by drawing a line from the center of each of these three Atoms to the center of the others we have a triangle. If we consider the one Atom (No. 9) as resting upon two others, as constitutes a building of layers, or strata, we find in Figure E that the triangle has a certain height indicated by the dotted lines. We also note that the triangle is not an equilateral triangle. (And this is important to all Rosicrucians.)

If, on the other hand, we take three Atoms from the grouping in Figure D, we find another law. By taking any three Atoms, or in this example by taking Atoms numbered 4, 5, and 7, and placing them in the same relation to each other as they are in Figure D, we find that a triangle can be formed by drawing a line from the centers of the Atoms. But in this case the triangle is an equilateral triangle.

By comparing these two triangles as shown in Figures E and F we see that they have different heights (indicated by the dotted lines) and the height is shown by the two heavy lines in the center of the diagram.

This, says Dr. Dalton, shows the height of the strata of each group of Atoms.

He also calls attention to the fact that in the grouping shown in Figure D, the angles are always 60 or 120 degrees—a fact to be kept in mind by all Rosicrucians.

Therefore, we see that when the law of the triangle (the equilateral triangle) demonstrates or manifests itself in the composition of matter or the arrangement of Atoms, we have an entirely different and important demonstration of the Atomic laws.

The grouping in Figure D represents the grouping of Atoms in the formation of ice. By this arrangement of the Atoms the air space or "air" is eliminated to a great extent and thereby the liquid becomes more solid. This is accounted for by the two facts that since the Atoms fit more closely together the matter becomes more solid, and that the elimination of air takes from the water a great amount of its elasticity.

To further demonstrate the grouping of Atoms in this fashion in the formation of ice, Dr. Dalton points to another interesting fact. He calls your attention to the formation of ice. He asks you to note that when water freezes by sudden congelation (that is, when water is brought into an atmosphere below the freezing point and is suddenly chilled) certain forms of crystals or spiculae can be seen upon the surface of the water. Figure G shows one of these spiculae and it illustrates two points: that the Atoms are co-related to one another as shown in Figures C and D, and that the angles are very significant.

An examination of the designs shown in snowflakes will teach one many interesting facts regarding the laws embraced in the foregoing statements.

Table II shows a comparison between the chemical formulations of Frater Dalton and those of modern scientists with regard to some substances commonly encountered in the study of Chemistry. Apart from obvious differences in names, one is struck by the remarkable similarities in formulations. When it is recalled that Frater Dalton was unaware of the fact that two hydrogen atoms ordinarily combine to form a hydrogen molecule, one cannot help but marvel at the remarkable success he enjoyed through the judicious application of Rosicrucian Principles. In fact, in the examples cited in Table II all differences in chemical formulations can be accounted for on the basis of current knowledge in regard to the di-atomic nature of hydrogen gas.

TABLE II—COMPARISON BETWEEN DALTON & MODERN FORMULATIONS

Chemical Formula		Physical State	Name	
Dalton	Modern		Dalton	Modern
N ₂ O ₃	N ₂ O ₃	Liquid	Nitrous Acid	Dinitrogen Trioxide
NO	NO	Gas	Nitrous Gas	Nitric Oxide
NO ₂	NO ₂	Gas	Nitric Acid	Nitrogen Dioxide
C ₂ H ₂ O ₂	C ₂ H ₄ O ₂	Liquid	Acetous Acid	Acetic Acid
NH ₂ NO ₃	NH ₄ NO ₃	Solid	Nitrate of	Ammonium Nitrate
CO ₂	CO ₂	Gas	Ammonia	Carbon Dioxide
CO	CO	Gas	Carbonic Acid	Carbon Monoxide
CH	C ₂ H ₂	Gas	Carbonic Oxide	Acetylene
CH ₂	C ₂ H ₄	Gas	Olefiant Gas	Ethylene
HO	H ₂ O	Liquid	Carburetted	Water
			Hydrogen	
			Water	

COMBINING ATOMS

PLATE THREE

Let us turn our attention to Plate 3. Here Dr. Dalton illustrates many other laws of the Atoms.

To understand what Dr. Dalton meant to convey—and to make plain to our Rosicrucian readers the laws they have been studying—we must bear in mind that all Atoms have a certain aura around them due to their vibrations. Considering the nature of an Atom and its composition from the Rosicrucian point of view, it is not surprising that we should speak of an aura surrounding an Atom. This aura of influence or magnetic quality has been recognized by scientists for many years.

Modern science describes the atom as consisting of a tiny nucleus of positive polarity around which move a number of electrons of negative polarity. The number of electrons is just enough to balance the number of units of positive polarity associated with the nucleus. It is the electrons which impart to the atom its size. Electrons are also the units that are transferred or shared between atoms when they combine to form molecules.

Although the existence of electrons in atoms has been established since the turn of the century (1900), the true nature of the electron has not yet been established. In fact, the electron in atoms is so elusive that scientists have been obliged to express its behavior in terms of probabilities. Like the photon, or particle of light, the electron has been described as both a particle and a wave. In fact in modern quantum theory scientists find it necessary to treat the electron as an electromagnetic wave-function. Electromagnetic waves correspond to some aspects of what Rosicrucians call vibration.

Atomic Laws (continued)

FIG. 2

FIG. 3

FIG. 4.

FIG. 6

FIG. 5. (A to P)

This Chart copyrighted 1917 by A.M.O.F.C. of
 Nova Scotia, Supreme Grand Lodge.

According to modern theory, electrons, as electromagnetic wave-functions, are the entities that hold atoms together in molecules. The foresight displayed by Frater Dalton in declaring that when atoms combine to form molecules, they are held together by the strong affinity of vibration, is therefore a testament to the efficacy of Rosicrucian principles.

The aura which surrounds atoms is a function as much of the electrons which surround the nucleus as the positive nature of the nucleus itself. Modern chemists acknowledge the existence of polarity in atoms as being due to the positive influence of their inner nature—the nucleus. The nuclei of atoms exert an influence far beyond the bounds of their physical size. This positive influence the modern chemist calls electronegativity. Electronegativity is the measure of an atom's ability to attract to itself electrons from other atoms. This "measure" is due to the fact that in atoms the units of positive electricity in the atomic nucleus are never perfectly shielded by the normal complement of electrons present in the atom. When electronic shielding of the nucleus is nearly perfect one speaks of a noble gas—i.e., a type of atom which very rarely can be induced to engage in chemical reactions. Examples of noble gases are helium, neon and argon.

Atoms other than noble gases fall into two major categories known as metals and non-metals. The motive force behind most chemical reactions is a drive for atoms to achieve a structure similar to that of a noble gas. To achieve this noble structure, atoms must gain, lose or share electrons. Electronegativity is therefore a measure of the force with which an atom attracts electrons in attempting to reach a noble structure. Atoms other than noble gases must either lose or gain electrons in order to attain to a noble structure.

Metals generally have lower electronegativity values than nonmetals. For this reason, in most reactions involving metals and nonmetals, the metal functions as an electron-donor while the nonmetal functions as an electron-acceptor. In such transfers of electrons both metal and nonmetal attain to a noble structure. However, such transfers of electrons lead to the formation of ions of two polarities. The metal atom, in donating electrons, becomes positively charged, while the nonmetal, in receiving electrons, becomes negatively charged. Ions of positive polarity are called cations; ions of negative polarity are called anions. Anions and cations, being of opposite electric polarity, attract each other to form molecules known as salts.

When atoms having similar electronegativity values combine to form molecules, electrons are not transferred between them. Instead electrons are shared in such a manner as to yield more complete shielding of their nuclei. The type of bond formed when electrons are shared between atoms is called covalent. The reason for the sharing is not one of brotherly love or concern for each other, but rather it is born of mutual respect. It is as if two brothers of equal strength and agility were given a pie to share between themselves. Since neither has an advantage, i.e., their electronegativity values are the same—the pie is shared equally. When two atoms of equal electronegativity value share electrons in forming a molecule, one

speaks of a non-polar molecule. When one brother enjoys a moderate advantage over the other the sharing is unequal. The type of molecule formed under conditions of unequal sharing is referred to as a polar molecule. All out advantage, as in the case with metals and nonmetals, leads to the formation of ionic molecules or salts. Thus we see that the type of union that exists between atoms covers the range from ionic, on the one hand, to non-polar covalent on the other. The type of molecule formed when atoms combine is dependent only upon the ability of atoms to attract electrons to themselves, i.e., the degree of difference between the strength of their auras.

Atoms of a given type and polarity (electronegativity) do not always find themselves in the presence of atoms of a different polarity. In other words, atoms often find themselves in the presence of their own kind. Under appropriate conditions of temperature and pressure the auras of like atoms may interact in such a way as to lead to the formation of liquids from gases, or solids from liquids. Differences in physical states are accounted for on the basis of closeness of atoms as illustrated in Plate 2.

Expressions of this principle of closeness are known to modern crystallographers who have studied the differences between various allotropic forms of iron and sulphur, for example. Allotropic forms reflect the various physical arrangements of the atoms concerned. Changes in physical arrangements of atoms are usually accompanied by changes in density and, especially in the case of sulphur, elasticity.

In Figures 1, 2, and 3, of Plate 3, Dalton shows Atoms in groups to form certain elastic fluids. Figure 1 shows Atoms form Hydrogen. Figure 2 shows Nitrous Gas. Figure 3 shows Carbonic Acid. What he intends to show is that the aura from the Atoms, composing these three, causes the atmosphere around the Atoms to be charged with certain emanations from the Atoms, and that this atmosphere and the vibrations in it cause the composition or element formed by the Atoms to be "elastic." In this way, he says, are elastic fluids or gases formed.

In Figure 4, however, we come to one of the most interesting diagrams and illustrations of the Atomic law. In fact, the point which Dalton tried to present in a veiled way has not been fully offered to the workers in chemistry before.

Assuming (and this may not be an assumption at all) that the Atoms do have certain rays emanating from them, we can best illustrate these emanations by making them diagrammatic. Therefore, we will consider that the rays issue from the center of each Atom and go outward from the Atom in straight lines. For a very good reason we will assume that these rays form an aura around each Atom, and that this aura is in the form of a square. (I must repeat that this MAY NOT BE an assumption at all.) We find, however, that there are four emanations from each Atom which form diagonal lines in the square aura surrounding each Atom. In other words, there are four definite rays from each Atom, stronger than the others, which leave the Atom at equidistant points, and these rays are called the POTENTIAL RAYS.

In dealing with the symbolism of numbers, we have been instructed

in the meaning of the number four. The number four is represented by the square, which is itself symbolic of foundation. The question we must ask ourselves then, is whether the findings of modern chemistry shed any light on the significance of the number four in the combining, of atoms to form molecules. In this regard it is interesting to note that precisely between the extremes of those atoms referred to earlier as metals and nonmetals, is a small group referred to as the metalloids. Metalloids are neither metal or nonmetal. Instead, they share in the characteristics of both extremes in that they very rarely accept or donate electrons. Yet, unlike the noble gases, metalloids frequently engage in chemical reactions. Metalloids love to share! As a consequence, they are Nature's choice in the important task of maintaining a foundation.

The two metalloids most used by Nature in the important position of "foundation" are carbon and silicon. Both of these atoms have a valence, or combining power of 4. Valence is a number which expresses how many electrons an atom must lose, gain or share in order to achieve a noble gas structure. The highest valence that any atom can have is 4.

Next to oxygen, silicon is the most abundant atom on earth. The earth's crust, the mantle which forms the physical foundation of our world, owes its stability to the dependability of the silicon atom.

Although not nearly so abundant as silicon, the carbon atom has also been used by Nature in her establishment of the principle of foundation. The carbon atom serves as the backbone of those molecular structures so vital to the expression of life forms on earth. Occupying the middle ground of chemical reactivity, carbon is ideally suited to the stable, yet dynamic changes associated with the life process. In avoiding the extremes of chemical reactivity the carbon atom participates in both—this is foundation! Thus we see the significance of the number four. As student mystics, we can learn much from the book of Nature.

Another point to be remembered is that not all Atoms are of the same size. Figure 5 on Plate 3 shows a number of Atoms representing sixteen different elastic fluids, from A to P. The Atoms are drawn in their proportion to one another, and the square of aura surrounding each Atom is drawn in proportion to the size of the Atoms. Thus we can plainly see by the size of the square aura the difference in the aura of each of these sixteen Atoms.

Behind all the laws known to chemistry for the combining of certain Atoms, or the mixing of certain elements, is this law: That the rays from each Atom must meet and find harmony with the rays of other Atoms if they would blend or unite. This law is illustrated in Figure 4 on Plate 3. There are four Atoms of Azote (Nitrogen) in their square auras at the top of Figure 4. You will note that the rays from these four Atoms, forming the square auras around each Atom, unite or meet.

Because these rays join in this manner the four Atoms form a united element. You will further note that the POTENTIAL RAYS of each of the four Atoms meet and thereby form diagonals in the large square

composed of the four smaller squares. At the bottom of the four squares of Azote there are two squares containing Atoms of Hydrogen. These latter squares are larger than the others above them, because the auras of Hydrogen are larger than the auras of Azote, as shown in the diagrams C and P in Figure 5.

However, the Atoms of Hydrogen unite well with the Atoms of Azote because the diagonal rays, or the POTENTIAL RAYS of all the Atoms in the combination of Figure 4, meet and unite perfectly. This is shown in Figure 4 by the HEAVY DARK diagonal lines running through four squares and which represent the Potential Rays.

To make this more clear. Figure 6 has three different Atoms and their auras enlarged. Here we find that because of the difference of the rays forming the auras of those Atoms, not one of the rays in one of those Atoms or auras meets with the others. No matter how you may place or try to unite those three Atoms—whatever they may be—they will not make the perfect association desired.

By this we learn that when the potential rays of Atoms unite there is one form of mixture; and that when all the rays meet (as in the upper four squares of Figure 4) there is another mixture of a purer and unmodified nature. And—when none of the rays unite we find that the Atoms do not give a true mixture of any kind.

Thus we see that theoretically, at least, there is a great deal to study and learn about the potentiality of Atoms and the emanations of Atoms; for in the potentiality and in the rays lies the secret of the combination of Atoms and the formation of matter.

This, then, is the great work of Rosicrucian chemistry, and in our Order are found laws making all those things plain which I have been able to refer to only in a veiled way in the interpretation of the work and discoveries of Dr. John Dalton.

CONCLUSION

Members are urged to study this carefully. Reference to any standard textbook on chemistry will be helpful. It must be realized that since Dalton's time there have been changes in phraseology and that modern instruments such as the spectograph, the electron microscope, the electrical balance, the x-ray, and many other wonderful precision instruments have revealed things not known to Dalton and have shown, in some ways, that some of his terminology or explanations are in error. However, his fundamental principles were definitely sound and some of his ideas are still considered a realm to be investigated by modern science. Of what these consist the Rosicrucian student is well informed through his membership studies.

Part Seven

Biographies of Rosicrucian Leaders

SIR FRANCIS BACON

Baron Verulam, Viscount St. Albans, Eminent
Imperator of the Rosicrucians

Because of the increasing interest in the life and works of Francis Bacon, we introduce his portrait (on page 7) and a few brief remarks about him.

He was born in London on January 22, 1561. He attained very high positions in the British government, and was secretly a representative of many high officials, and was often forced to assume the responsibility and guilt of those whose reputations he would save. For years those unfriendly to him believed the evil that was said of him, and which he cared not to deny in order to save further explanations. But within the past fifty years certain unquestioned records have proved the Rosicrucian contention that he was one of England's noble men—in heart, soul, and deed.

As a pioneer in the revolution of methods of education he stands without a peer, and the effect of his "secret society" upon mankind in Europe was ever a puzzle to the multitude until it was discovered that the esoteric society, to which much of his correspondence seemed to refer, was the Rosicrucian Order. Then it was found that some of his literary co-workers were his official emissaries or deputies of the Rosicrucian Order, making periodical journeys to foreign jurisdictions.

It was Bacon, who, as Imperator of the Rosicrucian Order, wrote the now internationally famous book called the *Fama Fraternitatis* to which the fictitious name of Christian Rosenkreutz was signed—meaning Rosy Cross. Through the discovery of the secret code in this manuscript, and the several acknowledged writings on secret codes, it was further discovered that Bacon wrote the famous plays attributed to the one who produced them, Shakespeare. An examination of the pages of the original plays shows not only the name and titles of Bacon concealed in the strangely arranged lines of text, but the Rosicrucian and Bacon symbols are found as watermarks in the paper. The writing and production of plays at that time was considered a low, mean, and sordid occupation, and while the "Shakespeare plays" were of a very high type and quite different from all previous plays, the very nature of their intimate revelations would forbid the author from admitting his connection with them under penalty of having them destroyed. It was a most fortunate circumstance for civilization that Bacon conceived his wonderful plan of writing and issuing the plays under the name of the principal actor, yet preserving within their text the name of the real author.

It was Bacon who first planned the Rosicrucian colonization of America. He wrote a book called the *New Atlantis* (often referred to as "The House of Solomon") in which the whole scheme is given in fascinating symbolism. Many years later, in 1693, a specially selected group of Rosicrucians, with their families, gathered from all parts of Europe at one port, and set sail for America in their own

chartered boat. They arrived at what is now Philadelphia in the early part of 1694, and established many of the first educational institutions in the United States. Their record, well preserved in the archives of this country, testifies to the magnificent influence of the Rosicrucians in the foundation of this great Republic.

Bacon's transition occurred April 9, 1620, in the very height of his Rosicrucian work and while he was making some important scientific tests.

The full-page illustration of Bacon, shown on page 7, accompanied by many of the symbols used in reference to him, was made by our former Emperor, Dr. H. Spencer Lewis, in 1919, as a frontispiece to a book he was compiling. It has been reproduced a number of times and is drawn from the best-known portrait of Bacon, with other decorations and features known so well to Rosicrucians. It is unlike any page to be found in any of Bacon's books in entire composition, but duplicating parts of many. Thus our members have an excellent souvenir of the eminent Rosicrucian Emperor of the seventeenth century.

Former Imperator (1915-1939) for International Order,
A. M. O. R. C.

The following is a brief biography compiled from facts gathered from our various official publications and from official records.

Harvey Spencer Lewis was born in Frenchtown, New Jersey, on November 25, 1883, at 12:38 noon (corrected, astrological time). His parents were engaged in educational work at the time and he was given a good schooling, and later brought to New York with his two brothers. He was of Welsh extraction, descending from the family of Lewis whose great forbear was Sir Robert Lewis and whose other descendants included Merriweather Lewis of the famous Lewis and Clark expedition, and many others prominent in early American history.

Educated in New York City schools, he united with the Methodist Church and was one of the early members of the well-known Methodist "Metropolitan Temple," of which Dr. S. Parkes Cadman was the first clergyman and marvelous promoter of great good.

Devoting himself to scientific studies he also entered the advertising world as a professional artist, and in many parts of America are paintings in oil, pastel, and water color, as well as hundreds of pen drawings from his prolific pen. Many of these have become nationally known. Before his twenty-first year he was in charge of special art features of the New York Herald.

At about this same time he was elected President of the New York Institute for Psychical Research, and among the many able associates in his work were Ella Wheeler Wilcox and "Fra" Hubbard, founder of the Roycrofters. Both of these later assisted in the establishment of the Rosicrucian Order in America and were on the first American Council of the Order when Dr. Lewis was selected Supreme Grand Master of America.

After many years of continuous scientific and psychic research, even in the fields of wireless (radio) when this science was little known, he made his first contact with the work of the Rosicrucians through obtaining copies of the secret manuscripts of the first American Rosicrucians, who established their headquarters near Philadelphia in 1694. A member of the English branch which sponsored the first movement in America, Mrs. May Banks-Stacey,* descendant of Oliver Cromwell and the D'Arcys of France, placed in his hands such papers as had been officially transmitted to her by the last of the first American Rosicrucians, with the Jewel and Key of Authority received by her from the Grand Master of the Order in India, while an officer of the work in that country.

For several years correspondence was maintained with different representatives of the foreign jurisdictions until proper investigation

* See portrait on page 10.

could he made establishing the worthiness of Dr. Lewis to carry out the warrants then in his possession. Finally in 1909, he was directed to make his appearance before certain high officials in France. He visited Toulouse, the ancient center of the Rosicrucian international conclave, and returned from that country in possession of further authority. This and the papers possessed by Sro. Stacey were presented to a committee of over a hundred American citizens and the foundation for the decreed revival of the work in America was laid, with Sro. Stacey as Grand Matre of the Order, and Dr. Lewis as Supreme Grand Master.

Since that time many high honors were conferred upon him by foreign and American societies, academies, scientific institutions, and learned bodies.

As an American citizen he had been cited for honored decoration with the Cross of Honor and made a Knight of the Flag by the United States Flag Association. In Europe he received a number of similar decorations, including the Gold Cross of the Knighthoods of the Temple of Jerusalem. He was a member or officer of a number of European and American educational societies, and had been received into the highest degrees of fourteen or more of the leading esoteric, mystical, and philosophical societies of the world, including the Rose-Croix Kabalistique de France, the Martinist Order of France, Belgium and Switzerland, the Rose-Croix Alchemical Society of France, the Unknown Samaritans of Europe, the Brahmanist Brotherhood, the Egyptian Rites of Memphis and Mizraim, and others; he was also one of the few Initiates to be received in a mystery temple of Luxor, Egypt, in 1929. He was distinguished with high honors at the international Congress of the Federation Universelle des Ordres et Societes Initiatiques (FUDOSI), held in Brussels, Belgium, in 1934. He was the only Rosicrucian officer in North America having been so universally empowered to represent the ancient esoteric sanctuaries of the world.

His wife, Martha Morfier Lewis, a descendant of the famous French General, Morphier, was the first lady in America to cross the Threshold of the Order in the new regime, and his four children have been reared in the work; his son, Ralph M. Lewis, served as Supreme Secretary of the Order for North and South America for many years, and is now incumbent Imperator.
